River in January 1945 under machine gun and artillery fire to inspire the men of the Third Army to follow him. The latter, however, does help to emphasize the fact that where General Patton sent his men he, himself, would go. During the war he had at least three narrow escapes from death—once when a German 380-mm. railway gun just missed his headquarters at Nancy, France; again when a shell hit his headquarters and he was out; and another time when a large shell landed within 10 feet of his parked jeep but failed to explode. At least one of the stories told about him appears to have been true: He went into battle with two pearl-handled revolvers carried in holsters on his hips. High-tempered, and given to saying what he thought, he frequently got into trouble; once when he slapped a soldier whom he believed to be a malingerer, though the boy is said actually to have been suffering from battle fatigue; and again when, at the opening of a club for American soldiers in London, he was quoted as having said that the British and American people were destined to rule the world, though Army press relations officers said that what he actually said was that "we British and American, and of course, the Russian, people" are destined to rule. He stirred up another tempest in the teapot when he told a Sunday school class, while at home in June 1945, that its members would be the officers and nurses of the next war. But this was nothing compared with the furor that was stirred up when, in an interview granted American correspondents after his return to Europe, he was quoted as saying with respect to the military government in Bavaria which was under his command, that too much fuss was being made over denazification, and compared the Nazi Party to the losers in an American election. That remark cost him command of the Third Army. He was transferred a few days later to the command of the American Fifteenth Army, a paper organization set up to study the tactical lessons of the war just ended. It must have been a severe blow for him to part with his Third Army, but he took his transfer like the real soldier he was, and no one ever heard him complain.

There was, however, a softer side to General Patton for he, despite his profanity, was a deeply religious man, and also author of two volumes of poetry, which he stipulated were not to be published until after his death.

Though he signed himself George Smith Patton, Jr., General Patton was actually the third in line of his family to bear the name. His grandfather, the first George Smith Patton, was a graduate of the Virginia Military Institute, and served as a colonel in the Confederate Army during the Civil War. General Patton's father, George Smith Patton, 2d, also was graduated from the Virginia Military Institute, then studied law and moved to California, where he amassed a fortune in real estate. General Patton entered V.M.I. at the age of 18, but a year later entered the United States Military Academy from which he was graduated in 1909. Though he is said to have been a poor student, he was rated an outstanding athlete at West Point. He excelled as a sprinter on the track team; was regarded as the best fencer in the army; was an exceptional swimmer, horseman and shot. In 1912 he represented the United States at the Olympic Games in Stockholm, Sweden, and finished fifth, behind four Swedes, in the modern pentathlon among 30 contestants. After graduation he was commissioned 2d lieutenant in the 15th U.S. Cavalry,

and advancing through the grades, reached the rank of lieutenant general in 1943. On April 17, 1945, he was promoted full general (temporary) in recognition of his superb achievements. He was graduated from the Cavalry School in 1913; from the Advanced Equitation Class, Cavalry School, in 1914; was graduated with honors from the Command and General Staff School in 1923, and was graduated from the War College in 1932. After serving as an instructor in weapons at the Cavalry School, 1914-16, he served as aide-de-camp to General John J. Pershing in the Mexican Expedition of 1916-17, and in May of the latter year sailed for England in the same capacity. In November 1917, he was the first man detailed in the Tank Corps of the United States Army. He organized and directed the American Tank Center at Langres, winning the Distinguished Service Medal for his work. But, he wanted action at the front and was assigned to command the 1st, later the 304th, Tank Brigade which distinguished itself during the St. Mihiel offensive in September 1918. Later that fall he was severely wounded during the Meuse-Argonne offensive while charging a pillbox after 40 per cent of the tanks in his command had been put out of commission. His life was saved by Pvt. Joseph T. Angelo of Camden, N.J., who dragged him to safety in a shell hole.

After the First World War he commanded the 304th Tank Brigade at Camp Meade, Maryland; then commanded the 1st squadron of the 3d Cavalry at Fort Meyer, Virginia. In 1923 he was transferred to the General Staff and served thereon until 1927. Thereafter he served in the Office of Chief of Cavalry, 1928-31; as executive officer of the 3d Cavalry, 1932-35; again on the General Staff, 1935-37; then after several cavalry commands he was made commanding officer of the 2d Armored Division at Fort Benning in 1940. When the North African invasion was planned, he was given command of the American forces scheduled to land on the Atlantic coast of Morocco, November 1942. He took command of the 2d United States Corps after the American reverse at Kasserine Pass and won the Battle of El Guettar; and disappeared from the public eye soon thereafter only to turn up as commander of the American Seventh Army in the invasion of Sicily. After the Sicilian campaign he again disappeared, and it was rumored that he had fallen into disfavor with General Eisenhower, but what actually had happened was that General Eisenhower had sent him to England to prepare for a key role in the invasion of western Europe.

General Patton's death was due to injuries received in an automobile accident, which occurred December 9 near Mannheim, Germany, when his automobile collided with a truck. His neck was broken, but he rallied in a short while and was thought to be recovering, but after having been put into a plaster cast; he developed a lung congestion followed by paralysis of the chest which made it impossible for him to obtain normal relief by coughing. His condition was not regarded as grave until 24 hours before his death. He was buried in the United States military cemetery at Hamm near Luxembourg, where rest the remains of many of the men who fought under him in the Battle of the Ardennes (Bulge) in December 1944.

PEABODY MUSEUM (Harvard University). Due to the fact that the greater part of its staff continued to serve either in the armed forces or in

special research for other government agencies, the research work of the Peabody Museum, which constitutes the larger part of the organization's activities, was drastically curtailed in 1945, according to the annual report of Dr. Donald Scott, the director. Furthermore, the museum, like various other institutions, finds itself in need of funds with which to carry on properly its researches. This, it was stated, is due to a 20 per cent decline in the rate of return upon endowments and to the rising cost of services and supplies. Funds are particularly needed to carry on expeditions and field work upon which members of the museum were engaged before the war.

During the academic year, July 1, 1944, to June 1, 1945, Dr. Hugh O'Neill Hencken brought near completion his reports upon the archaeology of Ireland, based on the results of the Harvard Irish Expedition under his direction. He also made progress with the rearrangement of the museum's European Neolithic, Bronze, and Ice Age collections. Dr. Earnest A. Hooton completed his survey to provide ideal specifications for seats in railway coaches. Recommendations contained in his report have been adopted by a committee on seating appointed by the United States railroads. Mr. Harper Kelley, Thurman Arnold fellow, on leave from his position as curator of paleolithic archaeology in the Musée de Trocadero in Paris, continued his preparation of a volume on the Paleolithic Age in France. He returned to France in order to resume his curatorial position and to complete his book. Dr. John Otis Brew, who was appointed curator of North American archaeology, prepared for publication his report of excavations on Alkali Ridge, Utah, and continued work on the final reports of the museum's expeditions to Awatovi and the Jeddite Valley in northeastern Arizona. Mr. Henry Eliot brought near completion a series of 35 annotated charts which give a graphic analysis of some of the major archaeological sites in Mesopotamia, including the sites of Ur, Kish, Susa, al-'Ubaid, Jemdet Nasr, and several others.

Field Work.—The Ramah project, under Dr. Clyde Kluckhohn's direction, was carried forward by Dr. Janine Chappat, who was in the field from August 1, 1944, to July 1, 1945. In addition to making certain films and routine observations of the Navaho children in Dr. Kluckhohn's study, she laid the groundwork for an investigation of race attitudes in 48 children of three different groups, Navaho, Mormon, and Spanish American, living in this general area. The Rev. Robert McNair also spent a month studying certain aspects of the religious life of the Ramah Navaho. Dr. William H. Kelly spent a month with the Cocopa Indians of the Colorado River delta, carrying forward his intensive study of this primitive group.

Publications.—Six volumes were published by the museum in 1945: *Early Man and Pleistocene Stratigraphy in Southern and Eastern Asia*, by Hallam L. Movius, Jr. (Peabody Museum Papers, vol. 19); *Racial Pre-history in the Southwest and the Hawikuh Zunis*, by Carl C. Seltzer (Peabody Museum Papers, vol. 23); *The Excavation of Los Muertos and Neighboring Ruins in the Salt River Valley, Southern Arizona*, by Emil W. Haury (Peabody Museum Papers, vol. 24); *Archaeology of Northwestern Venezuela*, by Alfred Kidder, 2d (Peabody Museum Papers, vol. 28); *An Introduction to the Archaeology of Cuzco*, by John H. Rowe (Peabody Museum Pa-

pers, vol. 27); and *Archaeological Investigations in El Salvador*, by John M. Longyear, 3d (Peabody Museum Memoirs, vol. 9).

Publications by members of the staff were as follows: *Young Man, You Are Normal*, by Dr. Earnest A. Hooton; *The Relationship Between the Masculine Component and Personality*, and articles in the *American Journal of Physical Anthropology*, by Dr. Carl C. Seltzer; and five publications by Dr. Clyde Kluckhohn, *Dynamic Theory of Personality* (with O. H. Mowrer), *The Influence of Psychiatry on Anthropology in America During the Past One Hundred Years*, *The Concept of Culture* (with William H. Kelly), *Anthropological Research and World Peace*, and *The Personal Document in Anthropological Science*.

Accessions.—A total of 50 accessions, approximating 3,600 specimens, were received, distributed as follows: North America, 19; Central America, 12; South America, 11; Europe, 3; Africa, 4; Asia, 5; Oceania, 3. Of these, 21 were archaeological; 17, ethnological; 2, skeletal material; and 15, photographs and negatives.

PEACHES. Whereas the 1945 apple crop of the United States was but little more than half the normal crop, the 1945 peach crop of the country established a record. According to the Department of Agriculture's October 1 estimate, 81,954,000 bushels of peaches were picked in the United States in 1945 as compared with the 1944 crop of 75,963,000 bushels and the 1934-43 average crop of 57,201,000 bushels. California, as usual, was the leading producing state in 1945. Its crop totaled 31,795,000 bushels compared with its 1944 crop of 34,044,000 bushels and its 10-year average crop of 23,389,000 bushels. Georgia was the second largest producer with 8,091,000 bushels in 1945 against 4,590,000 bushels in 1944 and a 10-year average crop of 4,997,000 bushels. South Carolina held third place with 5,760,000 bushels in 1945, 2,460,000 bushels in 1944, and 2,039,000 bushels as its average 10-year crop.

PEANUTS. On October 1 the Department of Agriculture estimated the 1945 peanut crop of the United States at the record figure of 2,260,050,000 pounds, an increase of about 150,000,000 pound over the 1944 crop which aggregated 2,110,775,000 pounds, and 781,725,000 pounds over the 1934-43 average crop of 1,478,325,000 pounds. Georgia led the producing states in 1945 with an output of 734,300,000 pounds. Texas came next with 398,000,000 pounds; North Carolina was third with 343,200,000 pounds; and Alabama was fourth with 332,050,000.

PEARS. Production of pears in the United States in 1945, according to the Department of Agriculture, reached record proportions with a yield of 32,685,000 bushels, compared with the 1944 crop of 31,956,000 bushels and the 1934-43 average crop of 28,616,000 bushels. California led the producing states with 13,210,000 bushels in 1945 compared with 10,417,000 bushels in 1944 and a 1934-43 average crop of 9,951,000 bushels. After California came Washington with a 1945 crop of 7,982,000 bushels against a 1944 crop of 8,665,000 bushels and a 1934-43 average crop of 6,260,000 bushels. Oregon was third with a 1945 crop of 4,842,000 bushels compared with a 1944 crop of 4,354,000 bushels and a 1934-43 average crop of 3,720,000 bushels.

PECANS. The October 1 estimate of the Department of Agriculture placed the 1945 pecan

crop of the United States at 141,533,000 pounds as compared with the 1944 crop of 140,165,000 pounds, and the 1934-43 average crop of 97,346,000 pounds. Georgia jumped from 33,500,000 pounds in 1944 to lead all of the producing states in 1945 with an output of 38,500,000 pounds. Texas, which led in 1944, with 45,000,000 pounds, dropped to 33,750,000 pounds in 1945. Oklahoma was the third largest producer in 1945 with 22,500,000 pounds, while Alabama came fourth with 10,660,000 pounds.

PELLIOT, Paul, French Sinologist: b. 1878; d. Paris, Oct. 29, 1945. One of the world's leading scholars on ancient China, Dr. Pelliot was credited with being the first to apply the techniques of philological and archaeological methods to the study of Chinese sources and history.

Dr. Pelliot originally intended to enter the consular service, but he proved himself such a brilliant linguist that in 1899 he was sent on a scholarship as a language student to the School of Far Eastern Studies at Hanoi in Indo-China. Later he was appointed professor of Chinese at the École des Langues Orientales Vivantes and from 1906-09, he conducted an archaeological expedition in Chinese Turkestan, under the sponsorship of the Geographical Society and the Academy. From this and later expeditions, he brought back to the Louvre thousands of valuable Chinese, Tibetan, Sanskrit and Uigur manuscripts and paintings. He was made a professor at the Collège de France in 1911, and in 1921 he became a member of the Académie des Inscriptions et Belles-Lettres. During the First World War, he served in France and later in the Dardanelles, where he won the Victoria Cross for his heroism in taking command of a British regiment when all of its officers were killed. Later he was sent on diplomatic missions to Peking and Siberia. Dr. Pelliot had visited the United States a number of times to give lectures; his last trip was to attend the Pacific Relations Conference at Hot Springs, Va.

PENANG. See BRITISH MALAYA.

PENDERGAST, Thomas J., American politician: b. St. Joseph, Mo., July 22, 1870; d. Kansas City, Mo., Jan. 26, 1945. Democratic boss of Kansas City for many years, Pendergast was assailed by his opponents as the ruthless leader of a corrupt political machine which violated all the principles of decency and democracy, and hailed by his followers as a friend who never let them down and as a leader with an outstanding record in directing the affairs of government.

After attending St. Mary's College at St. Mary's, Kans., Pendergast went to Kansas City, where he worked in his brother's saloon. Soon he plunged into politics, and in time became a ward captain. He served for a period as deputy marshal. In 1900 he was appointed a street commissioner and thereafter held various offices, including that of city councilman. All the while his political prestige was improving. About 1911 his brother died, and "Big Tom," as the boss was called, took over the liquor business. After making himself the political overlord of the First Ward, "Big Tom" began to extend his influence into the Second Ward. Time and again he was forced to fight to hold his power. His enemies condemned his rule, asserting that gambling, prostitution and crime flourished in his political domain, with his connivance, but nevertheless, he gradually grew stronger and stronger until he developed into the acknowledged boss of all Kansas

City, and also wielded a wide influence in Democratic politics throughout the State of Missouri. He reveled in his bossdom. On one occasion he was quoted as saying: "Yes, sir, you've got to have boss leadership. Now look at me. I'm not bragging when I say I run the show in Kansas City. I am boss. If I was a Republican they would call me a 'leader,' but 'boss' is good enough for me."

As boss, Pendergast continued to run the Democratic Party in Kansas City until his political career came to an inglorious end in 1939, when he was sent to Leavenworth Prison after pleading guilty to a charge of income-tax evasion. He was released after serving a year and a day of a 15-months' sentence, his probation including a provision that he should abstain from politics for five years; but, under his lieutenants, his machine continued to function. However, it was defeated in the local elections in 1940 and again in 1942. Pendergast had been ill with heart trouble most of the time he was in Leavenworth, and he never recovered. Thus passed the most powerful boss the Middle West had known in many years—a boss who was credited with the ability to make or break senators, governors, legislators, judges, and other officials, and who, because of his influence with Missouri's large block of votes, was much sought after and coddled by aspirants for the presidential nomination in Democratic National Conventions.

PENICILLIN. See **AGRICULTURAL RESEARCH ADMINISTRATION**—*Bureau of Agricultural and Industrial Chemistry*; **CHEMISTRY**—*Drugs, Insecticides and Agricultural Chemicals*; **MEDICINE**—*Antibiotics*.

PENNSYLVANIA. Middle Atlantic state, United States; one of the original thirteen states. Population (1940): rural, 3,313,303; urban, 6,586,877; total, 9,900,180. Land area, 45,045 square miles, divided into 67 counties. Principal cities, with 1940 populations: Philadelphia, 1,931,334; Pittsburgh, 671,659; Scranton, 140,404; Erie, 116,955; Reading, 110,568; Allentown, 96,904; Wilkes-Barre, 86,236; Harrisburg, the capital, 83,893; Altoona, 80,214.

Chief State Officers, 1945.—Governor, Edward Martin; lieutenant governor, John C. Bell; secretary of state, C. M. Morrison; treasurer, Ramsey S. Black; auditor general, G. Harold Wagner; attorney general, James H. Duff.

Judiciary.—Chief justice of the state supreme court, George W. Maxey; associate justices, James B. Drew, William B. Linn, Horace Stern, Marion D. Patterson, Allen M. Stearne, Charles Alvin Jones.

Legislature.—The General Assembly (Senate, 50 members; House of Representatives, 208); meets biennially in odd years on the first Tuesday in January.

Education.—Public elementary schools (latest report, 1943-44 school year), 8,526; teachers, 33,888; pupils, 997,982; average yearly salary of elementary school teachers, \$1,596. Public senior high schools (1943-44), 80; teachers, 3,688; public junior high schools, 218; teachers, 5,453; public junior-senior high schools, 367; teachers, 7,080; all other public secondary schools, 562; teachers, 7,182; total students in all public high schools, 575,325; median yearly salary of secondary school teachers, \$2,073. There are 18 state teachers colleges in Pennsylvania. Total state appropriation for education (1943-44), \$71,021,350¹. Pennsylvania's compulsory school attendance law is effective for children between

the ages of eight and seventeen; for children who enter school between six and eight years of age, the law becomes effective on the date of admission.

Finances.—Following is a statement of Pennsylvania's finances for the fiscal year 1944-45, furnished by the state treasurer's office:

Balance in treasury, June 1, 1944	\$163,385,378.91
Receipts, 1944-45	698,282,313.45
Total	\$861,667,692.36
Disbursements, 1944-45	722,679,446.32
Balance, beginning of fiscal year May 31, 1945	\$138,988,246.04 ¹

¹ In addition to the cash on hand as of May 31, 1945, the state had invested in short term United States government securities with surplus funds par value of \$96,540,000, making total cash and securities (May 31, 1945), \$235,528,246.04.

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

Crop (and unit of production)	Average 1934-43	Production	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)	54,266	53,580	60,192
Oats (1,000 bu.)	25,296	23,912	25,590
Buckwheat (1,000 bu.)	2,406	2,940	2,460
Wheat (1,000 bu.)	18,249	20,288	20,626
Barley (1,000 bu.)	2,722	2,632	3,230
Rye (1,000 bu.)	1,002	735	744
Hay:			
Alfalfa (1,000 tons)	464	506	584
Clover and timothy (1,000 tons)	2,354	2,425	2,562
Tame (1,000 tons)	3,046	3,216	3,435
Tobacco (1,000 lbs.)	40,353	52,893	52,447
Potatoes (1,000 bu.)	22,318	19,140	17,825
Apples (1,000 bu.)	8,684	9,100	2,730
Peaches (1,000 bu.)	1,601	1,886	1,222
Pears (1,000 bu.)	513	464	126
Grapes (tons)	17,590	19,500	6,800

PERFORMING RIGHT SOCIETIES. These associations of composers and authors of musical works, and their publishers, exist throughout the world for the protection of performing rights included in music copyrights. With the now general recognition of the principle that the right to license public performance of music is vested in the copyright owner, the societies act as collection agencies for their members who, for this purpose, assign to the societies their performing rights.

Twenty-one such organizations, each representing a country, were grouped in the International Confederation of Performing Right Societies at the outbreak of the Second World War, with headquarters at Lausanne. Thus a worldwide activity was carried on in the issuing of licenses for performing copyright music, the member society in each country representing in that country all affiliated societies and the license issued by each society opening to the licensee the repertoires of all societies.

Chief performing right society of the confederation is the American Society of Composers, Authors and Publishers (ASCAP) which in 1945 was a leader in steps to restore the reciprocity interrupted by the Second World War. During the war, relations continued as usual among the United Nations societies, but worldwide activities were hampered and in some cases altogether halted. With the German occupation, the German society (STAGMA) absorbed the Austrian society (AKM). Much business perforce fell within the scope of the Alien Property Custodians of the various countries.

¹ Figure represents one half the state appropriation for the biennium, 1943-45.

During 1945 the Austrian society was rehabilitated, many new contracts were signed among the member-societies, and there was a definite approach to prewar operations. The German society was being reorganized with officers acceptable to the governments of occupied Germany. Among the important new contracts were those of ASCAP with PRS (England), SACEM (France), SGAE (Spain) and the societies of Argentina, Brazil and Uruguay. As existing contracts among the various members expired, they were being renewed, usually for longer periods than heretofore.

By the end of 1945, most of the 120 members of ASCAP in the armed forces had returned to civilian life. During the year the society had considerably expanded its coverage of the symphonic and concert fields, a task formerly left to individual members. The chief symphony orchestras and many concert halls had been licensed. In the field of television the society took assignments of its members' performing rights to the extent that it supervised the blind radio use of such rights. A special committee of the society continued a study of this new field.

Committees of the society also met with representatives of manufacturers and the makers of sound equipment to formulate a policy for licensing the use of music in industry to succeed ASCAP's wartime \$1 per year license. ASCAP already was sharing in substantial collections in England for use of music in industry.

Late in 1945, ASCAP's licensees in all fields approximated 30,000. Its membership was some 1,750 composers and authors and some 250 publishers. Return of peace brought renewals of many licenses suspended during the war period, with increased revenue. The ASCAP main office is at 30 Rockefeller Plaza, New York 20, N. Y., with 22 branches throughout the country. Deems Taylor was re-elected president for the 1945-46 term. John G. Paine is general manager.

American Society of Composers, Authors and Publishers.

PERLIS. See BRITISH MALAYA.

PERSIA. See IRAN.

PERU. A republic of South America on the Pacific coast between Chile and Ecuador, having an area of 482,258 square miles and a population of 7,395,687, of which about 50 per cent are white, 1 per cent are Negroes and Asiatics, and the remainder are Indians. Conquered in the 16th century by Pizarro, who subjugated the Incas, the country remained under Spanish rule for almost three centuries. Independence was established in 1824 after three years of revolutionary war. According to the constitution the executive authority is vested in a president, elected for six years and ineligible for a consecutive term. Legislative power belongs to a Congress, consisting of a Senate of 40 members and a Chamber of Deputies of 140 members, all elected for 6 years. After the elections of 1936, which were declared void, the Congress voted its own dissolution and conferred dictatorial powers on President Oscar Benavides y Benavides until 1939. He was succeeded on Dec. 8, 1939, by Dr. Manuel Prado y Ugarteche, elected for six years. On June 10, 1945, Dr. Jose Luis Bustamante Rivero, liberal and leftist candidate, was elected president. He assumed office on July 28. For administrative purposes the country is divided into 23 departments. The capital is Lima, (pop. 533,645). Other cities are Callao

(84,438), Arequipa (80,487), Cusco (45,230), Iquitos (35,539), Chiclayo (32,646), and Trujillo (41,589).

Religion and Education.—There is religious liberty, but the Roman Catholic religion is protected by the state and is the only religious instruction permitted in schools, state or private. An archbishopric has been located at Lima since 1545. There are 18 bishops and vicars general, 3,837 officials, priests, monks and nuns, and 4,230 churches, chapels, convents, and religious houses. All church property is owned by the state. All marriages must be civil, regardless of religion, and must be preceded by medical examination.

Elementary education is compulsory and free. In 1944 there were 7,647 elementary schools, with 13,084 teachers and about 500,000 pupils. There are 161 religious and state secondary schools with about 22,474 students. Budget appropriations for education in 1944 were 43,007,954 soles. (1 sol = \$0.4740 in U.S. money) The Universidad de San Marcos in Lima, founded by Charles V in 1551 is famous. Other state universities are located at Arequipa, Cusco, and Trujillo, and there is a large Catholic University at Lima.

Army and Navy.—There is a universal and compulsory military service, though in peacetimes only a limited number of the annual quota are called for active duty. The authorized establishment of the army in 1940 was over 2,000 officers and over 30,000 other ranks, but there are police and rural guards numbering about 10,000, including civil guards and mounted police. There is a war college at Chorrillos. The navy consists of two cruisers, two destroyers, four submarines, six river gunboats, one depot ship, one transport, and one oiler.

In the 1943 budget 50,000,000 soles were appropriated to the army; 15,000,000 soles to the navy, and 15,500,000 soles to the air force.

Communications.—There are 20,663 miles of national highways of which about one tenth are macadam or concrete. The Central Andean Highway, Lima to Oroya, extends 528 miles and makes possible a land-water journey from the Pacific to the Atlantic Ocean. Motor vehicles in 1943 totaled 27,917, including trucks and buses. Railways total 2,758 miles, of which about 2,000 miles are privately owned and over 600 miles owned by the state. The telegraph, telephone, post, and radio services are government controlled. There are 11,842 miles of telegraph lines, and the telephone instruments total 35,151. A waiting list of approximately 10,000 applicants for telephone services existed in Lima in the summer of 1945. Domestic aviation is intensely developed within the country and international services connect the principal cities with neighboring countries. A total of 56,189 passengers were flown by civil aircraft in Peru during 1944, an increase of 11 per cent over 1943.

Agriculture and Industry.—The country is divided into three distinct regions: the coast strip, west of the Andes, which contains the chief towns and most of the white population; the Sierra, or western slopes of the Andes; and the inward slopes (montaña) and boundless forests of the Amazonian basin. Agricultural pursuits occupy about 80 per cent of the population, chiefly in the coastal region, where 62,400 acres have been irrigated by the government in the past few years. Chief products are cotton, sugar, coffee, wool, hides and skins. The 1945 cotton crop was estimated at 62,100 metric tons, as

compared with the higher 1944 crop of 67,154 metric tons. Sugar output for 1945, it was anticipated, would be somewhat in excess of the 444,000 short tons produced in 1944. The 1944 rice yield was estimated at 83,879 metric tons as compared with the 82,500 ton yield in 1943. Approximately 4,094 metric tons of coffee were produced in 1943. Leaf tobacco production in 1943 was estimated at 1,385 metric tons, about the same amount (1,381 metric tons) having been produced in 1942. Over 2,000,000 pineapples were produced in 1943. Flax production in 1944, after regrading, was 1,300 tons of fiber and 2,000 tons of tow, as compared with 1,248 tons of fiber and 3,000 tons of tow produced in 1943. Peruvian production of cattle hides totaled 127,570 pieces during the first half of 1945, compared with 132,369 pieces in the same period of 1944.

According to the United States *Foreign Commerce Weekly* (April 1, 1944) "Peru's textile industry comprises some 5 cotton spinning mills, 10 cotton weaving mills, 7 woolen mills, 10 hosiery and knitting mills, and 7 rayon plants. Capacity operations were reported by all except those using imported rayon yarn. Peruvian cotton delivered to mills reportedly reached an all-time high in 1943, or nearly 250,000 quintals, compared with 246,000 in 1942 and 210,000 in 1941. . . . Approximately 8,000,000 sheep are shorn annually in Peru. The 1943 wool yield was estimated at 8,000 metric tons, compared with 7,700 tons in 1942. Domestic woolen mills, which operated at full capacity in 1943 . . . are estimated to have consumed 3,220 metric tons."

Mineral resources are found principally in the mountainous sections and are exploited chiefly by foreigners. Copper output in 1943 was 33,407 metric tons as compared with 35,332 tons in 1942. In 1943, 32,285 metric tons of zinc were produced, a little less than the 32,691 tons produced in 1942. Lead production in 1943 was 47,810 metric tons, as compared with 44,881 tons in 1942. The coal produced in 1943 amounted to 22,716 metric tons of anthracite and 164,280 tons of bituminous. Crude petroleum to the amount of 1,946,524 metric tons was produced in 1944, as compared with 2,058,651 metric tons in 1943. Other mineral resources include silver, gold, bismuth, vanadium, antimony, and iron.

Silk culture is being developed, and the eastern slopes of the Andes are well adapted to stock raising. Alpaca, sheep, and llama wool are exported. There are guano deposits in Huanillos, Punta Lobos, and other adjacent islands which had an output of 126,545 metric tons in 1940.

Finance.—Revenue in 1945 was estimated at 546,546,666 soles, and expenditures at the same amount, as compared with revenue and expenditures balanced at 459,619,000 soles in 1944. The budget for 1945 included 20,101,709 soles for public works and 109,123,162 soles for commerce; 58,834,648 soles for education; 64,383,014 soles for war; 20,719,472 soles for the navy, 28,642,910 soles for aviation, and 68,235,522 soles for government and police. The total debt of Peru, as of Dec. 31, 1943, amounted to 1,232,402,212 soles.

Foreign Trade.—Exports from Peru for the first 5 months of 1945 totaled 246,000,000 soles in value and 770,000 metric tons in quantity. These figures were well above the January-May 1944 export total of 214,000,000 soles, but tonnage was only 748,000 for the same period in 1944. Imports valued at 195,800,000 soles also were sub-

stantially greater than the figure for the corresponding period of 1944, which was 175,700,000. The quantity of imports was 182,000 tons or the same as the figure for the same period in 1944.

Although Peru sells more abroad than she buys, by almost 25 per cent, this balance of trade is "favorable" in name only, Peruvians point out, since profits on the bulk of exports go to foreign companies—largely British and United States—who own mines, oil wells, and sugar and cotton plantations as well as railroads and utilities.

In 1945 the value of imports was above that for any of the previous 15 years, while the trend in tonnage continued downward. Consequently Peru had a favorable balance of trade of 5,000,000 soles at the end of May compared with 38,000,000 soles on the corresponding date in 1944.

Principal Events.—Approximately 1,500 persons perished in a flood on January 17 in the town of Chavin, when a wave of water 150 feet high washed down the Mosna River in consequence of the breaking of a dike in a lagoon above the town. Heavy rains had preceded the catastrophe. The town was left buried under silt and rocks. On February 12, Lima reported that Peru considered itself at war with Germany and Japan; and on February 17, ambassadors of Peru and Ecuador signed an agreement in Rio de Janeiro, Brazil, ending a 150-year-old boundary dispute between the two nations. Marshal Oscar Benavides, former president of Peru, died on July 1 at Lima. It was reported on July 5 from Quito, capital of Ecuador, that troops of the latter country had formally occupied the river port and area of Vargas Guerra, following evacuation by Peru, in accordance with the terms of the agreement signed by the two nations earlier in the year. A quiet but tense presidential election campaign preceded elections held on June 10, and on July 22 the National Electoral Board proclaimed Dr. Jose Luis Bustamante Rivero, liberal and leftist candidate, president of the republic. Dr. Rivera, who scored an overwhelming victory, was backed by the *Frente Democratico* (Democratic Front), a coalition of heterogeneous liberal forces formed by the Apristas (members of the former APRA, since renamed *Partido del Pueblo*, or People's Party, by its leader, Victor Raul Haya de la Torre) and by the Communists, despite the fact that the latter had been excluded from the coalition by the Apristas. The unsuccessful candidate, Gen. Eloy Ureta, was favored by conservatives generally, by some liberals, and by the openly pro-Fascist Union Revolucionaria. The liberal victory in the election resulted in the establishment in Peru, for the first time, of a free press and of civil rights generally, and constituted a significant breach with repressive traditions of the past. The Peruvian Chamber of Deputies on August 6 approved a resolution urging the government to break relations with Spain until such time as free institutions are restored there, and another resolution was passed recommending the establishment of diplomatic and commercial relations with the Soviet Union. Productive activity in Peru during the first half of the year continued at the high level of 1944 in most industries, and foreign trade was at a record high level. Credit expanded, prices continued to advance, and there was an inflationary tendency. It was expected that agricultural production would continue on the same level as in 1944, and that Peru in 1945 would depend on outside sources for much wheat, flour, meat, lard, and fruits. Building activity remained active. The index of the cost of

living was 202 for June (1934-36 = 100), showing an increase of 9 points since January.

PESCADORES. A group of 49 small islands off the Chinese seaport of Amoy, 30 miles west of Formosa, called by the Chinese, Peng Hu; the Japanese knew them as Hoko Gunto. The total area of the group is 49 square miles, and the population numbers 70,000. Fishing is the chief occupation of the inhabitants. The Japanese constructed a formidable naval base at Mako (Makung Harbor), on Penghu, largest of the islands.

The Pescadores were ceded to Japan by China, following the Sino-Japanese war of 1894, by the Treaty of Shimonoseki, April 17, 1895. They were mentioned in the declaration following the Cairo Conference of November 1943 among the "stolen" territories to be returned by Japan to China. The naval base of Mako was raided by United States bombers from China on Aug. 15, 1944, and by carrier-based planes on October 12; and during the early months of 1945 attacks were continued from American bases in the Philippines. The Pescadores returned to Chinese sovereignty in September 1945 with the capitulation of the Japanese on Formosa, of which the group was an administrative dependency.

PETAÏN, Henri Philippe, French soldier and head of the French state, June 1940-August 1944: b. Cauchy la Tour, Pas-de-Calais, May 24, 1856. On Aug. 15, 1945, 89-year-old Marshal Pétain, head of the Vichy government during the German occupation of France, was convicted of treason and intelligence with the enemy, and sentenced to death, with a recommendation by the jury that the sentence be commuted to life imprisonment because of his great age. Two days later, the jury's recommendation was carried out by Gen. Charles de Gaulle.

French ambassador to Spain from early 1939 to May 1940, Marshal Pétain was called to Paris to act as minister of state and vice president of the government council. On June 16, he replaced Paul Reynaud as premier, and on June 22, despite the opposition of those Cabinet members who wanted to continue prosecution of the war against Germany, he signed an armistice with the Nazis. On July 2, he moved his government's headquarters to Vichy. Thereafter, he followed, for the most part, German dictates as to his country's administration. In April 1942, Pétain reinstated Pierre Laval, whom he had ousted as vice premier in 1940, and in mid-November, gave Laval authority to make laws and issue decrees. After the North African invasion in that same month, he broke off relations with the United States government.

On Aug. 21, 1944, Marshal Pétain left Vichy under German escort. In a message to the French people, he declared that he had been compelled by the Germans to leave France. Kept in Belfort, in eastern France, for a few weeks, he was transferred to a small resort in southern Germany. In April 1945, he entered Switzerland with the intention of crossing that country and surrendering himself to the French people. On April 26, he was arrested when he entered France, and was taken to Paris to await trial.

In the First World War, Marshal Pétain commanded the defense of Verdun, February-May 1916, and in 1918, was commander in chief of all French armies under Marshal Foch. He was made a marshal of France in the latter year.

From 1922-31, he was inspector general of French armies; from 1925-26, commanded French troops in Morocco. He served as minister of war in 1934. Pétain was vice president of the Superior War Council between 1918 and 1940.

PETROLEUM. Toward the close of 1944, the oil industry in the United States, long since short of manpower and materials, was concerned over shortages of aviation gasoline and fuel oil. Stocks of crude and petroleum products in general were still on the decline. And, of course, there was no prospect of relief for civilian users of gasoline. The situation changed quickly in 1945 when military demands began to ease off, as was evident by the authorization June 22 of an increase in the value of ration coupons from four to six gallons, and by the announcement August 15 that rationing of gasoline and fuel oil was ended. The joint army-navy petroleum board had given notice of a reduction in its takings of oil. Thereupon the Petroleum Administration for War (PAW) declared its intention to lose no time in lifting the restrictions and regimentation imposed by it, and stated further that it hoped to liquidate itself by the end of the year.

One of PAW's first moves was to lift the ban on the making of premium gasoline, and the ban against conversion from coal to oil in home-heating. There followed a removal of restrictions on refiners, and they were ready almost overnight with reconversion to the production of quality motor fuel. In a short time virtually all restrictions on the sale, use and marketing of petroleum products had been removed.

The changed situation meant a cutback in crude production, perhaps to 1941 levels or a million barrels less output per day. But increase of activity in foreign oilfields was predicted, also a further increase in our oil imports.

A peak of crude production occurred in mid-July with an average of 4,944,000 barrels daily, and in refinery runs to stills in mid-August with an average of 5,140,000 barrels daily.

The payment of subsidies on stripper-well production had a fair chance of continuing during the rest of the fiscal year, but extra transportation costs could not be expected to continue.

Imports and Exports.—Statistics given out by the Bureau of Mines in July disclosed that wartime imports of oil had been as follows:

	Crude (thousands of barrels)	Refined products (thousands of barrels)
1939	116,883	25,965
1940	78,970	41,089
1941	75,592	46,536
1942	12,297	23,669
1943	13,833	49,066

The bureau pointed out that receipts of refined products in 1943 were the highest on record. These included: kerosine, 375,000 barrels; distillate fuel, 15,992,000, and residual fuel, 26,567,000 barrels. Exports of motor fuel in 1943 amounted to 51,381,000 barrels, the highest since 1930. Other products exported in 1943 were: kerosine, 4,619,000 barrels; distillate fuel, 24,862,000; residual fuel, 16,766,000, and lubricating oil, 8,756,000 barrels.

Other figures show that in comparison with crude imports averaging 37,000 barrels daily in 1943, they more than tripled to 122,000 in 1944, went on to 170,000 in the early part of 1945 and averaged around 260,000 barrels daily near mid-July.

Reserves.—Total proven reserves in the United States at the end of 1944 were estimated by the American Petroleum Institute (API) to be 22,-

131,652,000 barrels, an increase of 389,079,000 barrels during the year. Additions to reserves by discoveries of new pools in 1944 amounted to 511,308,000 barrels, and by extensions of fields and revision of figures, 1,556,192,000 barrels. Against total reserves was charged a production of 1,678,421,000 barrels of oil during 1944.

Besides our reserves of crude as above given in barrels, equivalent to some 3,200,000,000 tons, the Bureau of Mines estimates some 14,500,000,000 tons of shale oil and 2,800,000,000 tons of natural gas.

Total known oil reserves outside the United States, as set forth in testimony before the Senate oil investigating committee, were estimated at 30,500,000,000 barrels, owned or held under concession by these interests: American, 10,125,000,000; British-Dutch, 12,250,000,000; USSR, 6,000,000,000, and other interests, 2,125,000,000 barrels.

Reserves of the Near East have been estimated by PAW at 15,500,000,000 barrels. And there are, particularly in Kuwait, besides the proven, extensive reserves indicated.

In the matter of United States reserves, the Senate war investigating committee—chairman, James M. Mead—expressed the opinion in its fourth annual report that we cannot "oil another war," that with 20 per cent of known reserves we were supplying 80 per cent of the war's needs.

Oilfields.—Well completions in 1944, as given by PAW, totaled 24,154, of which 3,881 were wildcats. For 1945 some 27,000 wells were scheduled, including 5,000 wildcats. Completions the first six months of 1945, in the *Oil and Gas Journal* tally, were 12,820 as against 11,356 in the first half of 1944, and they were classed as 6,908 oil wells, 1,318 gas wells, 3,512 dry holes, and 1,082 service wells. The wildcat completions, numbering 2,055, resulted in 270 oil wells, 64 gas, and 1,721 dry, i. e., about one wildcat in six made a producer.

In field developments, Oklahoma made important contributions by extension of the West Edmond pool near Oklahoma City and the discovery south of there in McClain County of what appeared to be a major field. Mississippi and Alabama added new pools, and Florida a second well. In the Texas Gulf Coast field, a world's deep-hole record of 16,655 feet was made in a Brazoria County well. In East Texas about Carthage a great gas field is under development, the average well good for 50,000,000 cubic feet per day, some rated two to three times greater. A half-dozen gas lines have or will tap the supply, and a Fischer-Tropsch plant is projected for the purpose of converting natural gas into petroleum liquids. In West Texas further discoveries have been made in the deep Devonian and Ellenburger formations, one of the latest of these fields in Ector County and known as the TXL. These deep wells cost \$150,000 to \$250,000 average to complete.

In Wyoming, the production of black oil was stimulated by war demand. Colorado's Rangely field was revived and extended, a pipeline outlet to Wyoming to be given. The Bureau of Mines laid the cornerstone for an oil shale laboratory at Laramie, Wyo., and began construction on an oil shale plant near Rifle, Colorado.

Crude production in California had been greatly increased during the war. Besides this, shipments of sour crude arrived from West Texas, reaching a peak of over 40,000 barrels daily in July. There were also refined products coming

from the mid-West to her ports to the extent of some 100,000 barrels daily. A production of 65,000 barrels daily from the Elk Hills Naval Reserve as set by Congress was attained months ahead of schedule with the completion of some 200 wells. In late August the production was cut back to 15,000 barrels daily.

In the following table, the domestic output of crude oil is given by states for two full years and for the first six months of 1944 and 1945 as a means of comparison.

CRUDE OIL PRODUCTION BY STATES (thousands of barrels)

Authority: *Oil and Gas Journal*

	1943	1944	First six months 1944	1945
Alabama	43	8	75	
Arkansas	27,600	29,418	14,579	14,505
California	284,188	311,793	151,032	165,855
Colorado	2,320	2,944	1,354	1,871
Illinois	82,260	77,413	39,095	37,326
Indiana	5,283	5,118	2,559	2,321
Kansas	106,178	98,762	49,553	48,286
Kentucky	7,883	9,621	4,232	5,052
Louisiana	123,592	129,207	64,285	63,909
Michigan	20,768	18,490	9,445	8,744
Mississippi	18,807	16,337	7,667	9,305
Montana	7,916	8,627	4,337	4,321
Nebraska	635	417	208	157
New Mexico	38,896	39,555	20,284	18,890
New York	5,059	4,697	2,363	2,253
Ohio	3,322	2,937	1,500	1,335
Oklahoma	123,152	124,616	60,703	67,704
Pennsylvania	15,757	14,118	7,296	6,109
Texas	594,343	748,122	355,771	389,958
West Virginia	3,349	3,070	1,570	1,443
Wyoming	34,253	32,388	15,667	20,520
Miscellaneous	52	60	32	41
Total	1,505,613	1,677,753	813,540	869,980

Refining.—Runs to stills increased at a higher rate than crude production in 1944, and gasoline production showed an increase of 22 per cent during the year. Butadiene plants, in the synthetic rubber program, operating on petroleum products reached capacity, yielding about 400,000 tons. The products used represented a net consumption of less than 1 per cent of daily crude oil production. Curtailment of the 100-octane program, and consequent saving of tetraethyl lead, allowed refiners to increase their production of premium grade civilian gasoline early in August. Some refiners were instructed to switch to superfuel in part. A barrel of superfuel takes two barrels of 100-octane gasoline to make, and its rating, as disclosed by PAW, is 130-octane. Many refiners cut down operations of high octane plants to meet more normal demands.

Figures for some refined products are included in a summary made by *Oil Weekly* and based upon reports of the Bureau of Mines and API, as follows:

	First six months (thousands of barrels) 1944	1945
Domestic production, all petroleum liquids	862,468	927,691
Domestic production, crude oil	813,540	870,314
Stocks, beginning of period	484,086	477,089
Stocks, end of period	472,993	452,480
Crude stocks, beginning of period	241,672	220,862
Crude stocks, end of period	229,631	220,781
Runs to stills	809,860	867,476
Motor fuel production	356,110	400,710
Motor fuel stocks, end of period	74,723	79,739
Gasoline production	345,403	388,813
Gasoline stocks, end of period	70,246	74,689
Kerosine production	39,689	39,315
Kerosine stocks, end of period	9,825	9,676
Distillate fuel oil production	118,508	124,976
Distillate fuel oil stocks, end of period	34,242	32,213
Residual fuel oil production	227,959	239,416
Residual fuel oil stocks, end of period	46,649	35,548

Oil Policy.—Early in the year Senator O'Mahoney succeeded the late Senator Maloney as

chairman of the special Senate oil policy committee. In its first formal report the committee outlined a program of inquiry into virtually all phases of the oil industry at home and abroad. It began hearings in May, taking up first the subject of cartels as related to oil. Other subjects on the program included: sources of petroleum in the United States, under which were embraced also factors related to production such as conservation and special laws, taxation, price, etc.; the independent company and its problems; post-war disposal of pipelines, refineries and tankers; petroleum requirements of the United States and the world; our petroleum interests in foreign countries.

Testimony during June hearings indicated that our domestic reserves were ample for all defense needs and for all or nearly all industrial needs for the next twenty years. Some witnesses expressed opposition to government competing in business, and to its policies and controls. The Bureau of Mines gave information concerning the capture of German research records and their advantage in the development of synthetic fuel in America.

A representative of the State Department expressed approval of a new draft of the Anglo-American oil treaty. The treaty had been signed in August 1944, only to meet with such criticism from the oil industry that the president withdrew it from Senatorial consideration. A redraft was then made, approved by the Petroleum Industry War Council (PIWC) in December, and submitted to the State Department for study. In September, PAW's Ickes headed an American delegation going to London to renegotiate with the British. A new agreement was signed September 24 and announced as a preliminary step to an international meeting and agreement. A six-man commission is provided to study matters of mutual interest.

Testifying before the special committee in July, a representative of the army specified four recommendations to be included in a national oil policy: pledge by the government to protect our nationals abroad in the pursuit and development of their legitimate enterprises, and to support them in their legal rights; encouragement to the foreign oil enterprises of our nationals with a view to importation of oil into the United States consistent with the maintenance of a progressive and economically stable domestic petroleum industry; early adoption and implementing of the Anglo-American oil treaty; acquisition of military reserves outside the United States when such a course is determined to be in the national interest. Testimony of other witnesses also advocated a strong foreign policy for the United States—in the words of one, "a steady, consistent and effective government policy."

Oil-Powered Warfare.—In April it was estimated that 95 per cent of Germany's crude oil supplies and 75 per cent of her synthetic oil plants had been captured. The same month brought her oil production nearly to an end. Hanover, seat of her main oilfields, was taken by the Americans early in the month. The large synthetic oil works at Leuna, producing 250,000 gallons of gasoline a day, were occupied about the middle of the month, as were the Fischer-Tropsch plants, also in the Leipzig area. Germany literally "ran out of gas." Yet, as an American investigating committee later reported, her synthetic industry was in process of going underground and would have been ready to operate in September.

Similar treatment for Japanese oil supplies began with the first heavy attack delivered in May on large storage in southwest Honshu and on a small island off Kyushu. By mid-year Japan had lost the producing fields of Burma and those of Borneo through recapture. Also, by Russian cancellation of treaty-rights to North Sakhalin oil, Japan lost that source, while virtually all the other occupied oilfields were subjected to effective blockade. But she had been storing oil for many years and had built up a synthetic production. It was these facilities which became the objectives of Allied bomber attacks.

War needs forced England to build a pipeline system extending from Liverpool to the south coast. To this was added Operation "Pluto" (Pipe Lines Under the Ocean), a score of crossings of specially designed pipe under the English Channel, the first of them operating to Boulogne in October 1944. On the continent three systems of pipelines advanced with the armies, from Marseilles, Cherbourg and Antwerp respectively, each system reaching the Rhine and throwing a line across it. From pipeline outlets, and railheads, POL (petrol, oil, lubricants) trucks of the United States Army Motor Transport Service operated. As announced by PAW, the Army Transport Corps delivered an average of five million gallons daily of POL between D-day and V-E Day; and that, from Pearl Harbor on, our expenditure was 22 billion gallons of petroleum products, not including navy's use of fuel in transporting men and materials.

For the Pacific area, it was estimated that a barrel of oil produced there was worth five obtained from America, e.g., it required 21,000 barrels of fuel oil to deliver 100,000 barrels of gasoline from the Gulf Coast to the Philippines.

In an article published in mid-year, the deputy petroleum administrator estimated that since Pearl Harbor the United States had furnished 75 per cent of the 8 billion barrels of crude produced by the United Nations, 82 per cent of the 3 billion barrels of gasoline, and 85 per cent of the aviation gasoline.

World Production.—Later figures on Venezuela crude production indicate a total for 1944 of some 257,000,000 barrels or a 43 per cent increase from 1943, to include a doubling of output in the newer fields of the eastern part to some 74,000,000 barrels. In mid-July, Venezuela was producing over 950,000 barrels daily. Cuba reports a second producing field, and Saskatchewan her first.

In the Soviet Union, new production was developed in the Baku region, but the principal activity centered in the less exploited fields between the Volga River and the Ural Mountains. New areas were opened just east of the Caspian Sea and in central Asia. Russia, now in possession of Poland's major oilfields, leaves that country with a production that totaled only 65,000 barrels for the month of June. Russia receives also the production of Rumania, partly as reparations and partly in trade, for the movement of which new pipelines, one going to Odessa, will supplement the line to Constanza.

During the war England developed a small oil production in Lancashire. Holland also joined the ranks of oil producing countries, her oil pool extending into Hanover.

In the Near East, Iraq expects to double production when a second pipeline to Haifa is completed. A refinery of 80,000 barrels daily capacity was in prospect for Haifa. Iran also increased her output, in step with expansion of the Abadan

refinery. On Bahrain Island, refinery capacity was doubled to 60,000 barrels daily, while on the mainland, in Saudi Arabia, a new refinery of 50,000 barrels daily capacity was under construction at Ras Tanura. Surveys for the thousand-mile pipeline across Arabia have been made for alternative routes. The Arabs insist the terminus must be in territory predominantly Arabic, but it has been announced in the United States that the terminus will be at Haifa. The sheikdom or principality of Kuwait has been under development by joint British and American interests which completed a first well in 1938 and have drilled others. Operations are scheduled to be resumed and a short pipeline built to the Persian Gulf. Production already secured is estimated at 75,000 barrels daily.

Reportedly the richest oil deposit in China was discovered in 1944 at Kiangyu 200 miles northwest of Chungking, with development to begin in 1945. The war has given the world its longest pipeline, Calcutta to Kunming, about 1,800 miles. Petrol and Diesel oil began flowing into Kunming the past spring, the fruition of a task kept secret and beset with all sorts of heart-breaking difficulties. See also CHEMISTRY.

PHILATELY. Stamps of 103 governments were chronicled for addition to the Standard Catalogue of 1945. The total number of stamps of all kinds, including 22 United States revenue and 1 war savings stamps, was 1,341, only 49 less than in 1944. In this total were 970 postal and semi-postal issues, 261 air mails, 34 officials, 21 postage dues, 12 postal tax, 8 military, 6 special delivery, 3 postal fiscal, 2 parcel post and 1 insured letter. As in other recent years, the percentage of overprints, surcharges and reissues was high and only 346 new designs were produced.

China led the world in the number of stamps catalogued—76, followed by France with 74 and Russia with 50. The Central and South American countries continued to lead in the number of air mail stamps issued. Venezuela alone produced

38. The postage and air mail issues included 218 commemoratives.

The Vichy government issues, invalidated after the liberation of France and apparently never used in the colonies, were duly chronicled although their final status remains in doubt. They are handsome stamps but may prove interesting only as souvenirs of a vicious regime.

Chinese issues continued complicated as political shifts and economic instability necessitated a great number of overprints, surcharges and hurried reissues. It will be many months before all of the wartime Chinese stamps can be fully catalogued.

Even before V-E and V-J Days, stamps from the Axis countries arrived in the United States in considerable quantities. Among them are many so-called rarities which may well prove worthless and careful collectors should refuse to buy until legitimate prices can be established.

Two distinguished series of stamps were issued by the United States—the Roosevelt memorials and one honoring the marines, army, navy, coast guard and maritime service. The 5-cent of the Roosevelt series and the maritime service stamp will be issued in January and February 1946, respectively.

The San Francisco Conference 5-cent stamp, whose design and wording were suggested by the late president, was issued on the opening day of the conference, April 25. First day sale at San Francisco—\$60,000—was the largest for any United States 5-cent stamp; 3,959,403 were sold in Washington on the second day. This stamp was the subject of Mr. Roosevelt's last directive. It had been designed originally with the inscription "Toward United Nations, April 25, 1945," Mr. Roosevelt's words, but without his name. It was planned that he should buy the first sheet at the opening of the conference. Plate numbers 23262, 23263, 23264 were assigned to the stamp in this form but these plates were never sent to press. After Mr. Roosevelt's death April 12 his name was added to the stamp, the new plates, with numbers 23265, 23266, 23267, were printed and the stamps were delivered in San Francisco in time for sale April 25.

Postal routes and services throughout the world were opened as the Allied armies and navies advanced—to Guam January 11, the Philippines January 12, Belgium February 2, etc. In many of the French post offices American troops found stocks of Vichy stamps overprinted "R F," ready for use immediately after liberation. These were among the first of the many European Victory issues. Two of the best of these are the Luxembourg "Thanks to the Allies" set and the French "Victoire." The former comprises four stamps with flags and inscriptions expressing gratitude to France, Russia, Great Britain, and the United States.

The French stamp was designed by Edmund Dulac and shows a beautifully drawn head of Victory. A number of values have been issued and more are to come.

In the United States, popular collecting continued to follow the course of the war, with particular interest concentrated on the San Francisco, Roosevelt, and Armed Services issues and the several Victory stamps from Europe and the Pacific. Great potential interest was shown in the 1941-45 enemy issues and these are certain to be in great demand. None was included in the 1946 Catalogue, published in 1945, and it is probable that "official" and complete information will not be available until sometime in 1946.

Next in order of collecting interest were the stamps of China. Their great variety and the unusual possibility for the discovery of unsuspected rarities have made them especially attractive to the more advanced collectors.

DEOCH FULTON,
Scott Stamp and Coin Company, Inc., New York.

PHILIPPINES (COMMONWEALTH OF THE PHILIPPINES). An archipelago in the Pacific Ocean comprising some 7,083 islands (6,621 of which have an area of less than one square mile), with a total area of 115,600 square miles. Luzon and Palawan, farthest west of the larger islands, are between 500 and 600 miles from the coast of Asia, Manila being 6,929 miles by steamship west southwest from San Francisco, and some 1,900 miles southwest of Tokyo.

Discovered by Magellan in 1521, the islands were conquered in 1565 by the Spaniards, who ruled them until 1898, when they were ceded to the United States on the conclusion of the Spanish-American war in return for a compensation of \$20,000,000. After a native revolt which lasted from 1899 to 1902 they were administered by a governor general until the passing by the United States Congress of the Tydings-McDuffie Act, in March 1934, providing for the independence of the islands after a 10-year period as a commonwealth under a Filipino executive. The act provided for the adoption of a constitution, and for the establishment of a government autonomous except for certain responsibilities to be assumed by the United States during the period of transition. The constitution called for in the Tydings-McDuffie Act was approved by the president of the United States in March 1935, and ratified by the Philippine electorate on May 14 of the same year. It provided for a president and national assembly of not more than 120 members, to be elected for three years. The presidential term was at first to be six years, but this was later amended to four, with eligibility of the incumbent for one immediate re-election. Manuel Quezon was elected president in 1935 and was re-elected in 1941. On Dec. 10, 1941, three days after the raid on Pearl Harbor, Japanese forces (the Japanese had begun to settle in the Philippines, especially in the Davao area, soon after the Spanish-American War) landed on Luzon, occupied Manila on Jan. 2, 1942, and on May 6 forced the surrender of the last American forces at Corregidor.

On Sept. 26, 1943, the Japanese set up a puppet Philippine Republic, with José P. Laurel, interior commissioner of the otherwise exiled Commonwealth government, as president elect, and on October 15, Tokyo announced the granting of Philippine "independence." In the meantime, while American-Filipino guerrillas continued to resist the Japanese, President Roosevelt pledged freedom to the Philippines following the war. Identically-worded resolutions were offered in both houses of the United States Congress pledging immediate independence, and on November 13 a bill was approved extending the terms of President Quezon and Vice President Sergio Osmena until the Japanese had been expelled.

On June 30, 1944, President Roosevelt signed a resolution passed by both houses of Congress granting the Philippines independence immediately following the expulsion of the Japanese, not later than July 4, 1946, with provision for United States military and naval bases as a defense measure. This act, confirming and hastening the extension of Philippine independence,

was passed a month before the death (on August 1, at Saranac Lake, N.Y.) of Manuel Quezon (q.v.), first president of the Philippine Commonwealth. Vice President Sergio Osmena at once assumed the presidential office.

Principal Islands and Cities.—Over 90 per cent of the total land area of the Philippines (115,600 square miles) is included in the 11 largest islands: Luzon (40,420 square miles), Mindanao (36,537), Samar (5,050), Palawan (4,550), Panay (4,448), Negros (4,205), Mindoro (3,759), Leyte (2,785), Cebu (1,703), Bohol (1,492), and Masbate (1,262). Other island groups included in the Commonwealth are the Babuyans and Batanes, north of Luzon, the Calamian and Cuyo groups northeast of Palawan, and the Sulu group, steppingstones between Mindanao and Borneo. The estimated population in 1941 was 16,971,100, almost all of Malayan stock, foreign born residents including 117,487 Chinese, 29,059 Japanese, 8,709 Americans, 4,627 Spaniards, and 2,439 other Europeans. Manila, on Manila Bay, chief port and business center, is the administrative capital. It had a population of 673,000. Other important centers are Cebu (population 155,100), Zamboanga (137,700), Davao (103,100) and Iloilo (94,300). Baguio (27,000) in Mountain Province, Luzon, is the summer capital.

Religion and Education.—Roman Catholicism is the dominant religion, with 12,603,365 adherents. There were in 1939, 1,573,608 Aglipayans (an independent Filipino sect), 378,361 Protestants, 677,903 Mohammedans, 626,008 Pagans, 47,852 Buddhists, and 13,681 Shintoists.

Education is free and compulsory. It is publicly conducted and co-educational, English being a required subject during the ten-year interim period. There were in 1940–41, 12,369 public schools, with an enrolment of 2,027,957 pupils. There were many special schools, including the Philippine Normal School and 6 regional normal schools, the Philippine School of Arts and Trades, and 26 provincial trade schools, the Central Luzon Agricultural School and 23 provincial agricultural schools, and about 182 farm settlement schools. Higher education was provided in the University of the Philippines, with 7,567 students, and 89 accredited private institutions of higher learning, including the University of Santo Tomás, founded in 1611. In addition there were 468 private schools of various grades of instruction, with 168,584 students.

The 360 newspapers and magazines, published in English, Spanish, and other languages in 1940, had a total circulation of 2,224,340.

Finances.—Total expenditures of 111,675,480 pesos and receipts of 102,982,082 pesos were anticipated in the 1941–42 general budget submitted to the National Assembly on Feb. 11, 1941. (1 Philippine peso = U.S. \$.50) During the fiscal year 1940–41 expenditures had been 167,767,838 pesos, receipts, 158,667,903 pesos. The bonded debt on June 30, 1941, was \$56,065,000, with a sinking fund, however, of \$20,053,931.

Expenditures totaling 137,136,620 pesos were called for in the 1945–46 fiscal year ending June 30. Estimates of tax revenues did not exceed 10,000,000 pesos.

Production.—Of a total area of 73,214,700 acres in the islands, 63 per cent is suitable for cultivation but only 14.1 per cent was cultivated in 1940. Principal products are copra, sugar cane, unhusked rice, Manila hemp, corn, tobacco, and maguay. The islands are among the fore-

most producers of copra and coconut oil in the world. The Philippines in 1941 produced an estimated 21 per cent (3,430,000,000 nuts) of the world output of coconuts. The output in 1940 of raw sugar, including muscovada and panocha, was 984,755 metric tons. It was estimated that the output of sugar in 1945-46 would be only 300,000 to 400,000 tons because of war damage, and that full quotas could not be expected until the 1947-48 season. The tobacco output in 1940 was 36,033,200 kilos. Bananas are the principal fruit, but mangoes, papaya, lanzones, chico, mandarins, and oranges are also grown. The cultivation of rubber had been increasing before the war, until approximately 5,000 acres were being planted annually. Stock raising had been widely practiced, livestock including 3,015,400 water buffaloes, 1,396,200 cattle, 343,500 horses and mules, and 4,446,800 hogs.

The forests, of which about 97.5 per cent belong to the government, yield cabinet and construction timber, gums and resins, vegetable oils, rattan and bamboo, and dye barks and woods. Destruction of the Philippine lumber industry in the war was estimated at more than 50 per cent of the prewar milling capacity. Mineral resources include gold (of which the output for 1940 was 1,096,745 fine ounces), chromite, iron, manganese, coal, rock asphalt, asbestos, guano, and silica.

Manufacture of embroideries, buntal hats, mats, and pottery, had been carried on largely in the homes, but by 1940 there were, in addition to 46 sugar centrals and four refineries, eight coconut oil mills, 70 distilleries, 131 lumber mills, seven soap factories, three textile mills, six cocoa factories, eight shoe factories, 92 cigar and cigarette factories, and 2,391 rice mills.

In 1945, industrial production, damaged and dislocated by the war, remained substantially at a standstill at the midyear, but great efforts were under way to speed recovery. In Manila alone war damage to property was estimated on September 19 by the Philippines Census Statistics Bureau at \$500,000,000.

Trade.—Exports for 1940 were valued at 311,849,047 pesos, imports at 269,462,542 pesos. Rating fifth, in 1939, among buyers of goods from the United States, including especially machinery, automobiles and tires, electrical goods and petroleum products, the people of the Philippines claimed to have the highest standard of living among the countries of the Far East. Principal exports, of which the United States in 1940 purchased about 85 per cent, were manila hemp (abacá) and other fibers, sugar, copra and coconut oil, dyewoods, and chromium.

Communications.—In 1940, there were 14,235 miles of highways in the islands, of which over 6,500 were first-class. Total railways mileage was 844, of which 712 miles were government owned. There were 1,050 post offices and 459 telegraph offices.

Principal Events.—Public opinion throughout the world was stirred early in 1945 by accounts of atrocities committed against war prisoners and civilians in the Philippines by the Japanese, who were angered by continued civilian resistance, by increasing American air and sea raids, and by growing, convergent American military victories. These accounts included the description of a typical massacre of inmates, foreigners, and other refugees in the Concordia Convent in Manila, where the Japanese set fire to the buildings and then machine-gunned those emerging to escape the flames. Over 3,000 persons were reported to

have perished in this holocaust. Following invasion of the island of Luzon by American armed forces under General Douglas MacArthur on January 10, Manila was entered by American troops on February 3, and the fall of the city was proclaimed on February 6. The island of Mindanao was invaded on March 10; Cebu on the 26th; and Negros on the 29th. Cebu was cleared of Japanese forces by April 21, and thereafter American progress was rapid. The entire island of Luzon was declared liberated on June 28; and on July 5 it was announced that the Philippines were completely freed.

Civil administration had been turned over to the president of the Philippines, Sergio Osmeña, as early as February 27, but participation in the government by Gen. Douglas MacArthur's military forces was not declared officially ended until September 1. Meanwhile the political picture had considerably clouded. In the rice-growing provinces of central Luzon, peasant guerrilla forces known as the Hukbalahap (a native word meaning People's Anti-Japanese Army), estimated at figures ranging from 20,000 active fighters and 50,000 reserves to adherents numbering 150,000, were disarmed, and their leaders, Luis Taruc, commander in chief, and Castro Alejandrino, vice commander, were jailed. At the same time, many figures in the government who had collaborated openly with the Japanese, including representatives of the regular military forces and certain members of the Philippine legislature, remained in power, headed by Manuel Roxas, who has been a prominent figure in the Japanese puppet government of Jose P. Laurel. Roxas had helped formulate the constitution of the puppet government, had headed its Economic Planning Board, and then had become secretary without portfolio in Laurel's Cabinet. Following his incarceration as a collaborationist when the Philippines were freed, he was subsequently liberated, re-entered politics, was elected president of the Senate by a collaborationist majority in the legislature, and became a candidate in the presidential elections then scheduled for November 1945. In this campaign he threatened to overshadow President Osmeña. The latter, committed to a platform advocating independence, appeared to have lost much popularity. The president was accused by political opponents of having weakened his stand for complete independence, of having compromised repeatedly with collaborationists, of inaction, of hesitancy, and of succumbing to reaction. Popular dissatisfaction grew. In August it was estimated that living expenses had climbed to eight times the prewar level; and the black market flourished openly, charging as much as ten times the official ceiling prices. Liberal opposition groups formed the Democratic Alliance, a coalition including most of the liberal opposition groups, including the disarmed Hukbalahap resistance movement. The Alliance was formed too late to influence markedly the impending presidential elections, but it offered a long-range progressive political platform, including land reform; which promised to affect considerably the political future of the Commonwealth.

In Washington, President Harry Truman reiterated on May 5 the intention of the American government to grant independence to the Philippines as soon as possible, adding—"I hope to be able to accept the invitation of President Osmeña to visit Manila at the inauguration of the Philippine Republic." Meanwhile President Truman dispatched Senator Millard E. Tydings,

PHILIPPINES

American artillery throws shell after shell across the Pasig River into the walled city of Manila.

To symbolize the rebirth of culture in the Philippines, the Manila Symphony Orchestra gives a concert in the ruins of the Santa Cruz Church, Manila.

chairman of the Insular Affairs Committee to the Philippines to examine conditions and make recommendations. Senator Tydings' report, submitted in June, advocated no change in the policy of granting the islands independence, and included the proposal that the United States grant the Philippines the sum of \$100,000,000 in consideration of damages sustained in the war, liberal loans, and a liberal tariff policy. It was reported in September that the elections scheduled for November had been postponed until April 1948, following the receipt by President Osmena of a message from Secretary of the Interior Harold L. Ickes, proposing that accused pro-Japanese collaborationists in the Philippines be brought to trial before elections were held.

On September 6 President Truman appointed Paul V. McNutt, War Manpower Commissioner, to the post of High Commissioner to the Philippines, an office which he had held from 1937 to 1939. On September 23, the president requested Congress to authorize a general election in the Philippines April 30, as an emergency measure which would enable newly elected officers to take over by May 28.

Gen. Tomoyuki Yamashita, Japanese commander in the Philippines during the last eleven months of the war, surrendered at Baguio, Luzon, and was made a prisoner of war, together with his officers. General Yamashita's trial for the atrocities committed throughout the islands under his jurisdiction began on October 8. He was found guilty on December 7, of condoning atrocities committed by his troops, and immediately applied to the United States Supreme Court, which granted him a reprieve.

PHILOLOGY. Scholarly activities in the fields of languages and literatures may be grouped into two classes: (1) those works (predominantly linguistic) which owe their existence to the demands of the immediate pressure of world events; and (2) those works (both linguistic and literary) which have been carried on in spite of, or resumed after, the actualities of war. In the first category we may mention with particular emphasis the commercial publication of a number of basic language courses with record sets which had hitherto been available to service personnel only; W. and J. Moulton's *Spoken German*, B. Bloomfield's *Spoken Dutch*, and C. Hockett's *Spoken Chinese* were among the first volumes to appear (New York). Most of the accomplishments referred to in the following bibliography are more directly traceable to the second category. The periodical *Word*, published by a group of American and European scholars, came out in April 1945 for the first time. Toward the end of the year the Bell Telephone Company announced an invention which may well prove to be of immense importance for the understanding of language: a technique whereby the records of the sound waves that make up speech are made visible, in terms of time, pitch, and amplitude, in such a way that a trained person will recognize the speech utterance in question without hearing it. To judge from the scant reports now available, the technique was designed as a speech teaching device for the deaf. Since, however, one of the chief difficulties in the theoretical mastery of language structure is the proper correlation of the acoustic properties of speech sounds with the finite number of sound distinctions that are meaningful in a given language, the new method promises to aid linguists in bridging the gulf between gram-

mar on the one hand, and the purely physical study of speech on the other. (See R. K. Potter in *Science* 102, 463-70.)

The general scope of the work accomplished in the last year is best gauged by listing selectively such independent publications as may be regarded representative of the main trends. (It goes without saying, however, that much scholarly effort of the highest quality has gone into numerous periodical publications.)

The function of language in general rather than its structure has been dealt with by a philosopher, C. L. Stevenson, in *Ethics and Language* (New Haven). Of general interest to all kinds of philologists is H. J. Chaytor's *From Script to Print* (Cambridge, England). Classical scholars have contributed such works on ancient literary history as E. H. Haight's *More Essays on Greek Romances* (New York) and H. Fränkel's *Ovid, A Poet between two Worlds*, a collection of lectures (Berkeley). E. H. Clift has written on *Latin Pseudepigrapha* (New York), and to A. Y. Campbell we owe a new edition of Horace's *Odes and Epodes*. Y. Malkiel has traced the history of two Latin suffixes, *-antia* and *-entia* (*The Development of . . . in the Romance Languages*; Berkeley), with particular emphasis on their development in Spain. J. M. Blecua devotes a literary essay to that country; *El mar e la poesia española*. E. L. Trumbull's *Contemporary Spanish Poetry*, augmented by a contribution from P. Salinas (Baltimore), offers a selection of originals and translations. C. E. Kany has published a work on *American Spanish Syntax* (Chicago). Here another useful frequency list must be mentioned: C. B. Brown, W. M. Carr, and M. L. Shane, *A Graded Word Book of Brazilian Portuguese* (New York). In the field of Italian literary history we mention Y. E. DiSilvestro's exposition of *La Vita di Grazia Deledda* (Philadelphia).

Among the Romance languages French continues to hold the main interest. We mention E. Cailliet, *Pascal, Genius in the Light of Scripture* (Philadelphia); R. G. Mahieu, *Sainte Beuve aux Etats-Unis* (Princeton); H. C. Lancaster, *Sunset*, a work dealing with French drama at the beginning of the 18th century (Baltimore); R. Dumesnil, *Gustave Flaubert* (Paris); and M. E. Chernowitz, *Proust and Painting* (New York).

J. Sutherland's inaugural lecture treats of *English in the universities* (Cambridge, England). J. A. Roy poses the question *Is there a Scottish Literature* (Kingston, Ont.). H. Granville-Barker, *The Use of Drama* (Princeton) and C. Brooks and R. B. Heilman, *Understanding Drama* (New York) testify to the general interest in the problems of the stage. A. C. Judson has published a *Life of Edmund Spenser* (Baltimore). Shakespeare is, as always, the subject of extensive research: we mention F. Baldensperger, *La vie et l'oeuvre de W. Shakespeare* (Montreal), L. Kirschbaum, *The True Text of Lear* (New York), J. W. Draper, *The Humors and Shakespeare's Characters* (Durham, N.C.), and G. E. Bentley, *Shakespeare and Jonson* (Chicago). D. Bush interprets *Paradise Lost in Our Time* (Ithaca). J. E. Tobin has given us a bibliography (1895-1944) on Alexander Pope (New York). To S. C. Roberts we owe a lecture on *Samuel Johnson* (London). Worthy of particular mention is S. B. Liljegren's *Essence and Attitude in English Romanticism*. E. F. Boyd has written on *Byron's Don Juan* (New Brunswick, N.J.), a phase of the poet's work to which P. G. Trueblood devotes his study, *The Flowering of*

Byron's Genius (Stanford). N. P. Stallknecht's *Strange Seas of Thought* (Durham) deals with Wordsworth. E. Thompson's *Robert Bridges, 1844-1930* (London) and F. M. Stenton's book on *Sir Allen Mauger, 1879-1942* (London) should not be overlooked. F. J. Hoffmann treats of *Freudianism and the Literary Mind* (Baton Rouge).

W. Matthews and R. H. Pierce have written a bibliography of *American Diaries* (Berkeley). Other aspects of the language and literature of America are dealt with in B. M. Levy's *Preaching in the First Half Century of New England* (Hartford); N. Smither's *History of the English Theater at New Orleans* (New Orleans); Liljegen's *Revolt Against Romanticism in American Literature* (Uppsala); J. C. Colcord's *Sea Language Comes Ashore* (New York); and last but not least, H. L. Mencken's first supplement volume to *The American Language* (New York). G. C. D. Odell's *Annals of the New York Stage* has now been published up to the 14th volume covering the years 1888-91 (New York).

In the field of Germanic languages (other than English) we mention S. Einarsson's *Icelandic Grammar*, including texts with glossary, (Baltimore). German literature is represented by such studies as L. W. Foerster, *Georg Rudolf Weckherlin, 1584-1653* (Basel); J. Boyd, *Notes to Goethe's Poems: Vol. 1* (Oxford); and J. G. Brunan, *Thomas Mann's World* (New York). L. M. Hollander's selection from the *Scalds* (Princeton) makes a highly interesting body of literature available.

In conclusion, four outstanding publications from fields more remote from general interest should be listed: F. J. Carmody's *Interrogative System in Modern Scottish Gaelic* (Berkeley); R. A. Hall's *Hungarian Grammar* (Baltimore); W. Leslau's *Gafat Documents* (New Haven), texts and grammar of a South-Ethiopic language; and M. Jacobs, *Kalapuya Texts* (Seattle) containing extensive records of an Indian language spoken in Oregon.

H. M. HOENIGSWALD,
Yale University.

PHILOSOPHY. The year 1945 brought the philosophical world no event as melodramatic as last year's assassination of the celebrated Italian idealist, Giovanni Gentile, by unknown partisans (presumably for his early and long-continued support of fascism), nor any occurrence as satisfying to other philosophers as the emergence of Gentile's fellow-idealist, Benedetto Croce, as a central figure in post-Fascist Italian politics. However, the past twelve months have witnessed an event on the American philosophical scene that is of considerable significance, since it appears to prove what many have long suspected; that all is not satisfactory within the circles of academic philosophy. Beginning with 1945, the University of California and Columbia University now require that candidates for the doctorate in philosophy attain a master's degree (or the equivalent) in some nonphilosophical field, such as physical, biological, or social science, art, literature or philology. Both schools have stated frankly that they hope other universities will follow their lead, and both have appealed for financial aid to provide fellowships to encourage students to spend the extra year or so which the new requirement will add to the already lengthy process of securing a Ph.D. degree.

The purpose of this added hurdle is primarily to combat the sterility and excessive technicality of the present graduate study in philosophy, by

giving the developing philosopher an assured body of raw material upon which to exercise the finely sharpened intellectual tools which his study has created. This in turn will prevent these instruments of thought from being turned upon themselves in endless self-analysis and ingrowing epistemological criticism. This should influence philosophical thought to turn outward again toward a broad study of human experience, instead of inward to a morbid concern with its own cognitive processes. While it is perhaps too much to expect that we shall shortly see logic and epistemology subdued and reduced to the instrumental role they formerly played in philosophy, this decision by two of the leading universities in the country indicates a healthy reaction against the overwhelming domination of contemporary philosophy by two of its own subdivisions. It is particularly significant that the reaction has reached the very citadel of this domination, the graduate schools themselves.

The routine character of the few books and many articles published in the field during the year gives a pointed timeliness to this announcement. Never very successfully converted to war, the philosophers have quickly returned to the highly technical battles of philosophical controversy. However much the war may have affected the personal lives of contemporary thinkers, there is little evidence in print that the last six years have produced much change in their thought or brought any lessening of their devotion to largely technical problems. There is only one exception to this general return to prewar aloofness sufficiently marked to merit comment, but it may be significant enough to give encouragement to those who have been depressed by philosophy's withdrawal from daily life and universal issues. Surveying current philosophical publications, it is undeniable that the word "democracy" appears far more often than a decade ago. While much of the discussion of democracy is abstract and abstruse, the mere fact that the term has now become a central concept of social philosophy and ethics offers an omen of hope, even if it proves only that some thinkers are now aware that even the philosopher's study is not immune to atomic bombs. In the day when war and revolution usually meant a struggle between armed groups in some distant place, it was natural for philosophers to view such violent clashes of ideas "under the aspect of eternity," which normally meant with considerable detachment. Now, however, that the philosophical world is suddenly revealed to be as roofless as an enemy city, thinkers are beginning to see that philosophy and all that it stands for in human history can be assured a continued existence only if some means are discovered whereby the world of thought can be combined with other areas of man's experience to form one unified world.

HUNTER MEAD,
San Diego (Calif.) State College.

PHOSPHATE ROCK. Another record for the annual marketed production of domestic phosphate rock was made in 1944, according to the United States Bureau of Mines. The quantity sold or used by producers in 1944 reached 5,376,643 long tons valued at \$20,856,429 compared with 5,126,232 tons valued at \$18,926,021 in 1943. Mined production, including Tennessee brown rock matrix, was 5,200,002 long tons in 1944. Phosphate rock was mined in 1944 in Florida, Tennessee, Montana, and Idaho, and apatite in Virginia. New records were set in 1944 for the quantities of land pebble and total Florida phos-

phate rock sold or used. However, the quantities of both hard rock and soft rock marketed in Florida in 1944 were considerably less than in 1943.

The total mine production of phosphate rock from January to June 1945 was 2,773,894 long tons. Phosphate rock sold or used during this period was 2,629,669 long tons valued at \$10,567,755, as compared with 2,682,601 tons valued at \$10,183,358 for the corresponding first six months of 1944.

PHOTOPROGRESS. The world continued to be served in many ways by photography in the closing months of the war and in the peace that followed. In Europe the advance of the armies of the United Nations in the west under General Eisenhower and in the east under Marshal Zhukov was photographed from the ground and from the air. Cameramen recorded the final surrender of all German armies and the arrest of the leaders. Photographic evidence of their organized criminal brutality was accumulated. Historic conferences at Yalta in the Crimea and at Potsdam in Germany were covered by the newsreels for world-wide distribution. In the Pacific, cameramen risked their lives also to photograph the invasion of Luzon, the destruction of Manila, the bloody campaign of Iwo Jima, the Kamikaze attacks on the fleet off Okinawa, the bombing of cities on the Japanese mainland, and hundreds of other operations. Finally in August came the photographic recording of the destruction of Hiroshima and Nagasaki by atomic bombing, the occupation of Japan, and on September 2 the signing of the surrender papers on the U.S.S. *Missouri*. Thus ended the most photographed war in history.

Many years will probably pass before the full value of photography in the Second World War can be appraised because only a portion of its many uses can be revealed at this time. The acceleration of the training of the armed forces by the use of hundreds of specially prepared motion picture films and film strips is well known. Combat cameramen covered every phase of each ground operation on the active war fronts. In the air, photo-reconnaissance was a necessary part of all bombing missions as well as to provide factual information for the ground forces. A report of the United States Technical Service Command stated that upwards of 20 million photographs were made each month for military purposes. A typical day's work of one reconnaissance group in the European theater of operations was 45,000 negatives. The quality of the photographic results improved steadily throughout the war as a result of using better equipment, lenses and shutters, and the employment of more skillful personnel.

The first photographs of radar screens to be released publicly were reproduced in June in an issue of *Impact*, United States Army Air Forces magazine. The pictures showed the coast of Normandy before and during the invasion of June 6, 1944 as it appeared on the viewing screen of the radar instrument in a plane flying above thick clouds.

The increased range of anti-aircraft fire necessitated much of the aerial photography to be made from high altitudes, over 35,000 feet, or from high-speed planes at lower altitudes. In the former case, the use of lenses of long focal length and haze filters was necessary to reveal ground detail clearly. Lenses of 40-inch and 60-inch focal length were known to have been used and

two new 48-inch lenses making 9 by 18-inch pictures were said to be under construction at the close of the war. Thermostatically controlled electrical warming devices were used to prevent distortion from the intense cold at high altitudes.

Although much aerial photography during the war was done from planes without armament protection and which depended on their speed to avoid being hit, announcement was made in August of a photo version of the B-29 Superfortress, called the F-13-A, used by the United States Army Air Forces, which retained the firepower of the B-29 but carried a lighter bombload. It was equipped with six cameras.

An ophthalmic camera was developed by Wing Commander Pierce, RCAF, for photographing the blood vessels of the eye in connection with vitamin deficiency studies of flying personnel. Exposure was made with a high intensity discharge lamp with the camera lens operating at $f/80$ to $f/100$.

Experience showed that hand-held cameras, both aerial and ground types, needed to be of rugged construction to withstand field conditions, especially in the tropics. Descriptions of two new combat cameras were published: these were called the Graphic 45 and the Simmon. A cone-type front on the Graphic 45 protects the lens from dust or rain; other features are a built-in flash synchronizer and two shutters (diaphragm and focal plane types). The Simmon combat camera is all metal and has no bellows. It is equipped with protection for the lens and the film recess. An accessory shutter protects the film from fogging during rewinding of the focal-plane shutter.

The use of an Edgerton type gaseous discharge photoflash lamp for aerial photography at night was disclosed by the Army Air Forces.

One of the most spectacular weapons used in the war was a rocket gun. To study the early part of the flight of a rocket, Bell Laboratories developed a high-speed camera known as the ribbon-frame camera. An ingenious feature of the camera is the shutter mechanism which consists of two concentric drums rotated at slightly different speeds in the same direction. The outer drum has five transverse slots and turns 24 revolutions per second and the inner drum has four slots and turns 30 times per second. The film (a standard No. 122 size) passes continuously over a slit, 0.15 inch wide, outside the two rotating drums with exposure times adjustable from 0.0001 to 0.0006 second, the pictures appearing as narrow "ribbons" across the width of the film, 200 pictures per roll of film.

More rapid repair of damaged ships was effected during the war through the aid of photography. Photographs of the damage would be flown from the base in the Pacific to a navy yard on the west coast of the United States. A complete set of blue prints of the ship would be copied on microfilm from the master file in the United States Navy headquarters in Washington. The reels of microfilm would then be flown to the west coast navy base where enlargements of the damaged sections were made. By the time the ship reached port, the damaged sections were re-fabricated and ready for installation.

Transmission of micro-copies of letters by the V-mail system was suspended October 31. This plan, an adaptation of the Airgraph system developed by Kodak Ltd. in Europe, was inaugurated in the United States in June 1942. From that date until the end of the Japanese war, the War Department reported that more than 1,250,000,000 pieces of V-mail were processed.

Since 1,800 V-mail letters could be copied on each 100 feet of film, the plan resulted in a saving of 98 per cent of space on planes as compared with that occupied by the same number of letters packed in standard mail sacks. Loss of mail by enemy action was also avoided by the use of V-mail because the original letters were not destroyed until certification of the delivery of photocopies was received by the transmitting station.

Color photography was used to a considerable extent for documentation purposes in the Pacific war. A series of Kodachrome transparencies made by the United States Marine Corps of the life of the people on Okinawa island were reproduced in the September issue of *National Geographic Magazine*. Aero Kodacolor film was used to some extent for reconnaissance purposes by the United States Navy and Air Forces. This product could be processed in field or ship laboratories. One of the most remarkable color pictures of the war was the view showing the firing of a salvo from two triple batteries of 16-inch guns of the battleship U.S.S. *Missouri*. In the Kodachrome picture the six projectiles can be seen as well as the entire ship with the fire and smoke belching from the guns.

The establishment of the United States Navy Photographic Institute under the directorship of Capt. E. J. Steichen, USNR, was announced by the navy in July. Promotion and encouragement of outstanding photography of naval subjects will be recognized by annual awards in the fields of still and motion picture photography.

Civilian Uses of Photography.—At the close of the war with Japan in August, photographers were much encouraged at the prospect of getting more films and paper. The military requirements had been so great during the first half of the year that civilian deliveries had been very much curtailed. Manufacturers of photographic equipment were in a much better position to fill existing orders and to start building new apparatus as a result of the rescinding on September 15 of the WPB Limitation Order L-267. This order had restricted them to 3 per cent by weight of the metals used for photographic apparatus manufacture in 1941. Military needs of the armies of occupation and back orders of servicemen were given preference. Sale of surplus photographic equipment and materials by the Office of Surplus Property of the United States Department of Commerce aided somewhat in relieving the civilian supply shortage.

Reconversion of the photographic industry to a peacetime basis, according to a report in *The New York Times* in September, was proceeding smoothly with very little loss of time. Although all companies had made many specialized products during the war, they had continued also the manufacture of photographic materials throughout this period. Cancellation of war contracts therefore made available added floor space and equipment for normal peacetime products.

Prospects for a wide expansion of color processes appeared very bright and it was generally expected that some of the developments in this field that had been used by the armed forces would be made available in the same or modified form for civilian use. Such monopack processes as Aero Kodacolor, Ansco Color, and Gasparcolor offered promise for adaptation to amateur and professional use. A comprehensive article on the history, chemistry and characteristics of color development was published by Tull in January in the *Photographic Journal* (London), Section B. Small enlargements (playing card size) known

as Minicolor continued to be quite popular among users of 35-mm. Kodachrome for sending to their loved ones in service.

The Kodak Dye Transfer Color Print process was announced in September. It represented an improvement over the Wash-Off Relief process in that it gave better color saturation, greater control of registration, and required less time to make a print.

Some of the finest portraits of the year were made by Karsh of Ottawa who sprang into prominence in 1942 with his striking photograph of Winston Churchill, then the British prime minister. Subsequently, Karsh traveled to London, Washington, San Francisco and other cities to make portraits of the world's great leaders.

Press photographers were permitted to accompany the armies as war correspondents during the European battles and the island warfare in the Pacific. They worked in close collaboration with the combat cameramen of the Signal Corps and the Marine Corps. As a result of this plan and the prompt release of many photographs by the armed forces, the public was able to see "spot news" quickly. One of the most remarkable newsreels of the year was *Iwo Jima*, 1,000 feet long selected from 50,000 feet of film, exposed by 60 combat cameramen. Another example of high quality photo-reporting was the 17-picture story by W. E. Smith entitled "24 Hours with Infantryman Terry Moore" which appeared in *Life* on June 18. While photographing this story on Okinawa, Smith was wounded by Japanese fire. A still photograph showing a group of United States Marines raising the flag on Mt. Suribachi on Iwo Jima was published very widely and used as the symbol for the Seventh War Loan Drive. It was made by Rosenthal of the Associated Press.

The official motion picture record of the European campaign from Normandy to the heart of Germany as made by combat cameramen of nine Allied nations was released in September for theater showing under the title *The True Glory*. Another excellent documentary motion picture showed the destruction of the city of Manila.

As one of the consequences of the successful use of 16-mm. training films for military and industrial instruction during the war, it was expected that wider use of this medium would be made by schools and industry than had been made before the war. Toward this end, the University of Chicago was establishing a center for the study of audio-visual instruction in their department of education. The United States Office of Education reported the completion of a new series of 16-mm. sound films on problems of supervision to be released for use by educational and industrial authorities.

Large-scale aerial surveys were initiated in various countries; some using the Tri-metrogon system of photography.

Improved methods of tropical packaging of photographic materials and equipment were developed during the war. It was expected that the information gained from this experience would be applied for the prevention of corrosion and deterioration that occurs in hot, humid climates and thus assure a higher quality of products for use under such conditions. The wrappings included rip-strip cans with lithographed labels, waterproof laminated bags and preservative dips.

The Photographic Process.—Several new package developers were placed on the market during the year; one firm introduced a group of them with such phonetic names as Dektol, Microdol, Versatol, and Selectol. A continued trend toward

Spectrum photograph of the solar eclipse July 9, 1945, photographed in 1/45 second from Mitchell plane at 26,000 feet with Cooke Telephoto 20-inch lens at $f/3.6$ using Wood Grating having 14,440 lines per inch. Spectrum extends from the red hydrogen line (at lower left) to violet calcium pair.

greater use of chemicals in this convenient and accurate form was noted.

Methods of controlling the formation of calcium sludges in photography were discussed by Henn and Crabtree who specified the use of a tetraphosphate in a developer as the most effective sequestering agent. The action of formaldehyde-hydroquinone developers was studied by Yule. These are used by photoengravers for films requiring images of very high contrast, such as those used for half-tone and line work. Yule concluded that the tendency of such developers to produce a filling-in of fine lines is caused by "infectious development."

A quinone-thiosulfate intensifier devised by Muehler and Crabtree was claimed to produce a greater degree of intensification than any other known single-solution intensifier, particularly when used with high-speed negative materials.

Processing formulas for Ansco Color Reversible Sheet film were published in the March-April issue of *The Ansonian*.

Photographic Standardization.—Problems of unification of practices in the photographic field were studied further by various subcommittees of the War Standards Committee on Photography and Cinematography Z52 of the American Standards Association. Photographic flash lamps were evaluated on the basis of their picture taking characteristics in specification Z52.43-1944. Three new sound quality test standards for 16-mm. motion picture prints were also established as follows: Z52.15-1944, intermodulation tests on variable density prints; Z52.39-1944, cross modulation tests on variable area prints; Z52.38-1945, signal-to-noise-ratio of 16-mm. sound motion picture prints.

Other subcommittees of the Section Committee Z38, Photography, of the American Standards Association were known to be working actively on other problems of standardization.

Applied and Scientific Photography.—The eclipse of the sun on July 9 was studied photographically by groups of scientists who set up their equipment in Montana and in several provinces of Canada. Several beautiful photographs were made from planes flown by the Royal Canadian Air Force.

In the first of a series of studies conducted by the Illinois Institute of Technology in collaboration with the Chicago Symphony Orchestra, photographs were made at the rate of 1,000 pictures per second of the finger technique of the violinist, Milstein, during his playing of trills and glissandi in difficult passages of a concerto.

An electronic sequence timer permitting six microflash lamps to be fired at intervals of 0.6 to 0.0003 second apart or simultaneously was developed by the Air Technical Service Command at Wright Field, Dayton, Ohio for the purpose of studying effects of gunfire on armor plating and other phenomena requiring high-speed photography.

The efficiency of airplane engine-propeller combinations was investigated by Fairchild Engine and Airplane Corporation by making motion pictures at a rate of four per second through a special wire grid which was mounted rigidly five feet in front of the camera. When the grid was placed 1,000 feet from the runway, each square measured 20 feet of runway. Propeller efficiency was determined from graphs drawn from the projected motion picture.

At the March meeting of the Rochester Technical Section of the Photographic Society of America, Condit showed color motion pictures of the

whole sky made with a time-lapse camera. A convex mirror 12 inches in diameter reflected the image of the entire sky hemisphere into a small plane mirror mounted 30 inches above it. The latter image was photographed with a Ciné-Kodak Special equipped with a motor drive and a set of gears which allowed six different speeds, varying from one to twenty pictures per minute. When the film was projected at the normal rate of sixteen per second, the appearance of the sky throughout a complete day could be seen in a minute or so. Photometric data made at the same time were correlated with the motion pictures. See also under PHYSICS—Applied Physics.

Bibliography.—Books of interest published during the year included the following: Beaton, C., *British Photographers* (W. Collins, Glasgow); Blair, J. M., *Practical and Theoretical Photography*, 2d ed. (I. Pitman, New York); Cameron, J. R., *Encyclopedia of Sound Motion Pictures*, 5th ed. (Cameron Publishing Co., Woodmont, Conn.); Clerc, L. P., *La Technique Photographique*, 3d ed. (P. Montel, Paris); Eder, J. M., *History of Photography* (Columbia University Press, New York), tr. by E. Epstein of Dr. Eder's *Geschichte der Photographie* (4th ed. 1932); Johnson, B. K., *Practical Optics* (Hutton Press, London); Kraszna-Krausz, A., *Photography as a Career* (Focal Press, London); Kraus, H. F., *The Use of Photographs in Layout* (MSR Publishers, New York); Partington, Frank and Molly, *The Art of Photographing Children* (Fountain Press, London); Pike, O. G., *Nature and Camera* (Focal Press, London); Sayre, I. H., *Photography and Platemaking for Photolithography*, 2d ed. (Lithographic Textbook Publishing Co., Chicago); Topholme, C. H. S., *Photography in Engineering* (Faber and Faber, Ltd., London); U.S. Navy, *Photography*, 2 vols. (Government Printing Office, Washington, D.C.).

GLENN E. MATTHEWS,
Technical Editor, Kodak Research Laboratories,
Rochester, N.Y.

PHYSICS, Recent Progress in. The advent of the atomic bomb is easily the outstanding development in physics during the present calendar year. This is not the place to enter into a detailed discussion of its significance for war and peace, and of course much about its construction is still a military secret. However, it is appropriate to point out that the atomic bomb is the result of a straightforward application on a very large scale of discoveries in pure physics of the past fifty years. These discoveries were made initially because of the physicist's overwhelming urge to find out how things go and not primarily with the thought of practical application. It would be hard to find a more striking illustration of the dividends ultimately paid by "pure" research and therefore of the value of encouraging this type of disinterested investigation of natural phenomena. The development of the atomic bomb and other important wartime applications of physical principles, e.g. radar, has, to be sure, given a tremendous stimulus to proposals for government aid to research in pure and applied physics. Much discussion is now underway concerning the most satisfactory method of providing this assistance. The numerous references to the problem in the public press give evidence of much confusion about the real nature of physical research or indeed of scientific research in general. Much emphasis has been laid on the desirability of large-scale planning, which of course has been very successful in carrying out the practical projects of wartime. What is overlooked, however, is that no amount of planning involving large teams of physicists working under "expert" direction and at huge expense will necessarily lead to the development of such fundamental physical theories as relativity and quantum mechanics. It is in fact a logical contradiction to "plan" to discover what you are unable even to think about until you have discovered it! No

physicist questions the value of planned, co-operative large-scale research in the solution of definite problems based on the use of all physical theories now available. Action to this end is imperative. But it should not be forgotten that the future progress of physics will continue to depend on: (1) discovering the largest possible number of young people interested in natural phenomena and with keen, inquiring minds; (2) giving them the best possible scientific education; and (3) providing them with the opportunity to think and experiment without restrictions of any kind. It does not require an exaggerated belief in the potentialities of the human mind to feel complete confidence that persons so selected, educated and equipped will develop the fundamental physical theories of the future without which there can be no ultimate success in the application of physics to human needs.

Postwar physical research in the United States will be seriously hampered by the cumulative shortage of trained physicists resulting from our wartime policy of practically abolishing the graduate study of physics by able-bodied men. The number of Ph.D.'s graduated in 1944 fell to 55 compared with 191 in 1941. Even if the present policy were to be reversed immediately and graduate study were to be renewed at full blast, it has been estimated that by 1953 the United States will have accumulated a deficit of 1,800 graduate physicists. What this means can be best appreciated in the light of the fact that there are only 2,833 Ph.D. physicists listed in the National Roster of Scientific and Specialized Personnel and many of these are old men inevitably passing every year out of their careers of activity.

The remainder of this article is a brief sketch of some recent developments in the principal branches of physics, listing the latter in alphabetical form for convenience. It is impossible within the confines of a short article to do justice to all discoveries; those selected for notice merely reflect the taste and judgment of the reviewer, who has tried to emphasize material of interest to the general public.

Acoustics.—Physicists always feel a special sense of satisfaction when research in one field yields results of importance in another. A very good example is provided by the action of high frequency sound waves on concentrated solutions of high-polymers, namely organic substances of very high molecular weight like gelatine, rubber, and the various plastics now becoming so well known. H. Mark has an interesting review of this work in the January 1945 issue of the *Journal of the Acoustical Society of America*. One of the principal effects of supersonic radiation is a decided decrease in the viscosity of such solutions. If the frequency does not exceed 100 kilocycles the solution gradually recovers its original viscosity after the irradiation has ceased. This is interpreted to mean that the high frequency sound waves tend to pull the long chain molecules apart and to keep them from getting as entangled as they would normally be. When the sound is turned off the ceaseless Brownian motion of the molecules tangles them up again and restores the viscosity. One might expect that even higher frequencies, e.g. 300 kilocycles or higher, might actually break up the molecules and lead to an irreversible decrease in viscosity, i.e. one that would not be restored after removal of the radiation. This is indeed found to be the case, indicating that supersonic radiation can actually bring about

chemical degradation and lower the molecular weight of high-polymers. The practical possibilities of this effect are already being exploited.

Turning to an acoustical problem of more purely academic interest, we find A. T. Jones in the April issue of the *Journal of the Acoustical Society* examining a very old problem, namely the behavior of singing flames. The sounds produced when an air tube closed at the far end is brought down over a gas flame have been known a long time. The hitherto accepted theory is that by Lord Rayleigh, who assumed that standing sound waves are necessary in the tube supplying the gas for the flame in order to maintain vibrations in the air tube and thus make the flame "sing." Jones has established that Rayleigh's theory is inadequate and that the singing depends to a large extent on the time taken by the flame gases to rise from the orifice to the top of the flame. Moreover the viscosity in the orifice plays an important role. Evidently a singing flame is by no means a simple thing!

A well-known source of high-frequency sound radiation used for underwater signalling is the vibrating quartz crystal employing the so-called piezoelectric effect. In practical use such crystals are ordinarily flat plates, but in the April issue of the *Journal of the Acoustical Society of America*, L. W. Labaw presents the results of some experiments using curved crystals as radiators. At a frequency of approximately one million cycles, definite focusing action is evident when the radiation leaves a concave surface. This intensification of the acoustic beam may have considerable practical application in modern supersonic research. Further investigation is necessary, for the problem is by no means so simple as the focusing of light by a curved mirror, for example. It appears rather that curving the crystal somehow allows it a larger vibration amplitude than a flat crystal would have for the same impressed voltage.

Another noteworthy research of L. W. Labaw, performed in the acoustics laboratory at Brown University, is the development of an ingenious method for plotting experimentally the wave front of a progressive high-frequency sound wave in water or other liquid.

The progress of acoustics like that of other branches of physics depends largely on the development of accurate measuring instruments. The combination of electronics with sound has led to enormous advances in this field. Thus in the July issue of the *Journal of the Acoustic Society of America*, Frank Massa describes a new piezoelectric crystal microphone for measuring sound pressure very accurately over a frequency range from zero up to 20 kilocycles (i.e. the whole audible range), and over a pressure range from zero to a million dynes/cm². Its high impedance guarantees that it will produce very little disturbance of the sound field in which it is placed. Just as a high resistance voltmeter provides a more accurate measure of the electrical potential difference between two points in a circuit than a low resistance meter, so this new acoustical pressure gauge will provide much more accurate measurements of acoustic pressure than have hitherto been possible. The gauge is also interesting in that it will probably use the new piezoelectric crystal primary ammonium phosphate in its construction.

Applied Physics.—With the end of the war we may expect to see the gradual release from military restrictions of a host of physical instruments and gadgets for peacetime application. One of

PHOTOPROGRESS

Photographs comparing aerial radar scope of Nantucket Island with actual chart of island. Land areas appear white; aircraft and shipping appear as white dots; water black on radar screen.

the most important of these is undoubtedly radar, the fundamental principle of which has now been made clear to the general public through the press. It is based on a very old idea, namely that of the *echo*, but its application to radio waves of ultra short wave length has been made possible by electronic techniques of marvelous adaptability. In one field alone radar will probably pay for all its wartime development cost. This is the guidance of aircraft to decrease enormously the hazards of blind flying and landing. A device is in prospect which will show on a fluorescent screen at every airport the exact instantaneous positions of all aircraft within a radius of 25 miles. A further device mounted in the plane will show the pilot visually his instantaneous position relative to other aircraft and possible obstacles such as buildings, mountains, etc.

Scientific applications of radar will doubtless turn up in the most unexpected places. Thus it has already been proposed to use it to study the migratory flight of birds. Here it would provide automatic registration at appropriate stations in place of the usual haphazard direct visual observation by human observers.

High-speed photography, with many uses in aeronautical and ballistic research, has taken a decided step forward through the development by the Western Electric Company of some new high-speed cameras. One type takes 8,000 pictures a second on 8 mm. film with an exposure time of 33 millionths of a second and another takes 4,000 pictures a second on 16 mm. film with an exposure time of 83 millionths of a second. By projecting the resulting pictures at the standard rate of 16 per second the action can be appropriately retarded for special study. The system employed differs from the now well-known scheme of Edgerton in which the continuously moving film is exposed by light flashes of high intensity and short duration. In the new cameras, the film also moves continuously but the illumination is also continuous. By means of 4 or 8 sided prisms placed between lens and film the image is flashed on the film only at certain definite instants.

Vacuum tube technique progresses faster than one can follow it in a review like the present. Westinghouse announces the development of a super-sensitive tube smaller than a 25 watt incandescent lamp bulb which is so sensitive that when used in association with a photoelectric cell it can detect 10^{-14} of the light given off by the average home reading lamp. It is expected to be of great use in measuring the intensity of starlight.

Everyone knows of the manifold uses of X-rays in industry and medicine, but new applications continue to crop up. C. Frondel, the mineralogist of the Reeves-Ely Laboratories in New York, has been studying the change in the elastic properties of quartz and other crystals produced by radiation with X-rays. Color changes have been known for some time. But the change in elasticity can produce a definite change in the resonance frequency of quartz crystals used as a source of supersonic radiation. Hence the practical application.

Astrophysics and Geophysics.—Perhaps the outstanding event in the astrophysical world this year is the announcement by the British biologist, J. B. S. Haldane of a new theory of the origin of the solar system. One now expects such things to be both up-to-date and daring. Haldane's theory fulfills both requirements; it employs the quantum theory and it is a bold extrapolation of

the so-called kinematical relativity developed some ten years ago by the British astrophysicist, E. A. Milne. No really popular account of Milne's theory has ever appeared. Indeed some authorities, notably Herbert Dingle (another British physicist), believe that this is impossible and that when the attempt is made to translate the theory into ordinary everyday language absurdity results. Such controversies should not disturb the layman: they are part of the very life blood of science progress. Haldane deduces from Milne's theory that the earliest date for the formation of the solar system was about 4×10^{11} years ago and that the planets were pulled out of the sun through the agency of a single photon possessing the enormously high frequency of 10^{72} vibrations per second, with resulting energy of the order of 10^{32} kilowatt hours, a super atomic bomb, in a very real sense! He believes that such a "lump" of energy must have been born when the universe was only 10^{72} seconds old. It all sounds fantastic, but most physical theories do when they are first announced. The interested reader will find a complete account of Haldane's ideas in the July 1945 issue of *The American Scientist*. The original announcement appeared in *Nature* for Feb. 3, 1945.

Harlow Shapley continues his preoccupation with the galaxies, those huge collections of stars of which our own Milky Way is to us the most shining example. They are of two principal types, the spiral (decidedly the more numerous) and the spheroidal. Jeans originally proposed a theory that the spheroidal galaxies gradually evolve into the spiral variety. Shapley presents evidence favoring the opposite point of view, that it is the spirals which are the young galaxies and the spheroidals, the elder brethren. As evidence he directs attention to the super giant stars which are common in the spiral galaxies but rarely found in the spheroidal systems. Since it is now believed that the life of a supergiant is relatively short, it follows reasonably enough that the spirals are in the early stage of evolution. There is indeed one catch: perhaps the supergiants are still being born, in which case the logic of the above reasoning would not be so compelling. But astronomers must reason boldly if they want to reason at all!

The common theory of the production of the aurora and magnetic storms on the earth's surface is that they are due to charged particles ejected from spots on the sun. In this connection it is of great interest that recent work at Mount Wilson Observatory has given the first clear-cut evidence of the existence in interplanetary space of charged calcium atoms (ions) approaching the earth from the sun with velocities (about 1,000 kilometers per second) adequate to account for the appearance of auroral displays. The latter usually take place some 24 hours after the appearance of a solar flare near a sun spot. The figures check moderately well. The observational evidence is spectroscopic in character.

While we are on the subject of the aurora, we should notice the work of Stebbins, Whitford and Swings, who have detected the existence of infrared radiation of unusually high intensity in the light of the night sky. The intensity fluctuates with time but has a maximum value about 100 times that of the famous auroral green line. The wave length is of the order of 10,000 Angstrom units. In a sense this phenomenon may be said to correspond to an infrared aurora. Its distance above the surface of the earth has not yet been estimated.

The theory of the expanding universe depends on the well-known red shift in the spectrum lines in the light from the distant nebulae. This shift is usually interpreted in terms of the Doppler effect as indicating a real recession of the nebulae with velocity increasing with the distance from our galaxy. But alternative explanations have not been lacking and each year brings out a new one. Thus in *Nature* for March 17, A. J. Schneiderov proposes to find the origin of the red shift in the force exerted on the incoming photons by the stars of our galaxy. This would tend to accelerate the light particles. To maintain the principle of relativity, which insists that the velocity shall not exceed the figure 3×10^{10} centimeters per second in free space, and to satisfy the law of gravitation all at the same time, he finds that the frequency of the photon as received by us must be less than that of the photon as emitted by the distant nebula. The effect is greater the farther away the nebula. But no exact figures are given. It may well be that all such "explanations" of the red shift simmer down to pretty much the same thing in the final analysis.

No review of astrophysics would be complete without at least a passing mention of the total eclipse of the sun on July 9, 1945 which produced many astronomical expeditions to northwestern United States and western Canada, as well as Russia. Preliminary reports on the results will be found in the August issue of *Popular Astronomy*.

Biophysics.—When a biologist makes an excursion into physics and a theoretical physicist turns biologist it is news. We have already noted Haldane's cosmological adventure under *Astrophysics*. Here it is appropriate to call attention to the little book *What is Life?* brought out this year by Erwin Schrödinger, the celebrated author of wave mechanics and one of the world's leading authorities on quantum theory. The idea he presents is a fascinating one. The regularity we appear to see in the inorganic world about us and which we describe in terms of the laws of physics is actually only a statistical regularity due to the mutual action of vast numbers of entities (i.e. atoms and molecules) whose individual fates are quite fortuitous. It is indeed only the continual transformation of order to disorder with resulting approach of entropy to a maximum that guarantees any stability and permanence to our physical laws. With living organisms, however, the situation must be otherwise, for all of them, whether simple or complicated collections of cells, show an orderly stability over relatively long periods of time which cannot be due to mere statistical regularity, since the number of vital entities concerned (i.e. the cells) is not numerous enough. The explanation is to be found, thinks Schrödinger, in the assumption that the fundamental units in the cell, i.e. the genes, are controlled by the quantum theory. Mutations in organisms on this view are produced by quantum transitions between relatively stable molecular configurations of individual genes. The biologists will doubtless find much to question in this ingenious hypothesis, but if it encourages greater collaboration between biologists and physicists it will have served a very useful purpose.

General Physics.—One might suppose that, with all the physical experimentation which has gone on through the past centuries, the properties of matter in bulk would by this time have been pretty well pinned down so that nothing new

could turn up. That this is not really the case provides some of the excitement in physics. As an illustration consider the peculiar substance into which liquid helium is transformed when the temperature is lowered below 2.2°C above absolute zero (i.e., below -270.8°C). A recent review of this strange liquid by the Russian physicist, Kapitza is noticed in *Nature* for May 19. It differs from all liquids previously observed in that it flows with absolutely perfect freedom, that is, has no measurable viscosity whatever! Moreover it possesses abnormally high thermal conductivity. With it, convection currents can be made to flow in one direction only, with no *observable* return flow! It is believed that these properties of liquid helium II (as it is called to distinguish it from its more normally behaving chemical prototype, ordinary helium I) will ultimately provide the possibility of reaching closer to the absolute zero of temperature than is possible by any other means now known.

We have already noted under *Applied Physics* the effect of X-rays on the elastic properties of crystals. A somewhat similar effect is announced by E. N. daC. Andrade in *Nature* for July 28. He suspended a metal wire under sufficient tension so that it showed a creep or increase in length with time of same 0.05 per cent per minute. He then bombarded a part of the wire with alpha particles and showed that the rate of creep was increased about 5 times. It seems a simple thing and yet it may have profound consequences for our understanding of what goes on in the surface of metals under stress.

Nuclear Physics.—The public will undoubtedly hear more in the near future about the new fission elements, neptunium and plutonium, discovered in connection with the atomic bomb. For the present one can only refer for details to *Atomic Energy for Military Purposes* by H. D. Smyth. (Cf. list of books at the end of this review.)

The betatron of Kerst is proving to be a very useful instrument. It may be recalled that it produces very high speed electrons which can then be used to provide high energy X-rays of controlled maximum frequency. In the *Physical Review* for January 1945, G. C. Baldwin and H. W. Koch of the University of Illinois report on the use of the X-rays from the betatron to disintegrate nuclei by what may properly be called the nuclear photoelectric effect. In the ordinary photoelectric effect as used in a photocell, visible light falling on a metal surface causes electrons to be emitted. In the nuclear photo effect, invisible light of very high frequency (i.e. X-rays) striking a substance will actually penetrate the nuclei of atoms of the substance and release neutrons, at the same time transforming the atoms into new ones, generally radioactive in character. Thus by the agency of X-rays of 19 million electron-volts energy ordinary carbon of atomic weight 12 is transmuted into a radioactive form (an isotope) with atomic weight 11 but with the same nuclear charge. Iron, copper, zinc among others yield radioactive isotopes with half-lives ranging from 9 to 39 minutes when radiated with X-rays with energies in the range from 11.6 to 14 million electron-volts. There is every reason to believe that nearly all nuclei can be disintegrated by this process with available betatron energies.

C. Groetzinger, P. G. Kruger and L. Smith of Illinois report new advances in the artificial production of a new type of neutral (i.e. un-

charged) radiation from a cyclotron. This radiation is more penetrating than neutrons in water or gamma rays in lead. It appears to consist of uncharged particles of mass smaller than that of a neutron. The investigators are inclined to think of it as an uncharged mesotron. It will be recalled that the ordinary mesotron (also called meson) is the particle found in cosmic rays with negative charge equal to that of the electron but with a mass about 180 times that of the electron. The physicists, Sirkar and Bhat-tacharyya, in India have recently found evidence for the existence of such neutral mesotrons in the cosmic rays themselves. The "neutral" observer may be pardoned for coming to the conclusion that there are getting to be too many of these particles! The interested reader will find the relevant material fully reported in the current files of the *Physical Review*.

Book List, 1945.—Auger, Pierre, *What Are Cosmic Rays?* (Chicago, University of Chicago Press); Bush, Vannevar, *Science—The Endless Frontier* (Washington, United States Government Printing Office); Eve, A. S., and Creasey, C. H., *Life and Work of John Tyndall* (London, Macmillan and Company); Hadamard, Jacques, *The Psychology of Invention in the Mathematical Field* (Princeton, Princeton University Press); Hawley, Gessner G., *Seeing the Invisible* (The Story of the Electron Microscope) (New York, Alfred A. Knopf); Rayleigh, Lord, *Theory of Sound* (re-issue of the latest edition with a historical introduction by Robert Bruce Lindsay) (New York, Dover Publications); Schrödinger, Erwin, *What is Life?* (New York, Macmillan); *Science in Progress* (fourth series of Sigma Chi Lectures) (New Haven, Yale University Press); Smyth, H. D., *Atomic Energy for Military Purposes* (Princeton, Princeton University Press).

R. B. LINDSAY,

Chairman, Department of Physics, Brown University.

PICCIRILLI, Attilio, American sculptor: b. Massa, Italy, May 16, 1868; d. Bronx, New York City, Oct. 8, 1945. A member of the well-known sculptural firm of Piccirilli Brothers, Attilio Piccirilli was the sculptor of the Maine Monument entrance of Central Park, the doors for the International and Italian buildings, and the frieze for the Time and Life Building, Rockefeller Center, all in New York City, and the Marconi Monument in Washington, D.C.

Piccirilli first came to the United States as a boy, went back to Italy to study at the Academia San Luca in Rome, and returned to the United States in 1888. He served as assistant to various New York sculptors until 1898, when he executed the MacDonough Monument in New Orleans. He won medals at the expositions in Buffalo, Charleston, St. Louis, San Francisco; also the Saltus Medal of the National Academy of Design and the Busch Prize of \$1,000 at the Grand Central Galleries. In 1931 he completed a bust of Thomas Jefferson which was placed in the State Capitol in Richmond, Va., and the next year he was awarded the Jefferson Presidential Medal. Founder and president of the Leonardo da Vinci Art School in New York City, Piccirilli had been a former president of the American Italian Art Association. He was elected to the National Academy in 1935.

PLASTICS INDUSTRY. Until V-J Day the plastics industry maintained a high production level in the fulfillment of goods and services for the armed forces. From that period to the end of the year, plans for reconversion were put into effect

to serve the normal peacetime requirements. With the end of the war, secrecy restrictions upon a number of articles were lifted and for the first time some of the lesser known but highly important roles of plastics in the war effort were revealed. These are discussed more fully in the section devoted to new applications.

In compliance with limitations upon travel, the national plastics societies did not hold their usual national meetings during the first half of the year, though normal activities were resumed before the year ended. Activity among local sections in the East and Far West was quite in evidence, and processes and materials which were the subject of earlier discoveries were thoroughly aired. The Society of the Plastics Industry began publication of the various chapters of their technical *Handbook* prepared by their technical committee, chapters which will serve as a guide to those using plastics and as an authoritative background for others inquiring into activities of the plastics industry.

Material Developments.—Due to the complete changeover from war to peace the production figures for plastics underwent an appreciable change—though immediate outlets were found for orders for articles in the home, industrial, decorative, and novelty fields which had been accumulating for many months. There was no one single group of high polymers introduced during 1945, which had not been observed and applied in previous years, though several that were first introduced in 1944 enjoyed extensive commercialization. The laminating materials prepared from polyester resins continued to attract considerable attention and appreciable work was accomplished and still is being performed in their application to structural elements. Radar housings for aircraft were especially prominent, and when manufactured in combination with low density cores, exceptionally good results were attained from a strength-weight standpoint. One manufacturer found it possible to develop a foam material *in situ* between two low pressures, glass cloth reinforced, and laminated skins. The patent gazettes were replete with developments in low pressure laminating materials and the polyesters resins took a prominent position. Many of these developments have been pending for several years, and the disclosure by the patent office threw some light on the technical background leading to their formulation.

Phenolic resins were recommended as coatings for the bonding of rubber to metals and as softening agents in the preparation of special rubber stocks—indicating still further outlets for this highly versatile plastic material. Semicommercial quantities of 3,5, xylenol made it probable that another phenol would be available to the plastics industry. A rather unusual application of phenolic plastics was revealed in powdered lead, phenolic binders for a transfer molded frangible bullet employed for gunnery practice. The slug is hard enough to be fired through a rifle barrel, but soft enough to disintegrate on reaching its target, leaving a telltale mark. Keratin protein, obtained from feathers, hair, and hoofs was revealed to be a useful modifier for phenolic plastics—yielding better arc resisting materials.

The silicon resin continued to attract much attention and many new uses were developed from these materials. A silicon rubber product proved to possess the highest temperature resistance of any rubber-like material yet developed. The chemical journals revealed a new

technique of synthesizing silicon resins through direct reaction of alkyl halides upon powdered silicon at high temperature, in the presence of copper.

Greater quantities of styrene-butadiene copolymers were made available, in which a higher proportion of styrene was present. The properties of this product lay intermediate between the copolymer widely used for the production of synthetic rubber tires, and the harder polystyrene employed for molding purposes. Experimental quantities of divinyl benzene and diethyl vinylbenzene became available—and will probably play an increasingly important role as a cross-linking agent for higher temperature resistant polystyrene compounds.

Proteins came in for their share of attention, and national advertising began to feature dress goods prepared from "Aralac", obtained from casein. This material began large scale commercial production and is destined to enjoy wide distribution in the textile industry. Another naturally occurring resin, "Vinsol", was the subject of research at the Bureau of Standards, coming in as an addition product to cement, and included for its air entraining properties.

Further developments of polysulphide rubbers revealed a new molding compound which can be pulled from the mold hot, and exhibit the flow characteristics of a thermosetting material. When cold it retains its rubber-like qualities however.

Process Developments.—During the latter months of 1944 and the beginning of 1945, considerable attention was given to the art of free-blowing canopies of transparent acrylic plastics. This technique does not employ a fixed male or female mold, but utilizes air pressure alone to expand a heated sheet of acrylic to the desired contour. Excellent optical properties were realized unmarked by any surface imperfections. Many of the leading fighter aircraft were equipped with free-blown canopies of transparent plastics.

Developments in blowing plastics moved forward rapidly, resulting in the development of special injection machines which forced a controlled quantity of thermoplastic material into a die, where it could be blown to a desired shape. Vertical injection molding machines came in for their share of attention, promising to augment the equipments now in current use. At the end of the year, there was a pronounced trend towards small 1-oz. laboratory injectors, and many of these types were produced by machine manufacturers.

The development of post forming of thermosetting laminates received special commendation in the award of the Hyatt medal to W. Beach for this outstanding contribution to the art. Post formed laminates were beginning to find their way into luggage, trays, boxes, and industrial parts of every description at the end of the year.

New Applications.—Contributions of plastics to the development of rockets were cited in the latter part of 1945 by directing attention to various igniter strips, fusee containers, launching tubes, etc. which had been prepared from these materials. Binders for explosives have also been an important role of certain plastics materials.

The completion of the largest airplane in the world, the *Hughes Hercules*, was a tribute to the skill of the cabinet makers and wood technologists who contributed to its production. With a wing span of 320 feet it represents an ambitious undertaking. Prominent throughout its assembly

were the various thermosetting plastic type adhesives.

Synthetic resin paints with special lead salts were revealed to have substantially solved the barnacle problem upon the larger naval vessels. This saved many hours of scraping when undergoing repairs and insured maximum efficiency in operation at sea.

Plaster of paris forms came in for their share of attention when techniques were developed for the commercial impregnation of these forms with furane resins. The plaster parts were converted to very hard, durable structures through treatment with these plastics.

The plastics industry has now an opportunity to put the lessons well learned during the war into skillful peacetime practice. See also **CHEMISTRY; ELECTRICAL AND ALLIED DEVELOPMENTS.**

Technical Director, Plastics Industries Technical Institute.

PLUMS. California and Michigan are the only states credited with commercial plum production by the United States Department of Agriculture. On October 1, California's 1945 crop was estimated at 71,000 tons, and Michigan's at 2,200 tons. In 1944 California produced 92,000 tons and Michigan, 6,200 tons.

POLAND. A country of central Europe, re-established as an independent republic in 1918 following the First World War after having been partitioned among Germany, Russia, and Austria-Hungary from 1772 to 1918. As restored, Poland had an area of 150,470 square miles, and an estimated population of 34,775,698 in 1939. Of this population, about 68 per cent, or 21,993,400, were of Polish origin. The remainder were largely Ruthenians and Ukrainians, 4,441,600; Jews, 2,732,600; White Ruthenians, 989,900; Germans, 741,000; and Russians, 138,700. About 27 per cent of the population lived in cities and towns while 73 per cent lived in villages. More than 60 per cent earned their livelihood by agriculture, and 25 per cent by industry and commerce. Capital: Warsaw, pop. (1939) 1,289,000. Other principal cities are Lodz, 672,000; Lwów, 318,000; Poznan, 272,000; Cracow, 259,000. A partition of revived Poland (the fourth dismemberment in less than two centuries) was made a month after Germany began the Second World War by invading Poland on Sept. 1, 1939. According to the terms of their treaty of September 29, Germany and Russia divided Poland between them, Germany receiving approximately 72,866 square miles, and Russia 77,620 square miles. Soon after Germany launched her attack of June 22, 1941, against Russia, the German Army drove the Russians out of their area and occupied all Poland. But by March 1945 the Russian armies in their victorious counteroffensive had expelled the German forces from the entire country.

Constitution and Government.—The constitution of the new Polish Republic, as adopted in 1921, divided the powers of government into three branches—executive, legislative, and judicial. It provided for a bicameral National Assembly or Parliament composed of a Diet (Sejm) and a Senate; a president, elected by the assembly for seven years; a Council of Ministers; a Supreme Administrative Tribunal; and various other offi-

cers and departments. Executive power was vested in the president and Council of Ministers. The president of the council, jointly with the president of the republic and the particular minister concerned, were required to sign every law passed by the assembly. The head of the republic was the head of the army in time of peace and he had power to call, adjourn, or dissolve Parliament with the concurrence of both houses and, with the consent of the Diet, to declare war and make peace. All legislative power was vested in the Parliament. Judicial control was vested in the courts, the judges being appointed by the president of the republic. In 1934 the constitution of 1921 was altered for the purpose of strengthening the prerogatives of the executive branch, especially those of the president. After June 20, 1940, for the remaining period of German occupancy, the Polish government in exile had its seat at London. The Polish Committee of National Liberation in Lublin on Dec. 31, 1944, declared itself the provisional government of Liberated Democratic Poland, with Boleslaw Bierut as president. On Jan. 18, 1945, the Lublin provisional government entered Warsaw. In February at the Yalta (Crimea) Conference the hope was expressed that this government would be reorganized on a broader basis to include democratic leaders in Poland and from among the Polish exiles. Neither the London nor the Lublin government was invited to attend the San Francisco Conference. Correspondents continued through the year to find the Polish government, as constituted, completely dominated by Russia and hostile to political liberty.

Education.—Illiteracy was one of the big problems that confronted the republic whose adult population was over 60 per cent illiterate. Within the first 10 years of independence Poland reduced illiteracy to 23.1 per cent; at the outbreak of the Second World War it did not exceed 18 per cent. In 1938-39, Poland had 28,881 elementary schools with 91,224 teachers and 4,953,000 pupils; 789 secondary schools with 234,200 pupils; 74 teachers colleges, with 6,600 students; and 764 professional schools with 1,319 departments (including dental, mining, agriculture, veterinary, art, commerce) and 106,415 pupils. In recent years education was free and compulsory; secondary education was raised and standardized; and the 5 universities among them the University of Cracow (founded, 1364) were rapidly developed and modernized. The new republic also raised the professional qualifications and remuneration of teachers, their status and salaries being fixed by law as were those of judges and other public officials.

Religion.—The predominant religion is Roman Catholic, but no legal restrictions were imposed on other faiths. At the census of 1931, the population of Poland (31,915,000) consisted of 64.8 per cent Roman Catholics, 10.4 per cent Greek Catholics, 11.8 per cent Orthodox Church, 9.8 per cent Jews, 2.6 per cent Protestants, and .6 per cent members of other religions.

Agriculture, Mining and Industry.—Poland is primarily an agricultural country, and an immense agrarian problem was among the republic's heritages from its long tri-monarchical maladministration. The Land Reform Bill, passed in 1920, and the creation of a Land Department to engineer, and a state bank to finance the project of agrarian reform, indicate the seriousness of Poland's land problem and the energy with which it was attacked. While the Land Bill has undergone

repeated modification since its enactment, its essential plan and purpose were to distribute, with state compensation to private owners, large estates, particularly those uncultivated or neglected, among landless Polish peasants for actual occupancy and use. By 1927 from 60 to 70 per cent of Poland's productive land was in the hands of small owners, none of whose shares exceeded 200 acres, and all arable land was under actual cultivation.

In mining, Poland ranked low in its preindependence days, but its acquisition in 1921 of Polish Upper Silesia, with coal beds that are among the richest in the world (estimated at 63,901,500,000 metric tons), transformed it from a net importer of coal (10,000,000 tons annually before the First World War) to the second largest coal exporting nation of Europe, after England, and the fourth largest European coal producer (over 37,500,000 tons in 1930) after England, Germany and France.

Industrially, too, Poland made great progress after its independence. While state credits greatly stimulated Poland's industrial boom in the earlier years of its independence, ever-increasing home and foreign markets (the latter largely offsetting the loss of Soviet Russian trade) made artificial stimulation of industries unnecessary. Under these circumstances, and aided by commercial treaties, Poland's further industrial development seemed assured. Manufacture of agricultural implements, machine tools, as well as oil refining were flourishing industries, while salt, potash, iron ore, and zinc ore were among the other products of importance. The principal industry, however, was textile manufacturing, which employed (1937) 2,751,800 spindles, and 57,700 looms.

Principal Events.—As a prelude to the great Soviet winter offensive that was to free all of Poland from the Nazi rule, Moscow on Jan. 5, 1945, recognized the provisional government formed on New Year's Eve by the Polish Committee of National Liberation in Lublin. This unilateral move, promptly repudiated by the Western Allies, further sharpened the diplomatic issue born from the antithesis between London and Lublin Poles. Inter-Allied tension over this knotty problem continued to rise as the liberation of Poland swiftly progressed and the provisional government established itself in Warsaw, following the capital's fall on January 17. Despite the continued support of Britain and the United States, however, the Polish government in exile in London was doomed by its inability to influence the course of events in the homeland, while the rival regime in Warsaw vigorously partook in the final expulsion of Nazi forces and in the setting up of a new national administration.

One of the most regrettable results of this "unhappy spectacle of rival governments in Poland, one recognized by the Soviet Union, and the other firmly adhered to by the Western powers," (Prime Minister Winston Churchill) was to leave Poland without representation at the United Nations Conference at San Francisco. A Soviet request that the Polish provisional government (unrecognized at the time by any major power save Russia) be invited was turned down by London and Washington, late in March, but neither did the government in exile receive an invitation. It was agreed, though, that Poland's position as a charter member of the new world security organization would be safeguarded despite her absence from the conference.

There was also agreement in principle between Russia and the Western Allies that a new

Polish government combining elements of both the London and the Lublin factions should be formed, in accordance with the decisions taken at Yalta, but negotiations to this effect made only slow progress. A great step forward was taken when former Premier Stanislaw Mikolajczyk, principal spokesman of the conciliatory wing of the London Polish group, on April 15, unequivocally endorsed the Yalta formula despite protests from the Arciszewski government.

Meanwhile, however, a new disturbing element had arisen. On April 6, it was learned that 16 Polish underground leaders, including in particular Jan Jankowski, vice premier of the London Polish government, and Gen. Bronislaw Okulicki, commander of the Home Army, had disappeared after a meeting with Red Army officers. The mystery was not cleared up until May 3, when Soviet Foreign Commissar V. M. Molotov, disclosed at a Big Three meeting in San Francisco that the missing Poles had been arrested on charges of "diversionist activity" behind the Red Army lines. American and British diplomats reacted sharply to this disclosure, the more so as the arrested Poles apparently had been assured of safe conduct when meeting the Red Army authorities. The incident caused a temporary suspension in conversations aimed at the formation of a Polish government of national unity.

The situation was not improved when Russia on April 21, signed a treaty of friendship, mutual assistance, and postwar collaboration with the Polish provisional government, without awaiting its recognition by the other Allies. The accord was completed within 48 hours of the arrival in Moscow of the two principal leaders of the Lublin group, President Boleslaw Bierut and Premier Edward Osubka-Morawski.

Despite these setbacks, negotiations for a new Polish government continued and substantial progress was made after the arrival in Moscow of President Truman's special emissary, Harry Hopkins. As a direct result of Mr. Hopkins' endeavors, an invitation was sent on June 12, to the moderate wing of the London Poles and democratic leaders of the Polish underground to come to Moscow for discussions. On June 15, S. Mikolajczyk and Jan Stanczyk, Socialist miners' leader, flew to Moscow from London, but the most prominent of the leaders from inside Poland, Wincenty Witos, was too ill to attend the conference. After a good start, the conference temporarily was put in jeopardy by the trial and conviction of General Okulicki and associates before a Moscow military court, but the comparatively mild sentences imposed and a promise of ulterior amnesty saved the situation. On June 23, formation of the long-awaited Polish national government was announced with Osobka-Morawski as premier and Mikolajczyk as vice premier. The vast powers normally exercised by the president of the republic were vested in a three-man council composed of Bierut, Witos, and Prof. Stanislaw Grabski of the London group. By general agreement, the new government was representative of all Polish factions except the relatively small group in power in London.

As a result, Britain and the United States let it be known, on June 23, that they would withdraw recognition from the Arciszewski regime and recognize the new administration in Warsaw as soon as the latter had pledged itself to the holding of free elections. After fulfillment of this condition, recognition was formally extended

on July 5; Arthur Bliss Lane was appointed American ambassador in Warsaw. France and Sweden had recognized the new Polish Government a week earlier and most of the other powers followed the lead of the American and British governments. The Polish regime in London protested in vain against these developments and made strenuous attempts to withhold funds and the control of the 200,000 Polish soldiers serving with the Allies from the Warsaw government. Open opposition was offered in particular by the Polish High Command but British authorities handled the situation firmly and skillfully. On August 19, Jan Stanczyk, Polish minister of social welfare, predicted that eventually all but some 500 of the more than 1,000,000 Poles stranded in Europe would return to their homeland.

On August 16, Russia and Poland signed a treaty in Moscow, fixing the new frontier between the two countries and sharing the compensation to be exacted from Germany for damages caused by the Nazi occupation. The frontier settlement agreed upon followed by and large the earlier delimitation along the Curzon Line, with minor territorial concessions for Poland in various places. The accord was signed by Premier Edward Osobka-Morawski for Poland, and by Foreign Commissar V. M. Molotov for the USSR.

Under the terms of the reparations agreement, Russia promised to turn over to Poland 15 per cent of all reparation deliveries from the Soviet zone of occupation in Germany collected in the period after the Berlin conference; and 15 per cent of the industrial capital equipment received by Russia from the western zones of occupation.

In return, Poland agreed to deliver to Russia 8,000,000 tons of coal in 1946, 13,000,000 tons each year during the next four years, and 12,000,000 tons for each further year of the occupation of Germany. In order to facilitate the execution of this contract, the Polish government assigned 50,000 German prisoners of war to work in the Silesian coal mines.

Poland's economic recovery made more rapid progress than in most other countries formerly occupied by the Germans. This was primarily due to the surprisingly good condition in which the Silesian industrial region was taken over by the Poles as a result of the swift Soviet conquest which left the retreating Germans no time for a thorough wrecking job.

An official survey released on Sept. 1, 1945, indicated that coal production would reach 36,500,000 tons by the end of the year and that zinc production was expected to reach 75,000 tons a month, or 39 per cent more than the pre-war average. The steel output also was rising steadily.

ALBERT ABARBANEL,
Former Assistant Professor of Philosophy and Social Sciences, University of Newark.

POLICE TRAINING AND EDUCATION. Programs for the training and education of police went forward in 1945 at accelerated pace. The necessities imposed by war conditions are mainly responsible for this fact. They could not have been effective but for their recognition by the Federal Committee on Social Protection, the F. B. I. and other agencies including awakened and intelligent police forces throughout the country.

In many police departments, and especially in schools that are established in colleges and universities, the police are receiving substantial in-

struction from very competent men in the law of arrests and in criminal procedure. Officers who are in daily touch with the actual problems of criminal law are, as a rule, responsible for giving the instruction. This is a distinct advance over mere training in techniques. Within the year publications by the commanding officer of the Legal Bureau in New York City Police Department and his second in command have for the first time made authoritative and considerably detailed information on the subject available to the police generally.

The stages in criminal prosecution; direct and circumstantial evidence; presumption; presentation of evidence; burden of proof; the hearsay rule and its exceptions in dying declarations and in *res gestae* (statements that are made at the time of a crime and that are regarded as a part of the event); confessions and admissions; opinion testimony; the distinction of crime as an act that is wrong in itself from an act that is merely prohibited by law; intent and motive; principals, accomplices and accessories; what manner of person is liable; attempt; entrapment; when prosecution may be initiated; double jeopardy; withdrawal of a complaint and compounding a crime; all these are recommended as topics to be included in a course for police officers on the law of arrests. A serious attempt is being made to cover the area indicated by these topics even though the war made it necessary to telescope a good many courses of instruction. The start that has been made in this direction is expected to be enlarged now that peace has come.

It is significant of a new attitude among police forces that the teaching of the law of arrests is intended to keep alive an awareness of the rights and privileges of individuals in a democratic pattern of life. To this end it includes instruction that relates not only to the circumstances in which arrests may be made, but also to those in which arrests may be avoided to the advantage of the individual concerned and for the protection of the community as well. Thus, it is described as better policy to get the co-operation of a landlord toward removing a morally undesirable tenant, or toward improving a situation that contributes to moral contamination, than to arrest the landlord because he has such a tenant on his premises.

This is a recognition of the preventive function of the police that has lately been coming to the front. For example, Cleveland College offers a course in crime prevention in which 50 police women were enrolled early in the year and a six week's school for state and municipal police women of Connecticut was opened at the Bethany State Police Barracks in April. Preventive police work is being fostered, also, through a new association between Syracuse University in New York and the police department of the city. The same movement is observed in Boston where the Boston College School of Social Work has enrolled 13 police women in its course in social services.

The coming of peace is expected to bring an immediate revival of instruction in police science and administration in certain institutions in which it was interrupted by the outbreak of the war. Moreover, steps have already been taken toward offering such instruction in new areas. For instance, the attorney general of the State of California and the State Peace Officers Association are supporting the application of the University of Southern California for means to establish a Crime Prevention Training Program to be mod-

eled after the Northwestern University Traffic Safety Institute in its field of activity. In other words, if the application should be successful, officers will be selected for enrolment on a competitive basis from all parts of the country. A larger or smaller group will be in attendance and under instruction during a period (three months if the institute is to be exactly copied) and be followed by another and still another group throughout the year.

The Department of Police Science and Administration in the Washington State College at Pullman, Wash., continued its activity unabated throughout the period of the war. It even increased the scope of its work. Recently its director, aided by young men and women enrollees, completed a city-sponsored survey of Seattle and made recommendations for reorganization within the police department.

There are definite signs that police training schools are not always to limit their function to giving instruction and training directly to enrolled officers, but are to extend it to the general public. For several years educational programs have been directed by these schools to the task of improving the habits of pedestrians in the streets. A Pedestrian Safety School is a feature, for illustration, of Portland, Oreg. Citations for careless crossing of streets are tickets of admission to the school. Attendance is required during one hour only on the first Tuesday evening following the date of the citation on pain of having to furnish bail or to appear in court.

Northwestern University Traffic Safety Institute in May 1945, for the first time, offered a five day Motor Vehicle Fleet Supervision course. Fifty supervisors were enrolled from the Chicago areas—Wisconsin, Iowa, Minnesota, Indiana, and Pennsylvania. They were representatives of trucking, insurance, oil distributing and other companies. The object of the course was to promote co-operation with law enforcement agencies in respect to driver qualifications, fixing accident responsibility, safety plans, etc. Movements of this nature are enlarging in the police a sense of social responsibility for more than just arresting criminals.

PORTLAND CEMENT. See CEMENT.

PORTUGAL. Formerly a monarchy, now a republic under a virtual dictatorship, continental Portugal, on the west coast of the Iberian Peninsula, has an area of 34,254 square miles, and with the Azores and Madeira (islands), which form provinces of the republic, an area of 35,490 square miles. Pop. (1940), 7,722,152. Lisbon, the capital and largest city, has a population of 709,179; Porto (Oporto), 262,809; Funchal, 48,493; Coimbra, 35,437; Setúbal, 35,071. Other cities are Braga, Évora, Ponta Delgada, and Faro.

The Republic of Portugal was proclaimed in 1910, following a revolution which forced the royal family into exile. A new constitution, adopted in 1933 provides for a dictatorship on a corporative basis, and a president elected for seven years. A Privy Council of 10 members, advises the president, and a Corporative Chamber functions alongside the National Assembly. Dr. Antonio de Oliveira Salazar, who was chiefly responsible for the Constitution of 1933, has been virtual dictator of Portugal since 1932, when he became premier. In 1936 he also assumed the offices of provisional minister of war,

and of foreign affairs. Gen. Antonio Oscar de Fragoso Carmona has been president since Nov. 29, 1926, having been last elected Feb. 8, 1942.

Finances.—Portugal's budget for 1944 authorized total expenditures of 3,768,406 escudos (the escudo equaled \$0.037 in U.S. currency in 1940), as compared with 3,984,615 escudos in 1943. Estimates of revenue are fixed at 3,769,351 escudos, as compared with 4,047,390 escudos in 1943.

Education.—Though compulsory education has been in force in Portugal since 1911, the 1940 census showed that only 43.23 per cent of the population could read and write. In 1941-42 there were 10,481 primary schools in operation with 546,790 pupils and 13,882 teachers. In private elementary schools in 1941-42 there were 45,086 pupils, making a grand total of 591,876 pupils receiving primary instruction in that year. Secondary education is supplied by *liceus* and by schools of technical instruction. There were 43 *liceus* with 15,877 pupils and 1,047 teachers; and 59 professional schools with 35,492 pupils and 1,150 teachers. In addition, 17,886 pupils attended private secondary schools, and 2,429, private technical schools. There are 8 vocational education schools with 1,724 students and 162 teachers. For higher education there are 3 universities—at Lisbon, at Coimbra, and at Porto—with a combined enrolment (1940-41) of 6,620 students. There are also special schools for music, art, commerce, and industry.

Religion.—The predominant religion is the Roman Catholic, although freedom of worship is permitted. Including the Azores and Madeira, there are 6 ecclesiastical provinces, with sees at Lisbon, Braga, and Évora, Loanda (Angola), Lourenço Marques (Mozambique), and Goa (Portuguese India). On May 7, 1940, a new concordat was signed with the Vatican, extending certain privileges of the Portuguese Church in the Far East.

Defense.—Military service is compulsory from the age of 20 to 48, consisting of 6 years of active service, 16 years in the active reserve, and 6 years in the territorial reserve. Peace strength in January 1940 was 3,200 officers and 26,800 other ranks, exclusive of 330 officers and 11,000 other ranks in the overseas garrisons. There is also a Republican Guard (220 officers and 5,500 other ranks), a Fiscal Guard (100 officers and 5,000 other ranks) and a voluntary force (3,400 officers and 49,000 other ranks). The navy consists of 6 sloops, 5 destroyers, 6 gunboats, 3 submarines, 1 sailing training ship, 3 surveying vessels, 3 river gunboats, 1 oiler, and 9 auxiliary service ships. Naval personnel on Dec. 31, 1941, included 757 officers and 5,482 other ranks. There is a military and naval air service.

Production and Industry.—Portugal's leading occupation is agriculture, followed by forestry (cork, naval stores, and mine pit-props are the principal products), and fishing. In 1941 a total of 479,500,000 kilowatt-hours of electricity was produced, a 4.2 per cent increase over 1940. A plan was adopted in 1945 to increase the output of electrical energy by more than 300 per cent within the next eight years. Production of a variety of goods for domestic and colonial consumption has been expanded in recent years. Since 1933, under the economic provisions of the constitution of that year, government control of production and distribution has been greatly extended.

Chief agricultural products include cereals, wine, olives and olive oil, almonds, figs and rice.

Wheat is the principal cereal crop, although production is usually insufficient for domestic needs. Production of wheat in 1944 was estimated at 400,000 metric tons, as compared with an estimated 300,000 tons in 1943. Rye, barley, oats, and corn are also grown, almost exclusively for domestic consumption, and rice production has been expanded recently. Portugal is normally fourth among the countries of the world producing olives and olive oil, being exceeded by Spain, Italy, and Greece. In 1942 production of wine was 8,334,775 hectoliters (the hectoliter = 26.418 U.S. gallons) and of olive oil 417,894 hectoliters. Fruits and nuts are raised in sufficient quantities to supply domestic needs, among them almonds, figs, apples, grapes, oranges, walnuts, and chestnuts being most important. Figs are Portugal's most important fruit export. The 1943-44 fig crop totaled 14,000 tons. Almond production in 1944 was estimated at 10,500 metric tons (unshelled), an increase over the 1943 yield of 9,000 tons. Portugal is the world's leading producer and exporter of cork, and resin and turpentine are also important, as are exports of mine pit-props to Great Britain.

The leading manufacturing activities are the production of cotton textiles, shoes, cement, glass and porcelain tiles, lime, fertilizers (mostly superphosphates), paper, household wares, soap, chinaware, agricultural implements, cork wares, tiles, nails and hardware, sardine canning, and the refining of sugar and olive oil.

Fisheries.—Fishing is one of the principal industries. In 1943 there were 39,974 men and boys employed, with 15,205 boats. The sardine catch (the leading fish catch) was 132,923 metric tons, as compared with 74,000 tons caught in 1942. Portugal also has built an important and increasing codfishing industry.

Minerals.—Although valuable mineral deposits exist in all the provinces of continental Portugal, mining operations are not extensive, and until recently the resources have been incompletely exploited owing especially to inadequate electric power and transportation. Copper pyrites are found extensively in southeastern Portugal, while tin and tungsten ores are found in the eastern and northeastern sections. Substantial tonnage of coal, sulphur, and kaolin are produced from long-established mines; and radium has been mined in Portugal since shortly after its identification. Manganese, lead, zinc, arsenical pyrites, marble, gypsums, and slate are found in varying quantities, but mining of these resources is as yet unimportant. Annual mineral production (in metric tons) reached the following figures in 1943: cuperiferous pyrites, 109,994; copper (precipitated), 278; coal, 498,808; kaolin, 2,145; wolfram, 5,671.

Anthracite coal production during the first quarter of 1945 was 96,855 metric tons as compared with 100,274 metric tons for the same period in 1944. The lignite output for the first three months of 1945 was 25,902 metric tons compared with 30,701 metric tons for the corresponding period in 1944.

Communications.—The total railway mileage in Portugal in 1943 was 2,224, of which less than half were state-owned. Highway mileage totaled 15,602; annual expenditures for highway construction and maintenance amount to about \$5,000,000. In addition to the highways and railroads there are 11 rivers which are navigable for various distances, the most important being the Tagus, the Duero, and the Guadiana. The Portuguese merchant marine in January 1943

consisted of 945 ships of 315,534 tons, mainly employed in the colonial service. This is almost four times as many ships as Portugal had in 1939. Large purchases of ships were also made in 1943, including certain vessels formerly of German registry, interned in ports in Angola and Mozambique. During the dislocation of regular European airlines caused by the war, Portugal became the outstanding air traffic center in Continental Europe. The new Lisbon airport was opened in December 1942. It is especially important as a base for transatlantic air passenger and mail service between Europe and North and South America. In 1942 Portugal had 8,389 miles of telegraph lines; and 118,750 miles of telephone lines, of which 32,541 were state-owned and 86,209 miles were owned by Anglo-Portuguese interests. There were 32 wireless stations.

Foreign Trade.—Portuguese trade consists of three main branches: imports for domestic consumption; exports of national or nationalized products; and the transit trade, which normally consists of foreign goods to be shipped to the Portuguese colonies and re-exports of colonial goods to foreign countries. In 1942 imports amounted to 2,476,523,630 escudos and exports to 3,938,866,153 escudos, and in 1943 to 3,341,383,269 escudos and to 4,034,902,298 escudos respectively. (In November 1945 the escudo = \$0.04055 in U.S. money.)

Principal Events.—On Jan. 29, 1945, Herman B. Baruch, brother of Bernard Baruch, was nominated United States ambassador to Portugal, replacing R. Henry Norweb. On February 9, Acting Secretary of State Joseph C. Grew stated that the United States was "not satisfied with the attitude of a number of neutral governments," concerning the possibility that their countries might be used as havens of refuge by Nazi war criminals. Mr. Grew's statement confirmed the declaration which former Secretary of State Edward R. Stettinius, Jr. had made on Nov. 15, 1944, to the effect that Portugal's reply in regard to assurances against giving asylum to Nazi war criminals was "not entirely satisfactory." On February 25, it was reported that Portugal, along with Spain, Sweden, Switzerland, and Argentina, had been barred from the world conference on security at San Francisco, and three days later the government-controlled Lisbon radio stated that a belated declaration of war on the Axis would not have conformed to the Portuguese sense of national honor. "Mere participation in a conference," declared the Lisbon station, "is not worth the sacrifice of national dignity." Government officials in Washington on April 18 expressed satisfaction with Spain's action in forbidding all German planes to land on Spanish territory, and added that no satisfactory reply had been received to a similar request made to Portugal. On May 2, according to the United States Office of War Information, the Portuguese government ordered two days of mourning for the death of Adolf Hitler, and flags were flown at half-mast on all Portuguese public buildings. However, Portugal severed relations with Germany on May 6, stating that, because of war developments, "there no longer exists a German national government." The Lisbon radio announced the lifting of many war restrictions on August 25.

The first general elections held in Portugal in 20 years were won on November 19 by Premier Salazar's National Union Party, but these elections were boycotted by the opposition. On De-

cember 5, Fred M. Vinson, secretary, United States Treasury, lifted curbs on financial transactions with all foreign countries except former neutrals, including Portugal, and former enemies.

PORTUGUESE COLONIAL EMPIRE. Comprised, in Africa, of Angola, Cape Verde Islands, Portuguese Guinea, São Tomé and Príncipe, and Mozambique; and, in Asia, of Portuguese India, Macao, and of Timor. Total area, about 803,835 square miles; total estimated population (1940) 10,875,051.

Angola (PORTUGUESE WEST AFRICA).—A Portuguese colony on the west coast of Africa, south of the Belgian Congo area. Area: 481,351 square miles; pop. (1940) 3,738,010. Capital, Loanda; future capital, Nova Lisboa (Huambo). Chief products include coffee, wax, sugar, maize, vegetable oils, coconuts and palm oil. Exports in 1942 totaled 480,353,049 angolares, and imports 328,126,702 angolares. The 1944 budget was balanced at 331,424,000 angolares.

Cape Verde Islands.—Ten islands and five islets in the Atlantic Ocean, between 300 and 400 miles off the west coast of Africa, between latitude 15° and 18° N. Their total area is 1,557 square miles; population (1940) 181,286. The capital is Praia, on São Tiago Island. Chief products are castor oil, coffee, mustard, brandy, oranges, and hides. Imports in 1942: 68,642,614 escudos (special commerce); exports, 19,606,958 escudos (special commerce). The 1944 budget was balanced at an estimated 26,205,000 escudos.

Macao.—An island off the mouth of the Canton River, China, which together with the smaller islands of Taipa and Colôane forms a Portuguese province. The approximate total area is 6 square miles; population (1940) 374,737. The estimated revenue and expenditures balanced in 1944 at 53,617,000 escudos.

On Jan. 16, 1945, American planes accidentally bombed the Portuguese colony of Macao. The United States government officially expressed its regret and ordered an inquiry.

Mozambique (PORTUGUESE EAST AFRICA).—Colony south of Tanganyika Territory and north of Natal. Area: 297,731 square miles, population (1940) 5,081,266. The capital is Lourenço Marques. The chief products are sugar, corn, cotton, sisal, copra, and mining products. Exports in 1943: 469,768,000 escudos; imports, 561,798,000 escudos. The budget was balanced for 1944 at 658,524,000 escudos.

Portuguese Guinea.—Colony on the west coast of Africa; area: 13,944 square miles; population (1940) 351,089. The capital is Bissau. Chief products include hides, rice, oil, seeds, and wax. Exports in 1943: 97,470,000 escudos (special commerce); imports 95,286,000 (special commerce). Estimated 1944 budget balanced at 41,150,000 escudos.

Portuguese India.—A colony of Portugal comprising three settlements on the west coast of India; Diu, an island, with the mainland territories of Gocola and Simbor, on the coast of Gujarat; Damao (Damaun), an island, with the mainland territories of Dadara and Nagar-Aveli, on the Gulf of Cambay; and Goa, the largest settlement, on the Malabar coast, together with the islands of Angediva, São Jorge and Morcegos. The combined area is 1,537 square miles; population (1940) 624,177. The capital, in Goa, is Panjim (Nova Goa), on the estuary of the Mandavi River. The governor general is Col. José Ricardo Pereira. Revenue and expenditure

of the colony in 1944 was estimated to balance at 46,850,000 escudos. Portuguese India had (1938) 503 elementary schools, 12 secondary schools, a medical school, and a teachers' training college. While agriculture and fishing are the principal industries, large numbers are engaged at salt works in all three settlements, and manganese is mined on a fair scale near Mormugao, the principal port of Goa. The chief exports are coconuts and copra, fish (fresh and dried), spices, caju-nuts, and salt. Exports were valued in 1940 at 19,910,940 escudos, and imports at 102,018,420 escudos. Much of the trade is transit. A railroad of 51 miles connects Mormugao with the Deccan States.

Portuguese Timor.—Eastern portion of the island of that name in the Malay Archipelago, with the territory of Ambeno, and the neighboring islands of Pulo Cambing, and Pulo Jako, midway between Australia and Celebes, and about 700 miles southeast of Borneo. The area is 7,330 square miles; population (1936) 436,796. Chief products include coffee, rice, sugar, coconuts, sandalwood, wax, and copra. Imports in 1940 totaled 3,880,000 escudos, and exports 4,154,000 escudos. The estimated public revenue and expenditures in 1944 balanced at 9,430,000 escudos. Portuguese Timor was occupied by the Japanese in February 1942. The Portuguese government announced on Aug. 17, 1945 that Japan had agreed to return the Portuguese half of the island, and to surrender Japanese forces there.

São Tomé and Príncipe.—Two islands lying about 125 miles off the west coast of Africa in the Gulf of Guinea. Capital: São Tomé. The area is about 372 square miles; population (1940) 60,490. Chief products include cacao, coconuts, copra, palm oil, coffee and cinchona. Exports in 1943 totaled 55,307,000 escudos; imports, 25,780,000 escudos. The budget balanced in 1944 at 13,170,000 escudos.

POTASH. Production and sales of domestic potassium salts continued to increase and again set a new record in 1944, according to the United States Bureau of Mines. The total production for the year amounted to 1,578,498 short tons of marketable potassium salts containing 834,568 tons of equivalent potash (K_2O), as compared with 1,428,840 tons containing 739,141 tons of equivalent potash in 1943. Total sales in 1944 amounted to 1,543,420 short tons, and were a little more than 10 per cent over 1943. The contained equivalent potash (K_2O) in this material was 817,892 short tons, an increase of nearly 12 per cent over 1943. Stocks of potassium salts in terms of K_2O in producers' hands at the end of 1944 were more than double those of 1943 and were larger than in any recent year.

POTATOES. According to the Department of Agriculture, the 1945 potato crop of the United States came close to being a record one. The yield on October 1 was estimated at 435,395,000 bushels, as compared with the 1944 crop of 379,436,000 bushels and the 1934-43 average crop of 375,091,000 bushels. Maine retained first place in 1945 as the leading producer with a crop of 58,025,000 bushels. Idaho was second with 43,650,000 bushels; and California was third with 37,365,000 bushels, early and late. Every state in the Union is listed as a potato grower.

POTSDAM CONFERENCE. See **WORLD POLITICS.**

PRATT, Frederic Bayley, American educator and civic leader: b. Brooklyn, N.Y., Feb. 22, 1865; d. Glen Cove, N.Y., May 3, 1945. Retired president

of Pratt Institute, which his father, Charles Pratt, founded in 1887. After serving as secretary to the board of trustees and as an administrative officer, he became president of Pratt Institute in 1923 and held this post until 1937 when he was elected chairman of the board of trustees. Mr. Pratt was a founder of the New York Museum of Science and Industry in Rockefeller Center, and its head from 1928 until 1935.

PRESBYTERIAN CHURCH IN THE UNITED STATES (South). This division of the Presbyterian denomination covers the territory commonly known as the Southern states. It was composed in 1945 of 17 synods (in most cases, corresponding to state lines) and 87 presbyteries, with 3,513 organized churches, 2,586 ministers and 580,369 members, exclusive of ministers. During the year 20,714 members were received on profession of faith, and 25,954 by certificate. There were 12,035 adult baptisms and 9,559 infant baptisms. The ruling elders numbered 18,659, and deacons 22,112. Contributions for current expenses during the year amounted to \$5,721,307, for pastors' salaries \$3,811,606, for building expenses \$3,443,950, and for benevolences \$5,656,925; a grand total of \$18,633,788, an increase over the preceding year of more than \$2,600,000. The total per capita gift was \$32.10, of which \$9.74 was for benevolences and \$22.36 for current expenses.

The 85th General Assembly of the church convened in Montreat, N.C., May 24, 1945, with 365 commissioners present. Rev. Thomas K. Young, D.D., pastor of the Idlewild Presbyterian Church, Memphis, Tenn., was elected moderator. Actions taken by the General Assembly of special interest are as follows: the Committee on Co-operation and Union was instructed to continue "to explore and search in suitable ways and means of bringing into one body all branches of our Presbyterian family"; specifically to "endeavor to perfect as soon as practicable the plan for reunion of the Presbyterian Church in the United States of America and the Presbyterian Church in the United States." Overtures asking that the General Assembly withdraw from the Federal Council of Churches of Christ in America were answered in the negative. A goal of 50,000 won to Christ on profession of faith during the year was adopted enthusiastically. Much impetus was given to the work of the Committee on Radio by fixing a budget of \$30,000 and by the approval of efforts to extend the *Presbyterian Hour* over a live voice network which would cover the territory occupied by our church.

This church continues to go far beyond its quota of chaplains in the armed forces with 151 in the army and 119 in the navy. This total is more than 10 per cent of all ministers in the church and 13 per cent of all ministers who are in active service.

Plans are being made for the rehabilitation of the Foreign Mission work in the Orient. All of the fields of this church were affected by the war because we had stations in Japan and Korea and in that part of China which was overrun by the Japanese.

Extensive plans have been drawn up for pushing Home Mission work in the areas where the sudden shift of populations has created critical situations.

Establishment of outposts or chapels will be pushed throughout the bounds of the church in an effort to take the Gospel to people who are not reached by the churches.

Training of recruits for the ministry and lay service is conducted in the four theological seminaries and the Training School for Lay Workers. Thirteen colleges controlled by synods and two affiliated colleges provide a Christian education for young men and women, who will be the future leaders of the church. Seven junior colleges, eight secondary schools and three mission schools (one for Indians and two for Mexicans) continue to render splendid service. Sixteen orphan's homes and schools take care of the needs of over 1,600 children.

The 1946 meeting of the General Assembly will convene in Montreat, N.C. on May 23.

REV. E. C. SCOTT,
Stated Clerk and Treasurer, The Presbyterian Church in the United States, Dallas, Texas.

PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA. The 157th General Assembly of this communion met in Minneapolis, Minn., May 24, 1945, in Westminster Presbyterian Church, which was the host of the assembly. The Rev. William Blakeman Lampe, D.D., of St. Louis, Mo., was elected moderator, and Ruling Elder President Charles J. Turck, of St. Paul, Minn., was appointed vice moderator.

Thirty-two overtures, together with other communications, reports, and papers were presented from various judicatories. The stated clerk, the Rev. William Barrow Pugh, D.D., presented the report of the Office of the General Assembly. The General Council submitted its 22d annual report approving a benevolence budget of \$10,537,240, of which it is anticipated that \$2,364,100 will be received from other than living sources.

The War-Time Service Commission reported that the campaign to raise over \$1,250,000 had been more than successful, and the General Assembly authorized the raising of a total fund of \$27,000,000, to be known as the Restoration Fund, which includes the continuation of the War-Time Service Fund for a period of five years, together with large sums for rehabilitation and reconstruction, and the stabilization of the Service Pension Fund.

The special committee on army and navy chaplains reported 425 Presbyterian chaplains in the army and 300 in the navy.

The 158th General Assembly was scheduled to meet in Atlantic City, N.J., on May 23, 1946.

STATISTICAL SUMMARY

Synods	40	Ministers dismissed	14
Presbyteries	268	Ministers deceased	211
Ministers	9,519	Elders	55,464
Licentiate	146	Deacons	26,956
Candidates	1,304	Churches	8,604
Ordinations	181	Churches organized	24
Licensures	191	Churches dissolved	60
Installations	662	Churches received	1
Pastoral dissolutions	631	Churches dismissed	2
Ministers received	46	Youth budget churches	1,665

National Missions.—The Board of National Missions has under its control local church work, Sunday-school missions, community work, educational work, medical service, itinerant missionary work, evangelism, building, general promotion, etc. In 1944-45 the board received \$3,099,082 and expended a like amount. Total assets amounted to \$39,359,500; the value of properties owned is \$10,812,518.

Foreign Missions.—The Board of Foreign Missions operates in China (eight provinces), Chosen (Korea), Japan, India, Africa, Latin America (seven countries), Iran, Philippines, Siam (Thailand), Syria and Iraq. In 1944-45 the board received \$3,314,281 and expended \$3,574,329. Total assets amount to \$21,839,195.

Christian Education.—The Board of Christian Education is authorized to co-operate with 45 colleges, 10 theological seminaries, and 3 training schools, which are generally known as Presbyterian institutions. The receipts in 1944-45 were \$1,095,529, and \$1,085,134 was expended. The assets amount to \$3,064,635.

Pensions.—Under a service pension plan, put into operation April 1, 1927, 3,684 pensioners received a total of \$1,315,152, for the year ending March 31, 1945. According to this plan, a church pays into the Board of Pensions 8 per cent of its pastor's salary and the pastor himself pays 3 per cent (new rate commenced Oct. 1, 1942). The pension is payable upon retirement after attaining the age of 65 in proportion to the length of service, with a minimum of \$600 if 35 years of service have been rendered. Income for the relief department from churches, individuals, and permanent funds, amounted to \$424,900. Income from investments amounted to \$1,520,234, and the total assets amount to \$44,915,948.

HENRY BARRACLOUGH,
Manager, Administration Department, Office General Assembly, Presbyterian Church in the United States of America.

PRESBYTERIAN CHURCH OF NORTH AMERICA, United. A member of the family of Presbyterian Churches, of Secession and Covenanter origin, formed by the union in Pittsburgh, Pa., May 26, 1858, of the Associate and Associate Reformed Churches. The General Assembly of the church convened in Monmouth College, Monmouth, Ill., May 30, 1945, being the 87th meeting of this court. The outstanding feature of the meeting was the formal launching of The World Wide Christian Advance program in which the membership of the church will be asked to subscribe within a two-year period a fund of \$2,310,000. The membership in America is 198,759, and in Egypt and India, 68,705. Contributions in America in 1944 amounted to \$6,230,350, or an average of \$31.35 per member. The officers of the denomination are: moderator, James M. Ferguson, D.D., Bellevue, Pa.; vice moderator, Albert E. Kelly, D.D., Santa Ana, Calif.; clerk, O. H. Milligan, D.D., Pittsburgh, Pa.; treasurer, R. L. Lanning, D.D., Pittsburgh, Pa.; executive secretary of the Board of Administration, T. C. Strangeway, D.D., Pittsburgh, Pa. Headquarters for this church are maintained in the Publication Building, 209 Ninth Street, Pittsburgh, Pa.

REV. ROBERT A. FOSTER,
Keokuk, Iowa.

PRIBILOF, or FUR SEAL ISLANDS. A group consisting of two main islands (St. Paul and St. George), two small uninhabited islands (Otter and Walrus), and several islets, all of volcanic origin, part of Alaska, situated in Bering Sea

about 200 miles north of the Aleutians and slightly west of Dutch Harbor. The total area is about 180 square miles. The population, which in 1940 was upwards of 500—mainly Aleuts, with a few United States government officials—was evacuated in June 1942 to the Alaska mainland, at the time of the Japanese incursion into the Aleutians, the Army remaining in charge.

The group is of great importance as the breeding place of the fur-seal, sea-bear, otter, and blue fox. To prevent reckless killing and herd extinction of the seals the islands were made a seal reservation in 1911 and put under the authority of the United States Bureau of Fisheries. In peace-time, the bureau gave work to the islanders and provided housing, food, clothing, medical care, and transportation. In 1941 the herd of fur-seals included 2,720,780 animals, about 85 per cent of the world's fur-seal population. In 1940 about 65,000 sealskins were taken. A thousand fox skins was the winter average.

PRICES AND PRICE CONTROLS. See INFLATION AND PRICE CONTROL; LABOR CONDITIONS IN THE UNITED STATES.

PRINCE, John Dyneley, American diplomat, linguist, and educator: b. New York City, April 17, 1868; d. there, Oct. 11, 1945. United States minister to Denmark from 1921 to 1926 and to Yugoslavia from 1926 to 1933. Dr. Prince was one of the world's leading linguists. Among the languages he could speak were French, German, Russian, Italian, Spanish, Portuguese, Danish, Swedish, Serbian, Hungarian, Czech, Polish, Bulgarian, Slovene, Slovak, Welsh, Icelandic, Gypsy, and Turkish.

Dr. Prince was graduated from Columbia University in 1888, studied at the University of Berlin from 1889 to 1890, and received his Ph.D. degree from Johns Hopkins University in 1892. He became professor of Semitic languages at New York University in 1892 and dean of its graduate school in 1895. In 1902 he joined the Columbia faculty as professor of Semitic languages, retaining this post until 1915. He served as professor of Slavonic languages at Columbia from 1915 to 1921 and again from 1933 to 1935, and as professor of East European languages from 1935 until his retirement in 1937.

PRINCE EDWARD ISLAND. Smallest of the Canadian provinces; area 2,184 square miles; pop. (1941), 95,047; principal cities (1941), Charlottetown, the capital, 14,460; Summerside, 4,978. The island lies at the mouth of the Gulf of St. Lawrence, and is separated from the mainland of New Brunswick and Nova Scotia by Northumberland Strait. It was discovered by Sebastian Cabot in 1497; first settled by the French, but taken from them in 1758; annexed to Nova Scotia, 1763; constituted a separate colony, 1769; entered the Confederation, July 1, 1873. It is governed by a lieutenant governor and a Legislative Assembly of 30 members, elected for 5-year terms, half by real property holders; half by universal male and female suffrage. The division, according to the election of Sept. 15, 1943, was: Liberals, 20; Progressive Conservatives, 10; total 30.

Education and Religion.—In 1943 there were in the province 454 schools, with 659 teachers and 17,179 pupils, exclusive of two Roman Catholic convent schools at Summerside and Charlottetown with 617 pupils. There are two colleges—Prince of Wales College, head of the provincial school system, and St. Dunstan's University

(Roman Catholic), both in Charlottetown. Total expenditure for education Jan. 1, 1943–March 31, 1944, was \$764,160.

In 1941 (latest available statistics) Roman Catholics numbered 42,743; Presbyterians, 14,724; United Church, 24,005; Baptists, 5,443; Anglicans, 5,739.

Finance.—The budget for Jan. 1, 1943–March 31, 1944, showed revenues of \$3,072,460 and expenditures totaling \$3,048,820. On March 31, 1943, the total sinking funds of the province amounted to \$2,593,669; total liabilities on March 31, 1944, were \$9,123,613.

Production and Industry.—Farm land occupied in 1943 totaled 1,334,400 acres; field crops in 1943 occupied 472,000 acres and were valued at \$14,753,000. The leading crops were wheat, oats, barley, mixed grains, potatoes and hay. Livestock in 1943 included 27,340 horses, 46,300 milk cows, 54,300 other cattle, 56,000 sheep, 65,000 swine, 1,098,300 poultry. Silver foxes are extensively bred on the island, the pelts being shipped to the United States and European markets. The Canadian fur-farming industry had its origin in Prince Edward Island, and in 1942 the value of pelts sold in the province was \$735,142. Fishing is relatively important, the landed value in 1943 being \$1,869,266 and the market value \$2,860,073. Oyster beds cover an area of about 20,000 acres in Richmond Bay. These beds are under control of the Dominion government. In 1942 there were 243 industrial establishments operating in the province. These employed 1,261 persons and turned out products valued at \$6,855,344. There were 286 miles of railway on the island in 1943, which has daily steamship communication with the mainland. There were over 10,951 miles of telephone wires and 6,075 telephones on the island.

PRINCIPE. See PORTUGUESE COLONIAL EMPIRE.

PRISONS. See CRIME AND PRISONS.

PRIZES AND AWARDS. Among the principal awards and prizes made or announced in 1945 (some for achievements made previously) were the following:

Army and Navy Awards.—According to the *Biennial Report of the Chief of Staff of the United States Army to the Secretary of War*, submitted June 30, 1945: "Exclusive of the Purple Heart, which a man receives when he is wounded, the army awarded 1,400,409 decorations for gallantry and meritorious service since we entered the war. The nation's highest award, the Congressional Medal of Honor, was made to 239 men, more than 40 per cent of whom died in their heroic service; 3,178 Distinguished Service Crosses have been awarded; 630 Distinguished Service Medals; 7,192 awards of the Legion of Merit; 52,831 Silver Stars; 103,762 Distinguished Flying Crosses; 8,592 Soldiers Medals; 189,309 Bronze Stars; and 1,034,676 Air Medals."

According to the United States Navy Department, the total number of medals awarded during the Second World War, as of Oct. 24, 1945, were as follows: Medal of Honor, 91; Navy Cross, 2,823; Distinguished Service Medal, 208; Silver Star Medal, 6,455; Legion of Merit, 2,096; Distinguished Flying Cross, 4,842; Navy and Marine Corps Medal, 2,850; Bronze Star Medal, 11,711; Air Medal, 17,406; Letter of Commendation, 8,196; Letter of Commendation (Secretary of the Navy), 1,519.

Nobel Prize Awards.—The Nobel Peace Prize for 1944, awarded in 1945, was accepted by Dr.

Max Huber of Switzerland for the International Red Cross. The same award for 1945 went to Cordell Hull, former United States secretary of state. Professors Wolfgang Pauli of Zurich, Switzerland received the 1945 prize for physics and Otto Hahn of Berlin, Germany, received the 1944 award for chemistry. Both were cited for their work in atomic research. Sir Alexander Fleming, Sir Howard W. Florey, and Dr. Ernst B. Chain, all of England, received the 1945 award in medicine and physiology for their outstanding work in medicine, specifically in the development of penicillin. The 1945 chemistry prize went to Prof. A. I. Virtanen of Finland for his work in producing and conserving artificial fodder. The 1945 award in literature was bestowed on Gabriela Mistral (Lucila Godoy), Chilean poet. Each of the Nobel prize winners received a diploma and approximately \$30,000.

Pulitzer Prizes.—On May 7, 1945, the board of trustees of Columbia University announced the Pulitzer Prize awards for 1944. A gold medal costing \$500 was awarded to the *Detroit Free Press*; other awards in letters, journalism, and music were \$500 each.

Letters: John R. Hersey, for the most distinguished American novel of 1944, *A Bell for Adano*; Mary Chase, for the play *Harvey*; Stephen Bonsal, for his history *Unfinished Business*; Russell Blaine Nye, for his biography *George Bancroft: Brahmin Rebel*; Karl Shapiro, for his book of verse *V-Letter and Other Poems*.

Journalism: For "the most disinterested and meritorious public service rendered by an American newspaper during the year," the *Detroit Free Press*, specifically for its investigation of legislative graft and corruption at Lansing, Mich. For "an outstanding example of news photography," Joe Rosenthal, photographer of the Associated Press, specifically for his photograph of marines raising the American flag on Mt. Suribachi on the island of Iwo. The photograph was actually taken in February 1945, but the board announced that it had "moved by resolution that the rule be suspended for this distinguished example." For his editorials, especially those on freedom of the press, George W. Potter, chief editorial writer of the Providence *Journal-Bulletin*. For "distinguished correspondence during the year," Harold V. (Hal) Boyle, war reporter and columnist of the Associated Press. For distinguished service as a cartoonist, Sgt. Bill Mauldin, cartoonist of the United Feature Syndicate, Inc. The cartoon chosen from his series "Up Front With Mauldin," as exemplifying his work, portrayed a single GI Joe slogging through mud and rain accompanying three German prisoners over the caption "Fresh, spirited American troops, flushed with victory, are bringing in thousands of hungry, ragged, battle-weary prisoners" (News Item). For a "distinguished example of telegraphic reporting on international affairs," Mark S. Watson, military correspondent of the *Baltimore Sun*, specifically "for his distinguished reporting during the year from Washington, London, and the fronts in Sicily, Italy, and France." For a distinguished example of a reporter's work in matters of special interest of a local or regional character, Jack S. McDowell of the *San Francisco Call Bulletin*, who gave a blood donation, flew to the front to see it used, and returned to write articles which stimulated the donation of blood in San Francisco and Los Angeles. Making a special journalism citation, the board commended the "cartographers of the American press, whose maps of the war fronts

have helped notably to clarify and increase public information on the progress of the armies and navies engaged."

Music: For his *Appalachian Spring*, Aaron Copland. This ballet, written for and presented by Martha Graham and her company, was commissioned by Mrs. E. S. Coolidge.

Scholarship: The annual scholarship, having a value of \$1,500, was awarded to Vincent de Gregorio, art student, of New York City. On May 18 it was announced that the Pulitzer Traveling Scholarships, which are awarded annually to members of the Graduate School of Journalism at Columbia University, had been awarded to Lois Felder, of Corpus Christi, Texas; Virginia Paty, of Denton, Texas; and Claire Neikind, of Mahopac, N. Y.

Motion Picture Awards.—The following awards were announced by the Academy of Motion Picture Arts and Sciences for the season of 1943-44:

Best production—*Going My Way* (Paramount).

Actress—Ingrid Bergman (*Gaslight*).

Actor—Bing Crosby (*Going My Way*).

Supporting actor—Barry Fitzgerald (*Going My Way*).

Direction—Leo McCarey (*Going My Way*).

Screenplay—Frank Butler, Frank Craven (*Going My Way*).

Original screenplay—Lamar Trotter (*Wilson*).

Original story—Leo McCarey (*Going My Way*).

Scoring, musical—Morris Stoloff, Carmen Dragon (*Cover Girl*).

Scoring, drama—Max Steiner (*Since You Went Away*).

Original song—*Swinging on a Star* (*Going My Way*); Music, James Van Heusen; lyrics, Johnny Burke.

Art direction, black and white—Edwin B. Willis, Paul Huldshinsky (*Gaslight*).

Art director, color—Thomas Little (*Wilson*).

Film editing—Barbara McLean (*Wilson*).

Sound recording—E. H. Hansen (*Wilson*).

Cinematography, black and white—Joseph LaShelle (*Laura*).

Cinematography, color—Leon Shamroy (*Wilson*).

Special effects, photographic—A. Arnold Gillespie, Donald Jahraus, Warren Newcombe (*Thirty Seconds Over Tokyo*).

Special effects, sound—Douglas Shearer (*Thirty Seconds Over Tokyo*).

Short subjects—Cartoon: *Mouse Trouble* (Metro-Goldwyn-Mayer); One-reel: *Who's Who in Animated Land* (Jerry Fairbanks-Paramount); Two-reel: *I Won't Play* (Gordon Hollingshead-Warner).

Thalberg Memorial Award—Darryl F. Zanuck.

Special award—Margaret O'Brien (as the outstanding child actress of the year).

Documentary production—Feature: *Fighting Lady* (20th Century-Fox-United States Navy); Short subject: *With the Marines at Tarawa* (United States Marine Corps).

Other motion picture awards were made by critics in khaki, on June 10, to Hollywood stars at Walter Reed Army Hospital, Maj. Gen. Norman T. Kirk, the army's surgeon general, explaining that the selections were made through a poll of soldiers in all theaters of war, and that the assembly of wounded men before whom the awards were made represented all GIs. These

awards went to Bing Crosby because he had demonstrated "rare ability in creating and delivering weapons designed to eliminate the mental heaviness attendant upon GI's"; to Rita Hayworth because "her sheer loveliness and her willingness to share that loveliness through the medium of the screen with millions of war-sick and lonely GI's has contributed immeasurably to the morale of the fighting men"; to Jennifer Jones, who "by her outstanding performances, distinguished herself in the eyes of this nation and the men who are fighting for it"; to Leo McCarey for directing the film *Going My Way*, which "maintained in the minds of the American home front the principle for which American soldiers are fighting," and to Eddie Bracken for provoking "laughter from millions of GI's throughout the world when they were serving under conditions that rendered laughter almost impossible."

Science.—Dr. William Frederick Durand, chairman of the division of engineering and industry of the National Research Council, Washington, D.C., was awarded the American Society of Mechanical Engineers Medal, the organization's highest honor, on July 29, particularly for his contributions to the design and application of the principles of jet propulsion. The society's Holley Medal went to Dr. Sanford Alexander Moss of West Lynn, Mass., for pioneer work in turbo-superchargers, which helped make possible the height, range, and speed of modern airplanes. The society's Worcester Reed Warner Medal was granted to Dr. Joseph M. Juran, assistant to the administrator of the Foreign Economics Administration, Washington, D.C., primarily for his work on the problem of quality control in mass production. The society awarded its Melville Prize Medal to William Julian King, research engineer of the fuels division of Battelle Memorial Institute, Columbus, Ohio, for his essay on *The Unwritten Laws of Engineering*. The Society's Junior Award was granted Bruce E. Del Mar, for his paper, *Presentation of Centrifugal Compressor Performance in Terms of Non-Dimensional Relationships*.

Kenneth Campbell, research engineer, received the Wright Brothers Medal at the aeronautical meeting of the metropolitan section of the Society of Automotive Engineers in New York City on April 5 for his article on cooling fans, adjudged the outstanding article of 1944 in the field of aeronautics.

The two principal annual awards made by the Institute of the Aeronautical Sciences on January 31, consisting of annual honorary fellowships, the one for the United States and the other abroad, were received by Dr. Edward P. Warner, vice chairman of the Civil Aeronautics Board, and Sir Frederick Handley Page. The Sylvanus Albert Reed Award for a contribution to aeronautics went to Fred E. Weick for his development of the two-control, non-spinnable Ercoups in the field of small planes. The John Jeffries Award for a contribution to aeronautical medicine was conferred on Air Marshal Sir Harold E. Whittingham, director general of the Royal Air Force medical services. The Octave Chanute Award was granted to Col. Benjamin S. Kelsey of the Army Air Forces for his achievements in testing high speed aircraft. The Robert M. Losey Award was received by John Cary Bellamy, special consultant to the air forces weather service, for contributions to meteorology; and the Lawrence Sperry Award, for the outstanding contribution of a young man to aeronautics, went

to William H. Phillips, head of the stability and control flight section at Langley Field.

Dr. Harlow Shapley, director of the Harvard College Observatory, was awarded the Franklin Medal, highest honor of the Franklin Institute, on April 18 at Philadelphia, for his "many valuable contributions to the science of astronomy." Other individuals receiving medals from the Franklin Institute on this occasion included: Edwin A. Link, the Howard N. Potts Medal, for his "valuable contributions in the field of training devices for aviators"; Dr. Zay Jeffries, the Francis J. Clamer Medal for "meritorious contributions to the science of metals"; Gilmore David Clarke, for "technical ability, foresight and outstanding leadership in the field of town and city planning"; Sanford Lockwood Cluett, for "mechanical ingenuity in development of the process for the pre-shrinking of woven fabrics"; Rear Admiral Stanford C. Hooper, United States Navy, retired, for "pioneering leadership in the field of radio for the Navy"; Lewis Ferry Moody, the Elliott Cresson Medal for having played a "leading part in the development of the hydraulic turbine and pump"; Dr. Rupen Eksergian, the Louis E. Levy Medal for his paper "on the reaction of fluids and fluid jets."

Dr. Elmer K. Bolton was awarded the Perkin Medal, highest honor in applied chemistry, at a dinner of the American Section of the Society of Chemical Industry held in New York City on January 5, "for his leadership in the synthesis of neoprene, the first general-purpose synthetic rubber to be developed either in this country or abroad, and for his direction of nylon research."

Richard Erwin Dougherty, vice president of the New York Central Railroad System, received the 1945 Egleston Medal of the Columbia University Engineering Schools Alumni Association on April 15.

Dr. Edwin R. Gilliland, former assistant rubber director, professor of chemical engineering at Massachusetts Institute of Technology on duty with the Office of Scientific Research and Development in Washington, D.C., won the first Leo H. Baekeland Award of the North Jersey Section of the American Chemical Society, it was announced on February 7. The award, consisting of a gold medal and \$1,000, is awarded biennially in recognition of achievements in pure or industrial chemistry.

John W. Thomas, who had supervised the designing and construction of a \$2,000,000 rubber research laboratory at Akron, Ohio, was awarded the gold medal of the American Institute of Chemists on February 2.

Dr. E. F. W. Alexanderson, inventor of the alternator that made possible the first radio broadcast, was granted the Edison Medal, highest award in electrical engineering, at a joint session of the American Institute of Electrical Engineers and the Institute of Radio Engineers held on January 24.

Belated recognition came to Capt. Robert A. Bartlett and Commander Donald B. MacMillan, 36 years after they aided Admiral Robert E. Peary on his successful expedition to the North Pole, when they received the Peary Polar Expedition Medal on May 25 at the Boston Army Base. The citations stressed "outstanding service to the government of the United States in the field of science and for the cause of polar exploration" and "exceptional fortitude, superb seamanship, and fearless determination on the important and difficult mission."

Frank C. Whitmore, dean of Pennsylvania State College, was awarded the 1945 Willard Gibbs Medal of the Chicago Section of the American Chemical Society in Chicago, it was learned on May 18.

Edward C. Wells of Seattle on February 18 received the Fawcett Aviation Award for 1944 in Philadelphia for his contribution to the development of the Flying Fortress and the Superfortress.

Rear Admiral Edward R. Stitt, retired, was awarded the gold medal of the American Foundation for Tropical Medicine on February 5 in New York City.

To Dr. Leonard H. Cretcher, assistant director of Mellon Institute in Pittsburgh, was presented the Pittsburgh Award for outstanding service to chemistry, the award being made on February 15.

The American Design Award, consisting of a certificate and a check for \$25,000, was presented to the National Academy of Sciences on April 19 in New York City, the award honoring a group of American scientists referred to as the "big six" in the country's scientific high command. These were Dr. Vannevar Bush, director, Office of Scientific Research and Development; Dr. James Bryant Conant, chairman, National Defense Research Committee (NDRC); Dr. Karl T. Compton, chief of the field service for the NDRC; Dr. A. Newton Richards, chairman, Committee for Medical Research; Dr. Jerome C. Hunsaker, chairman, National Advisory Committee for Aeronautics; and Dr. Ross G. Harrison, chairman, National Research Council.

Dr. Katharine B. Blodgett, it was announced in Washington on March 28, was awarded the \$2,500 Achievement Award of the American Association of University Women, given annually to "an outstanding woman scholar in recognition of distinguished achievement." The citation mentioned her invention of "invisible glass" and also her important long-time research on methods of building films of almost "infinitesimal thickness."

The Grant Squires Prize awarded every five years to a graduate of Columbia University for original investigation of a sociological nature, was conferred, it was announced on May 20, on Dr. George Rosen, physician and sociologist serving at the time as a captain in the army's Division of Medical Intelligence.

Arts and Letters.—Tennessee Williams' drama, *The Glass Menagerie*, was named the best American play of the 1944-45 season by the Drama Critics Circle on April 10.

Booth Tarkington received the Howells Medal of the American Academy of Arts and Letters, for distinction in fiction, at the joint annual meeting of the academy and the National Institute of Arts and Letters held in New York on May 18. W. H. Auden received the academy's award of merit for poetry; Eva Le Gallienne, the medal for good diction on the stage; Paul Manship, the gold medal for sculpture; and Dr. Richard Beer-Hofmann, the award for distinguished achievement.

George Santayana, 82-year-old author and philosopher, received the 1945 Nicholas Murray Butler Gold Medal of Columbia University, given once every five years for the most distinguished contribution to philosophy or educational theory, practice, or administration. The Butler Silver Medal, awarded annually, went to Sidney Hook, professor of philosophy at New York University. Both awards were announced on April 6.

Elizabeth Metzger Howard of Winter Haven, Fla.; Charles Andrews Fenton, of New Haven, Conn.; and Fannie Cook of St. Louis, Mo., won three contests conducted by the editors of Doubleday, Doran, the publishing house. Mrs. Howard won the \$20,000 prize with her novel, *Before the Sun Goes Down*. Mr. Fenton took the \$4,000 prize in a New Writers' Contest with his novel *But We Had Fun*. Mrs. Cook, with a new novel on Negro life, won the George Washington Carver Memorial Award of \$2,500.

The 1945 award of the Child Study Association of America went to Florence Crannell Means for her book, *The Moved Outers*, which dealt with a Japanese family removed during the war to a relocation center. Dorothy Canfield Fisher presented the award on November 12 at a "One Nation" luncheon held at the Astor Hotel, New York City.

Winners of the two \$1,000 awards, silver plaques, and contracts granted by the Metropolitan Opera Association in New York on April 1 were Robert Merrill, baritone, of Brooklyn, and Thomas Tibbett Hayward, tenor, of Kansas City. Joseph Victor Laderoute, tenor, of Sault Ste. Marie, Ont., and Miss Pierette Alarie, coloratura soprano, of Montreal, were awarded \$500 scholarships, and first options on their services were taken by the Metropolitan.

Miscellaneous.—In behalf of the School of Journalism of the University of Missouri, medals for distinguished service in journalism were granted at Columbia, Mo., on May 10, to Foster S. Halley, editorial writer for the *New York Times*; Robert J. Casey, of the *Chicago Daily News*; and William E. Freeland, editor and publisher of the Taney County (Mo.) *Republican*. Newspapers and magazines honored in similar fashion were the *Washington Post*, the *London Daily Express*, and *Harper's Magazine*.

The Spingarn Medal, awarded annually by the National Association for the Advancement of Colored People "for the highest and noblest achievement by an American Negro during the preceding year" was granted to Paul Robeson, actor and singer, in New York City on October 18. The award was made specifically "for his distinguished achievements in the theater and on the concert stage, as well as his active concern for the rights of the common man of every race, color, religion and nationality."

Dr. Nicholas Murray Butler, president emeritus of Columbia University and president of the Carnegie Endowment for International Peace, received from the Americas Foundation, on October 12, in New York City, the Americas Award for "his lifetime contribution to friendship and understanding among the nations of the Western Hemisphere."

Gardiner Howland Shaw, of Boston, was named recipient of the 1945 Laetare Medal at Notre Dame, Ind., on March 11, an award made annually by Notre Dame University to an outstanding American Catholic. Mr. Shaw, who has enjoyed a distinguished diplomatic career, is also widely known for his work in social welfare.

Paul D. Williams, secretary of the Catholic Committee of the South and vice president of the National Council of Catholic Men, and Richmond Barthe, sculptor, received the 1945 James J. Hoey awards for interracial justice in New York City on October 29. These awards are conferred annually on a white and Negro layman who "have contributed prominently during the year to the cause of interracial justice."

Philip Murray, president of the Congress of

Industrial Organizations, and Auxiliary Bishop Bernard J. Sheil of Chicago were recipients of the first annual Msgr. John A. Ryan award of the Committee of Catholics for Human Rights at a dinner held in their honor at the Hotel Roosevelt in New York City on November 28. Solicitor General J. Howard McGrath awarded the bronze plaques, describing Bishop Sheil as "an eloquent and unfaltering voice for human brotherhood," and Murray as "a leader in the struggle for equal opportunity and human rights."

Ernie Pyle and Franklin D. Roosevelt were awarded the American Legion Distinguished Service Medals at the Legion's 27th annual national convention, which opened at Chicago on November 18. The noted writer and former president of the United States were both cited as having died in the distinguished service of their country.

It was announced in Washington, D.C., on December 13, that Gen. Carl A. Spaatz, commander of Strategic Air Forces in Europe and the Pacific, would receive the 1945 Robert J. Collier trophy awarded annually to the American making the outstanding contribution to aviation.

For Guggenheim Foundation awards, see GUGGENHEIM MEMORIAL FOUNDATION. See also MOTION PICTURES; PAINTING AND SCULPTURE.

PROTESTANT EPISCOPAL CHURCH. Months before V-E or V-J Day the church, through its National Council, laid plans for its postwar strategy and on May 1, 1945 launched its Reconstruction and Advance Fund. This effort has a two-fold purpose: (1) the creation of a deep feeling of appreciation for the missionary work of the church throughout the world and the relationship between that work—the establishment of a worldwide Christian fellowship—and a lasting peace; (2) the raising of a minimum of \$5,000,000 for reconstruction in areas overrun by the destruction of war—China, Japan, the Philippines; and advance in the war areas and other strategic centers—among Negroes in the United States, in Latin America and Liberia, and in the armed forces through the chaplains.

The Reconstruction and Advance Fund which is without precedent in the Episcopal Church will reach its climax on Feb. 3, 1946 when every parish in the United States will make an every-member canvass to secure the means required to carry out the program. By that time it is expected that church people will be better informed about the church's mission than ever before as a result of the intensive educational program that was inaugurated in May 1945 and which is a primary purpose of the campaign.

During the closing months of the war, chaplains of the church served with the armed forces, sharing with their men all the hardships and perils of modern war as is evidenced by these official statistics:

	Army	Navy
Killed in action.....	6	2
Died from other causes.....	3	1
Decorated for valor.....	56	9

Each year witnesses significant changes in the House of Bishops. During 1945, these changes were especially numerous. Twelve new bishops were consecrated including three missionary bishops: R. H. Gooden (Panama Canal Zone); Bravid W. Harris (Liberia); and Arthur B. Kinsolving, 2d (Arizona). The other new bishops, with the exception of Thomas H. Wright (East Carolina), William R. Moody (Lexington),

Henry I. Louttit (suffragan, South Florida), and Alfred L. Banyard (suffragan, New Jersey) were all coadjutor bishops: Donald B. Aldrich (Michigan); Conrad H. Gesner (South Dakota); Frederick L. Barry (Albany, N.Y.); C. Avery Mason (Dallas, Texas); and John E. Hines (Texas).

Three bishops died during the year: the Rt. Rev. H. P. Almon Abbott (Lexington), the Rt. Rev. Julius W. Atwood (retired, Arizona), and the Rt. Rev. Frank T. Touret (retired, Idaho).

The National Council's department of promotion continued to utilize radio and motion pictures as media for proclaiming the church's message. Its second professional sound motion picture, *Thy Will Be Done*, was released in the autumn of 1945 and met with instant success. The Religious Film Association accorded it its highest rating. The department was also taking a leading part in the organization of a Protestant film association for the production of more and better motion pictures. In radio, the church continued its participation in Columbia's *Church of the Air* and Mutual's *Radio Chapel*; stimulated use of local stations; and produced a second series of transcriptions for radio broadcast under the general title *The Living People*. This series of nine transcriptions was directly related to the church's annual every-member canvass and demonstrated the National Council's use of modern media.

The church took a leading part in the national clothing drives and the church Christmas packages for distressed peoples in Europe and Asia. Through the Presiding Bishop's Fund for World Relief, Episcopalians, in 1945, gave in excess of \$50,000 for the succor of afflicted peoples and late in the year was organizing to participate actively in the material aid programs under the World Council of Churches and the Church Committee for Relief in Asia.

A number of distinguished churchmen from overseas visited the United States in 1945. Chief among these were the bishop of Melanesia, the Rt. Rev. Walter H. Baddeley; the bishop of Tanganyika, the Rt. Rev. George A. Chambers; the bishop of Chichester, the Rt. Rev. G. K. A. Bell, who came to America for meetings of the Executive Committee of the World Council of Churches; and Dr. Francis C. M. Wei, president of Central China College, who came as the first visiting Henry R. Luce professor of World Christianity of Union Theological Seminary of New York.

The General Convention, the central legislative body of the church, which meets triennially, will convene for its 55th session on Sept. 10, 1946 in Philadelphia, Pa., instead of San Francisco, Calif., as previously announced. Between sessions of the General Convention, the affairs of the church are conducted by the National Council.

The headquarters of the National Council, which is also the board of directors of the Domestic and Foreign Missionary Society, are in the Church Missions House, 281 Fourth Avenue, New York 10, N.Y. The official magazine is *Forth*, William E. Leidt, editor. The president of the National Council is the Rt. Rev. Henry St. George Tucker, formerly bishop of Virginia.

WILLIAM E. LEIDT,
Editor of Forth; Director of Publications, National Council, Protestant Episcopal Church.

* **PRUNES.** Only four states are listed by the United States Department of Agriculture as producers of prunes. California leads, with an esti-

mated crop in 1945 of 212,000 tons, followed by Oregon with 93,500 tons. Idaho was third with 28,000 tons and Washington fourth with 24,900 tons. Figures in tons for the four states in 1944 were as follows: California, 159,000; Oregon, 60,400; Washington, 27,000; and Idaho, 22,900. California's crop is estimated on a dried prune basis of 2½ pounds of fresh fruit to 1 pound dried. The figures for the other states are given on a fresh fruit basis.

PRUSSIA, East. A northern province of Prussia and of the German Reich, bounded (according to the Versailles Treaty, 1919) on the south and west by Poland, on the northwest by the Baltic Sea, on the north by the territory of Memel, and on the east by Lithuania. Parts of East and West Prussia were awarded to Poland (under the Versailles Treaty) thereby separating the province of East Prussia from Germany proper by the strip of territory known as the Polish Corridor. The total area of the province under the treaty was 14,286 square miles, and its population in 1933 was 2,333,301. A long period of unrest and friction with the Poles over communication facilities between East Prussia and Germany ended in September 1939 with the Nazi invasion of Poland, when the Corridor, along with the Free City of Danzig, was incorporated into the German Reich. Königsberg (pop. in 1939, 368,433) the capital of East Prussia, is an important port on the Baltic Sea.

Soviet military forces, it was reported on Jan. 15, 1945, reopened a determined offensive in East Prussia, and within two days had taken Schlossberg. The capture of Tannenberg was reported on January 22, and on January 26, the Red Army reached Tolckemit on the Baltic, cutting off East Prussia from the rest of Germany. On April 9, it was announced that Soviet troops had taken Königsberg, capturing over 42,000 Germans in a 2-day battle. On April 19, Soviet forces captured Pillau, clearing the mainland of the last remaining Nazi troops.

On August 12, a communiqué issued by the Berlin Conference held by President Harry Truman of the United States, Prime Minister Clement R. Attlee of Great Britain, and Premier Joseph Stalin of the Soviet Union, outlined the future of East Prussia as follows: "The East Prussia city of Königsberg and adjacent area are transferred to Russia pending ultimate determination of boundaries, with Poland's western frontier running from west of Swinemünde on the Baltic south along the Oder and Neisse rivers to the Czech frontier. Poland would get that part of East Prussia not given to Russia."

PSYCHOLOGY. From Oct. 1, 1944, to Oct. 1, 1945, psychologists were still for the most part engaged in one variety or another of war work. Since the combat phase of the war is now over, it can be anticipated that interests and motivations acquired in the war effort will result in many years of continued research in concrete, applied problems on the one hand, and on the other in problems of personality and adjustment.

Only a few general texts have appeared. There are two written for high schools—A. Crow and L. D. Crow, *Learning to Live with Others* (Boston, Heath, 1944, 284 pp.); and T. L. Engle, *Psychology—Principles and Applications* (Yonkers, N.Y., World Book Company, 1945, 549 pp.). C. N. Bittle has written a philosophical psychology entitled, *The Whole Man* (Milwaukee, Bruce, 1945, 687 pp.), and W. White has stressed social relations, personal worth and how

to get along with people in *Psychology in Living* (N.Y., Macmillan, 1944, 333 pp.).

In the historical field R. E. Brennan published *History of Psychology from the Standpoint of a Thomist* (N.Y., Macmillan, 1945, 277 pp.). E. Cassirer, eminent in philosophy and scientific method, wrote *An Essay on Man: an Introduction to a Philosophy of Human Culture* (New Haven, Yale University Press, 1944, 237 pp.), in which symbolic thought, speech and language are emphasized as factors in the evolution of culture. From a socio-psychological point of view, R. Linton edited *The Science of Man in the World Crisis* (N.Y., Columbia University Press, 1945, 532 pp.), a collection of papers by 22 different social scientists.

So many books have appeared this year worthy of the attention of AMERICANA readers that in most instances the titles, only, will have to suggest the content. There are one interesting book and two papers in general theory written from the background of biological science. The book is by G. W. Corner, *Ourselves Unborn: an Embryologist's Essay on Man* (New Haven, Yale University Press, 1944, 188 pp.), stressing the comparatively generalized nature of patterns in the human as compared with other embryos, a condition that permits maturation of free activities in spite of the "foreordination" resulting from genetic factors. The first paper is by C. J. Herick, "The Incentives of Science", in the *Scientific Monthly* (1944, Vol. 58, 462-466), in which the author makes the unusual but timely assertion that science is a growing thing because human beings are still growing (evolving). Science is not in the strictest sense of the term a body of objective facts and impersonal abstractions. Of necessity science must be interested in human values and in the end the goals of humanism and science are the same. The other paper is by R. S. Lillie, in *Philosophy of Science* (1944, Vol. 11, 161-179) which stresses a directive factor in animal life, psychological in character, which acts and influences behavior only in the present.

Experimental studies show the trend toward physiological psychology and the simpler processes, as anticipated in the AMERICANA ANNUAL review of 1942; cortical extirpations; electroencephalography; physiological and emotional reactions under stress, as at high altitude conditions; psychosomatic (biodynamic) medicine, theories of vision, cutaneous sensitivity, "facial vision," figural after-effects in visual processes, ecology and the like.

The trend is toward detailed mapping of the cortex (localization of function) although W. S. McCulloch (*Physiological Review*, 1944, Vol. 24, 390-407) points out that the primary sensory areas do not give rise to interregional association fibers, hence increasing the presumed importance of the "association areas". The *Journal of General Psychology*, *Physiological Review*; *Diseases of the Nervous System*; *Journal of Nervous and Mental Diseases*; *Journal of Neurophysiology*; and *Psychosomatic Medicine*, all carry articles on the alpha waves of the cortex, extending our knowledge in this specialized but important field in several different directions. C. E. Henry, in *Mon. Soc. Res. Child Dev.*, No. 3, 1944, summarizes results from 1,473 children ranging from 3 to 19 years of age. P. C. Buey is the editor of a handbook on *The Pre-central Motor Cortex*, (Illinois Mon. Med. Sci., Vol. 4, 1944, Nos. 1-4, 605 pp.), an important source of information. A. S. Householder and H. D. Landahl have a theoretic-

cal treatise on *Mathematical Biophysics of the Central Nervous System*, (Bloomington, Ind., Principia Press, 1945, 124 pp.).

The trend toward mechanistic interpretations of behavior as opposed to organismic, predicted in 1942, shows signs of increase both in the field of neurology and animal behavior. Windle, long an opponent of Coghill's principle of individuation presents evidence which he believes refutes that principle as Coghill applied it to stages in the maturation of motor co-ordination in the embryo. Windle insists that the first responses in most complex animal embryos are of the reflex rather than the mass action type. Harlow and others (*Journal General Psychology*) working on monkeys seem to lean toward the absolute rather than the relative response as the simpler and more basic in monkeys. That is, transposition, held in the organismic view as the basic process, is relegated to a secondary position.

In the field of heredity, R. Cook (*Journal of Heredity*, 1944, Vol. 35, 133-4) discusses the "Rh" gene, gene of human blood, as a cause of mental deficiency and suggests that incompatibility may account for twenty-five to thirty per cent of the hitherto undifferentiated types of deficiency. Scheinfeld (*Journal of Heredity*, 1944, Vol. 35), from follow up data, questions certain of the interpretations in Goddard's famous 1912 study of the Kallikak family, another timely contribution.

There are many important books in the field of social psychology, and related areas:

Criminology: G. Creel, *War Criminals and Punishment* (N. Y. McBride, 1944, 303 pp.), a description of atrocities perpetrated in Europe, and what should be done about it; Abrahamsen, *Crime and the Human Mind* (N.Y., Columbia University Press, 1944, 244 pp.); Karpman, *Case Studies in the Psychology of Crime*, Vol. 2, cases 6-9, (Washington Medical Science Press, 1944, 738 pp.).

Religion and Attitude: J. Wach, *Sociology of Religion* (Chicago, Chicago University Press, 1944, 412 pp.); Powdermaker and Storen, *Probing Our Prejudices*, a unit for high schools, sponsored by the Bureau of Intercultural Education (N.Y., Harper, 1944, 73 pp.); Bruner, *Mandate from the People*, (N.Y., Duell, Sloan and Pearce, 1944, 278 pp.) a study of American public opinion on a dozen postwar problems.

Family Relations: R. G. Foster, *Marriage and Family Relations*, (N.Y., Macmillan, 1944, 314 pp.); E. R. Groves, *Conserving Marriage and the Family*, (N.Y., Macmillan, 1944, 138 pp.), gives addresses of marriage clinics and counsellors.

Public Relations: Writer's Congress, *Proceedings*, (Berkeley, Calif., University of California Press, 1944, 663 pp.), deals with social and psychological problems of mass media—radio, motion pictures, the press—and sponsored by Hollywood Writers Mobilization and the University of California.

Books for Veterans: W. Waller, *The Veteran Comes Back*, (N.Y., Dryden, 1944, 316 pp.), by a sociologist and veteran of the First World War; Yost and Gilbreth, *Normal Lives for the Disabled*, (N.Y., Macmillan, 1944, 298 pp.); Child and Van de Water (eds.), *Psychology of the Returning Service Man*, (Washington, D.C., Infantry Journal and Penguin Books, N.Y., 1945), the sequel to *The Psychology of the Fighting Man*, and a practical pocket edition, available in many bookstores and newsstands. There are chapters on (1) out of uniform, (2) meeting problems and looking ahead, (3) choosing a job, (4)

learning new skills, (5) getting married, (6) returning to your wife, (7) being a father, (8) the veteran as a citizen, (9) social conflict, (10) POW, (11) getting well, (12) building up, (13) NP's, (14) combat nerves, (15) injuries to the nervous system, (16) injury to sight or hearing, (17) loss of limb, (18) years of your life. G. K. Pratt, *Soldier to Civilian—Problems of Readjustment*, (N.Y., Whittlesey House, 1944, 233 pp.).

Interpretative General Accounts: Malinowski, *Freedom and Civilization*, (N.Y., Roy, 1944, 338 pp.), a famous anthropologist argues for a World State; C. L. Stevenson, *Ethics and Language* (New Haven, Yale University Press, 1944, 338 pp.); R. West, *Conscience and Society—A Study of the Psychological Prerequisites of Law and Order*, (N.Y., Emerson, 1945, 261 pp.).

Adjustment Problems: Bossard and Boll (eds.), *Adolescence in War Time*, (Annals of the American Academy of Political and Social Science, 1944, Vol. 236, pp. 1-168), a successor to the earlier work on children in a depression decade; H. B. Richardson, *Patients Have Families*, (N.Y. Commonwealth Fund, 1945, 408 pp.); R. Linton, *The Cultural Background of Personality*, (N.Y., Appleton-Century, 1945, 157 pp.).

In the field of vision there are Dvorine, *Dvorine Color Perception Testing and Training Charts*, Vol. 1, Testing Charts; Vol. 2, Training Charts; and a manual, (Baltimore, Author, 2328 Eutaw Place, 1944, 130 plates); and Luckiesh, *Light, Vision and Seeing*, (N.Y., Van Nostrand, 1944, 325 pp.).

In the industrial field and guidance there are M. Smith, *Handbook of Industrial Psychology*, (N.Y., Philosophical Library, 1944, 304 pp.); Amiss and Sutton, *The Industrial Supervisor: a Training Guide for Improvement of Skill and Leadership*, (N.Y., Ronald, 1944, 243 pp.); Reed, *Guidance and Personnel Services in Education*, (Ithaca, N.Y., Cornell University Press, 1944, 496 pp.); Bradley, *Your Problem—Can It Be Solved?*, (N.Y., Macmillan, 1945, 213 pp.); J. E. Walters, *Personnel Relations—Their Application in a Democracy*, (N.Y., Ronald, 1945, 547 pp.); N. Cantor, *Employee Counselling—A New Viewpoint in Industrial Psychology*, (N.Y., McGraw-Hill, 1945, 167 pp.).

In the field of child and educational psychology there are new contributions: Chittenden, *Living with Children*, (N.Y., Macmillan, 1944, 164 pp.); A. S. Neill, *The Problem Teacher*, (N.Y., International University Press, 1944, 160 pp.); H. Lewis, *How to Read Better and Faster*, (N.Y., Crowell, 1944, 319 pp.), covers methods of thinking as well as reading; E. Gann, *Reading Difficulties and Personality Organization*, (N.Y., King's Crown Press, 1945, 149 pp.); Betts and Betts, *An Index to Professional Literature on Reading and Related Subjects*, (N.Y., American Book Co., 1945, 135 pp.), a bibliography of 8,278 titles.

The new and coming field of human ecology is represented by several papers covering the relationship of mental disorders to population density (Hyde and Kingsley); motivation in rats living under different artificial climates (rats from a cool "climate" show on the whole considerable more motivation than those from a hot "climate" (K. Moore); rates of rejection from the armed services in relation to population density (Hadley et al.); social behavior, range and territoriality in domestic mice (Scott); and the psychology of frogs and toads (Bragg).

Ellsworth Huntington, in his usual erudite and encyclopedic manner, has published a very

important book: *Mainsprings of Civilization*, (N.Y., Wiley, 1945, 660 pp.). This book attempts to analyze the role of biological inheritance and physical environment (location, geography, climate) in influencing the course of history. It is a book that must be taken seriously by students in many different fields.

RAYMOND H. WHEELER,

Professor of Psychology, University of Kansas.

PUBLIC BUILDINGS ADMINISTRATION. See **FEDERAL WORKS AGENCY.**

PUBLIC HEALTH SERVICE, United States. First established as the Marine Hospital Service in 1798 by an act of Congress "for relief of sick and disabled seamen," the United States Public Health Service is today the principal federal agency concerned with the health protection of the American people. It was transferred from the Treasury Department to the Federal Security Agency (q.v.) when the latter was established in 1939. The specific duties imposed by Congress bring the service into an increasingly closer relation with the state and territorial health authorities and provide for active co-operation with other federal agencies, professional bodies, and scientific institutions in the interest of public health.

Administrative Units.—The Public Health Service carries on its functions under four administrative units: Office of the Surgeon General, National Institute of Health, Bureau of Medical Services, and Bureau of State Services. The surgeon general maintains general supervision over the administration and operations of the service. In addition, he is responsible for professional supervision over Public Health Service officers detailed for duty with other governmental agencies and for maintaining relations of the Public Health Service with international organizations having public health functions.

Advisory Groups.—The Public Health Service Act of 1944 (Public Law 410) codified 150 years of legislation pertaining to the Public Health Service and broadened the role of the National Advisory Health Council in consulting with, and making recommendations to, the surgeon general on matters relating to health activities and functions of the service. The council was required to recommend grants for research and the first grant approved was that of \$92,000 to the University of Utah for a study of the heredity of muscular dystrophy. The Cancer Act of 1937 provided authority for grants for cancer research, but grants for general research were not authorized until 1944.

The National Advisory Cancer Council, established in 1937 by earlier legislation, was continued under Public Law 410. Grants-in-aid totaling \$140,043.44 for 19 research projects were approved in 1945. This amount reflects the growing interest in the disease by medical groups throughout the country that are joining in cancer research and education. At the present time, cancer is the second cause of death in the nation.

Other groups which serve as advisory boards to the Public Health Service are the Sanitation Advisory Board, Advisory Committee to the Division of Nurse Education, Board for the Control of Biological Products, Advisory Council on Nervous and Mental Diseases, Mental Hospital Survey Committee, Surgeon General's Advisory Committee on Education for the Prevention of Venereal Disease, Committee of Consultants in Dermatology, Committee on Postwar Training of Public Health Personnel.

Demonstrations.—Section 314 of Public Law 410 authorized demonstrations in the field of public health. Two types of demonstrations were initiated in 1945: one in nutrition, a demonstration of the detection of malnutrition through mass surveys; and the other a 10-year study of the control of dental caries by the addition of fluorides to public water supplies.

Cadet Nurse Corps.—During 1945, the United States Cadet Nurse Corps fulfilled the purpose for which it was established under the Division of Nurse Education to assure "a supply of nurses for the armed forces, governmental and civilian hospitals, health agencies and war industries." This was accomplished through an intensive recruitment campaign for new student nurses—completed Oct. 15, 1945—more rapid preparation under an accelerated program, and provision of means for distributing nursing services. Nurses who enrolled up to Oct. 15, 1945 continue to receive scholarship benefits for their full course of undergraduate study. Grants were authorized by the Nurse Training Act of June 15, 1943 (57 Stat. 153). Allotments were administered to schools of nursing for fees, maintenance, tuition, and fees for postgraduate courses. The recruitment quota set for the 1945 fiscal year was 60,000 new student nurses. New admissions totaled 61,471. From the inception of the corps to June 1945, 16,000 corps members were graduated.

The added strength of nursing personnel is revealed by a comparison of the 1942 enrollment in schools of nursing, which was 91,457, with the 126,576 enrollment in 1945.

Aid to States.—A major responsibility of the Public Health Service is to administer grants-in-aid to states to assist development of their public health organizations and through field work to apply measures for controlling many diseases. Grants to states for general public health work have been of great importance in developing health services throughout the country. Used to augment state and local appropriations for better and more extensive health protection, these grants have served as a means of establishing public health work in new areas and in initiating new services in established health departments.

Allotments and payments to states as grants-in-aid have increased from \$8,000,000 first authorized in 1936 to \$21,765,800.52 in 1945. This sum comprised \$10,913,490.26 for general health, \$9,482,196.26 for venereal disease control, and \$1,370,114.00 for tuberculosis control.

Appropriations for Emergency Health and Sanitation and related activities totaled \$50,703,154 for services in military and war industrial areas from July 1, 1940 through June 30, 1946. The major share of industrial health services, and a large part of the environmental sanitation work have been made possible by such appropriations. Many communities owe their local health departments to the war program. This program has included the assignment each year of between 300 and 400 professional personnel to state health departments by the Public Health Service.

Tuberculosis Control.—The tuberculosis control program is directed toward (1) determination of the extent of this problem by age, race, and sex of the population in each community; (2) mass case finding by all available techniques; (3) hospitalization of infectious and remediable cases; (4) provision of clinic facilities for the care and supervision of ambulatory patients; (5) vocational and social rehabilitation of re-

covered patients; (6) research in newer and better methods of control, including search for new drugs to cure the disease; (7) professional education of medical and allied groups in the diagnosis, treatment, rehabilitation and after care of tuberculosis patients; and (8) health education for the general public.

In addition to providing chest X-ray examination service to 1,375,497 persons, including industrial workers, farm laborers, federal employees, and members of the United States Coast Guard, division personnel also toured the 13 Coast Guard separation centers to supervise the installation and operation of X-ray units. The division co-operated with allied agencies in promoting mass radiography surveys as a case-finding measure. Twenty field demonstration X-ray units, equipped and staffed by the division, have been instrumental in conducting case-finding programs and in stimulating local purchase and operation of units in many states and communities.

Venereal Disease Control.—Four important developments in venereal disease control during the past year were (1) the recognition that rapid treatment centers should be made an integral part of the long range venereal disease control program; (2) the development of methods whereby treatment of gonorrhea with penicillin can be completed in relatively few hours; (3) intensive community-wide programs of public education, mass diagnosis, and treatment conducted in two large cities; and (4) the consideration of principles of local, national, and international control by the National Conference on Postwar Venereal Disease Control.

Admissions to 2,500 clinics treating venereal disease totaled 278,369 cases of syphilis in fiscal year 1945, a decrease of 22 per cent over 1944, and 200,176 cases of gonorrhea, a 36 per cent increase. Rapid treatment centers admitted 61,898 cases of syphilis and 67,326 cases of gonorrhea. Fifty-four of these centers were operated by the Public Health Service and state health departments for the intensive treatment of syphilis. The centers have reduced the average stay of patients from 24 days to about 11 days for syphilis and from 16 days to 3 days for gonorrhea. They are now treating approximately 180,000 patients a year.

The two cities participating in intensive programs of mass diagnosis and treatment were New Orleans, La., and Birmingham, Ala. During a 45-day drive in New Orleans, 4,000 cases of gonorrhea were discovered and treated with penicillin provided to private physicians and clinics by the Public Health Service. In Birmingham, 300,000 persons, or 92 per cent of the population of Jefferson County were blood tested for syphilis. Of these 50,000 showed doubtful or positive reactions. Also in Birmingham, voluntary examinations resulted in the detection of 3,000 cases of gonorrhea.

Industrial Health.—The many changes which have taken place in the labor force, in materials and methods of production, and in working, home and community conditions, have greatly increased industrial health problems. The Public Health Service has provided consultant services to the states on general programs and has provided specialists for the staffs of state and local industrial hygiene organizations. Control of occupational diseases and accidents, provision of medical services, and proper placement of workers in jobs suited to their physical abilities, continued to be the basic elements of the industrial hy-

giene program promoted by the service in co-operation with other governmental agencies, management and labor.

Malaria Control.—The work of the Office of Malaria Control in War Areas has been influenced by changing conditions. Until Jan. 1, 1945, work had been limited to war areas. At this time, Public Health Service authority was extended to include malaria foci which would affect the civilian population. This involved the strengthening of existing controls in the South and the establishment of mobile units to safeguard areas where malaria carriers from overseas have been introduced. As a part of this program, the Office of Malaria Control in War Areas conducted the spraying with DDT of 300,000 private dwellings in malarious areas of 13 Southern states. The success of the war areas program was shown in the uninterrupted downward trend of malaria cases.

Typhus Control.—The Typhus Control Unit assisted in the organization or operation of numerous programs to combat the spread of typhus in 10 Southern states and Puerto Rico. In July, all operations and facilities of this unit were transferred to the Office of Malaria Control in War Areas.

Medical Care.—As war operations attained a peak during the past year, the Hospital Division furnished the largest volume of medical relief in its history. All hospital and out-patient facilities were utilized beyond range of normal capacity in order to meet the great demand for medical care of Public Health Service beneficiaries. The total number of patients admitted to the 27 Marine hospitals for in-patient care was 98,300 which is 85 per cent more than in the prewar year 1939. Applying for treatment in the out-patient department were 329,000 persons or 70 per cent more than in 1939.

The number of merchant seamen given medical relief by the service increased substantially during the past year and the seamen continued to form the largest portion of the in-patient load of the service. They have increased from less than 32 per cent of the daily average in-patient census last year to almost 38 per cent. The daily average census of Coast Guard patients declined because of the increasing number of coast guardsmen on overseas assignments, where medical care was provided by naval and other facilities. This group comprised only 23 per cent of the total as compared with 29 per cent in 1944. Veterans accounted for almost 8 per cent of all in-patients. Of the out-patient treatments furnished, approximately two fifths were for Coast Guard personnel, one fourth for American merchant seamen, and one tenth for U. S. Employees' Compensation cases.

An annex opened at Neponsit Beach, Long Island, N.Y., for the treatment of tuberculosis supplemented the overcrowded Stapleton Marine Hospital. The treatment of patients suffering with leprosy continued at the Marine Hospital in Carville, La. In 1945, there were 64 admissions to this institution.

Mental Hygiene.—During the year the work of surveying public mental hospitals was continued. Seventy-one institutions in 20 states were surveyed or visited. A study of addiction to marijuana smoking was carried out on six subjects at the Public Health Service Hospital in Lexington, Ky. Various other studies were continued on the nature and treatment of drug addiction. The hospital in Fort Worth, Texas, established a notable record in the treatment of psychotic pa-

tients of the United States Navy. Admissions for the year totaled 2,748 male patients. Approximately 80 per cent of the patients have been released as cured within three months' time, although many of these were sent back to their home communities with the recommendation that psychiatric supervision and counsel be continued.

Quarantine Services.—The Public Health Service has legal responsibility for preventing the introduction of communicable diseases into this country. An inter-state quarantine responsibility of the service is control of communicable diseases. Quarantine activities in the past year show the following percentage increases over the previous year: inspection of planes arriving, 77 per cent; vessels inspected, 39; vessels fumigated, 25; examination of passengers from vessels, 77; and examination of passengers from planes, 83. Quarantine regulations were changed to abolish the procedure requiring the double boarding of vessels destined for continental United States by way of Hawaiian or Puerto Rican ports.

National Institute of Health.—Throughout the war, the National Institute of Health concentrated its efforts upon research in subjects directly related to the needs of the military and of war industries. Among the outstanding contributions made by the institute were: (1) the development and production of a safe and effective typhus vaccine which has protected the armed forces of the United States in epidemic areas abroad; (2) the synthesis and clinical evaluation of new antimalarial drugs; the development of rapid diagnostic tests for many exotic diseases affecting the armed forces abroad; (3) the discovery of the causative agent for jaundice following yellow fever immunization, as a result of which it was possible to produce an improved, safe, yellow fever vaccine for the armed forces; (4) epidemiologic studies to investigate potential domestic hosts of schistosomiasis, filariasis, leishmaniasis, and trypanosomiasis; (5) testing the effectiveness of army and navy equipment, such as water purifiers, insecticides, protective clothing, etc.; (6) determination of toxicity and establishment of control methods for handling many new substances including new explosives, high octane gas, solvents and rare metals, used in war plants and military operations as well as in the manufacture of munitions; (7) extensive research in aviation medicine, including development of protective clothing equipment; (8) the development of blood plasma substitutes; (9) and the determination of the role of folic acid deficiency in blood dyscrasias. For security reasons, much of the work of the National Institute of Health remained confidential until the termination of the war.

Caudal Analgesia.—For the past two years, the Public Health Service has co-operated with the Philadelphia Lying-In Hospital, the Pennsylvania Hospital, and the Jefferson Medical School in maintaining a graduate medical course in the study and control of pain in childbirth. Because of the increasing demand for this instruction, the program was transferred to the University of Tennessee College of Medicine in Memphis to provide more clinical material. The major accomplishments of this project include the training of 600 physicians in the methods of continuous caudal analgesia; the training of 25 nurses in the management of cases under this form of analgesia; the management of pain relief for 3,000 normal obstetrical cases during labor and delivery, of 456 obstetrical patients undergoing

cesarean section, and of 1,100 patients undergoing other surgical procedures.

Inter-Agency Co-operation.—Co-operative activities with other interested federal agencies, with official and voluntary health groups, and with social welfare agencies and educational organizations have continued at an accelerated rate. In line with the Public Health Service policy of assisting other agencies by assignment of trained personnel to help carry out their health activities and thereby promote the co-ordination of the health activities of the federal government, the Public Health Service worked with: War Shipping Administration; Office of Indian Affairs; Bureau of Prisons; U. S. Employees Compensation Commission; Coast Guard; Farm Security Administration; Office of Vocational Rehabilitation; Detention Centers; and Public Roads Administration.

Approximately 324,000 medical examinations were given to seamen in the 20 Port Medical Representatives' Offices. To achieve maximum possible attention to the serious problem of dental care, major training stations, ships, and crew examination offices established dental clinics. Eight new dental clinics were opened during the year, bringing the total to 27.

In addition, the Public Health Service detailed more than 200 officers to serve with the United Nations Relief and Rehabilitation Administration and has assigned a liaison officer with the State Department. The surgeon general of the United States Public Health Service, Dr. Thomas Parran, is an advisor to the United States delegates to the United Nations Conference on Food and Agriculture.

Surplus Property.—At the request of the Surplus Property Administration, the Public Health Service assists in the administration of the Public Benefits program. Opportunity to buy surplus property has been granted to nonprofit educational and public health institutions in a regulation issued by the Surplus Property Administration. This regulation (SPA Reg. 14) is designed to put into operation the Public Benefits program (Sect. 13) of the Surplus Property Act of October 1944. A medical officer and sanitary engineer in each continental Public Health Service district office will assist institutions in determining their needs and eligibility.

Vital Statistics.—Three important communicable diseases—poliomyelitis, meningococcus meningitis and scarlet fever—reached epidemic proportions in the United States during 1944. A total of 19,053 cases of poliomyelitis were reported, the largest annual total since 1916. Incidence of meningococcus meningitis in 1944 totaled 16,094 cases, slightly lower than 1943, the year of highest incidence. Scarlet fever was unusually prevalent during 1944 with 191,200 cases reported. The influenza epidemic which broke out in the middle of November 1943, carried over into the early months of the following year.

A slight decline in the general death rate was noted in 1944. The final general mortality rate for 1944 of 10.6 per 1,000 estimated population compares with 10.8 for 1943. The birth rate for 1944, 20.3 per 1,000 population, was slightly lower than that for the preceding year. Infant mortality continued to drop with a provisional rate for 1944 of 39.4 deaths per 100,000 live births as compared with 40.3 in 1943. For the first half of 1945 it was 39.0; the rate appears to be dropping further.

Personnel of Commissioned Corps.—On June 30, 1945, the Commissioned Corps of the service

numbered 3,139 officers on active duty. The number of officers on active duty increased by 797, the largest increase in any one year. This was due in large part to the extension of policy authorized by Congress which permitted commissioning of nurses, dietitians, and physiotherapists.

Appropriations.—The total appropriation of the Public Health Service for the year was \$127,792,457. Grants-in-aid to states totaled \$21,765,800 of this amount.

PUBLIC LANDS. Operating through 4 branches with 12 divisions in Washington, 5 agencies in the field with 25 offices scattered throughout the West and in Alaska, and 25 district land offices also strategically located for service in the West and in the territory, the General Land Office of the federal government closed its books for the period with a net profit both in conservation advancement and in financial gains in the administration of 778,000,000 acres of public domain.

During the war years, more than 16 million acres of the public domain were made available as sites for camps, gunnery ranges, aviation bombing fields, tank training areas, and other combat training zones. In addition, many secret withdrawals of land were made to assist the army and navy in carrying on the war, and several millions of acres were placed in a state of reserve to permit the untrammelled development for war purposes of the petroleum and other mineral resources in the areas. At the same time, the activities of trained investigators and cadastral engineers and other experts in land identification, classification and management were centered almost entirely upon war-connected tasks, ranging from the examination of thousands of mining claims to the segregation of areas in Arizona, New Mexico and other states for use in experimentation and in the development of the atomic bomb. Never before in history had the public lands under the jurisdiction of the General Land Office been called upon to provide such an abundant supply of natural resources for military purposes as in the period of the Second World War which drew near to a close with the end of the 1945 fiscal year.

In the aggregate, the activities of the General Land Office produce cash returns several times greater than the expenditures incident to its operations. In 1945, these cash receipts totaled \$13,381,654 and represented a ratio of \$5.66 for every \$1 of the expenditures which aggregated \$2,365,005. This was the second consecutive year in which the receipts exceeded \$13,000,000 and the fourth time they have exceeded \$10,000,000 since 1880.

Mineral rentals, royalties and bonuses accounted for 82 per cent of the total receipts, and sales of timber from revested Oregon and California railroad grant lands and reconveyed Coos Bay Wagon Road grant lands for an additional 13 per cent. The remaining 5 per cent were realized from sales of public and ceded Indian lands, rentals, fines and penalties, copying fees, and from miscellaneous sources.

World demands for lumber and other forest products in the postwar period were reflected in operations and plans of the Oregon and California Revested Lands Administration during the 1945 fiscal year. Established in 1938 to carry out a broad program of sustained yield forestry management on 2½ million acres of land in western Oregon which once was encompassed in a federal railroad grant but later revested in gov-

ernment ownership, this branch of the General Land Office maintains its headquarters at Portland, Oregon.

Rated as the world's largest experimental laboratory in practical co-operative sustained yield forest management, the "O and C" lands provide the testing ground for a world pattern of forestry economy. In 1945, sales of timber from these lands exceeded 426,000,000 board feet valued at approximately \$1,518,000.

In the 1945 fiscal year, a total of 12,479,270 acres in the United States and Alaska was made subject to use for grazing under 10,593 leases involving annual rentals totaling \$229,523.

The area of public lands remaining in federal ownership, including Indian trust and tribal lands, as of June 30, 1945, amounted to about 413 million acres in the public land states and about 365 million acres in Alaska. Approximately 400 million acres of these public lands were vacant, unappropriated, and unreserved as follows: 37 million acres in the states outside of federal grazing districts; 133 million acres within such districts; and 230 million acres in Alaska. During the year 692,000 acres were withdrawn for various public purposes while withdrawals reserving 9,497,000 acres were revoked.

Of the approximately 778 million acres remaining in federal ownership in the states and Alaska, 118 million acres in the states and 363 million acres in Alaska were still unsurveyed as of June 30, 1945.

FRED W. JOHNSON,
Commissioner, General Land Office.

PUBLIC UTILITIES. The impact of the Second World War brought about striking increases in the demand for all types of public utility service, but within the limits of this review one utility, electric power, which played an indispensable role in a highly mechanized war, has been selected for special emphasis. During the war the greatest increase in use of electric power within one year occurred in 1943, with total generation almost 221 billion kilowatt hours, an increase of about 32 billion over 1942. This increase within a single year was almost equal to the total production of approximately 33 billion in the World War year 1918. Consumption of electric power by "large light and power" customers increased about 125 per cent between 1939 and 1944. But it was possible to spread much of this increased demand over the 24-hour period and greatly reduce investment in power plants and facilities under what would have been necessary if many war industries had not been operating on a three-shift basis. Also, automatic load control devices, accelerated by the exigencies of war, made possible heavier line loading and greater reliability of lines thus controlled. The Federal Power Commission (FPC) through its emergency powers encouraged the interconnection of power companies and lessened the need for plant expansions by exempting certain utilities from interstate regulation while interchanging power across state lines for the duration. In many instances, daylight saving time meant substantial reductions in the evening peak on power plants. Return of peacetime schedules meant a less favorable ratio of peak demand to total use of electric power. Increase in total use in July 1945 compared with July 1944 was 0.9 per cent, but increase in demand was 3.3 per cent (FPC Release No. 2769, August 27, 1945).

The end of the war did not mean serious problems of reconversion for public utilities, since they continued to sell the same sort of products

or services. The financial loss resulting from sharp decreases in wartime demands did not affect all utilities in the same manner. For example, the marked decline in the use of electric energy by war industries meant a loss in the segment of the market for power that was being served at a comparatively narrow margin of profit, whereas the loss of straphangers by street railway and bus companies meant a marked decline in the profitability of local mass transportation. But since the ratio of capital invested to annual gross revenues is very high for public utilities as compared with nonpublic utility industries, all utilities experienced unfavorable financial results when the demands of war industries no longer called for the operation of their facilities "around-the-clock," and in many instances for a seven-day week.

Advances in the arts already under way or resulting from the war will affect the different utilities in varying degrees and magnitude, some of which cannot be adequately appraised until many years in the future. Atomic power is obviously in the latter group. On the other hand, with the resumed use of oil tankers, Congressional policy regarding the future use of the "Big-Inch" oil pipeline, laid from the interior to the East by the government during the war, will greatly affect the extent to which natural gas may become a competitor of coal and of electric power generated either by steam or by hydro projects. In the fields of transportation, communication, television, radio, and radio-telephony, both world-wide and local, striking advances have brought to the fore important domestic and international economic and political problems which in turn call for increased efficiency both in the management and the regulation of these utility services.

Judicial Review of Regulation by Commissions.—

In *AMERICANA ANNUALS* for 1943 to 1945 inclusive, certain Supreme Court decisions were characterized which granted greater discretion to public utility commissions in methods followed in rate making and in finding a rate base, provided the "end result" was justified. During 1945, concurring or dissenting opinions of Supreme Court justices indicated that various members of the court are no less convinced than they were when they dissented in earlier closely divided decisions regarding the freedom of utility commissioners to use whatever methods they desired, provided the end result was satisfactory. For example, Mr. Justice Jackson in a concurring decision in a 1945 case (65 S. Ct. 829) in referring to the Hope Natural Gas decision of 1944 said that case "introduced into judicial review of administrative action the philosophy that the end justifies the means. I have been taught to regard that as a questionable philosophy, so I dissented and still adhere to the dissent. But it is the law of this court, and I do not understand that any majority is ready to reconsider it." Some of his statements, quoted below, reveal his dissatisfaction regarding important issues involved in the Hope decision and with issues in the above 1945 case.

"I do not recede from the views . . . that Hope provides no workable basis of judicial review, no key by which commissions can anticipate what rule, if any, will control our review, and no guidance to counsel as to what issues they should try or how they should try them. I think, however, that the majority which promulgated that decision, or a majority of that majority, should be permitted to continue to spell out its application to specific problems until we see where it leads.

"It is difficult for me in these cases, and in some it might be impossible, to follow the rule of Hope in reaching a decision. I have no intuitive knowledge as to whether a given price is reasonable, and my fundamental concept of reasonable price in this industry and how to find it has been rejected by the Court. . . .

"Far-sighted gas-rate regulation will concern itself with the present and future, rather than with the past, as the rate-base formula does.

"I should like to reverse this case, not because I think the rate reduction is wrong, but because I think the real inwardness of the gas business as affects the future has been obscured by the Commission's preoccupation with book-keeping and historical matter. Such considerations may be relevant to rate-base theories, but will not be very satisfying to a coming generation that will look back and judge our present regulatory method in the light of an exhausted and largely wasted gas supply. But as the matter stands I see no legal grounds for reversal."

In another 1945 case (65 S. Ct. 829, 845) four justices dissented on the ground that the FPC in finding a rate-base had exceeded its power by including in the rate-base, properties excluded in the Natural Gas Act. These sharp and close divisions of the court raise the query regarding the future discretion which may be allowed to commissions in determining both a rate-base and a fair rate of return. Recent action by the Supreme Court (65 S. Ct. 716) involves rate making by the Interstate Commerce Commission and the power of that commission over rate bureaus which were charged with violation of the Sherman law. In a 5 to 4 decision the court consented to review on complaint of Georgia and other states alleged freight rate discrimination by railroads. The complaint charged that some 60 rate bureaus or other associations and organizations were being utilized by the railroads to fix rates in violation of the anti-trust laws and that the ICC (Interstate Commerce Commission) was unable to prevent such action. The court held that Congress had not given the ICC jurisdiction to remove rate-fixing combinations from the prohibitions of the anti-trust laws or to regulate or control them; that as there had been no legislation legalizing such rate bureaus since the Sherman Act was passed, "we can only conclude that they have no immunity from anti-trust laws." Among other things the court said, "No adequate or effective remedy other than this suit is suggested which Georgia can employ to eliminate from rate making the influences of the unlawful conspiracy alleged to exist here." That future rate making by utility commissions is involved in this case is seen in the contentions of the minority opinion of the court. The four dissenting justices (Chief Justice Stone joined by Justices Frankfurter, Jackson and Roberts) maintained that if an original complaint of this sort succeeded it would "only mean the breakdown of the unified system of fixing rates by commission action which Congress has ordained by the Interstate Commerce Act"; that "such suits cannot but fail to bring chaos into the field of interstate rate making."

Public Utility Holding Companies.—As indicated in *AMERICANA ANNUALS* for 1944 and 1945, the Supreme Court had not, up to that time, reviewed any cases involving the so-called death sentence provisions of the Holding Company Act of 1935 because the court lacked a quorum, four justices having disqualified themselves. The court, later

in the year, announced that it would hear such cases in its next term, but after the resignation of Mr. Justice Roberts the court indicated that these cases were again placed upon the deferred docket. In April 1945 the Securities and Exchange Commission in its Tenth Annual Report presented detailed information regarding divestment of holding companies from 1935 to June 30, 1944. A total of 266 electric, gas, and non-utility subsidiary companies with total assets of \$3,700,000,000 were divested during the decade. After divestment, 232 companies with total assets of \$2,200,000,000 were no longer subject to the Holding Company Act, and 34 companies with total assets of \$1,400,000,000 were still subject to the act by reason of their relationship to other registered companies. The status of each of the major holding company systems under the "death sentence" provisions of the act are given in the above report.

Competitive Bidding in Sale of Utility Securities.—The competitive bidding rule of the SEC (Securities and Exchange Commission) in the sale of public utility securities became effective in May 1941. The commission reported in its Tenth Annual Report that since 1941 "except in one or two instances" insurance companies and other institutional investors have not submitted bids for such issues; that since its rule became effective "there has been a substantial decrease in the relative amount of public utility securities that have been privately placed"; that prior to the adoption of the rule, utility securities were sold "by underwriters on the basis of a 2-point spread"; that the weighted average spread has been but 1.21 for the period since adoption of the rule.

Federal Power Developments.—Allocation of costs for the Bonneville Project was made by the Federal Power Commission July 13, 1945 (Release No. 2740). About \$86,000,000 out of a total cost of approximately \$112,000,000 as of July 1, 1944, was allocated to power as the government's capital investment in the Bonneville Project to be recovered out of electric revenues. The majority decision of the commission relied upon the cost analysis of its chief engineer who maintained in his 61-page report that the Bonneville Project as authorized is "for the purpose of improving navigation on the Columbia River and for purposes incidental thereto." "With this legislative determination," the chief engineer said, "the question as to the primary purpose of this project is a settled matter." Commissioner Smith, expressing his view that Bonneville is primarily a power project, presented a vigorous 36-page dissent in which he stated that \$100,000,000 should be allocated to power. He characterized the interpretation placed upon the statute by the chief engineer as "strained and unwarranted construction." "It seems to me plain," he said, "that in describing navigation as a 'primary' purpose Congress was not undertaking to establish a standard for cost allocation; it was simply following the familiar pattern dictated by considerations of constitutionality." He contended that it would have been "purposeless" for Congress to direct the commission to allocate costs if it was the intent of Congress to decide it by the language of the act, leaving to the commission "no function to perform except that of translating some adjectives into percentages and dollars."

Development of river valleys was recommended by President Truman in his message to Congress on Sept. 6, 1945: "If these rivers remain scourges of our Nation, it is only because

we do not have the prudence to harness them for the benefit of our people. . . . I hope that the Congress will proceed as rapidly as possible to authorize regional development of the national resources of our great river valleys." Partly because of important geographical differences in the regions and thus in economic problems involved in the establishment of additional river valley authorities, there are marked differences of opinion regarding the use of water for different purposes, such as irrigation, navigation, and for generation of electric power. But there are also sharp conflicts of opinion regarding the degree to which there is to be highly centralized federal control of river valley problems. (See below.) Government control of the financial transactions of federal authorities was made a part of recent legislation. In the act of Feb. 24, 1945, which separated the Federal Loan Agency from the Department of Commerce and restored the former to independent status, it was provided that the comptroller general should audit the accounts of all government corporations and submit to Congress such information as he may deem necessary to keep Congress informed of the operations and financial condition of such corporations. The act provides that his report shall "also show specifically every program, expenditure, or other financial transaction or undertaking" which in his opinion has "been carried on or made without authority of law." (U. S. Code Cong. Service 1945, p. 3.)

Financing Rural Electrification.—The Rural Electrification Administration as of Dec. 31, 1944, had made loans to 904 borrowers consisting of 831 co-operatives, 54 public bodies, and 19 private utilities. Of cumulative net allotments outstanding (\$517,000,000) approximately \$456,000,000 (88 per cent) was for distribution systems. Approximately \$12,000,000 was to finance consumer installations and refrigeration lockers.

Conflict between Federal and State Regulation.—Proposed river valley power authorities have brought to the fore the issue regarding the extent to which such authorities are to be under federal or state control. Proposals have been made in some instances for the purchase by the state of federal power projects within the state, thus bringing about state control of such hydro-power projects. Other proposals where a number of states are involved are for federal regional control over such authorities rather than highly centralized federal control.

One conflict between federal and state regulation during the year 1945 was continuation of the controversy regarding the jurisdiction of the FPC and the state commissions over the control of public utility accounting and also further controls growing out of such accounting requirements. In a case involving the control of rates by federal or state authority the Supreme Court in February 1945 held (45 S. Ct. 565) that the FPC, which ordered a reduction in wholesale interstate rates, had no power to order refunds to the customers in four Iowa towns; that retail rates to consumers was a matter to be decided by state, not federal, authority.

CLYDE O. RUGGLES,
Professor of Public Utility Management and Regulation, Harvard University.

PUERTO RICO. An insular possession of the United States in the West Indies, with a population (1940 census) of 1,869,255 and an area—including several smaller islands in the vicinity—of 3,435 square miles, divided into 77 munici-

palities. The population in 1940 was 1,869,255. The chief cities are San Juan, the capital (pop. 169,247), Ponce (105,116), Mayaguez (76,487), Caguas (24,377), Arecibo (22,134), and Rio Piedras (19,935). The executive power resides in a governor appointed by the president of the United States. There is a governor's Executive Council of 7, a Senate of 19 members, and a House of Representatives of 39 members. Puerto Rico is represented in the United States Congress by a resident commissioner elected by the people. Jesus T. Piñero, candidate of the native Popular Democratic Party, a wide coalition including support of the Confederation of Labor (CGT), was elected to this office on Nov. 7, 1944, replacing Bolivar Pagán, candidate of the native, conservative Union Republican Party. The governor is Rexford Guy Tugwell, appointed by former President Franklin D. Roosevelt in 1941.

Education.—Education is compulsory between the ages of 8 to 14. In 1942–43 there were 5,491 classrooms in 2,402 school buildings, and 302,806 public day school pupils. There are also 54 accredited private schools. The University of Puerto Rico is at Rio Piedras, near San Juan. Total appropriation for education in the fiscal year 1942–43 was \$7,721,255.65.

Agriculture, Commerce, and Industry.—Sugar cane growing is Puerto Rico's most important agricultural pursuit. Annual production of sugar is about 1,000,000 tons, nearly all normally exported to the United States. Coffee production averages 235,000 hundredweight. Other crops are fruits and vegetables, tobacco, cotton, and coconuts. A large part of the food consumed in the island is imported. Principal industries are sugar refining, and straw hat, cigar, and rum manufacturing.

Gold, silver, copper, iron, tin, mercury, platinum, and nickel are found in the island. Salt production is important.

Imports for the fiscal year ending June 30, 1941, were valued at \$153,259,895, and exports at \$101,580,919.

Economic conditions declined in the immediate postwar era, and while it was reported in June 1945 by the insular bureau of statistics that approximately 110,000 persons remained unemployed out of 613,133 employable persons, some progress was reported on the island's ambitious industrial program, in spite of a lack of raw material and venture capital, and a limited domestic market. The Puerto Rico Glass Corporation began production of bottles on January 10 in a plant scheduled to produce 389,000 gross tons of bottles annually; construction of a clay-products plant was begun in summer; and a large pulp and paper factory began operations in the fall. Plans were completed for a paperboard mill having a capacity of 8,000 tons; for expansion of the ceramics industry; for the manufacture of wallboard from the 2,700,000 tons of green bagasse (crushed cane-stalk) produced annually by the sugar industry; and for a cotton weaving plant to produce 3,000,000 pounds of coarse cloth.

Communications.—There are 1,830 miles of paved highways, 385 miles of railways, 99 post offices, 5 commercial radio stations, and 20,639 telephones. Air service to and from Puerto Rico was considerably augmented in 1944 and 1945.

Finances.—A six-year financial program for Puerto Rico was submitted to the insular legislature by the Puerto Rico Planning Board on Feb. 21, 1945. An appropriation of \$39,855,000 was recommended for the Puerto Rico Development

Company (established by act of legislature in 1942 to develop the island industrially), for a six-year period beginning with the fiscal year 1945–46. Of this amount, it was recommended that \$20,000,000 be allocated to the company for the fiscal year 1945–46. An appropriation of \$17,000,000 was passed by the legislature and approved by the governor for the current year.

Receipts from all sources in 1944–45 totaled \$134,929,001.42, which added to the balance in the treasury at the beginning of the fiscal year of 1944–45, namely \$109,924,892.47, amounted to \$244,853,893.89 including both general and trust funds. Disbursements during 1944–45 from general and trust funds amounted to \$108,248,512.63, leaving a balance of \$136,605,381.26 in the treasury at the beginning of the fiscal year of 1945–46. On June 30, 1945, the bonded debt of the territory totaled \$13,064,000. There was no floating debt.

Principal Events.—Considerable dissatisfaction continued to exist in 1945 over the fact that Puerto Ricans were still not allowed to elect their own governor, or to have final word on their laws. Both the governor, appointed by the president of the United States, and the president himself, continued to have veto power over all acts of the insular legislature. Moreover the inhabitants, most of them American citizens, continued to lack representation in Congress other than through a resident commissioner, who was allowed to speak on the floor, but was not entitled to vote. For these and other reasons, including dissatisfaction with economic conditions, independence remained the foremost political issue on the island.

The overwhelming victory in the November 1944 elections of the Popular Democratic Party of Puerto Rico, which advocated independence, led to widespread supposition that in 1945 its leader, Luis Muñoz-Marín, would lead an uncompromising fight on this issue. Instead, however, Mr. Muñoz-Marín, together with Jesus T. Piñero, newly elected resident commissioner in Washington, drew up a bill providing for a plebiscite on three alternatives: independence, statehood, or dominion status. Senator Millard E. Tydings, chairman of the United States Senate Insular Affairs Committee, did not wholly approve of this measure, but he agreed to introduce it as the Tydings-Piñero bill, No. 1002, in the Senate, where it encountered immediate opposition, as it did in Puerto Rico also. Statehood for Puerto Rico was opposed in Congress because it would add 2 senators and 10 representatives to the national legislature, already considered too large; and statehood was furthermore found to be unconstitutional, as was dominion status. The provision for independence in the bill, moreover, left the United States in complete military jurisdiction, and left the island's economy in bonds to the United States also. Eventually the bill was withdrawn and replaced by the Tydings independence bill (S. 227), which Dr. Gilberto Concepcion de Gracia, president of the Puerto Rican Pro-Independence Congress, declared would be acceptable to Puerto Ricans with certain amendments, including reversion of the army, navy, and aviation bases to Puerto Rico, all future arrangements to be made by treaty; and new economic arrangements through maintenance of a free market on the basis of imports and exports, measured in dollars, and other commercial arrangements to be concluded by treaty. In September, President Harry Truman, after meeting with Governor Tugwell, authorized the latter to

tell Puerto Ricans that he felt they were entitled to chose their future form of relationship to the United States as a reward for their part in winning the war, Puerto Rican boys having fought both in Europe and in the Pacific.

Governor Tugwell met with native opposition on two important measures in 1945. In May it was reported he had vetoed a joint resolution introduced in the Puerto Rican Senate by Dr. Rafael Arjona Saca for re-establishment of the Spanish language in the island's schools. Imposition of the American language on the Spanish-speaking people of the island had been widely resented. A bill written by Governor Tugwell making collective bargaining practically illegal was immediately signed by him in the face of opposition raised by the Puerto Rican Confederation of Labor, who complained that it wiped out 25 years of labor progress. The bill remained unenforced. Harold L. Ickes, Secretary of the Interior, who supervises Puerto Rican affairs, met with native criticism also in 1945 for failing to advocate independence for the island while petitioning the United States delegation to the United Nations Conference at San Francisco to work for a clause in the security charter guaranteeing the independence of colonial peoples.

An appropriation of \$17,000,000 was approved on Feb. 21, 1945, for industrial development; and in May, Governor Tugwell signed a bill passed by the insular legislature granting \$21,000,000 of insular treasury funds for the acquisition of land by the Land Authority, under which corporate land holdings of more than 500 acres have been declared unlawful.

PULP AND PULPWOOD. See **PAPER PRODUCTION.**

PYLE, Ernest (Ernie) Taylor, American newspaperman: b. Dana, Ind., Aug. 3, 1900; killed by Japanese machine-gun fire, Ie Island, near Okinawa, April 18, 1945. Chronicler of the human side of the war and spokesman for the average soldier everywhere, Ernie Pyle was America's most famous and beloved correspondent of the Second World War. In the words of President Truman: "No man in this war has so well told the story of the American fighting man as American fighting men wanted it told."

Educated at Indiana University, where he majored in journalism, Pyle left college shortly before graduation in 1923 to take a job as cub reporter on the La Porte (Indiana) *Herald*. After five months, he moved on to the Washington (D.C.) *Daily News*, first as reporter, later as desk man; and in 1926-27 he worked as desk man for the New York *Evening Post* and the New York *Evening World*. He was aviation editor for the Scripps-Howard Newspapers from 1928 to 1932, and then managing editor of the Washington *Daily News* from 1932 to 1935. In 1935 he became a roving reporter for Scripps-Howard. Together with his wife, he covered some 200,000 miles of the Western Hemisphere, each day's experience providing human interest material for a letter home. Pyle went to England in November 1940 and sent back vivid descriptions of the Luftwaffe's bombing of London. In the summer of 1942 he was with American troops stationed in England and Ireland, and when these troops went into North Africa, and later into Sicily and Italy, Pyle accompanied them, writing his column in and out of foxholes, and telling simply and sometimes eloquently what he saw and of the men who did the fighting. In June 1944 he was on hand for the Normandy invasion, but in September of that year he returned to the United States after having written: "I've had all I can take for a while." He returned to find himself famous and wealthy. But in January 1945 he was headed for the Pacific front. "I'm going simply because there's a war on and I'm part of it," he said in his column, "I've got to—and I hate it." At the time of his death, his dispatches were appearing in 393 daily newspapers with a total daily circulation of 13,390,144.

Pyle's columns were collected into three books: *Ernie Pyle in England* (1941); *Here Is Your War* (1943), which sold over a million copies; and *Brave Men* (1944), which sold 875,000 copies. In 1943 he won the Pulitzer Prize and in 1944 and 1945 the Raymond Clapper Memorial awards for distinguished war correspondence. Mrs. Geraldine Pyle, known as "That Girl" to millions of Pyle's readers, died at the Pyle homestead in Albuquerque, N.M., on Nov. 23, 1945. Her age was 45.

QATAR. See **ARABIA.**
QUARANTINE SERVICES. See **PUBLIC HEALTH SERVICE, UNITED STATES.**

QUEBEC. The largest Canadian province, embracing an area of 594,534 square miles, or 16.1 per cent of the total area of Canada, of which 351,780 square miles were acquired by the annexation of the territory of Ungava in 1912 under the Quebec Boundaries Extension Act. Three groups of mountains form the orographic system of the province: (1) The Laurentians, Canada's highest mountains east of the Rocky Mountains, skirting the St. Lawrence from Labrador to near the city of Quebec where they gradually recede and leave a widening lowland area between them and the river as far as the

Ottawa River. (2) Another chain of mountains, the Appalachians, includes the territory lying east of a line running from Lake Champlain on the Vermont border to the city of Quebec, thence down the St. Lawrence Valley to the gulf and through the Gaspé Peninsula. (3) The Monteregians, deriving their name from Mount Royal at Montreal, are situated in the western portion of the St. Lawrence lowlands and are composed of several hills of igneous origin ranging from 715 to 1,755 feet high. Agricultural land covers an area of 68,350,000 square miles, 10 to 13 per cent of the total surface, of which 364,370,000 square miles is forested land. The census of 1941 fixed the population of the province at 3,331,882; it is estimated to have increased to 3,506,000 in 1943. People of French origin constitute 80 per

cent of the whole. The rural population is about 35 per cent. In 1941, Quebec contained 28.96 per cent of the total population of Canada.

Government and Administration.—The government is composed of a lieutenant governor, named by the government of Canada, an Executive Council, a Legislative Council of 24 members appointed for life by the lieutenant governor, and a Legislative Assembly elected for five years. The present lieutenant governor is Maj. Gen. the Honourable Sir Eugene Fiset. The Executive Council is composed of 21 ministers, 7 of whom have no portfolio. The prime minister is Maurice L. Duplessis, leader of the Union Nationale Party. The position of the parties in the legislature following the elections of August 1944 is as follows: 48 Union Nationale, 48 Liberal, 37 Bloc Populaire, 3 Co-operative Commonwealth Federation (CCF), 1. One constituency is vacant. In the Dominion Parliament, the province is represented by 24 members in the Senate and 65 members in the House of Commons.

For the fiscal year 1943-44, the ordinary revenue of the province amounted to \$93,036,713.13. Ordinary expenditure was \$82,068,237.36 and capital expenditure \$9,191,611.19, leaving an overall surplus of \$1,285,159.70. The net public debt was \$305,078,048.32.

Education and Public Health.—The department of education is under the direction of a superintendent named by the lieutenant governor in council and is subordinated to the jurisdiction of the provincial secretary. In 1943-44, there were 1,959 school municipalities having under their control 8,572 schools distributed as follows:

	Catholic	Protestant	Total
Elementary schools.....	7,077	414	7,491
Complementary and intermediate schools.....	795	78	873
Primary superior and high schools.....	152	56	208
	8,024	548	8,572

To these must be added 532 independent schools providing education in the same grades. If we include normal schools, secondary, arts and crafts, technical, special schools, and universities, we find a grand total of 9,976 institutions of education; 25,771 persons were engaged as teachers and 719,735 students were enrolled.

In 1943-44, \$9,940,000 was allotted to the department of public education. In addition, grants totaling \$6,000,000 were made to various educational institutions by the department of the provincial secretary, the department of agriculture, the department of lands and forests and the department of public works. It is estimated that in 1943-44, a grand total of \$52,000,000 was appropriated by the various school authorities, municipal or provincial, for educational purposes.

Health conditions show a constant improvement. The average death rate for the five main communicable diseases which was 79.9 in 1926 had decreased to 15.7 in 1943. The industrial hygiene division of the department of health and social welfare has undertaken the task of promoting the organization of medical services in industry and has fostered education concerning hygiene in lumber camps. A great effort is made by the department to check the spread of venereal diseases.

Value of Production by Industries in 1942.—Production by industries is shown in the following table:

Industries	Gross value	Net value
Agriculture	\$ 325,567,000	\$ 233,812,000
Forests	299,728,675	165,274,650
Fisheries	5,506,973	3,892,537
Trapping	3,894,630	3,894,630
Mining	307,871,770	138,100,940
Electric stations	78,371,204	78,325,236
Construction	205,400,748	110,790,354
Custom and repair	57,097,000	38,743,000
Manufactures	2,333,303,012	1,059,873,943
	\$3,616,741,012	\$1,832,707,290

Agriculture.—The farm value was estimated at \$742,192,561 in 1941 and the number of farms occupied was 154,804. During the same year, the area under cultivation was 6,802,900 acres. Grants made for agricultural purposes by the department of Agriculture reached the amount of \$6,756,845 in 1943-44. Reports filed by the 544 farmers' co-operatives show that sales transacted by these societies amounted to \$37,558,676.00. The gross value of agricultural production was \$350,463,000 divided in the following items:

Field crops	\$148,317,000
Farm animals	73,338,000
Wool	618,000
Milk	85,578,000
Fruits and vegetables	9,020,000
Poultry and eggs	22,774,000
Fur farming	1,613,000
Maple products	4,199,000
Tobacco	1,478,000
Flax fibre	1,922,000
Clover and grass seeds	826,000
Honey	810,000

Forests.—In 1942, the capital invested in manufactures using wood and paper as chief component materials exceeded \$450,400,000, and the gross value of products amounted to \$322,394,000. There were 1,947 sawmills in operation. About 105,700 persons were employed in mills, factories and in lumber camps.

Mining.—The value of the output from mines and quarries of the province amounted in 1943 to \$101,859,559 subdivided as follows:

Building materials	\$12,475,910
Metals	59,727,333
Nonmetallics	29,656,316

Gold held first place with an output of 927,620 ounces worth, at the standard rate, \$19,175,607 to which must be added exchange equalization of \$16,537,763.

Fur Production.—With a production, valued at \$4,562,354, Quebec ranked second among the provinces in 1942-43. At the end of 1943, there were 2,129 fur farms in the province of which 1,972 were fox farms.

Fisheries.—In 1943, the value of the inland fisheries was estimated at \$805,302 and that of the sea fisheries at \$5,012,159.

Hydraulic Resources.—Extraordinary development in the hydroelectric industry in 1943 explains the increase of more than 1,000,000 horsepower in the production capacity of the turbines installed which increased from 4,839,543 hp. in 1943 to 5,847,322 hp. in 1944.

Manufactures.—The number of industrial establishments in 1942 reached 9,342 paying salaries and wages to 399,017 persons to the amount of \$536,329,170. Invested capital was estimated at \$1,883,353,668 and the gross value of the products at \$2,333,303,012.

Communications and Transportation.—The total mileage of improved roads is 22,670. Railways have a length of 5,203.44 miles. More than 364,000 telephones are in use; the postal service has 2,604 offices and the telegraph companies 926.

Trade.—In 1943, the value of the export trade of the province reached \$727,629,075 and that

of the import trade \$560,206,371. Retail trade amounted to \$916,132,000 during the same year.

Banks and Insurance.—Banks in the province operate under federal charter. In 1943, the 10 chartered banks had 1,041 branches in the province. Two savings banks operating under a provincial act had respectively deposits accounts of \$17,789,487.37 and \$96,287,239.47. The Co-operative People's Banks or Credit Unions, to the number of 627 in 1943, had total assets of \$48,854,549. An amount of \$68,795,752 has been paid to life insurance companies and \$6,225,593 to mutual benefit associations.

Principal Events of 1945.—The United Nations Food and Agricultural Organization (FAO) opened its conference at Quebec on October 16, when delegates of 30 out of 45 eligible nations signed its charter. See also CANADA.

EUGENE FISET,

Lieutenant Governor, Province of Quebec.

QUEENSLAND. See AUSTRALIA.

QUISLING, Vidkun Abraham, former "führer" of Norway under the Germans: b. Fyresdal, Norway, July 18, 1887; d. Oct. 24, 1945. Vidkun Quisling, whose name has become synonymous

with treachery, died before a firing squad in Akershus Fortress, Oslo. He had been brought to trial the preceding August, charged with treason, illegal action against the Norwegian government and constitution, and "contributing to the death of others." Convicted on September 10, he was sentenced to death, and his subsequent appeal denied.

Quisling actively collaborated in the German invasion of Norway in April 1940, using his authority as an army officer to hasten his country's collapse, and in September 1940, he was rewarded with appointment as sole political head of Norway and chief of a state council of thirteen Nazi-dominated commissioners. Destined for a military career, Quisling trained at Norway's war college, and entered the army in 1911. By 1931 he was a major of field artillery. He also served in the diplomatic service, as military attaché at Leningrad, 1918-19, and at Helsingfors, 1919-21. In May 1933, after Hitler's assumption of power in Germany, Quisling organized his own political party, the National Union, patterned after that of the Nazis, and pledged to suppression of communism and the freeing of Norwegian labor from unionism.

R

RACE PROBLEMS. See LAW, Section 9.
RADAR. See PHYSICS—Acoustics; RADIO.

RADIO. In 1945, the veil of secrecy was lifted from the most spectacular radio device so far developed—radar. This unique equipment uses high-frequency radio waves to determine the presence and location of unseen objects in space. In operation, a radar system generates high-power radio waves that are projected from an antenna, usually in a narrow beam. It then picks up the waves which are reflected back from objects in its range, and converts these into a pattern on a fluorescent screen like that in a television picture tube. In addition, electrical circuits accurately time the echoes from the unseen objects, measure the distance, and give the exact position. Other circuits cause the antenna to follow the object automatically as it moves.

Two general types of radar are used. One is the search type which scans across distant areas to detect the approximate position of a target; and the other, the fire-control type, which uses a narrow beam to accurately determine the position of the target. When this is done, shells can be aimed or bombs released at the proper instant. Some radars employ a low frequency in searching for and detecting enemy objects, then switch to a higher frequency to determine the exact location of the object.

A radar set at Pearl Harbor gave warning of the approach of the Japanese planes. This was a long-range search type, as was the early model that warned England of German bombers and enabled the "so few" RAF airmen to be at the proper point at the right time to intercept the enemy planes. In spite of their great bulk and weight, requiring four or five trucks, these long-range search sets have been set up within several hours after being put ashore on a beachhead.

For antiaircraft protection, the fire-control radar is invaluable. This set locates enemy planes at relatively short distances and enables the guns to be aimed at unseen targets above the clouds, in fog, or darkness. Connected to an electronic computer, the radar locates the enemy planes and anticipates their future position on their course. The AA guns then place the shells at this point and at the same instant that the plane arrives. On the Anzio beachhead, German night bombers pounded the American troops without serious loss of planes for a while. The older radars that were first used in that operation were almost useless because the Germans effectively jammed the air with radio waves of their own that interfered with the radar waves. A new fire-control radar was landed that could not be jammed by the enemy. After a few nights of operation, so many enemy planes were downed that the night attacks ceased. The operation was too costly for the Luftwaffe.

Even American gun crews refused to believe in the uncanny ability of radar. On a new destroyer heading into Pacific action, the crew persisted in using optical gun sights during target practice despite the commander's orders to close their eyes and use radar. On one peaceful but cloudy day, the radar unit picked up something above the clouds and the commander ordered them to commence firing even though they could see or hear no plane. After five minutes of apparently aimless antiaircraft fire at dense clouds, a Japanese plane came spiraling downward in flames.

For peacetime industry, radar can be used by ships and airplanes for navigation through fog and darkness. Radar units have been ordered by the United States Maritime Commission for installation in merchant ships now being built. With these, the navigator can locate shore lines, land masses, other ships, and obstacles from 200

RADIO

yards away up to 30 miles distant. A control console in the wheelhouse contains a cathode-ray tube indicator that shows concentric rings on its screen to indicate the range. The ship's position is indicated in the center of this screen. A range switch permits the navigator to use a 30-mile range until the ship approaches to within six miles of the obstacle when a six-mile range is used. Further localizing is made with a two-mile scale and objects can be observed down to 200 yards on this setting.

Pulse Time Modulation.—A new method of transmitting intelligence through space was publicly demonstrated in 1945. In this technique, known as pulse time modulation or PTM, a multitude of telephone conversations or radio programs can be sent over one transmitter and antenna. For the initial demonstration, 24 telephone conversations were fed into a single ultra-high frequency transmitter and sent over an 80-mile path through the air to a receiver that sorted them automatically and fed them to the proper telephones.

Pulse time modulation differs from the two systems now in use, amplitude modulation and frequency modulation, in that both the amplitude and frequency of the signal are constant. Instead of varying these, a number of pulses are transmitted and the time interval between them is varied at a rate that corresponds to the original sound frequencies. Each pulse provides a sound channel and the 24 pulses follow in sequence a marker pulse. For normal conversations, the sequence is repeated 8,000 times per second and switching of the channels is done by rotating an electron beam past 25 electrodes in a specially designed electron tube. Synchronizing of the transmitter to the receiver is accomplished by the marker pulse. The advantages of the new system include elimination of cross-talk between stations and reduction of static and other forms of interference.

Mountain-top Radio Relay.—One radio company is going ahead with plans for a peak-to-peak network in the West for FM, television, and other types of wireless communication which might make telephone and telegraph wires obsolete. Experimental high-frequency relay broadcasting (30,660 and 39,540 kilocycles) will be done from eight famous mountain peaks of the West: Mt. Adams, Mt. Shasta, Mt. Tamalpais, Mt. Whitney, and Mt. San Geroni, on a line parallel with the Pacific coast, plus Wheeler Peak, Nev., Kings Peak, Utah, and Grays Peak, Colo. The experiments are expected to measure field strength and interference under various conditions, and may prove that a satisfactory television and FM network, without land lines, can be developed extending from Seattle through San Francisco to Los Angeles, with an eastward branch for the Salt Lake City and Denver areas. Television and FM programs would be relayed from one mountain-top station to the next for rebroadcasting at each city on the network. Likewise, programs originating at relay points would be fed into the chain. Experimental stations are planned in Boston and New York as the eastern foundation for the network. Relay stations would link Detroit, Chicago, and other eastern cities.

Mobile Radio Telephones.—A telephone on the dashboard of any car or truck is a new service announced in 1945 by the Bell System. Approved by the Federal Communications Commission, this permits a car on the highway to use radio equipment for calling the home or office while in motion. Subscribers' cars will be

equipped with low-power transmitters and receivers operating on fixed wavebands. Their link to existing wired phones will be through radio central offices where higher-powered transmitters and receivers would be located. The effective range of equipment will be limited to a 25 to 35-mile radius. A number of vehicles will share each channel, giving them the radio equivalent of a party line. The radio central office will have a number of receivers scattered about the city to insure clear reception of the voice signals from the low-power mobile transmitters.

When a subscriber wishes to call a car, he will dial the operator who will plug in the car's radio channel and press a lever to ring a bell or light a lamp on the car's dashboard. Electrical impulses will go from the switchboard to the transmitter and there be transformed into radio waves which do the ringing or lighting. This apparatus will be selective, so that only the phone of the party or car called will ring—not those of other cars having the same waveband. In the car will be a handset telephone. When this is lifted off its hook voice signals will go out through the car transmitter and be picked up by one or more of the central office radio receivers, and relayed from them by wire to the radiophone switchboard, and then to the subscriber. This type of service is operating for emergency use by utility companies in New York and Boston today. Its expansion, to include commercial motor fleets, doctors, or anyone else requiring mobile communication, awaits only manufacture of needed equipment and Federal Communications Commission approval of specific projects. Customers may be given the option of renting their mobile radio equipment from the Bell System on a monthly basis, or of buying it outright.

New FM Frequencies.—The Federal Communications Commission announced new regulations and frequencies for FM (frequency modulation) stations in 1945. The commission will utilize 70 channels in the new commercial FM band (92–106 megacycles) and add ten more channels (106–108 mc.) to the thickly populated northeastern part of the United States. The country will be divided into two segments: Area 1 covering the northeastern portion, and Area 2 the remainder. Sixty commercial FM channels have been earmarked for metropolitan stations and 20 for community stations in Area 1. No rural stations will be licensed in Area 1. The power of metropolitan stations in Area 1 will be limited to 20 kilowatts radiated power, and antenna heights will be restricted to 500 feet, except in unusual cases. Community stations generally will be limited to 250 watts radiated power and antenna heights of 250 feet. Rural stations, which may operate in Area 2, will be licensed to cover large areas and will be of high power, according to FCC engineers. All FM stations will be licensed for unlimited time operation, but required to operate a minimum of six hours daily at the start.

Home Radio Telephones.—Personal two-way radiophone communication between civilians was also provided in 1945 by the frequency allocations of the Federal Communications Commission. Assigned to the band of 460 to 470 megacycles, the new personal sets would permit a person to own and operate a two-way radiophone for talking to his friends that own similar stations. Uses for such sets are almost numberless around the home and farm, for contacting farmers in the fields, and in business for routing store deliveries and pickups in a town. Sets of this

type may come in several sizes and operate from either batteries or the regular house current supply. For fixed locations, the electric light line can provide power; for portable mobile use, batteries are necessary. The extreme usefulness of this latter is shown by the extensive use of handie-talkie two-way radios by the army during the war. Firemen used similar portable radio transmitter-receiver sets at the fire which damaged the 78th and 79th floors of the Empire State Building in New York after a B25 army bomber crashed into it. The fire fighters, 900 feet in the air, kept in touch with firemen in the street and with Fire Headquarters by means of walkie-talkie radios.

International Broadcasting.—In 1945, United States government short-wave broadcasts to the other Americas were 280 program-hours weekly, as compared with one half hour in 1941. One third of the total operating time of the 36 United States short-wave broadcast transmitters is used for Spanish, Portuguese, and English programs beamed south of the border to radio audiences in all of the 20 other American republics. The strength of the signal from the United States is tested throughout the broadcast day by signal intensity monitoring stations which have been installed at key points in Guatemala, Colombia, Peru, Chile, Uruguay, Brazil, and Puerto Rico.

In international communications, the army spent \$162,000,000 overseas and in 1945 the navy budgeted \$480,000,000 for the purchase and maintenance of communications items.

Pushbutton Crystal Receivers.—Quartz crystals for radio equipment are usually individually processed to increase the activity of vibration. As a result, each plate exhibits certain individual characteristics that are different from sister plates of the same dimensions. In a new technique as many as 100 plates can be processed as a group to final square-edge dimensions within 0.0002 inch tolerance. All the blanks for a particular frequency are then exactly the same at the finishing stage. This minimizes the tendency to lap or etch beyond the desired thickness for that frequency and avoids most of the failures encountered in temperature cycling. Such a mass production technique may lead to the use of the quartz wafers in home radio receivers to eliminate the drifting away from the station frequency that pushbutton models exhibited. Each desired frequency would have one crystal so that a ten-station pushbutton set would use ten crystals. In the past, the amount of hand work by skilled operators brought the cost of ten crystals too high to be incorporated in any but a high-priced receiver.

X-Rays Boost Crystal Production.—A new production technique for quartz crystals uses X-rays to adjust the quartz crystal plates used in radio transmitters to final frequency at a rate of 30 to 50 cycles per minute. Quartz plates for the 6 to 8-megacycle range can be lowered up to 3 kilocycles in frequency simply by exposure to X-ray beams. Frequency can be checked continually during the treatment and the crystal can be removed from the beam when it reaches the correct frequency. The X-ray equipment developed for this purpose employs a new high-intensity water-cooled X-ray tube. One crystal is exposed at a time. The change in frequency is permanent throughout and beyond any temperature range that the crystal is apt to experience. Factory applications of the technique include: recovery of over-shot crystals that have been carried too far in finishing; precise adjust-

ment of standard crystals for use in calibration and in testing; manufacture of precision crystals for frequency and time standards; for a crystal which is considered stable, precise adjustment to final frequency by this method without the possibility of further aging.

Power-Line Radio.—Electric utility companies use power-lines instead of the ether to provide a highly reliable type of communication that insures privacy of conversations. In addition the radio waves along the wires are used to actuate electronic switching, high-voltage line-coupling equipment and other developments that have been given an impetus unequaled in more normal times. The frequencies usually utilized range from 50 to 150 kilocycles. The radio-frequency energy is confined almost entirely to the wire lines and not radiated into space as is common in radio broadcasting. This results in greater efficiency and makes it possible to transmit greater distances with less high-frequency energy. An important application of power-line carrier is to provide reliable, high-quality voice communication between various points on the system, such as generating stations and dispatchers' offices, or between dispatchers' offices of interconnected systems. See also ELECTRICAL AND ALLIED DEVELOPMENTS.

VIN ZELUFF,

Associate Editor, *Electronics*.

RADIO-RELAY TELEPHONY. See TELEPHONE PROGRESS, Section 5.

RAILROAD CAR STABILIZER. A device developed by Westinghouse Electric Corporation for taking the "bounce" out of railroad cars. It is said to improve riding qualities more than two to one over cars not so equipped. Describing it, Clinton R. Hanna, associate director of the Westinghouse laboratories, said: "In three thousandths of a second it sizes up the direction and extent of an impending bounce and takes appropriate counteraction almost before it gets started. A sensitive floating weight picks up the first signs of any disturbance that might get through to the body of the car and acts to increase oil pressure in a cylinder. The system is so devised that pumps can cause pressure in an expanding as well as a contracting cylinder. This pressure, exerted at just the right time and in the proper direction to oppose the disturbance, helps the wheels of the car move up and down at the same time it holds the body still." Cylinders installed horizontally on the car also act similarly to restrain the normal tendency of the car to sway from side to side.

RAILROADS, American. Although the fighting phase of the war terminated in the European theater in June and in the Pacific theater in August, the railroads of the United States continued throughout the year to handle an immense volume of war traffic. Indeed, the movement of troops in special trains was even greater following the cessation of hostilities than before, and troop movements continued at record levels to the end of the year.

In March and April the railroads handled a greater volume of freight traffic (126,024,000-ton-miles) than in any corresponding period in history. Preliminary freight traffic figures for the calendar year, compared with previous years, indicate that the 1945 volume was about equal to that of 1942, but was below that of 1943 and 1944, which marked the all-time peak. The following ton-mile figures are based on Class I railroads:

Year	Ton-miles	Per cent above 1939
1939	333,438,412,000
1940	373,253,197,000	11.9
1941	475,072,001,000	42.5
1942	637,983,503,000	91.3
1943	727,075,495,000	118.1
1944	738,037,455,000	121.3
1945 (est.)	680,000,000,000	103.9

Passenger traffic was below that of 1944, the all-time peak year, but was approximately the same as in 1943. It was about four times the prewar volume, as indicated below:

Year	Passenger-miles	Per cent above 1939
1939	22,651,334,000
1940	23,762,359,000	4.9
1941	29,350,359,000	29.6
1942	53,658,615,000	136.9
1943	87,819,503,000	287.7
1944	95,467,024,000	321.5
1945 (est.)	91,000,000,000	301.7

From Dec. 1, 1941, through August 1945, a period of 45 months, the railroads handled a total of 43,730,000 servicemen and servicewomen in special troop trains or in special cars attached to regular trains. This comprised more than 97 per cent of all troop movements in the United States during the war.

One of the most exacting tasks which the railroads were called upon to perform was that of moving hospital trains and of transporting wounded and sick servicemen in regular trains from ports of embarkation and to and from military bases and hospital centers. During 1944 and 1945, the railroads transported 502,052 wounded or sick soldiers, not including large numbers of navy and coast guard personnel or wounded or sick prisoners of war.

The War Department reported that from Dec. 1, 1941 through August 1945, railroads handled some 293,758,000 tons of army equipment and supplies, representing about 90 per cent of all army freight moved by any form of commercial transport. In the same period the railroads moved 75,600,000 tons of navy freight.

The fall of Germany had the almost immediate effect of reversing the flow of wartime traffic moving by rail. Large quantities of freight en route to Atlantic and Gulf ports for European destinations were stopped and rerouted westward to Pacific ports. Military authorities set plans in motion to redeploy in ten months more than three million servicemen who had been assembled in Europe over a period of four years. Actually, redeployment ran ahead of schedule, and the brunt of the load fell upon the railroads.

In addition to the shift of troops and military freight to Pacific ports, large numbers of soldiers, sailors, marines and coast guardsmen were transported to their homes on furlough and to and from training and staging areas in the United States. Many thousands of Mexicans, Jamaicans and other imported laborers, as well as large numbers of prisoners of war, had to be moved. During the period between V-E and V-J days, to expedite military movements and provide equipment for troop movements, the Office of Defense Transportation, on July 15 banned the operation of Pullman sleeping cars for runs of 450 miles or less. This released about 900 sleeping cars to military use. Previously the ODT had prohibited making sleeping and parlor car reservations more than five days in advance of the departure of a train.

From V-J day to the end of the year, the volume of homeward-bound servicemen increased, reaching approximately 1,000,000 in December.

At the same time, large numbers of servicemen were moved to and from training areas and ports of embarkation, so that organized troop movements in December totaled approximately 1,500,000.

Heavy snow and sleet storms around the first of the year, especially in the Great Lakes-New York area, coupled with the manpower shortage, gave the railroads one of their worst headaches of the year. Thousands of freight cars had to be literally chopped out of the ice, due to the fact that the usual supply of emergency labor necessary to keep tracks clear of snow was lacking.

Equipment.—The government's wartime ban upon the building of new standard passenger cars was lifted after V-J Day, and railroads began to place orders with manufacturers for much needed equipment. In October well above 1,000 passenger train cars were under order. Others were being built in railway shops.

Authority to build or purchase other rolling stock enabled the railroads to acquire about 750 locomotives and about 48,000 freight cars during the year. On December 1, the railroads owned a total of 42,588 locomotives of all types, compared with 41,452 at the time the United States entered the war. Railway ownership of freight cars on December 1, serviceable and unserviceable, totaled 1,765,031, as against 1,693,978 at the time this country entered the war. The number of freight cars in serviceable condition increased from 1,620,655 on Dec. 1, 1941 to 1,696,111 on Dec. 1, 1945. Passenger train cars of all types, including Pullmans, totaled 47,421 on September 1, compared with 45,557 at the beginning of the war.

Thus, with a net increase of only 3 per cent in the number of locomotives; 5 per cent in the number of freight cars, and practically no increase in the number of standard passenger cars during the war, the railroads handled increases of more than 100 per cent in freight traffic and more than 300 per cent in passenger traffic.

Revenue.—Moreover, notwithstanding substantial increases in prices and wages during the war and precipitous increases in taxes, the level of freight rates remained nearly constant throughout the war and passenger fares increased only slightly. In 1945, the average revenue per ton-mile was below that of ten years ago, and approximately the same as at the beginning of the war. Passenger fares during the war were the lowest on record. Average revenues per ton-mile and per passenger-mile compared with previous years follow, all figures being for Class I railroads:

Year	Average revenue in cents per	
	Ton-mile	Passenger-mile
1930	1.063	2.717
1935	0.988	1.935
1939	0.973	1.839
1940	0.945	1.754
1941	0.935	1.753
1942	0.932	1.916
1943	0.933	1.882
1944	0.949	1.873
1945 (est.)	0.968	1.880

The performance of the railroads during more than 3½ years of war, with its unprecedented transportation demands, served to demonstrate their resourcefulness and their efficiency under private ownership and operation. After several years of terrific pounding without an opportunity to renew and maintain their facilities in the usual way, the railroads emerged from the war with much of their equipment badly worn and in need of replacements and with the necessity of making large expenditures to put their plant in first-class

condition to meet the transportation needs of the future.

New Equipment.—The new passenger cars ordered in the latter part of 1945 will be in service in 1946. These cars will embody desirable changes in design and materials suggested by pre-war experience with earlier streamlined cars, by experimental services of new types of sleeping cars and coaches built just before the war, and by an extensive opinion survey indicating the preferences of passengers and prospective passengers. The steam, Diesel and electric locomotives which will be placed in service in 1946 will embody many new features.

Several new types of steam locomotives were introduced during 1944 and 1945, notably Class Q-2 (4-4-6-4); Class V-1, Triplex, (4-8-4-8); the turbine-driven Class S-2 (6-8-4), of the Pennsylvania Railroad; Class M-1 (4-8-0-4-8-4), of the Chesapeake & Ohio Railroad, and the Niagara type (4-8-4) of the New York Central lines.

Finances.—The railroads continued their program, inaugurated in 1940, to reduce their funded debt. During the four preceding years 1941-44, debt reductions of Class I railroads, not in receivership or trusteeship, totaled \$967,616,000, as indicated below, the second column showing the amounts by which annual interest charges were thereby reduced:

Year	Net reduction of funded debt	Reduction of interest charges of funded debt ¹
1941	\$ 20,108,000	\$ 5,916,000
1942	267,045,000	10,863,000
1943	400,026,000	16,066,000
1944	280,437,000	13,728,000

¹ Interest is calculated on coupon rates and takes into account the reduction in debt-reduced interest on refunded bonds.

Railway Research.—Throughout the war, the railroads continued their research in many branches of engineering and operations. Much of this research was conducted under the auspices of the Association of American Railroads. In addition, the association early in the war organized the Railroad Committee for the Study of Transportation to study probable future trends, including marketing conditions, the production and distribution of commodities, the probable future effect of water, air, and highway transportation upon railway traffic and earnings, and technological developments and improvements in every field of railway operations.

More than 100 members of the Railroad Committee have been drawn from departments and branches of the railway industry, and the detailed work is carried on chiefly by 15 subcommittees, each assigned to the study of some particular phase of transportation from the viewpoint of both technical processes and economic results.

As a result of the extensive research work which has been and is being carried on under the auspices of the Association of American Railroads and the individual railroads, innovations and improvements may be expected in locomotives, in freight cars, in passenger trains, in air conditioning and in communications, including the wider use of radio. We may also look for improvements in signals and traffic control systems, in stations, in tracks and bridges, in more efficient yards, in shop machinery and in various other aspects of railway operations.

C. J. CORLISS,

Public Relations Office, Association of American Railroads.

RAMIE. See CHEMURGY.

RAMSAY, Sir Bertram Home, British naval officer: b. Hampton Court, London, Eng., Jan. 20, 1883; d. in a plane crash soon after taking off from a Paris airfield, Jan. 2, 1945. Admiral Ramsay won distinction for four critically strategic accomplishments during the Second World War: he massed a fleet of small craft that rescued 385,000 troops from Dunkerque in May 1940; planned the Allied invasions of North Africa in 1942, and that of Sicily in 1943; and then commanded the greatest amphibious maneuver of all time, the Normandy beachhead invasion in 1944. He was made naval commander in chief under Gen. Dwight D. Eisenhower, the supreme allied commander, as of Dec. 29, 1943.

Admiral Ramsay entered the Royal Navy in 1898, and received his first command in 1915 in the Dover patrol. After the First World War, he accompanied Lord Jellicoe on his mission to India and the Dominions. Later he commanded H.M.S. *Weymouth*, *Danae*, and *Kent*, and served on the staff of the Royal Navy War College. He spent two years as chief of staff of the China station, after which he was on the staff of the Imperial Defence College. He became rear admiral and chief of staff of the Home Fleet in 1935, serving in that post until his retirement in 1938. He was recalled to duty at the outbreak of the Second World War. In April 1944, the British Navy technically returned him to "active" status, and he was promoted from vice admiral to admiral. Already a Knight Commander of the Bath for his achievement at Dunkerque, he was made a Knight of the British Empire for his services in planning and executing the naval operations in the invasion of Sicily.

RANDALL, Albert Borland, United States naval officer: b. Brookhaven, L.I., N.Y., Sept. 11, 1879; d. Bethesda, Md., Dec. 1, 1945. Commandant of the United States Maritime Service from March 31, 1943, to April 30, 1945, Rear Admiral Randall was said to be the first merchant marine officer to be commissioned a rear admiral in the Naval Reserve.

Admiral Randall went to sea as an ordinary seaman on a square-rigger at the age of 17. He remained on sailing ships until 1899, when he took jobs aboard different tramp steamers. He signed up for army transport service in the Spanish-American War in a vessel where, for the first time, he came out of the fo'c'sle and took his place as a ship's officer. Transferring to naval service in 1901, he was chief officer of the *Caesar*, when this ship assisted in towing the 500-foot drydock *Dewey* from near Baltimore to Olongapo, Philippines, a distance of some 12,000 miles. Admiral Randall received his masters license in 1905, and his first command on Jan. 17, 1907. He was made a chevalier in the French Legion of Honor for his convoy work during the First World War. Nicknamed "Rescue" Randall for his great number of rescues at sea, he served as commander of various ships, including the *Republic*, *George Washington*, *Leviathan*, and *Manhattan*. He was commodore of the United States Lines from January 1931 to October 1939, when he retired because of the age limit. Appointed rear admiral in the United States Naval Reserve in January 1942, he was recalled to active duty, and assigned to the War Shipping Administration Training Organization as commandant in March 1943. On May 10, 1945, he was relieved of all active duty.

RAPA ISLAND. See FRENCH OCEANIA.

RAPEE, Erno, American conductor and composer: b. Budapest, Hungary, June 4, 1891; d. New York City, June 26, 1945. Musical director of Radio City Music Hall, Rockefeller Center, New York, and conductor of its symphony orchestra since the opening of that theater in December 1932, Erno Rapee was one of the pioneers in bringing classical music to large audiences at motion picture theaters. In addition, he composed such popular song hits as *Charmaine*, *Diane*, and *Angela Mia*, for the motion pictures. Their total sales have been estimated at 5,000,000 copies.

Mr. Rapee was graduated from the Budapest Conservatory in 1909 and spent a season with the Dresden Opera before going to New York in 1912. The following year he became musical director for the Hungarian Opera Company of New York. In 1917 he joined with the late S. L. Rothafel, better known as "Roxy," and was appointed musical director of the Rialto Theater in New York. Then followed several years at the Capitol Theater, the Fox Theater in Philadelphia, and the Roxy Theater in New York. During a brief interlude he served as guest conductor of the Berlin, Vienna, and Budapest Philharmonic orchestras, and in 1925 he was employed by the UFA Film Company of Germany to present musical programs in its nation-wide chain of theaters. He also wrote many musical scores, including those for *If Winter Comes*, *A Connecticut Yankee*, *The Queen of Sheba*, *Robin Hood*, *Monte Carlo* and *Nero*. Upon his return to the United States he became musical director for Warner Brothers and First National Pictures in Hollywood. He joined the National Broadcasting Company as general musical director in 1931, conducted the General Motors Symphony Orchestra from 1935-37, and appeared as guest conductor with many American orchestras. See also under Music—*Necrology*.

RECLAMATION. The Bureau of Reclamation in the Department of the Interior has had 43 years experience in regulating western rivers and conserving their waters. This agency, established under the Reclamation Law of 1902, constructs and operates irrigation, power, and other multiple-purpose projects in 17 states bordering on or west of the 97th meridian. It is the principal federal agency assigned the responsibility for water conservation in these regions.

The irrigation facilities constructed by the Bureau of Reclamation serve more than 4,000,000 acres of land in arid and semiarid regions. Repayments to the government for the costs of these works come primarily from water users on the irrigation projects and from the sale of power generated by hydroelectric plants, operated in connection with some of the dams. Power development, although incidental to the bureau's major function of irrigation, is important as a means of reimbursing the United States for the cost of reclamation construction.

Power plants on bureau projects have an installed capacity of 2,439,300 kilowatts. When all generators on existing projects and on those authorized are placed into operation, the capacity will be 5,179,300 kilowatts. In 1945 these plants produced almost 14 billion kilowatt hours of electric energy, the major portion of which was used by war industries.

Bureau of Reclamation engineers have won international renown for their work in the design and construction of giant dams. Since 1902 the bureau has constructed 179 dams, four of

them the largest concrete structures in the world. They are: Grand Coulee (Washington), Shasta (California), Boulder (Arizona-Nevada), and Marshall-Ford (Texas).

In addition to dams and hydroelectric power plants, the bureau builds thousands of engineering structures including canals for the delivery of irrigation water, bridges, flumes, culverts, pumping plants, and the like.

The Bureau of Reclamation now has in operation, under construction or authorized 108 irrigation and multiple-purpose projects, including 29 initial projects in the Missouri River Basin, authorized by the Flood Control Act of 1944.

In spite of manpower and material shortages, work was advanced during the fiscal year on several of the bureau's major projects, including the multimillion-acre Central Valley development in California and the Columbia Basin Project in the State of Washington.

Even as construction is accelerated in the Central Valley Project, which conserves and uses the waters of the Sacramento and San Joaquin rivers, the bureau is preparing to build the irrigation system for the Columbia Basin Project in eastern Washington. There, Grand Coulee Dam, which made such a record as a power producer during the war, is going to be put to work for the agricultural and industrial expansion of the Pacific Northwest. The Columbia Basin Project is designed ultimately to provide Columbia River water for irrigating more than a million acres.

Another great river which the bureau is preparing to harness for the benefit of man is the Missouri. The Congress, under the Flood Control Act of 1944, approved the co-ordinated plan of the Bureau of Reclamation and the Army Corps of Engineers for more fully developing the land and water resources of the Missouri Basin.

In the initial stage of the unified plan the Congress authorized the construction by the Bureau of Reclamation of 29 units and a power transmission grid. The Congress also authorized the appropriation of \$200,000,000 toward the construction of these initial units. The first 11 of the 29 authorized units are to be given priority, with a view to having the engineering and economic studies completed so that construction can be started in 1946 if the Congress makes the necessary funds available.

The Missouri Basin Plan is the first of the comprehensive river development programs designed by the Bureau of Reclamation to receive Congressional authorization. Similar studies are being prepared in 14 other river basins in the West.

The basin-wide development of the Missouri, like other multiple-purpose projects of reclamation, will provide for irrigation, hydroelectric power, flood control, municipal water, development of mineral resources, navigation, and recreational benefits through the co-operation of federal, state, and local governments.

More than a million persons live on farms and in cities and towns served by federal irrigation projects. Some 91,000 family-type farms have been created from 4,000,000 acres which were once largely unproductive. The value of 11,369,000 tons of food and forage crops produced on lands irrigated by federal reclamation projects set an all-time record in 1944 and represented substantial increases in production of many essential crops under the war food program. Another banner crop is in prospect for 1945. Farmers on bureau-irrigated lands are

major producers of sugar beets, potatoes, vegetables and fruits and also feed and forage crops essential to the livestock and dairy industry in the West. The gross value of these and other crops in 1944 was \$411,226,364, which compares with a gross value of \$159,885,998 in the prewar year of 1941.

More than 300 cities, towns and villages are located on or near these federal reclamation projects. Bank deposits in these cities and villages total over a half billion dollars. When the construction program now authorized is completed, the various services of the Bureau of Reclamation will be extended to regions in which live more than 10,000,000 persons.

In recognition of the need for employment and settlement opportunities for veterans and others, the bureau in 1945 presented to the Congress an inventory of 415 irrigation and multiple-purpose projects proposed for construction in 17 Western states. More than one hundred of these projects have been authorized, and construction is proceeding on some of them. As soon as funds, manpower, and material become available, this construction program can be greatly accelerated. The whole construction inventory of the bureau, if approved by the Congress, will create approximately 200,000 new farms, extending irrigation service to nearly 11,000,000 acres, and in addition, furnishing supplemental water for some 11,000,000 acres now inadequately watered.

Power plants at dams impounding water for irrigation would also provide 2,612,250 kilowatts of electric energy for industrial use, through expansion of existing bureau installations, and an additional 4,271,720 kilowatts of firm power capacity on projects under study. The Bureau of Reclamation's plans for further developments in the West would mean employment for thousands of returning servicemen and demobilized war workers and settlement opportunities for hundreds of families. Stabilization of agriculture in the West and industrial expansion in this area through the development of natural resources will help bulwark the economic structure of the whole nation. See also DAMS.

WILLIAM E. WARNE,
Assistant Commissioner, Bureau of Reclamation.

RECONSTRUCTION FINANCE CORPORATION (RFC). This corporation was established by authority of Public Act 2 of the 72d Congress, approved Jan. 22, 1932 and was organized Feb. 2, 1932, beginning operations immediately. Since then its powers have been increased and the scope of its operations extended or otherwise affected by numerous acts, public resolutions, executive orders, etc. The corporation is one of several government agencies comprising the Federal Loan Agency, under the supervision of the federal loan administrator. It is authorized to make loans for a wide variety of purposes; to subscribe for preferred stock and purchase the capital notes or debentures of banks, trust companies, insurance companies, national mortgage companies, etc.; to make loans and purchases to aid states and municipalities in financing various projects. By the act approved June 25, 1940, as amended by the act approved June 10, 1941, it was authorized to make loans and purchases, as well as engage in certain types of production, to aid the government in carrying out the defense program.

Pursuant to Public Law 109—79th Congress, effective July 1, 1945, the Rubber Reserve Company, Metals Reserve Company, Defense Plant Corporation, Defense Supplies Corporation and Disaster Loan Corporation were dissolved and all their functions, powers, duties and authority were transferred to the Reconstruction Finance Corporation. These subsidiaries, with the exception of Disaster Loan Corporation, were created for national defense purposes and have engaged in the production and acquisition of materials, supplies and equipment required for that purpose, including crude and synthetic rubber, strategic and critical materials (including minerals and metals), and the construction and expansion of plants for the manufacture of such materials. The functions of these corporations since their dissolution have been performed by the Reconstruction Finance Corporation through offices within the corporation.

War Damage Corporation was also created for national defense purposes in order to provide insurance against damage resulting from enemy attack, including any action taken by the military, naval or air forces of the United States in resisting enemy attack. Petroleum Reserves Corporation and United States Commercial Company were created under the same authority but were later transferred by executive order, and are now a part of the Foreign Economic Administration.

From the date of organization to the end of June 1945, loans and other authorizations made by the corporation aggregated \$39,268,363,061.39 including \$4,054,603,216.87 for allocations and loans to other governmental agencies and for relief by direction of Congress. Of the total amount authorized, \$4,221,829,181.67 was canceled or withdrawn. Disbursements amounted to \$33,920,383,448.18. Repayments and other reductions totaled \$23,785,486,977, including cancellation of \$2,784,867,007.21 of the corporation's notes pursuant to an act of Congress approved Feb. 24, 1938, leaving a balance outstanding on June 30, 1945, of \$10,134,896,471.18.

Amounts disbursed from Feb. 2, 1932 to June 30, 1945 and amounts outstanding on the latter date are shown by character of loans in the table on opposite pages.

As of June 30, 1945, the Reconstruction Finance Corporation had made commitments aggregating \$34,660,461,405.69. The commitments included those of its several subsidiaries, since merged into the Reconstruction Finance Corporation and now operating as offices within the corporation.

On April 2, 1945, the Reconstruction Finance Corporation was designated by the Surplus Property Board (now the Surplus Property Administration) as the disposal agency for government-owned surplus aircraft, producers' and capital goods, and war plants. Total acquisitions of salable surplus property by the Reconstruction Finance Corporation through July 31, 1945 was \$911,846,000, based on reported cost figures, and it had on hand goods costing \$587,926,000. As of the same date, the Reconstruction Finance Corporation had sold surplus property costing \$293,986,000 at a sales price of \$153,695,000. The Reconstruction Finance Corporation also had on hand as surplus property a nonsalable inventory of \$1,710,592,000, consisting of aircraft unsafe or unsuited for civilian use and including 19,892 nonflyable airplanes.

	Disbursements	Outstanding
For benefit of agriculture.....	\$ 1,452,180,464.11	\$ 277,878.66
To banks and trust companies (including loans for reorganization and liquidation of closed banks).....	2,195,135,339.31	14,491,747.05
For bank capital (including Export-Import Bank of Washington and Federal Home Loan Bank).....	1,496,806,311.56	575,827,997.97
For self-liquidating projects (including PWA municipal securities).....	617,041,915.14	28,950,461.38
To business enterprises:		
(1) total authorizations, except to aid in national defense.....	306,764,493.63	29,960,243.46
(2) total national defense under the act approved June 25, 1940 and under section 5d of the RFC Act, as amended, including loans and purchases of capital stock of corporations created by the RFC to aid in national defense and loans to Defense Homes Corporation.....	21,019,810,817.74	8,416,892,071.62
Total (1) and (2).....	\$21,326,575,311.37	\$ 8,446,852,315.08
To drainage, levee and irrigation districts.....	100,949,002.18	33,262,832.43
To railroads.....	852,785,175.16	213,700,247.04
For purchase of railroad securities from PWA (par value and/or cost)....	199,290,500.00	8,170,085.69
For loans to and capital of mortgage loan companies.....	780,881,255.50	91,366,973.54
For loans to and capital of insurance companies.....	137,843,209.81	31,763,344.78
To building and loan associations (including receivers).....	140,158,067.90	32,520.51
Other.....	899,312,656.63	342,997,012.31
Total—by directors of the corporation.....	\$30,198,959,208.67	\$ 9,787,693,416.44
Allocations and loans to other governmental agencies and for relief by direction of Congress.....	3,721,424,239.51	347,203,054.74
Grand total.....	\$33,920,383,448.18	\$10,134,896,471.18

In addition to the defense corporations, now offices, mentioned in the foregoing, the Defense Homes Corporation was incorporated Oct. 23, 1940, with a capital of \$10,000,000, supplied by the federal loan administrator from funds allocated by the president. The Defense Homes Corporation assisted in providing homes in areas of extensive defense building and manufacturing. Defense Homes Corporation is now a part of the Federal Public Housing Authority in the National Housing Agency, pursuant to Executive Order 9070 of Feb. 24, 1942.

The chairman of the Reconstruction Finance Corporation is Charles B. Henderson; secretary, A. T. Hobson; general counsel, John D. Goodloe; treasurer, Henry A. Mulligan. The directors are Charles B. Henderson, Sam H. Husbands, Charles T. Fisher, Jr., Henry A. Mulligan and Harvey J. Gunderson.

CHARLES B. HENDERSON,
Chairman of the Board, Reconstruction Finance Corporation.

RECONVERSION PROBLEMS. See LABOR CONDITIONS IN THE UNITED STATES; WAR PRODUCTION, U.S.

RED CROSS, American. Founded in 1881 by Clara Barton, and reincorporated in 1905, under congressional charter, the American Red Cross is obligated to "furnish volunteer aid to the sick and wounded of armies in time of war. . . . to act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the people of the United States and their Army and Navy and to continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities, and to devise and carry on measures for preventing the same."

In carrying out these obligations during 1945, the American Red Cross reached a higher peak of service than at any other period in its history. With an expenditure of more than \$250,000,000 during the years 1941-45, American Red Cross services to the armed forces became the greatest operation of its kind in the records of the organization, conducting extensive work at home and overseas through its Military and Naval Welfare Service, Home Service, Hospital Service and Services to Veterans. At the end of the war, more than 9,400 paid Red Cross workers were serving overseas. At home there was special emphasis during the year on improved disaster re-

lief techniques and other community services, and in the field of insular and foreign relations there was considerable expansion in various programs of relief to civilian victims of war.

Red Cross field directors, assigned to military and naval stations in the United States and overseas, helped men and women of the armed services with their personal and family problems. Through local Red Cross chapters the families of the servicemen received guidance and help. Hospital and recreation services were increased enormously, and Red Cross clubs served servicemen and women in all theaters of military operations. Services to veterans were expanded. Relief was sent to prisoners of war through the International Red Cross Committee of Geneva, and various services were provided for liberated prisoners and internees.

Authorized by law to represent veterans presenting claims before the Veterans Administration, the Red Cross gives assistance in filing applications and in assembling necessary supporting evidence. During 1945, Red Cross field directors were on duty for this purpose in all Veterans Administration offices, and claims services were also provided at camps, hospitals and separation centers. Home Service provides disabled veterans and their dependents temporary financial assistance on the basis of need, while applications for pension or other government benefits are pending, or when payments authorized are delayed or interrupted.

Between January 1941 and the end of the war, the Red Cross sent out supplies for American and other United Nations prisoners of war in Europe and the Far East valued at more than \$168,000,000, including medical supplies, cigarettes, comfort articles and 27,874,000 food parcels, of which 27,000,000 were packed by volunteers in four Red Cross packaging centers. A monthly *Prisoner of War Bulletin* was sent to all next of kin and a Red Cross News Service was prepared for circulation to American prisoners of war through the International Red Cross Committee. Red Cross aid to liberated prisoners and internees included canteen service, distribution of comfort articles and clothing, and collection, forwarding and distribution of messages to and from their next of kin.

The Red Cross completed its Blood Donor Service for the armed forces on V-J Day, having collected more than 13,250,000 blood donations for the army and navy. At the peak of the program, 35 centers and more than 60 mobile units were in operation, and more than 100,000 volunteer donations were obtained weekly. After the

war, a Red Cross civilian blood donor service was announced.

In addition to this plan to assist in the programs which will meet civilian needs during the years to come, the American Red Cross distributed blood derivatives which had been prepared from blood collected for the armed forces by the American Red Cross and which were declared surplus by the army and navy. Immune serum globulin, produced as a byproduct of the navy's serum albumin program, is the most valuable agent known for the prophylaxis and modification of measles. Amounts in excess of the needs of the armed forces were returned for distribution to civilians. The American Red Cross had this material prepared for clinical use and distributes it without charge through state and territorial health departments for civilian use.

Red Cross Disaster Relief provides food, clothing, medical care, nursing service and temporary shelter during the period of emergency and when needed gives continued care and rehabilitation on a family basis following disasters. During the year ended June 30, 1945, the Red Cross gave assistance in 260 disaster relief operations in 41 states, the District of Columbia and Alaska, at an expenditure of more than \$3,200,000. Serving under Red Cross direction in 70 disasters in 30 states were 1,677 nurses. Additional Red Cross nurses worked in the 1945 polio (poliomyelitis) outbreak. Aid was given to 6,683 rescued seamen and evacuees during the fiscal year ended 1945.

As a result of the war there was considerable expansion of the programs of First Aid, Water Safety and Accident Prevention Service. Water Safety Service, which had trained men of the armed forces to swim and save life under battle conditions, in 1945 inaugurated a "convalescent swimming" program. Special techniques were devised to help restore men handicapped by wounds or amputations, or suffering from battle fatigue, and similar techniques will be available for physically handicapped civilians.

During the war the Red Cross recruited nurses for the army and navy nurse corps, as well as nurse instructors to train volunteer nurse's aides for civilian and military hospitals and public health services and to teach home nursing classes. With an aim of "one person in every household with basic nursing skills," the Home Nursing program from 1941 to 1945 issued Home Nursing certificates to more than 1,400,000 persons. Nutrition Service helped promote a nationwide program for better food habits and trained volunteers for the Canteen and Dietitian's Aide Corps.

More than \$148,500,000 was made available for foreign war relief by and through Insular and Foreign Operations Service of the Red Cross from Sept. 1, 1939, to June 30, 1945. It is estimated that more than 50 million people, among them 19 million children, in 46 countries, benefited directly from this program. At the request of the Allied military authorities, the Red Cross provided trained civilian war relief personnel to work with civil affairs and military government officers in providing relief to the populations of liberated areas.

Under its civilian relief program, the Red Cross provided supplies to sister societies and other agencies, and a small number of trained personnel to assist them. The principal resources used by the Red Cross in foreign relief operations were (1) funds contributed to the Red Cross by the American people; (2) garments

and surgical dressings produced by chapter volunteers; (3) supplies purchased by United States government agencies from funds appropriated by Congress for foreign relief; (4) funds for special projects sponsored by the National Children's Fund of the American Junior Red Cross; and (5) resources made available by other agencies and governments for special projects. During 1945 the Volunteer Special Services had an enrollment of approximately 3,000,000 workers in the following corps: administration, 10,000; arts and skills, 4,000; canteen, 80,000; home service, 15,000; hospital and recreation, 40,000; motor, 30,000; dietitian's aide, 6,000; nurse's aide, 100,000; and production, 2,650,000. The Junior Red Cross enrolled 20,000,000 boys and girls through the schools. Among other activities, they made 10,000,000 comfort and recreation articles for the armed forces.

Headquarters of the American Red Cross is in Washington, D.C. and there are 3,754 local chapters and 5,578 branches. President Truman is ex-officio president of the organization.

HOWARD BONHAM,
Vice Chairman in charge of Public Relations,
American Red Cross.

REHABILITATION. Includes all activities and procedures that contribute to the recovery of a patient from his ailment, and prepare him to resume a normal life. The armed forces operate programs designed to achieve maximum adjustment of the individual patient either for further military service or for return to civil life, with the least possible handicap from his disability, whether physiological or psychological. The procedures include such activities as occupational therapy, various types of educational endeavors, maintenance of an optimum state of general physical fitness, welfare and recreational activities, and, in addition, counseling, prevocational training, and assistance for those who will be invalidated from the service. It is intended to make such use of the time a patient must, of necessity, spend in a hospital as will contribute to this purpose. Emphasis is focused on the individual's own interests with little stress on mass regimentation.

The Army Air Forces has established leadership in the field of rehabilitation which, in its ultimate success depends not simply upon medical facilities but on the intelligent handling of returned men through understanding of their problems, guidance in their readjustment and proper utilization of their abilities. In the AAF hospitals this program was initiated in 1942 and, in 1943, expanded to care not only for Zone of Interior patients but also for combat aircrews and ground personnel returning from theaters of operation. Shortly thereafter a similar program was instituted in all Army Service Forces and Navy hospitals.

Col. Howard A. Rusk, chief of the Convalescent Services Division, Office of the Air Surgeon, has been officially recognized as the originator of planned convalescence as practiced in the armed services.

It is the purpose of the convalescent hospital system supervised by the air surgeon and operated by the AAF Personnel Distribution Command to accomplish the physical and psychological rehabilitation of the sick returnee with the maximum speed and effectiveness. Similarly in the other armed forces the responsibility for providing fighting men with opportunities for useful life in the military service or the civilian com-

munity is shared by every commander of troops, inasmuch as rehabilitation begins and ends "on the job."

Col. Augustus Thorndike is in charge of the Reconditioning Division of the Office of the Surgeon General handling the overall army program. This reconditioning program is divided into three broad general phases: physical reconditioning, education reconditioning and occupational therapy. Patients are divided into four main classes. Bed-ridden patients are in Class 4, ambulatory patients are in Class 3. Those on their way to recovery who will resume active duty are in advanced reconditioning, Classes 2 and 1. Those men barred from further military service because of disability are discharged from Class 3 when they have obtained maximum hospital benefit. A program for the return to civilian life providing vocational guidance determines which fields men are best suited to enter should they so desire. (It should be noted, however, that vocational training, as distinguished from prevocational training or guidance, is the responsibility of the Veterans Administration under the law.)

All men wounded, overseas, whether members of the Air, Ground or Service Forces are placed in general hospitals operated under the Surgeon General, Maj. Gen. Norman T. Kirk. It is not until men have passed through Classes 4 and 3 as patients that air force men are separated and transferred to Air Forces Convalescent Hospitals. The Office of the Air Surgeon, Maj. Gen. David N. W. Grant, USA, has established a Convalescent Training Program designed to meet the special needs of this branch of the army.

In addition to providing for men who need no further definitive treatment in general hospitals, the AAF Convalescent Hospitals also treat returned combat personnel who are suffering from what is commonly referred to as "operational fatigue," but which, for the most part, is technically known as "anxiety reaction." These patients are restored to military duty or civilian life following physical reconditioning, psychological orientation, vocational guidance, and appropriate medical care.

Ground Forces men, upon completing definitive hospital treatment, are sent to advanced reconditioning, with stress placed on teamwork which is necessary for artillery or infantry units. Salvage of military manpower is the goal in all programs, but where disability prevents a man from donning the uniform, the program prepares him for his return to civilian life.

The Navy Bureau of Medicine and Surgery has likewise established an Office of Rehabilitation for the men of the Fleet and the Marine Corps which is directed by Capt. Howard H. Montgomery for the Surgeon General, Admiral Ross T. McIntire. The plans in all groups are managed under the same policy with the following purpose: "To provide in hospitals reconditioning both physiological and psychological, by planned and graduated training program utilizing heretofore wasted convalescent time."

In all plans, both those of the navy and army, the original AAF procedure is followed as a basis. Designed for a dual mission the Convalescent Programs aim, first, to send the man back to duty in the best possible physical condition in the shortest period of time; secondly, to teach the patient something that will make him a more efficient and effective fighting man, or barring the possibility of returning to duty, make him more capable of adjusting himself to a

home environment in which he is now a stranger.

Under this plan, physical activity and military education have become as much a doctor's prescription as drugs and diet. Muscles are not permitted to atrophy, for reconditioning exercise starts the moment acute illness or surgery is terminated. Minds do not become stagnant and time formerly wasted is spent purposefully. As a result of these methods the following results have been obtained:

- (1) Hospitalization time has been shortened;
- (2) hospital readmissions have been reduced;
- (3) sick leave has been practically eliminated except in extraordinary cases;
- (4) the morale of the patients has been immeasurably improved, for they have been kept interested and busy in a purposeful way;
- (5) personnel returning to duty or to civilian status have satisfactorily readjusted themselves from combat to noncombat environment.

NILS M. SMITH-PETERSEN,
*Captain, Air Corps, Liaison Division, Office of
Information Services.*

REHABILITATION IN CANADA

In Canada, rehabilitation and treatment of ex-service men and ex-service women are handled by the one federal department—the Department of Veterans Affairs. There are no agencies in Canada which compare with the various state agencies in the United States.

To handle the heavy problem of rehabilitation of those injured or who suffer illnesses, Canada has embarked on the largest hospital building program in its history, with the Department of Veterans Affairs at the present time building hospitals to a total cost of approximately \$35,000,000. These hospitals include active treatment centers as well as occupational and health centers where men are sent during the convalescent period.

While hospitalization of discharged veterans is the responsibility of the Department of Veterans Affairs, an advisory committee has been set up which, in addition to the Department of Veterans Affairs officials, also includes representatives of army, navy and air forces, while doctors from the three armed services co-operate with the doctors of the Department of Veterans Affairs in treatment of casualties.

The health and occupational centers are a new departure in Canada. It was felt by the directing heads of the Department of Veterans Affairs that a stage was reached in the convalescence of every ex-service man or woman where hospital atmosphere was not conducive to speedy recovery. Accordingly, plans were made for the operation of a number of health and occupational centers across Canada. Patients are sent there as soon as their recovery has reached a stage where they do not need to be under supervision of doctors and nurses. The health and occupational centers stress the importance of healthy activities in speeding convalescence. Farms are operated in conjunction with each of the centers, and the recovering veterans are encouraged to engage in the farming and gardening activities. Workshops also have been installed where the convalescent veterans can engage in activities such as carpentry, pottery, weaving, and so forth. There is little of the hospital atmosphere about these centers, with the buildings being designed bungalow style, and provision being made for a maximum of 24 veterans in each bungalow. Each bungalow also has an individual counselor who assists the veteran in planning his civilian career.

More than ever before throughout the general hospital picture of the Department of Veterans Affairs, the importance of physical medicine is being stressed. Doctors are finding that this is paying off in extra dividends, and that the convalescence period is shortened considerably as a result of the exercises which start while the veteran is still a bed patient.

The placement of veterans in employment who have a residual disability has become the responsibility of a special branch of the Department of Veterans Affairs known as the Casualty Rehabilitation Section. Officers of this section are nearly all themselves disabled men. The section is headed by Maj. Eddie Dunlop, who was totally blinded as the result of a Mills bomb explosion. Each Casualty Rehabilitation officer is a case worker. He contacts the veteran immediately on arrival in hospital and from that time on assists him in planning his civilian career. Training, in many cases, starts while the man is still a patient in the hospital. As the date of discharge approaches, the Casualty Rehabilitation officer contacts employers in the field in which the man wants to be employed. The physical requirements of the jobs are analyzed, and those selected which are suited to the man's remaining faculties. In almost all cases this system is working exceptionally well and disabled veterans, as a result of it, are being placed in employment as soon as they are ready for employment in jobs in which they can be 100 per cent efficient.

A number of special treatment centers have been set up for those casualties who come within special categories. Included are centers for paraplegics and for those veterans suffering from various types of neuroses. Neurological institutes have been opened at several centers across the Dominion, while there are three special units dealing with plastic surgery. Those blinded receive their training through the Canadian National Institute for the Blind, while the Canadian Society for the Deaf and Hard of Hearing co-operates in the training of those who lost their hearing during the war.

While there are twelve different categories of eligibility for treatment, there are three principles affecting veterans from this war. For instance, those veterans discharged from the services to the Department of Veterans Affairs in need of continuing treatment get this treatment along with the full pay and allowances which they received while they were in the services. Every ex-service man or woman is entitled to free treatment with allowances for any condition which arises in the 12 months following discharge that is not a result of their own misconduct. Pensioners receive free treatment with allowances for life for their pensioned disability, while those with service in the theater of actual war may have free treatment for life, without allowances, for any condition if they are unable to provide the treatment themselves.

Orthopedic appliances are supplied free for life to those requiring such appliances.

REORGANIZED CHURCH OF JESUS CHRIST OF LATTER DAY SAINTS. This is one of the few organizations surviving the disruption at Nauvoo, Ill., after the murder of Joseph Smith, founder, in 1844. The members do not call themselves Mormons (q.v.) as that appellation belongs specifically to and has been adopted by the Mormon Church at Salt Lake City, Utah.

Since America has been at war, missionary work has been carried on as circumstances have

permitted. Church income, however, always from voluntary tithes and offerings, has reflected the country's general "defense" prosperity.

The reorganization has always opposed polygamy, has continued to contest ever-recurring claims that the founder was responsible for the introduction of either its practice or the so-called "doctrine" on which it was based by the Mormons. That and plurality of gods, and other distinctive Mormon beliefs are held by the Reorganized Church to have been innovations of Brigham Young after the breakup at Nauvoo in 1844. Confusion in the public mind as to these two churches has greatly hindered the work of proselyting.

The personnel of the leading councils of the church remains the same, except that Clyde F. Ellis, a member of the Quorum of Twelve Apostles, died June 21, 1945. These principal quorums are: First Presidency, Dr. Frederick M. Smith, I. A. Smith and L. F. P. Curry; Quorum of Twelve, Paul M. Hanson, John W. Rushton, Myron A. McConley, John F. Garver, Daniel T. Williams, F. Henry Edwards, Edmund J. Gleazer, Sr., George G. Lewis, C. George Mesley (in Australia), Arthur A. Oakman, and Charles R. Hield; Presiding Bishopric, G. Leslie DeLapp, Clarence A. Skinner and Henry F. Livingston; Presiding Patriarch, Elbert A. Smith.

To date a substantial increase is noted in income in 1945 over corresponding period in 1944, reserves having been increased, looking forward to the carrying on of domestic and foreign missionary work and charitable activities of the church. There has been a normal increase in membership by baptisms. It is expected that many ministers now in the military service will soon resume their missionary labors.

The church maintains as shrines a number of properties which were established by the church in its early years: the Kirtland Temple, Kirtland, Ohio; the original homestead and other edifices at Nauvoo, Ill. These historic places are of considerable public interest and are visited by many thousands annually.

Graceland College, Lamoni, Iowa, non-sectarian, but church established and endowed, celebrated its 50th anniversary Sept. 17, 1945.

Religious education, a regular church department, has been directed for many years by Dr. Floyd M. McDowell, of Independence, Mo., church headquarters.

Church health activities center in The Independence Sanitarium and Hospital at Independence, under the direction of Dr. A. W. Teel, of Los Angeles, Calif., and his assistant, Dr. Charles F. Grabske, of Independence.

The church continues the publication of *Saints' Herald* which was begun in January 1860, and it is issued weekly by the Herald Publishing House, Independence, where other official books and publications are printed.

FREDERICK M. SMITH,
President, Reorganized Church of Jesus Christ of Latter Day Saints.

REUNION, formerly called BOURBON. An island 420 miles east of Madagascar, a French colony (area, 970 square miles; pop., 1941, 220,955). The capital is St. Denis (pop. 32,637), and other towns are St. Paul (23,055), St. Louis (20,867), and St. Pierre (20,150). Réunion sends a senator and two deputies to the French Parliament. The colony is administered by a governor, who is assisted by a Privy Council and an elected Council-General. Schools in 1943 numbered 199 public

and 46 private, with a total enrollment of 22,900 pupils. Agricultural products are sugar cane, manioc, coffee, vanilla, and spices. Sugar and spirits are the principal exports, but in 1944 sugar production was the smallest since the turn of the century, or about 16,500 short tons, as compared with 27,294 tons in 1943. In the first half of 1944, exports totaled 13,386 tons (in the like period of 1938, 50,000 tons), and had a value of 50,402,000 francs (103,000,000 francs for the corresponding period of 1938); imports for the first six months of 1944 amounted to 8,446 tons (45,000 tons in the like period of 1938), with a value of 98,989,000 francs (132,000,000 francs in the first six months of 1938). (The rise in prices and devaluation of the franc by 13 per cent on Feb. 8, 1944, affects comparison in values.) St. Benoit and St. Pierre are connected by railroads (combined length 80 miles) with Pointe-des-Galets, the chief port.

REYNAUD, Paul, French political leader: b. Barcelonnette, Basses-Alpes, Oct. 15, 1878. Minister of Finance in the Daladier cabinet from November 1938 until March 21, 1940, when he became premier succeeding Edouard Daladier. M. Reynaud was in office when the German assault began on May 10, 1940. On June 10, he moved his government from Paris to Tours; on June 14, from Tours to Bordeaux; and on June 16, the French cause virtually lost, he resigned, to be succeeded by Marshal Pétain. On September 7, he was interned, to await trial on charges of having contributed to France's collapse. He was taken prisoner by the Germans after the Allied invasion of North Africa in November 1942. On May 5, 1945, with several other prominent French leaders, he was liberated from Itter Castle, Austria, by American troops. M. Reynaud served throughout the First World War, and received the Croix de Guerre. He is a doctor of law of the University of Paris, and author of several books.

RHODE ISLAND. New England state, United States; one of the original thirteen states. Population (1940): rural, 59,963; urban, 653,383; total, 713,346. Land area, 1,058 square miles, divided into 5 counties. Principal cities, with 1940 populations: Providence, the capital, 253,504; Pawtucket, 75,797; Woonsocket, 49,303; Cranston, 47,085; Newport, 30,532; Warwick, 28,757.

Chief State Officers, 1945.—Governor, J. Howard McGrath; lieutenant governor, John O. Pastore; secretary of state, Armand H. Coté; treasurer, Russell H. Handy; director of finance, Edward L. Leahy; attorney general, John H. Nolan.

Judiciary.—Chief justice of the Rhode Island Supreme Court, Edmund J. Flynn; associate justices, William W. Moss, Antonio A. Capotosto, Hugh B. Baker, Francis B. Condon.

Legislature.—The state's General Assembly (Senate, 44 members; House of Representatives, 100) meets annually on the first Tuesday in January.

Education.—Public elementary schools (at last report), 325; teachers, 2,115; pupils, 60,216. Public junior high schools, 34; teachers, 933; students, 20,954. Public senior high schools, 29; teachers, 963; students, 20,390. Average yearly salary of public school teachers, \$1,945. Teacher training schools in the state, 4; teachers, 186; students, 3,665. Rhode Island College of Education and Rhode Island State College receive financial assistance from the state.

Finances.—Following is a summary of cash receipts and disbursements (general fund) for the fiscal year ended June 30, 1944:

Cash balance, July 1, 1943.....	\$ 5,930,874.47
Cash receipts, 1943-44.....	25,313,959.72
Total.....	\$31,244,834.19
Disbursements, 1943-44.....	26,812,164.80
Cash balance, June 30, 1944.....	\$ 4,432,669.39

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)....	326	288	360
Potatoes (1,000 bu.)...	837	1,235	1,311
Apples (1,000 bu.)....	271	268	76
Grapes (tons).....	210	200	100

RHODESIA. British territory in south central Africa, north of the Union of South Africa and south of the Belgian Congo, comprising Northern Rhodesia and Southern Rhodesia; both of them are colonies, the latter having a considerable degree of autonomy. In 1923 the British South Africa Company, which had brought the territory under administration during the 1880's, surrendered its sovereign rights to the British government. The combined area of the colonies is 440,656 square miles, and their populations total 3,031,116. The Central African Council, a standing body representative of the two Rhodesias and Nyasaland Protectorate (q.v.), is consultative in character, its purpose being to promote, through a permanent interterritorial secretariat, closer contact and co-operation between the three governments; at the first meeting of the council, in Salisbury on April 24, 1945, the prime minister of Southern Rhodesia declared that eventual amalgamation of the three countries was essential.

Northern Rhodesia.—The colony of Northern Rhodesia, 290,323 square miles in area, had a population in 1943 of 1,385,116, of whom 18,475 were whites; during the Second World War the colony also harbored 2,436 Polish refugees. Lusaka is the capital, and other towns include Broken Hill, Fort Jameson, Mazabuka, Abercorn, Kasama, Ndola, and Mongu. A governor (Sir Eubule John Waddington appointed May 31, 1941) is assisted by an Executive Council, of 5 officials and 4 nominated unofficials, and a Legislative Council; the latter body was reconstituted in 1944 to comprise 9 officials, 8 elected unofficials, and 5 nominated unofficials, 3 of the last representing African interests. African councils have been established in the 7 provinces, and it was announced by the Colonial Office in 1944 that "when these have had sufficient experience, an African Central Council will be set up consisting of delegates from the Provincial Councils." Northern Rhodesia is represented in the East African Governors' Conference, which maintains a permanent secretariat at Nairobi, Kenya Colony. In September 1944 a joint development adviser was appointed for the colony and Nyasaland Protectorate, his function being postwar planning. The estimated revenue in 1944 was £2,888,365, and expenditure £2,604,203. In 1944 there were 902 government and state-aided (mission) schools for natives, with 103,000 pupils; and for white children, 24 government and private schools, with a combined enrolment of 2,470. African social welfare is promoted by a welfare adviser. The

Northern Rhodesia Regiment was serving during 1944-45 in the campaign against the Japanese in Burma. White farmers are settled on more than 3,000,000 acres, their principal crops being corn (maize), wheat, and tobacco; other agricultural crops, many cultivated by natives, include citrus fruits, coffee, oil seeds, peanuts, beans, potatoes, and cassava. In 1944 exports of wheat totaled 250,000 bags (a record figure), and of corn 290,000 bags; native produce exported included 115,000 bags of corn and 35,000 bags of kaffir corn. New areas were opened up in 1944 for settlement on progressive lines by Africans. Fish farming is a new industry, waters at Chilanga, near Lusaka, being stocked with bluegill sunfish. Although some 600-700 elephants are exterminated yearly by the Game Control Department, destructive herds of elephants were on the increase in 1945, their numbers augmented by immigrants from the Belgian Congo. In 1944 the British treasury contributed £8,500 toward the cost of an organization for combatting red locusts, seasonally destructive of crops throughout central Africa. Natives possess 502,050 head of cattle; and whites, 126,500. Mineral rights remain vested in the British South Africa Company. More than 250,000 tons of copper are mined annually, principally at the Roan Antelope, Mufulira, and Nkana mines; the product of the last-named also contains silver and gold. The total value of mineral production in 1943 was £13,732,839.

The British government undertook to deliver to the United States in lend-lease in 1945, 170,000 tons of copper from Northern Rhodesia. Lead and vanadium ore are found in conjunction with the large zinc deposits at Broken Hill. Other minerals in development include bauxite, coal, and cobalt. Besides minerals, exports include timber, particularly Rhodesian redwood, and wild rubber. Exports in 1943 had a value of £13,946,080, and imports totaled £5,965,463. Motorbus services connect with the Rhodesia Railways (1,361 miles of line, main and feeder, in the colony). There is air transport connection with neighboring countries.

Southern Rhodesia.—The colony has an area of 150,333 square miles; the population was estimated in June 1944 to be 1,646,000 (African, 1,500,000; white, 82,680; Asiatic and colored, 6,970; others, 56,350). Salisbury (pop., 1941, 51,761) is the capital, and other towns include Bulawayo (39,817), Umtali, Gwelo, Gatooma, Que Que, Eiffel Flats, Mankie, Fort Victoria, Selukwe, and Shabani. The governor (Vice Admiral Sir Campbell Tait appointed Dec. 15, 1944) heads an administration responsible to an elected legislature. A Cabinet (Executive Council) comprises a prime minister (Sir Godfrey Martin Huggins reassumed office Oct. 13, 1943) and 5 ministers heading departments of the administration; Cabinet officers are selected from the majority party (the United Party) in the Legislative Assembly, the 30 members of which are elected by adult British subjects. In the native reserves are councils, of chiefs and other African leaders, which have a share in local administration and are consulted by the government respecting legislation affecting them. As is the custom in the case of the British Dominions, the status of which she has almost attained, Southern Rhodesia exchanges high commissioners with the British government; in 1944 the prime minister was invited to London to attend the conference of Dominion premiers.

The financial year 1944-45 ended with an accumulated surplus of £1,973,000; revenue for that period amounted to £10,516,000, and expenditure was £10,046,000. State-aided mission schools for natives totaled 1,452 in 1942 (pupils, 112,534), and for Asiatic and colored (half-caste) children 13 (pupils, 1,817); 12,678 white children attended 92 government and state-aided schools. Tobacco production in 1944 by white farmers was 40,400,000 pounds (from 60,543 acres), and by natives 738,071 pounds (from 1,485 acres); the corn (maize) crop was 1,250,000 bags from 235,000 acres. It was estimated that 72,160 acres were under tobacco in 1945, of which 71,000 acres were farmed by whites. Fruit orchards are of considerable economic importance. In 1942 white farmers owned 2,647,154 head of cattle, 285,773 sheep, and 150,411 hogs, and large numbers were also in native ownership; the government proposed in 1945 to reduce the cattle population over a term of years in order to curb overstocking. The dairying and chilled beef industries are growing. The country has cotton ginneries, oil, soap, and candle factories, and cement and lime works. The British South Africa Company disposed of its mineral rights to the government in 1933 for £2,000,000. In 1944, 592,729 fine ounces of gold, valued at £4,978,922, were mined. Other minerals include coal, chrome ore, asbestos, silver, mica, iron pyrites, tin, and tungsten. Base metals produced in 1944 reached the record value of £3,443,539. An Industrial Development Commission, set up by the government in 1945, was authorized to expend £600,000 annually to aid industrialists to develop new or existing undertakings. Both imports and exports attained record figures in 1944, the former being £11,967,000 and the latter £15,800,000. Exports to the United States in 1943 were 12 per cent of the total, and only 7 per cent in 1944, the decrease being due mainly to fewer shipments of asbestos. Motorbus services (route mileage in 1944, 1,658 miles), operated by the Rhodesia Railways administration, connect the main and feeder railway lines in the colony (1,360 miles in 1944); the railways are linked with the systems in the Union of South Africa, the Belgian Congo and Mozambique (Portuguese East Africa). Proposals were under consideration in 1945 for acquisition of the share capital of Rhodesia Railways, Limited, by the governments of the Rhodesias and the Bechuanaland Protectorate (through which the system extends southward). Highways suitable for motor traffic exceed 12,000 miles in total length. Air transport communications within the country and externally are good.

RIBBENTROP, Joachim von, German diplomat: b. Wesel, Germany, April 30, 1893. As ambassador at large (1935), later as ambassador to Great Britain (1936-38) and Adolf Hitler's Foreign Minister (from 1938), Joachim von Ribbentrop executed the diplomatic maneuvers necessary to Nazi Germany's rise to military power in Europe. He negotiated the German-Japanese anti-Comintern pact in 1936; was one of the powers behind the Munich meeting in September 1938; and in 1939, concluded the nonaggression pact with Soviet Russia. He also mended diplomatic fences for the creation of the Rome-Berlin-Tokyo Alliance in 1940. In *Failure of a Mission* (1940), Sir Nevile Henderson states that if he "were to apportion the blame for the tragic and ghastly

(Second World) war," he would rank as next to most important "the self-interested and pernicious advice of Herr von Ribbentrop and a small clique of Nazi veterans."

Von Ribbentrop was educated at Metz. In 1910, he went to Canada as an independent wine merchant, returning to Germany at the outbreak of the First World War. At the war's end, he was attached to the war ministry, and in 1919, was a member of the German peace delegation. Von Ribbentrop became identified with the Nazis in 1930; became a party member in 1932. According to some accounts, he arranged the meeting in early January 1933 between Hitler and von Papen at which decisions of great importance to Hitler's career were made.

In January 1944, as German reverses continued to mount, von Ribbentrop's dismissal as foreign minister was reported from Switzerland. On April 30, 1945, with Germany tottering on the edge of defeat, he went from Berlin to Hamburg, and there lived in hiding until his capture on June 15 by British Army authorities. He has the dubious distinction of being on the highest priority list of Nazi war criminals.

RICE. The commercial rice crop of the United States is grown in four states—Arkansas, Louisiana, Texas, and California. In 1945, the Department of Agriculture estimated these states produced a total of 71,602,000 bushels of rice, as compared with their 1944 crop of 70,237,000 bushels, and their 1934–43 ten-year average crop of 52,346,000 bushels. In 1945 Louisiana produced 23,166,000 bushels; Texas, 17,200,000 bushels; California, 16,884,000 bushels and Arkansas, 14,352,000 bushels.

RIVES, Amélie (PRINCESS TROUBETZKOY), American author and playwright: b. Richmond, Va., Aug. 23, 1863; d. Charlottesville, Va., June 15, 1945. Miss Amélie Rives created a literary furor with her first and most successful novel, *The Quick or the Dead?* (1888), the story of a young widow torn between her love for her dead husband and her affection for a live lover. Despite the fact that this subject was then considered taboo, the novel enjoyed a sensational success and had a sale, considered enormous in that day, of 300,000 copies. Educated by private tutors, Miss Rives lived in Mobile, Ala., until she reached the age of 21. In 1888, she married John Armstrong Chanler (later he changed his name to Chaloner), a young lawyer and member of one of New York's prominent families. She divorced him in 1895 and married Prince Pierre Troubetzkoy, a Russian artist, the next year. Among her works are *A Brother to Dragons* (1888); *Tanis* (1905); *Seléné* (1905); *Firedamp* (1930); a book of poems, *As the Wind Blew* (1922); and several plays.

ROADS, Public. See HIGHWAYS.

ROCKEFELLER FOUNDATION, The. Chartered in 1913 for the permanent purpose of "promoting the well-being of mankind throughout the world," the present program of the foundation is concerned with the extension and application of knowledge in certain definite fields of the medical, natural, and social sciences, the humanities, and public health.

Medical Sciences.—In the medical sciences the foundation's interest centers mainly on research and teaching in the field of nervous and mental

diseases and on the improvement of medical services. Its appropriations in 1945 for work along these lines include \$282,000 to the Roscoe B. Jackson Memorial Laboratory, Bar Harbor, Maine, for studies of genetic factors of emotional variation and intelligence in mammals; \$115,000 to the University of Illinois for research on the biochemical aspects of schizophrenia; \$112,000 to the Harvard Medical School for the development of teaching and research in psychiatry; \$24,000 to Columbia University for the investigation of genetic factors in the incidence of nervous and mental diseases peculiar to old age; \$45,000 to Karolinska Institute, Stockholm, for research in neurophysiology; \$32,000 to the American Psychiatric Association, New York City, for work of its Committee on Psychiatric Nursing; \$250,000 to the Bingham Associates Fund of Maine and the Bingham Associates Fund of Massachusetts for the development of a program of post-graduate medical education in certain rural areas and towns of Massachusetts; \$45,600 to Group Health Co-operative, Inc., New York City, for expenses in operating and developing medical insurance programs; and \$29,000 toward the expenses of Medical Administration Service, Inc., New York City, a voluntary association of laymen and physicians providing information to industries and to government and private agencies which plan or maintain medical care.

Natural Sciences.—The program in the natural sciences is concerned mainly with experimental biology. Among the appropriations in this field in 1945 were \$350,000 to Harvard University for research, in the Department of Physical Chemistry of the Medical School, on the physical chemistry of the proteins and related substances; \$150,000 to the University of Iceland toward the cost of building and equipping an institute of experimental pathology; \$54,900 to Harvard University for basic studies in chemotherapy; \$75,000 to Karolinska Institute, Stockholm, toward the cost of equipping the Department of Biochemistry and the Department of Cell Research in the Medical Nobel Institute; \$20,000 to the University of Illinois for research in the biochemistry of the amino acids; \$19,000 to the California Institute of Technology for research in immunology; \$15,175 to the University of Leeds for studies on analysis of biological tissues by physical techniques; \$18,000 to the University of Wisconsin for research in the physical chemistry of the proteins of human blood; \$125,000 to the Research Institute for Physics, Academy of Sciences, Stockholm, toward the cost of constructing a cyclotron; \$50,000 to the Massachusetts Institute of Technology for the design and construction of a new high-voltage electrostatic generator for nuclear research.

Social Sciences.—In the social sciences, studies of international relations and postwar problems are receiving major emphasis. In general, aid is given to projects contributing to the understanding of important social problems and to the development of personnel and methods. Some of the 1945 appropriations were \$152,000 to the Royal Institute of International Affairs, London, toward the cost of producing a history of the war and the peace settlement, and an additional \$144,000 to this institute for its research program; \$150,000 to the University of Chicago for the support of research in the Division of the Social Sciences; \$100,000 to the Social Science Research Council, New York City, for fellowships and for reconversion and retraining of social science personnel; \$60,000 to the Council on For-

ign Relations, New York City, for continuation of war and peace studies and for its general research program; \$51,030 to the University of Glasgow for development of research and training in the social sciences; \$40,000 to the Institute for Advanced Study, Princeton, toward the expenses of a study of the Law of International Aviation; \$30,000 to Tufts College for an experimental program in the psychiatric approach to training and research in sociology; \$10,000 to the University of California for study of the effects of Japanese migration and resettlement in California; and \$250,000 to Columbia University toward the development of a Russian institute in its School of International Affairs.

Humanities.—The program in the humanities is concerned with studies in language and foreign cultures aiming toward better international understanding; with regional studies in the United States and Canada; and with such means as drama, radio, motion pictures, libraries, and museums, for raising cultural levels of contemporary society. Grants made during 1945 included \$155,000 to the National Theatre Conference for support of activities and projects for improving educational and creative values in American universities and colleges through drama; \$90,000 to the American Library Association, Chicago, for the expenses of selecting and purchasing reference books for libraries in war areas; \$43,000 to the University Research Fund, São Paulo, Brazil, toward operation of its bibliographical information service; \$25,000 to the American Library Association for exchanges of library personnel within North and South America; \$50,000 to Stanford University for teaching and research in the areas and languages of the Pacific, Eastern Asia, and Russia; \$25,000 to the American Council of the Institute of Pacific Relations, New York City, for production of English translations of source materials on Chinese history; \$7,500 to Yale University and a similar sum to the Colorado School of Mines for the purchase of recording and reproducing equipment for language instruction; \$16,700 to the American Council of Learned Societies, Washington, D.C., toward the cost of completing a revised and enlarged edition of Redhouse's *English and Turkish Lexicon*; \$25,000 to the Rocky Mountain Radio Council, Inc., for expenses and equipment in connection with its work of preparing radio programs of educational and cultural value suited to the needs and interests of the listeners of the region; \$100,000 as a special fund in the humanities for the post-war development of personnel in the United States.

Public Health.—The foundation appropriated \$2,200,000 for the work of its International Health Division in 1945. This work includes research on a number of diseases, among them yellow fever, malaria, influenza, typhus fever, rabies, diphtheria, syphilis, tuberculosis, and hookworm infection; demonstrations in the control of certain of these diseases in their environments; co-operation with governments in the organization or improvement of important services of central or local health departments; and the development of public health education. In addition, the foundation made a grant of \$300,000 to the University of Toronto toward the cost of a building for the School of Nursing.

Officers.—Walter W. Stewart, chairman of the board of trustees; Raymond B. Fosdick, president; Thomas B. Appleget, vice president; Norma S. Thompson, secretary; Edward Robinson, treasurer; George I. Beal, comptroller;

Thomas M. Debevoise, counsel; Chauncey Belknap and Vanderbilt Webb, associate counsel. The offices of the foundation are at 49 West 49th Street, New York City 20.

H. B. VAN WESEP,
Director, Office of Publications, The Rockefeller Foundation.

RODA RODA, Alexander Friedrich Ladislous (real surname ROSENFELD), Austrian novelist, satirist, and playwright: b. Slavonia, 1872; d. New York City, Aug. 20, 1945. After attending an Austrian military academy, Roda Roda served as a lieutenant in the Austrian cavalry, but the liberal views that he expressed in his writings eventually caused the loss of his commission. As a young man, he contributed to *Simplitissimus* and the *Jugend*, German humorous magazines, and later he was a correspondent in the Balkan wars. He served in the First World War as an officer and war correspondent, and then lived in Vienna, later moving to Munich, and finally to Berlin. Roda Roda fled from the Nazis to the United States about 1940. Among his works, many of which were popular in Europe, are: plays, *Der Feldherrnhügel* (1910; with Carl Rössler), *Bubi* (1911; with Gustav Meyrink), *Der Minister, Frühstück beim Feldmarschall* (1937), and *The Babylonian Virgin* (1944); fiction, *R.R.R. (Roda Rodas Roman)* (1925), *Roda Roda und die 40 Schurken* (1934), *Krokodiltränen* (1935), *Schenk ein, Roda!* (1936), *Panduren* (1936), *Polo* (1938), and *Ein Mann von mittlerer Intelligenz* (1941).

RODRIGUEZ. See MAURITIUS.

ROKOSHOVSKI, Konstantin, Soviet Army officer: b. Warsaw, 1896. Fifty-year-old Marshal of the Soviet Union Konstantin Rokossovski has been identified with some of the most decisive battles and campaigns of the Russo-German war, beginning with the defense of Smolensk in the summer of 1941. He commanded one of seven Soviet armies that defended Moscow in 1941-42. He took part in the Stalingrad battles, and shared in the Soviet victory and the subsequent capture of 22 German divisions and their commander, Field Marshal Friedrich von Paulus. (With Marshals Konev, Malinovsky, and Tolbukhin, Rokossovski is known as one of "The Four Horsemen of the German Apocalypse.") In the summer of 1943, with Sokolovsky, Konev, Popov, and the late General Vatutin, he launched the offensive on the Orel-Kursk arc. There followed the Rylsk break-through toward Kiev; the drive to the Dnieper (Dnepr) by way of Bakhmach-Chernigov and the river crossing; the capture of Rechitsa and Gomel; and finally the rout of the Germans before Bobruisk and Minsk, in the swamps and forests of Belorussia (White Russia). In the spring of 1945, Rokossovski commanded the Second White Russian Army for the final assault on Germany.

Like so many of his fellow officers, Marshal Rokossovski is a product of the revolution and the Frunze Military Academy, "cradle of Soviet generals." He received his present rank of Marshal of the Soviet Union in 1944. His military decorations include the orders of Lenin, Suvorov, (1st degree), and Kutuzov (1st degree).

ROMAN CATHOLIC CHURCH. On the last war Christmas, Pope Pius XII delivered an important message to the world on true and false democracy. True democracy, he said, implied the right of the citizen to express his views of the duties imposed on him and to be heard before being

compelled to obey. When Germany surrendered May 8, the Holy Father in a world-wide broadcast gave thanks to God and prayed for a speedy end to hostilities in Asia. He appealed to all mankind, in the name of the war dead, to strive now to build a better world, founded on the fear of God and fidelity to His commandments, and on "respect for human dignity, on the sacred principle of equality, on the rights of all peoples and all states, large and small, weak and strong." All year the activities of the Holy See were chiefly directed toward the relief of war victims. Up to August over two million persons were aided by papal relief missions to internees in Austria and Germany. The supreme pontiff received a group of United States Congressmen in May and expressed the hope that United States influence might work for a happy solution of postwar problems. He recalled his personal visit with the late President Franklin D. Roosevelt and expressed his profound regret over the death of Mr. Roosevelt. The pope spoke to the Sacred College of Cardinals June 2, calling upon clergy and laity to devote themselves to strengthening the peace and to building an effective instrument for maintaining peace. In this same address he condemned the "idolatry of racism and statism." The French Catholic philosopher, Jacques Maritain, was named ambassador to the Vatican by France early in the year, and Mr. Myron C. Taylor, who was the late President Roosevelt's personal representative to the Holy See, continued at the Vatican as the envoy of President Truman. In June Mr. Taylor was awarded the Grand Cross of the Order of Malta by Pope Pius XII. The same honor had been conferred on Field Marshal Sir Harold Alexander, Allied Commander of the Mediterranean Forces. The chief rabbi of Rome, Dr. Israel Zolli, deeply impressed by the attitude of the pope during the war, became a Catholic; he and his wife were baptized in the Church of St. Mary of the Angels in Rome.

The church in most of the war-torn countries suffered grievous hardships. In June it was reported that, during the rocket-bomb attacks on England, 55 Catholic churches in London were destroyed or badly damaged. The number of presbyteries, schools and convents destroyed was considerably greater. In May, His Eminence August Cardinal Hlond, primate of Poland, revealed that three bishops and more than 2,000 priests in that country had met with violent deaths. In the Netherlands, the Catholic University, with its priceless library at Nijmegen, was burned by the Nazis. After the German surrender, His Eminence Michael Cardinal von Faulhaber, archbishop of Munich, who had remained at his see throughout the war, told the Allies that many of his priests had died in prison or had been deported by the Nazis. It was reported in August that during the war 149 prelates, priests, religious and seminarians of Prague, Czechoslovakia, were in German prison camps and that 22 of them had died there. In Manila, during the April campaign, 71 priests and religious were murdered by the Japanese. Later it was estimated that damage to church property in the Philippines, which included the Cathedral of Manila, would reach \$150,000,000. Documents released in March proved that, during the German occupation of France, the bishops of that country had made repeated protests to Marshal Petain against the persecution of the Jews.

In the United States the War Relief Services of the National Catholic Welfare Conference

(N.C.W.C.), established more than 150 welfare centers in 44 countries, which aided millions of victims of the war. Up to September there were 3,076 Catholic priests serving as chaplains with the United States armed forces; in addition, there were 1,639 auxiliary chaplains. Fifty-seven army, 10 navy and 15 auxiliary chaplains died during the war. In August, Omaha, Nebr., which had been a diocese since 1885, was made an archdiocese and its bishop, the Most Reverend James H. Ryan, was elevated to the rank of archbishop. The Most Reverend Joseph P. Donahue was consecrated titular bishop of Emmaus and auxiliary bishop of New York, March 19, and on May 1 the Most Reverend John K. Mussio was consecrated the first bishop of Steubenville, Ohio, which was made a diocese last year. On the same day, the Most Reverend Edward J. Hunkele was consecrated bishop of Grand Island, Nebr. The Most Reverend Vincent S. Waters was consecrated bishop of Raleigh, N.C., May 15, and on May 24, two bishops were consecrated in the Cathedral of St. Paul, Minn., the Most Reverend Francis J. Schenk for the diocese of Crookston, Minn., and the Most Reverend James L. Connolly as coadjutor to Bishop Cassidy of Fall River, Mass. The Most Reverend Louis F. Kelleher was consecrated titular bishop of Thenae and auxiliary bishop of Boston, Mass., June 8 and the Most Reverend Apollinaris W. Baumgartner, O.F.M. Cap., was consecrated titular bishop of Joppe and vicar apostolic of Guam, September 18. The Rt. Rev. Msgr. John P. Treacy of Cleveland, Ohio, was consecrated October 2 titular bishop of Metelis and coadjutor to the bishop of La Crosse, Wis., and the Rt. Rev. Msgr. William A. Scully of New York was consecrated October 24 as titular bishop of Pharsalus and coadjutor to the bishop of Albany, N.Y. Two other bishops were appointed to dioceses, the Most Reverend John F. O'Hara, C.S.C., titular bishop of Mylasa and military delegate, was installed as bishop of Buffalo, N.Y., May 8, and the Rt. Rev. Msgr. William R. Arnold, formerly chief of chaplains of the U.S. Army, was consecrated October 11, titular bishop of Phocara, to replace Bishop O'Hara as military delegate; the Most Reverend Henry O'Brien, who was the auxiliary bishop of Hartford, Conn., became bishop of that diocese in June. The Laetare Medal was conferred on Gardiner Howland Shaw, former United States assistant secretary of state, for outstanding work in the field of diplomacy and social welfare.

During the year, three bishops died in United States territory: in May, the Most Reverend Joseph R. Crimont, S.J., vicar apostolic of Alaska since 1917; in September, the Most Reverend Daniel F. Desmond, bishop of Alexandria, La.; and in November, the Most Reverend Joseph G. Pinten, retired bishop of Superior, Wis. In addition, the Most Reverend James McCloskey, bishop of Jaro, died in the Philippines, April 9. In September the Rt. Rev. Msgr. John A. Ryan, director of the Social Action Department of the N.C.W.C., died in his 76th year. Earlier in the year, February 13, death took Mother Grace Dammann, president of Manhattanville College, N.Y. On August 25 Thomas F. Woodlock, former member of the Interstate Commerce Commission, died. In Europe, death took two cardinals: His Eminence Justinian Cardinal Sereci, primate of Hungary, March 29, and His Eminence Adolf Cardinal Bertram, archbishop of Breslau, in July, reducing the College of Cardinals to 39.

Missionary work among the colored and In-

dian populations of the United States made great progress. The number of colored Catholics is about 330,000, an increase of 17,000 over 1944; there are nearly 100,000 Catholic Indians, an increase of 6,000 over the previous year. According to the *Official Catholic Directory*, published in June, Catholics in the United States, Alaska and the Hawaiian Islands now number 23,963,671; an increase of 543,970 over 1944. The number of ordained priests is the highest on record: 38,451.

REV. JOSEPH I. MALLOY,
Assistant Editor, *The Catholic World*.

ROOSEVELT, Franklin Delano, 31st president of the United States: b. Hyde Park, N.Y., Jan. 30, 1882; d. Warm Springs, Ga., April 12, 1945. Perhaps no president in the history of the country was more completely idolized by his followers and more thoroughly disliked by his enemies than was Mr. Roosevelt, whose spectacular career ended suddenly as he was about to witness the realization of his most cherished desire—the utter defeat in war of the Axis Powers. As he passed away, the Allied armies, whose activities he had helped so much to spark, were hammering at the gates of Berlin. Less than a month later Germany quit, and four months later Japan was through.

A maker and breaker of precedents, Mr. Roosevelt was the only person ever to be elected president of the United States for more than two terms; he was elected four times—in 1932, 1936, 1940, and in 1944—and served a total of 12 years, 1 month, and 8 days. It is entirely too early to attempt to fix his place in history. Much that he did was of such a highly controversial nature that even now it cannot be evaluated. Furthermore, it is practically impossible to obtain an unbiased opinion of either Mr. Roosevelt or his work. Aside from his war activities, which met with more or less general approval, about everything he did was praised by his followers and damned by his enemies. Generally speaking, business and industry disliked and distrusted him; on the other hand, labor, the racial minorities and the underprivileged all but worshipped him.

A consummate, or as some called him, a “super” politician, there were those who professed to see a political motive in everything he did—in his handling of labor; in his attitude toward minority racial groups; and in his denunciations of the moneyed classes as “economic royalists,” to which latter group he himself definitely belonged, though his own fortune was inherited. His admirers, however, saw him as a great humanitarian, whose consuming ambition was to uplift the downtrodden whether black or white, Jew or Gentile, farmer or factory hand. His must have been a very complex nature to have aroused such conflicting and contradictory emotions. When he passed away there were practically but two elements among the people of the United States—the Rooseveltians and the anti-Rooseveltians; there were almost no neutrals.

In many foreign countries, however, Mr. Roosevelt was greatly admired and abroad was perhaps the most popular president the United States ever had. But here again, his enemies attributed his foreign popularity, not to any liking for the man himself, but to what the foreigners hoped to get out of him, or out of the United States by way of lend-lease or otherwise.

Nevertheless, Mr. Roosevelt's sudden death came as a distinct shock to the entire country. Only a short while before, the public had been told that his health was good even though it

was perfectly apparent to all who saw him or saw pictures of him that the strain of his office was rapidly wearing him down. His face looked drawn and haggard and he appeared to be extremely tired. However, he was signing official papers and sitting for the painting of his portrait when he suddenly fainted. Two hours and 25 minutes later he was dead. Death was attributed to a “massive cerebral hemorrhage.”

There was a decided dash of the daring in Mr. Roosevelt. He had ideas and was never afraid to try them out. His experiments perhaps were not always as successful as he hoped they would be, but, if so, he maintained his own council and kept on trying. His fundamental weakness was a lack of administrative ability. He had a habit of piling one administrative unit on top of another in a way that must have been as confusing to the various organizations as it was to the public. As Gerald Johnson said of him (*Look*, July 10, 1945): “He was slow to delegate authority, still slower to remove incompetent officials if he liked them personally. Disliking quarrels, he sometimes allowed people to think he agreed with them when he did not, and so was accused of duplicity. Then there was a spice of the vindictive in his make-up. That also made enemies.”

Mr. Roosevelt was the son of the late James and Sara Delano Roosevelt, and a fifth cousin of the late President Theodore Roosevelt. The Roosevelt family is of Dutch origin, being descended from Klaes Martensen van Roosevelt, who came to America from Holland about the middle of the 17th century, and settled in what was then New Amsterdam. The Delanos are of Flemish origin. Philippe, the founder of the American branch of the family, came to America in 1624. Mr. Roosevelt's mother was his first teacher. Later he was taught by governesses and tutors. Each summer he traveled with his parents in Europe and at the age of 14 he was sent to Groton, the famous preparatory school at Groton, Mass. In 1900 he entered Harvard University from which he was graduated in 1904. Thereafter he studied law at Columbia University Law School, and in 1907 was admitted to the New York bar. From that year until 1910 he was associated with the firm of Carter, Ledyard, and Milburn. Later he was associated with others in the practice of the law, and from 1924 until 1933 was a member of the firm of Roosevelt and O'Connor.

Mr. Roosevelt's political career began in 1910 when, after having been a delegate to the state Democratic Convention of New York, he was persuaded to accept nomination for the state Senate in the district composed of Dutchess, Putnam, and Columbia counties. The district was regarded as overwhelmingly Republican, but one Democrat having been elected to the state Senate therefrom since the Civil War. Nevertheless Mr. Roosevelt won out in the general election. Shortly after he took his seat in the upper house of the state legislature in January 1911, he became the leader of an insurgent group that, in defiance of Tammany, lined up in opposition to the candidacy of William F. (Blue-Eyed Billy) Sheehan for the United States Senate to succeed Chauncey M. Depew. At that time members of the national Senate were still elected by the state legislatures. After 63 ballots, the Roosevelt following forced the election of James A. O'Gorman as a compromise candidate. This show of independence on the part of Mr. Roosevelt was followed by another in 1912 when, again in opposi-

tion to Tammany, which was supporting Judson Harmon of Ohio, he led the fight in the New York delegation to the Democratic National Convention at Baltimore for the nomination of Woodrow Wilson for president. These displays of opposition to boss rule greatly increased the popularity of the young state senator, and he was re-elected in the fall of 1912. However, shortly after Mr. Wilson's inauguration, Mr. Roosevelt accepted appointment as assistant secretary of the navy in which position he served until 1920. In 1914 he sought but failed to obtain the Democratic nomination for United States senator, and in 1918 he rejected Tammany's plea that he run for governor. In 1920 Mr. Roosevelt was sent as a delegate to the Democratic National Convention at San Francisco. There he made a notable speech seconding the nomination of Governor Alfred E. Smith of New York for the presidency. Mr. Smith lost out, but Mr. Roosevelt's speech is believed to have had much to do with his own nomination for vice president on the ticket headed by James M. Cox of Ohio. During the campaign Mr. Roosevelt made hundreds of speeches in two transcontinental trips, advocating adherence to the League of Nations. His ticket was defeated but the contacts he made aided him materially in his own campaign for the presidency 12 years later.

In 1921, when he was 39 years old and apparently in perfect health, Mr. Roosevelt was suddenly stricken with infantile paralysis. His subsequent fight to regain his health elicited the admiration of the entire country. His recovery was augmented by the healing waters of Warm Springs, Ga., and through his influence this previously little known resort became the center of treatment for victims of poliomyelitis in the United States. At the time it was generally believed that Mr. Roosevelt's affliction had permanently removed him from the field of political activity. However, he kept in close touch with public affairs, and in 1924 was well enough to attend the Democratic National Convention, held in Old Madison Square Garden, New York City. Here he made the most notable speech of the convention in nominating Governor Alfred E. Smith for the presidency. Four years later, at Houston, Texas, Mr. Roosevelt again placed Mr. Smith in nomination, and this time the New York governor was nominated on the first ballot.

Needing all the support he could get to carry New York State, Governor Smith prevailed upon Mr. Roosevelt to accept the Democratic nomination for governor. Mr. Smith lost New York but Mr. Roosevelt won out by a plurality of 25,564 votes, and two years later was re-nominated and re-elected by the then unprecedented plurality of 725,001 votes. Throughout his four years as governor of New York, Mr. Roosevelt had to contend, as did Governor Smith, with a more or less hostile legislature. His policies, in part, were a continuation of those of Mr. Smith, but he struck into new ground with his program for old age pensions, transfer of the budget-making power from the legislature to the executive, creation of a New York State Power Authority, farm relief, reforestation of submarginal lands, state unemployment relief system, etc.

While Mr. Roosevelt was busy with state affairs, James A. Farley and the late Col. Louis McHenry Howe were busy promoting the presidential candidacy of the New York executive. So well did they play their cards that by the time the Democratic National Convention met in Chicago in 1932, Mr. Roosevelt was the choice of

the majority of the delegates for the nomination. However, he was unable to command the necessary two thirds until an agreement had been reached whereby John N. Garner of Texas was to have second place on the ticket in exchange for the release of his Texas and California delegates to Mr. Roosevelt. The latter was then nominated on the fourth ballot, receiving 945 votes out of the total of 1,154 in the convention.

Campaigning on what came to be known as the New Deal platform, Mr. Roosevelt visited practically every section of the country, and in the general election he and Mr. Garner won out over President Herbert Hoover and his running mate by a plurality of 7,060,016 popular votes. They carried 42 of the 48 states, giving them 472 votes out of 531 in the Electoral College. This unprecedented victory was due in large measure to the economic condition of the country, then in the throes of the worst economic depression on record, but it was also due in part to Mr. Roosevelt's extremely pleasing personality. Four years later Mr. Roosevelt and Mr. Garner were re-nominated and re-elected over Governor Alfred M. Landon of Kansas by a popular plurality of 10,797,090. In that year they carried every state in the Union with the exception of Maine and Vermont, and received 523 votes (all but 8) in the Electoral College. That was Mr. Roosevelt's high-water mark. In 1940, when Henry A. Wallace was his running mate, his popular plurality dropped to 4,938,711 votes, and his Electoral College vote dropped to 449 against 82 for the late Wendell L. Willkie, his Republican opponent. In 1944 he fared even worse. With Governor Thomas E. Dewey of New York as his Republican opponent, his popular plurality dropped to 3,596,227 votes. In the Electoral College he polled 432 votes to 99 for Mr. Dewey. Undoubtedly some of this drop in votes was due to opposition to a third and fourth term, but there were other contributing factors not the least of which was a growing dislike of many of Mr. Roosevelt's policies.

On Feb. 15, 1933, prior to his first inauguration, an attempt to assassinate Mr. Roosevelt was made at Miami, Fla., just after he had finished delivering a speech in Bay Front Park in that city. Five shots were fired at him by Giuseppe Zangara, and though he escaped injury, five persons standing near the automobile from which he had spoken were wounded. One of these was Mayor Anton J. Cermak, of Chicago, who died in a Miami hospital March 6. Zangara was arrested immediately after the shooting and later, after trial, was executed.

Beset first by the depression and then by war, Mr. Roosevelt's administration was hectic from beginning to end. At the time he was first inaugurated, March 4, 1933, the country was shrouded in economic gloom. Banks in 38 states were closed and there were approximately 12,000,000 unemployed persons in the country. Taking as the theme of his inaugural address "the only thing we have to fear is fear itself," the new president promptly set to work to better conditions. Though he had preached economy in his campaign speeches, he tried to dissipate the depression by the spending of huge sums of money. He never quite succeeded, for when the Second World War came and changed everything there were still many people out of employment or working on relief projects.

Within 24 hours after he entered office, Mr. Roosevelt declared a four-day bank holiday, and

called Congress to meet in extraordinary session on March 9. Thirty minutes after it met he laid before it a message asking for ratification of his bank proclamation and for the grant of extraordinary powers to cope with the conditions. By 8 o'clock that night a bill giving him everything he asked was on his desk for his signature. He then asked Congress to authorize a reduction in pensions and in the pay of government employees. Such a bill became a law on March 15. Two days earlier he had asked Congress to legalize the manufacture and sale of beer, and by March 22 the bill had been passed and signed. On April 19 the president placed an embargo on the export of gold, thereby taking the country off the international gold standard. Under various acts, passed at the president's behest, he set up a total of 30 emergency agencies during the next few months. These included the Agricultural Adjustment Administration (AAA), the Commodity Credit Corporation, the Electric Home and Farm Authority, the Export-Import Bank of Washington, the Farm Credit Administration, the Federal Civil Works Administration, the Federal Deposit Insurance Corporation, the Federal Emergency Administration of Public Works, the Federal Substinence Homestead Corporation, the National Emergency Council, the National Labor Board, the Tennessee Valley Authority (TVA), and the National Recovery Administration (NRA). Some of the agencies created by Mr. Roosevelt have since been liquidated; some have been consolidated with other organizations; and some, notably the NRA and the original AAA have been declared unconstitutional by the Supreme Court. It was these decisions of the Supreme Court that led Mr. Roosevelt into one of the worst political blunders of his career—the attempt to increase the membership of the court from 9 to 15. Called the "court packing scheme," the controversy that raged over the proposal was bitter in the extreme. Congress turned it down, but the attempt plagued Mr. Roosevelt for a long, long time. He made another blunder when he attempted to purge Congress of some of his non-supporters therein at the 1938 elections. He succeeded in defeating only one of his intended victims, but even those who were elected never forgave him.

But before these troubles overtook him, Mr. Roosevelt had gone ahead with his plans for overcoming the depression. Early in January 1934, Congress passed the Gold Reserve Act under which he, on Jan. 31, 1934, proclaimed the weight of the gold dollar to be 15 $\frac{1}{2}$ grains, $\frac{9}{10}$ fine, or 59.06 per cent of the old gold dollar. This act transferred title to all gold in the Federal Reserve banks, the entire stock of monetary gold in the country, to the government, and the president fixed the price of newly mined gold at \$35 an ounce. Previously Mr. Roosevelt had done much to promote the adoption of the 21st Amendment to the Constitution repealing the 18th or Prohibition Amendment. The repealer amendment was adopted by the necessary 36 states on Dec. 7, 1934, and prohibition became a thing of the past.

Though Mr. Roosevelt had more important legislation enacted and spent more money than any president in the history of the country, it is altogether probable that his fame will rest on his war record. Some of his enemies have insisted that by his policies he was responsible for involving the United States in the Second World War. A contrary opinion gave him credit for foreseeing the danger to the country, the almost

certainly that in the event the Axis powers were victorious, the United States would have to fight them alone; that with Hitler in control of Europe the United States would have to trade with him on his terms, even if it did not have to fight him, and that America's foreign trade would be just what Hitler wanted it to be.

Whatever his motives, Mr. Roosevelt early began to prepare for trouble. He succeeded in having Congress pass the first draft bill, as a result of which approximately 1,000,000 men had had a certain amount of military training when at last Japan forced the war on the country. Furthermore, he had laid plans for strengthening the navy and air force, and the work was under way. Again Mr. Roosevelt deserves full credit for having picked able men in Gen. George C. Marshall and Admiral Ernest J. King to head the fighting forces and thereafter giving them their way. He is also given credit for having decided to fight Germany first and then go after Japan, and also for having decided that Africa should first be cleared of hostile troops before the invasion of Europe.

Again Mr. Roosevelt's friends give him credit for holding the Allies together. Certainly he worked unceasingly to do so, and it is a historical fact that no grand alliance half as big ever hung together half as long under even half as much pressure. Undoubtedly Hitler never believed that the alliance would hold up, and did everything he could to disrupt it, but to no avail. Even if it did get tottery after the fighting ended, it held together until the last gun was fired. In his efforts to promote Allied unity, Mr. Roosevelt made no less than three trips across the Atlantic—to Casablanca in January 1943; to Cairo and Teheran in November 1943; and to Yalta in February 1945. In addition, the president held numerous conferences with Prime Minister Winston Churchill, the most noteworthy of which perhaps was the one held in the North Atlantic in August 1941 when the Atlantic Charter was adopted. Three others took place in Washington—one in December 1941, a second in June 1942, and a third in May 1943. No other president traveled so much or, considering his physical condition, risked half so much as did Mr. Roosevelt. Undoubtedly the strenuous life he led hastened his end, but it is equally certain that he realized the fact and refused to surrender so long as he felt there was work to be done.

On March 17, 1905, while he was still a student at Columbia University Law School, Mr. Roosevelt married Miss Anna Eleanor Roosevelt, a distant cousin and the favorite niece of President Theodore Roosevelt. She and five children, four sons and a daughter, survive him.

Mr. Roosevelt was buried on the lawn of his Hyde Park home where a simple monument marks his last resting place. Nearby stands the Franklin D. Roosevelt Library, which houses his state papers, and his collections of naval prints, ship models, stamps, family papers and related materials presented by others, and which is administered by the Archivist of the United States. In time, Hyde Park itself, in accordance with Mr. Roosevelt's wishes, will become the property of the federal government—a shrine which already thousands visit annually. A. H. McDANNALD.

RORKE, Kate (Mrs. DOUGLAS CREE), English actress: b. London, 1864?; d. Hertfordshire, England, July 31, 1945. One of England's greatest actresses, Kate Rorke made two tours of the United States—in 1883-84 with Charles Wynd-

ROOSEVELT, FRANKLIN DELANO

From the south portico of the White House, Washington, D.C., President Roosevelt delivers his fourth term inaugural address, Jan. 20, 1945. His son, Col. James Roosevelt, USMCR, looks on.

Franklin Delano Roosevelt's body is carried to its last resting place in the rose garden of his home at Hyde Park, New York. Directly behind the casket are, left to right: Brig. Gen. Elliott Roosevelt, Mrs. Roosevelt, and Mrs. Anna Boettiger.

ham, and 10 years later as a member of Beer-bohm Tree's Company. Educated at the Convent of Notre Dame in Southwark, Miss Rorke made her first stage appearance as a child in 1878 in *Olivia*, under the management of John Hare. She was engaged by Charles Wyndham two years later, with a leading part as Grace Peyton in *Betsy*, and continued as a member of this company for several years. Later she was engaged again by John Hare and through this connection became the leading lady at the Garrick Theater in London for a period of six years. Her first Shakespearean role was Helena in *Midsummer Night's Dream* in 1889. On her second visit to the United States, she presented several of her greatest characterizations, which included Ophelia in *Hamlet*; Drusilla Ives in *The Dancing Girl*; Olga Morakoff in *The Red Lamp*; Lady Percy in *Henry IV* (Part I); in *Trilby*; and as Alice Duvarney in *The Seats of the Mighty*. Returning to England, she appeared at the opening of Her Majesty's Theater in April 1897 and repeated many of her earlier successes at the Drury Lane, at Terry's, the Metropole, and the Adelphi before accepting the title role in George Bernard Shaw's *Candida* in April 1904. In 1906 she was appointed professor of dramatic art at the Guildhall School of Music. After a revival of *A Pair of Spectacles* in 1917, Miss Rorke retired from the stage and devoted more than 20 years to the training of young actresses at her studio in London.

ROSE, Maurice, United States Army officer: b. Middletown, Conn., Nov. 26, 1899; d. near Paderborn, Germany, March 30, 1945, after having been captured by German soldiers whose orders he could not understand, and who shot him as he was reaching to give up his gun. As commanding officer of the 3d Armored Division since the Normandy break-through in 1944, Major General Rose had distinguished himself repeatedly during the First Army's drive through France, Belgium and Germany.

General Rose received his first military experience as a private in a cavalry troop of the Colorado National Guard in 1916. He served as a lieutenant with the American Expeditionary Force in the First World War, and received the Purple Heart and the Silver Star. After the armistice, he joined the Regular Army, and was commissioned captain in 1920, major in 1930, and lieutenant colonel in 1940. Named chief of staff of the 2d Armored Division in January 1942, he went overseas in December of that year, and fought in the North African campaign. He remained with the 2d Armored Division until June 1943, when he was promoted brigadier general. On Sept. 15, 1944, he was promoted to the temporary rank of major general. His troops were responsible for the capture of Liège in September 1944. General Rose received the Distinguished Service Medal shortly before his death.

ROTACHUTE. See AERONAUTICS, Section 10.

ROTARY INTERNATIONAL AND ROTARY CLUBS. Rotary International is the world-wide organization of all Rotary Clubs. It is responsible for the administrative supervision of its member clubs and for the propagation of the objects of Rotary throughout the world. A Rotary Club is a group of representative business and professional executives who meet together in fellowship to further the "Ideal of Service," which is thoughtfulness and helpfulness to others in business and community life.

Since the first Rotary Club was organized in Chicago, Ill., in 1905, Rotary has spread throughout the world. One indication of the strength of the Rotary organization is that during the last five years Rotary Clubs have been organized throughout the world at the rate of nearly four new clubs each week. There are now (Jan. 7, 1946) 5,620 Rotary Clubs in 60 countries with a membership of 256,925.

For 1945-46 (fiscal year ending June 30, 1946) the general officers of Rotary International are: president, T. A. Warren, Wolverhampton, England; vice-presidents, Herbert J. Taylor, Chicago, Ill.; Chengting T. Wang, Chungking, China; Carlos Hoerning, Santiago, Chile; secretary, Philip Lovejoy, Chicago, Ill.; and ten directors from Canada, Portugal, Sweden, the United States, Venezuela, and Wales.

During 1945, Rotary activities included general community-betterment undertakings, work for crippled and underprivileged children, the establishment and supervision of camps and clubs for boys and girls, assistance to students through student loan funds and scholarships, the promotion of high standards in businesses and professions, and the development of international good will and understanding.

In the United States and Canada some 400 "Institutes of International Understanding" were sponsored by Rotary Clubs, presenting to community forums and to high school audiences outstanding speakers on vital world problems.

Attendance at the 36th annual convention of Rotary International, which was held in Chicago, Ill., was limited to 141 key executives. In accordance with United States government directives, the convention was held in four separate meetings, a week apart, on May 31, June 5, June 12, and June 19, 1945.

Rotary International headquarters office at 35 East Wacker Drive, Chicago, Ill., U.S.A., serves as a clearing house for the dissemination of Rotary information. Additional offices for serving Rotary Clubs are located in Zurich, Switzerland; Bombay, India; and London, England.

The official magazine of Rotary International is *The Rotarian*, which has a Spanish edition, *Revista Rotaria*. In addition, there are numerous regional Rotary magazine publications throughout the world in several different languages.

PHILIP LOVEJOY,

General Secretary, Rotary International.

ROTARY WING AIRCRAFT. See AERONAUTICS.

ROYAL, Forrest B., United States naval officer: b. New York, 1893?; d. in the Pacific theater of war, of natural causes, June 18, 1945. A week before his death, Rear Admiral Royal was in command of the amphibious operations in the Brunei Bay area on the northwest coast of Borneo. Admiral Royal was graduated from the United States Naval Academy in 1915. He was promoted from captain to rear admiral in 1944, and received the Distinguished Service Medal for his performances as commander of an amphibious task group operating against Leyte and Luzon in the Philippines from July 1944 to January 1945. Admiral Royal was in command of the 7th Amphibious Force, which put ashore Australian and Netherlands troops at Tarakan Island in Borneo on May 1, 1945, the first Allied invasion of the Netherlands Indies.

RUBBER. The rubber manufacturing industry was in a constant state of chaos for the major portion of 1945. Although production of syn-

thetic rubber—the industry's main raw material—was more than sufficient to meet both military and essential civilian needs, component shortages cropped up throughout the year, particularly on carbon black and rayon tire cord, with the result that the manufacturing regulations and limitations were revised from month to month. Throughout the year manpower was the primary difficulty.

The military tire crisis carried over from 1944. Early in 1945 the military tire program was declared an "emergency" by the army and specific measures were taken to increase production of heavy-duty tires. These included institution of a seven-day work week for an approximate 120-day period; a moratorium on labor-management differences over wage changes and job classifications; top manpower priorities; furloughing of some 1,200 former tire workers from the army to return to tire plants; reactivation of special army manpower recruiting teams for the tire industry; use of new tire facilities which were approaching completion, and the launching of a study designed to transfer workers from passenger car production to the manufacture of military tires.

Late in 1944 a "within walls" expansion program was approved by the War Production Board, under which additional production facilities were to be installed in existing plants. Based on increased demand for military tires as a result of the "Battle of the Bulge" fought in Belgium, the War Production Board authorized an additional expansion program to include the construction of new plants and expansion of existing plants to furnish an additional 6,000,000 heavy-duty tires per year, or 25 per cent more than existing capacity. This latter program was expected to cost approximately \$70,000,000, and when completed total over-all capacity of heavy-duty tires was expected to reach 28,000,000 units per year, as compared with the 14,000,000 units produced in 1944.

In all, some 75 government projects were authorized, including tires, tubes and bogie wheels, between January and March, all of which were cut back in July and August, the major portion of them before the collapse of the Japanese war effort. Total expenditure for all of these expansions had been estimated at \$132,000,000. At the time of cancellation, only a handful of the new plants had been completed and were in partial operation. Approximately 10 plants were retained as part of the government tire program and were completed and placed in operation.

Stepped up production of military tires in the January-March period soon resulted in serious shortages of component materials. The shortage was especially evident in the supply of carbon black, and new plant expansions for the manufacture of both channel and furnace blacks were authorized by WPB. As a result of this situation, John L. Collyer, president of the B. F. Goodrich Company, was named special director of rubber programs on March 21, with J. Edward Trainer, vice president in charge of production of the Firestone Tire and Rubber Company, as assistant special director. Robert S. Wilson, vice president in charge of sales of the Goodyear Tire and Rubber Company, succeeded Mr. Collyer as special director on July 20, with George M. Tisdale, vice president of the United States Rubber Company, as his assistant director.

Conditions in the industry improved considerably shortly after the complete end of global warfare. Early in September all restrictions on

products manufactured of all types of rubber, other than natural rubber and butyl, were lifted. Continued control over the consumption of natural rubber was deemed essential until sufficient supplies began to come from the liberated rubber-producing areas in the Far East, and over butyl until the production of that special synthetic rubber was substantially increased. Because of its superior impermeability to air, practically all supplies of butyl went into the manufacture of inner tubes.

The end of the Second World War also witnessed a number of other changes in the industry. Restrictions on the amount of passenger, motorcycle and bicycle tires that could be manufactured, strictly limited up to that time, were removed; regulations governing the manufacture and sale of rubber processing equipment were revoked; the tire allotment plan covering the production of truck, bus, tractor, implement and industrial tires was withdrawn; rationing of industrial rubber footwear was ended; the nation-wide 35-miles-an-hour speed limit was lifted. Because of the critical need of passenger tires, the rationing of such tires by the Office of Price Administration was continued, but greatly modified. Tire rationing was officially ended as of Jan. 1, 1946.

Only a trickle of natural rubber reached the United States from the Far East following Japan's collapse. Accordingly not only was the consumption of natural rubber continued under control, but regulations governing its use were tightened. Under one amendment to the WPB Rubber Order, the use of some synthetic rubber was decreed for all types, kinds and sizes of tires, the percentage of natural rubber permissible ranging from 7 to 95, the latter percentage in S-11 constructions only. According to a report by the Rubber Reserve Company, imports of natural rubber into the United States in the 1940-45 period amounted to 930,000 long tons, of which 116,000 were received during 1944. It is estimated that approximately 140,000 tons were imported during 1945.

Production of synthetic rubber under the government program in 1945 reached an estimated 910,000 tons, of which approximately 850,000 tons were consumed. Total supplies of natural and synthetic rubber amounted to approximately 1,050,000 tons, of which some 978,000 tons were consumed, including approximately 108,000 tons exported to England, Brazil, Mexico, and other countries. Stockpiles of 230,000 tons of synthetic rubber and 105,000 tons of natural rubber were on hand at the year end.

Several new types of synthetic rubber were developed during the year. A number of special grades of GR-S, produced in government-owned plants, were made available by the Rubber Reserve Company, including GR-S-AC, GR-S-10, GR-S-38, GR-S-Black 1, and GR-S-Black 1AC. The Mooney viscosities of these various grades differ due to manufacturing procedures. A new silicone rubber, called Silastic, which remains elastic after heating at temperatures up to 500° F. and retains flexibility at temperatures as low as minus 70° F., was developed by the Dow Corning Corporation. The development of "Ethanite Rubber," a new synthetic produced from methane gas, reported to possess the wear and resilience of natural rubber and to be superior to such rubber in resistance to sunlight and oil, was announced by a syndicate of Detroit business leaders. A new synthetic rubber latex, a modification of the butadiene-styrene type of synthetic rubber, featuring greater uniformity

than other available synthetic latices, was developed by the United States Rubber Company.

Advances in manufacturing processes were recorded during the year, including the application of high frequency vulcanization on an assembly line basis. Goodrich and Firestone acquired the American rights to the Dufour and Leduc high frequency patents, considered basic patents in the rubber and plastics field. Both companies adopted the process in their own plants and formed a joint company, Industry Inventions, Inc., to permit other manufacturers to utilize the process under a royalty arrangement. According to Firestone, foamed sponge rubber is cured in 4 minutes by the process as compared with 30 minutes by steam; large hard rubber wheels are cured in 18 minutes, against 5 hours by steam; brake blocks in 48 minutes against 7 hours; elastic thread in 1½ minutes against 15 minutes. Firestone, incidentally, opened a new \$2,000,000 research laboratory in Akron, Ohio, during the year.

A new rubber compounding process reported to reduce the danger of heat failure of heavy-duty synthetic rubber tires was also developed by Firestone. The process covers the incorporation of magnesium sulphate into mixtures of latex and zinc oxide so that equal parts of the two materials can be mixed together and coagulated easily and quickly. Two interesting test methods were also developed during the year, one a method of testing static conductive rubber belts by Goodrich, and the other a quick method for testing individual rubber life saving suits, by inflating the suit with air containing ammonia and detecting the ammonia by a change of color of a dye, by the United States Testing Company.

In step with efforts to improve the processability of the various grades of synthetic rubber, chemical manufacturers continued to develop and introduce new rubber chemicals and compounding ingredients. These included: Setsit-5, a new accelerator for GR-S latex designed to obtain faster curing of latex films; Niathal, a tetrachloro phthalic anhydride, offered as an intermediate or compounding material in the manufacture of synthetic rubbers, resins, plasticizers, insulating materials and protective coatings; No 220 oil, a softener for reclaimed rubber which serves to make reclaims more compatible with synthetic rubber stocks; Insulac W, a specially-treated gilsonite, which easily disperses in Banbury or mill mixing of GR-S; ParaLene-W, a light-colored softener and plasticizer prepared to meet the demand for light-colored GR-S stocks; dioctyl sebacate, a low-temperature plasticizer for polyvinyl chloride; Marmix, a water dispersion of an organic resin, finding application with GR-S latex where high tensiles and abrasion and tear resistance are required; NTD-181.5-B, a nitrile plasticizer for butadiene-acrylonitrile rubbers and vinyl resins; Micronoil Moldeze-R, a combination lubricant and metal treatment, serving both as a mold lubricant and as a surface finishing agent for rubber; Neutroids, a series of latex and emulsion stabilizers for synthetic rubber latices; Peptizer P-12, a free-flowing, non-packing powdered material, which retards the recovery of neoprene stocks during storage. In addition to these chemicals, Goodyear developed a chlorinated synthetic rubber and a new synthetic rubber resin which acts as a replacement for carbon black and imparts rigidity to synthetic rubber itself.

Although machinery developments were not startling, several interesting pieces of apparatus

were introduced during the year, including a new automatic tire-building machine capable of producing a passenger car tire every two minutes, ready for curing; a new interval timer especially designed for use in the molding of rubber and plastics, operated and timed by a Telechron self-starting motor; a new brush-backed sanding wheel, which sands, deburrs, and finishes rubber products, removing flash from finished products; a web guide, pneumatically-operated and directly actuated by a circular vacuum chamber, which keeps the trim or weave of rolls well under one-half inch; a motor-driven, floor-mounted unit which prints identifications and other marks on molded and extruded goods during the processing operation; an expander which produces maximum width with minimum warp tension and without undue wear on the surface of the expander in the finishing or coating of fabrics; and a new 36-inch high-speed capstan for rubber and resin-insulated wire. The laboratory field witnessed the introduction of a cord tension vibrator for the fatigue testing by vibration of cords for tires and belting, a new aging bath for use in estimating the comparative ability of rubber to withstand the effect of immersion in oils and liquids, a new instrument for measuring the surface roughness of calendered rubber sheet and other types of rubber products, and a polarizer to determine the amount of strain produced by fabrication or mechanical manipulation of transparent, rigid and nonrigid plastic materials.

The rubber manufacturing industry had few reconversion problems following the end of the war and the accompanying revocations of manufacturing regulations. Few luxury and nonessential items for civilian use, however, made their appearance by the year end. Most new rubber products developed during the year were again military in nature, including a new antiexposure suit for use by the air forces to combat shock from contact with icy waters, a bullet-hole patching device for sealing fuel tanks punctured by gunfire, a pneumatic type of tourniquet designed to eliminate the danger of post-operative gangrene, a new knee-length boot designed for wet-cold climates, a pressurized stratosuit which can be donned in two minutes or less, and a series of waterproof packaging and fabricating materials for weaving into cloth for a variety of purposes. An important innovation in postwar seating was promised by United States Rubber through the development of a new type cushion support for latex cushioning material which, by virtue of its design, will incorporate the leaf spring principle into seating.

The industry had its share of labor-management difficulties during the year, the Navy Department taking over the operation of several plants of the Goodyear Tire and Rubber Company in Akron, Ohio, and the plant of the Lord Manufacturing Company in Erie, Pa., for limited periods, while the army occupied the tire plants of the United States Rubber Company at Detroit, Mich., for several weeks. The recorded history of the rubber industry was changed during the year by the discovery of an old Spanish manuscript which indicated that rubber was used commercially as early as 1785. The year also marked the 50th anniversary of pneumatic tires. Toward the latter part of the year the Inter-Agency Policy Committee on Rubber was organized by the director of War Mobilization and Reconversion, the chief function of which was to formulate a co-ordinated national policy on rubber for the United States.

At the close of the war the Rubber Manufacturers Association issued some statistics indicating the role played by the rubber industry in total victory. Airplane tire production climbed from 39,000 units in 1939 to 1,417,000 in 1944; military tires from 7,680,000 units to 14,713,000; the production of camelback from 54,400,000 pounds to 359,711,000 pounds. During the course of the war more than 10,000,000 hard rubber battery cases were produced for the armed forces, 45,000,000 pairs of rubber boots and shoes, 77,000,000 pairs of rubber soles, 104,000,000 pairs of rubber heels. From January 1944 to July 1945, more than 360,000,000 yards of fabrics were coated and converted to military raincoats, ponchos, jungle hammocks, flotation gear, etc. In all, the industry produced some 30,000 different products for the war effort and essential civilian needs. Editor, The Rubber Age.

RUM. See DISTILLED SPIRITS.

RUMANIA. The kingdom of Rumania (prior to its dismemberment in 1940) lay in the south-east of central Europe, and was bounded east by the Black Sea and Soviet Russia, by Bulgaria on the south, by Yugoslavia on the west, and by Hungary, Poland, and Soviet Russia on the north. A united Rumania was finally achieved in 1859, when the Rumanian principalities of Walachia and Moldavia elected the Moldavian Col. Alexandru Ioan Cuza to be their prince. In 1866 Prince Karl of the house of Hohenzollern was invited to become ruler; he took an oath before Parliament as hereditary prince of Rumania, becoming Carol (Charles) I. In 1881 he was proclaimed king. As a result of the First World War, the provinces of Bessarabia, Bucovina, Transylvania, the Banat, and Crisana-Maramures were added; but during 1940 much of the territory gained was restored to those countries from which it was taken, as indicated under the following heading.

Area and Population.—As a result of the addition of territories to Rumania after the First World War, the area of the country was 113,884 square miles, with a population (1939) of 19,933,802. Among these territories were the provinces of Bessarabia, Bucovina, southern Dobruja, and Transylvania. In 1940, as internal disorders grew in Rumania, and as the European war moved toward the Balkans, Rumania was forced to return these provinces, entirely or in part, to the nations from which they had been taken. Bessarabia and northern Bucovina, with an area of 19,300 square miles and an estimated population of about 3,500,000, were occupied by Soviet Russia, following an ultimatum from Moscow, on June 28–29, 1940 (retaken by German forces July 1941). The northern part of Transylvania was restored to Hungary on Aug. 30, 1940 after a settlement arbitrated in Vienna by Germany and Italy, thus taking from Rumania an estimated 17,370 square miles of territory with a population of about 2,385,987. Southern Dobruja, with an area of 2,982 square miles and a population of about 378,344, was ceded to Bulgaria by Rumania on September 7, and was promptly occupied by Bulgarian troops. Thus, Rumania's total area in 1941 was 94,284 square miles with a population of approximately 17,018,000. The chief cities remaining within Rumanian territory were Bucharest, the capital (pop. 648,162), Galați (102,232), and Timișoara (89,872).

Constitution and Government.—The Rumanian

Constitution was adopted Feb. 27, 1938. According to it, Rumanian citizens are equal before the law, regardless of racial origin or religion. However, no Rumanian may advocate in speech or writing a change in the form of government, a change in the distribution of the wealth of others, exemption from taxation, or class trouble. The clergy may not use their ritual authority for political propaganda, and all political associations based on religious pretexts are prohibited. The state guarantees to all religious denominations equal liberty and protection if their practices are not contrary to public order, good morals, and public security. Furthermore, it is stated that Rumanians shall enjoy liberty of conscience, work, press, assembly, and association. There is a bicameral legislature consisting of a Senate and a House of Deputies. Members of the Senate are nominated by the king, elected, or are life members. Life senators include the heir to the throne, all princes of the royal family, the patriarch, and the metropolitan, the bishops of the Orthodox Church and those of the Greek Catholic Church. Members of the Chamber of Deputies are elected for six years. The king has a suspensive veto over all laws passed by the Parliament. The executive is vested in a council of ministers.

As democratic as this may sound, very soon after the outbreak of the Second World War, the government was easily converted into a totalitarian one. Former King Carol II went into exile, and Gen. Ion Antonescu took over. Rumania then became overnight a pro-Fascist military dictatorship, with little if any authority vested in young King Michael, son and nominal successor of Carol II. Following the invasion of Rumania by the Soviet forces and its conquest by the Russian armies, Rumania on Aug. 23, 1944 accepted the terms of the Soviet armistice. Thereafter a National Government was set up to replace the Antonescu dictatorship.

Religion and Education.—The national church of Rumania is the Orthodox Church, but freedom of worship, provided its practice is not contrary to public order, was recognized by the constitution. In 1938 there were about 13,200,000 members of the Orthodox Church, 1,426,813 Greek Catholics, 1,200,000 Roman Catholics, 720,000 Reformists, 400,000 Lutherans, 75,000 Unitarians, 1,500,000 Jews, 260,000 Moslems, and 140,000 others.

Education was free and compulsory—but there were not enough schools for all. In 1938–39, before the territorial losses suffered in 1940, there were 2,151 infant schools with 120,516 pupils; 175 private and confessional schools with 8,922 pupils; and 1,405 confessional and private elementary schools with 133,184 pupils. In 1937–38, secondary public schools numbered 716, with 168,331 pupils, and 209 secondary private and confessional schools, with 35,923 pupils. For higher education there were three universities—in Bucharest, in Iasi, and in Cernăuți—with a total of 30,771 students.

Finance.—Revenue for the fiscal year 1942–43 was estimated at 71,200,000,000 lei and expenditures at 72,500,000,000 lei. The public debt on April 1, 1939 amounted to 104,127,428,054 lei, of which 68,899,280,215 lei was external debt. The Rumanian leu was valued at \$0.00486 in U.S. currency in 1941.

Production.—Rumania is essentially agricultural and pastoral. Nearly half of the total area of the kingdom before the territorial losses of 1940 was under cultivation. The country has exceptionally

fertile soil. Crops include various cereals, sugar beets, rape seed, hemp, and soybeans. Vines and fruits are abundant. Rumania's feudal agrarian system was one of the most backward in Europe. Out of 19,750,000 hectares of arable land, 13,385,000 hectares were reported to belong to 3,255,000 peasants, while 6,365,000 hectares belonged to 25,000 large landowners. Leaders of the Patriotic League pointed out that 12,000 of the largest landowners owned as much land as 2,000,000 peasants. Sweeping land reforms began in March 1945, following the appointment of Agriculture Minister Romulu Zafroni under the new regime headed by Premier Peter Groza. Huge estates were divided up among the peasantry, promising an end to the Rumanian variety of sharecropping known as *dijma*, under which the landowner frequently took as much as two thirds or more of the crops raised by peasant tenants. The National Democratic Front demanded that all landed properties exceeding 50 hectares be divided among landless and small peasants, the land to be acquired as private property for a suitable price, equivalent to the value of a year's harvest, payment to be spread over a period of 10 years. According to official data of the Finance Department of the Rumanian Ministry of Agriculture, 6,400,000 hectares of land remained in the hands of big landowners. The principal minerals are salt, lignite, iron and copper ores, natural gas, and petroleum. The salt mines, which are state-owned, have an annual output of approximately 300,000 tons. Crude oil produced in 1943 amounted to 8,700,000 metric tons, as compared with 5,150,000 metric tons in 1942.

There were in 1937 a total of 3,512 industrial establishments, including flour milling, brewing, and distilling plants, employing 278,919 persons. Capital invested in these plants aggregated 46,275,399,000 lei.

Oils.—Oils, minerals, and vegetables account for the German Reich's interest in Rumania. Although Rumanian oil production, centered around Ploesti, is only about 3 per cent of the world total, amounting to 8,700,000 metric tons in 1943, it is the most important European oil source outside the Soviet Union. The bombing of the Ploesti oil fields and refineries by Allied planes, Aug. 1, 1943, was reported to have destroyed the refining facilities through which passed a third of the Axis oil supply for motorized equipment on the Italian and Russian fronts. Further bombing attacks by the American and Russian airmen did much additional damage. Rumania's output of natural gas in 1942 was reported as 1,545,000,000 cubic meters.

Foreign Trade.—Rumania's exports in the first half of 1941 amounted to 15,000,000 lei, as against 20,000,000 lei for the corresponding period of 1940. Imports in the first six months of 1941 totaled 9,000,000 lei, as compared with about 15,000,000 in the first half of 1940. Of the imports, 63 per cent in the 1941 period came from Germany which in turn took 66 per cent of the country's exports. Other leading customers, in order of importance, were Italy, Switzerland, Turkey, Bulgaria, and Sweden.

Communications.—The principal railways in Rumania are state-owned and had in 1940 a total mileage of 9,505. Highways totaled 65,670 miles in 1938, of which 8,393 miles were national roads, 19,140 miles departmental roads, and 38,137 miles commercial roads. There were 48,708 miles of telegraph wire and cable in 1938, and 93,155 miles of telephone lines.

Principal Events of 1945.—On Oct. 11, 1944 the first members of the Allied Control Commission arrived at Bucharest. Premier Constantin Sanarescu's government (a coalition of Peasant, Liberal, Social Democratic, and Communist parties) reshuffled its membership on November 4 by eliminating the Peasant and Socialist representatives. On December 6, Gen. Nicolai Rădescu replaced General Sanatescu as premier, and laws reversing the anti-Semitic ordinances of the Antonescu regime were passed. The latent conflict between the coalition government and the Communists burst into the open on Feb. 24, 1945 when large groups of armed Communists of the Communist-inspired National Democratic Front attempted to overthrow the government. Shooting simultaneously occurred in several provincial towns. As a result, four days later the entire Cabinet resigned. On March 1, 1945 the king appointed Prince Barbu Stirbey (it was he who broke the ice for negotiations resulting in Rumania's armistice with the Allies in 1944) to form a new government; but there was still unrest in the country. The king then selected Dr. Peter Groza, a wealthy Transylvanian and head of the Leftist National Democratic Front, as prime minister. General Rădescu had to take refuge in the British legation in Bucharest. The Soviet-approved Groza was allowed by the Soviet government (March 10) to take over the control of northern Transylvania. The anti-Communist press was suppressed, and soon for the Rumanian man in the street there was no more freedom of expression than under the Nazis. There was the immediate problem created by the National Democratic Front's insistence on immediate land reform. Proprietors of farms in excess of 125 acres, knowing that they were to be expropriated, saw no reason to invest any money in seed or to make any effort to fill their quotas. Iuliu Maniu, the 72-year-old president of the National Peasant Party, went into retirement March 18, seeing no chance for a free election.

In January 1945, acting on a decree entitled "Conscription for Labor in the USSR of Rumanian Citizens of German Ethnographical Origin," the Allied-Soviet armistice commission began deporting 70,000 persons of German origins to Central Asia; and 36,000 refugees who had fled from Bessarabia in 1940 prior to the Soviet occupation were removed to other parts of the Soviet Union. Anna Pauker, an underground Communist worker until her arrest in 1935, who later was freed to go to the Soviet Union, became the real power in Rumania, next to the Communist members of the government: Lucretiu Patrascanu, minister of justice; Petre Constantinescu-Iasi, minister of propaganda; and Gheorghe Gheorghiu-Dej, minister of public works. On September 8, Soviet dissatisfaction with the Anglo-American policy toward the government of Groza was brought into the open with a vigorous editorial in *Izvestia* charging that King Michael asked outside intervention in forming a representative government under pressure of American and British representatives. In September Moscow eased the armistice terms for Rumania by agreeing to a "request" to return control of Rumanian railroads, restore part of Rumania's Black Sea and Danube shipping fleets taken as prizes, repatriate Rumanian prisoners of war in return for "Soviet citizens" (Bessarabian and Bucovinian) residing in Rumania, and reduce Rumania's \$300,000,000 reparations debt.

JOSEPH S. ROUCEK,
Professor of Political Science, Hofstra College.

RUNDSTEDT, Karl Rudolf Gerd von, German Army officer: b. Aschersleben, Prussia, Dec. 12, 1875. Once called by General Eisenhower "the greatest German strategist" of the Second World War, Marshal von Rundstedt engineered the German breakthrough at Sedan in 1940; the drive through the Ukraine in 1941; the Battle of the Bulge, 1944-45; and until Allied armies began swarming across the Rhine in March of the latter year, was supreme German commander in Western Europe. On May 1, in the final days of the European war, he was taken prisoner by American Seventh Army units near Bad Tolz, Bavaria. Interviewed shortly after his capture by United States correspondents, von Rundstedt gave what he considered the principal factors determining Germany's loss of the war—Allied strategic and tactical bombing; lack of oil and gasoline to power motorized German transport; and the power of Allied naval guns which at the time of the Normandy invasion reached deep inland, making it impossible to move forward reserves to stem the Allied invasion tide.

Son of a general and typical of the stiff-necked Prussian army officer, von Rundstedt was groomed for a military career almost from infancy. In the First World War, he distinguished himself in the Alsace sector as commander of Infantry Regiment 171; was summoned by the German General Staff to help plan grand strategy; and remained with the group until the war's end.

RUPERTUS, William Henry, United States Marine Corps officer: b. Washington, D.C., Nov. 14, 1889; d. there, March 25, 1945. Major General Rupertus received the Navy Cross and the Distinguished Service Medal for his command of the 1st Marine Division in the Solomons and the New Britain campaigns of the Second World War. General Rupertus personally led the marines who captured Tulagi, Gavutu, and the Florida Islands, and he participated in all engagements of the First Marine division from Guadalcanal to Peleliu. After the Peleliu campaign in the fall of 1944, he was brought back to the Marine Corps Base at Quantico, where he served as commandant of the corps school.

RURAL ELECTRIFICATION ADMINISTRATION.

More than 135,000 rural consumers were added to the number receiving electric service from borrowers of the Rural Electrification Administration during the fiscal year ended June 30, 1945. As during the previous year when approximately 110,000 consumers were added, most of these new consumers consisted of farms qualifying for service under the emergency regulations of the War Production Board authorizing the connection of farms able to employ electrical equipment in livestock, dairy and poultry production.

At the close of the fiscal year REA had allocated a total of \$564,968,184 as loans to 926 borrowers consisting of 852 locally-owned co-operatives, 55 public bodies, and 19 private utilities. Of the total, 832 borrowers had 424,072 miles of line in operation furnishing power to 1,287,347 consumers in 46 states, Alaska, and the Virgin Islands.

REA borrowers had a gross revenue of \$68,-151,594 in the fiscal year ended June 30, 1945, and as a group, constituted one of the largest blocks of electrical purchasing power in the nation. For the year ended June 30, 1945, these borrowers purchased 2,263,764,867 kilowatt-hours of electric energy at wholesale. The increasing use of electric power in farm production

is shown by the fact that during December 1944 REA-financed systems under 3 years old reported that their farm consumers used an average of 59 kilowatt-hours monthly. However, on systems over 6 years old the average monthly consumption was 97 kilowatt-hours. Borrowers also report increased use of power by other rural consumers, such as mines, factories, and commercial enterprises.

As of June 30, 1945, REA had advanced \$427,566,738 as loans to its borrowers. These borrowers had paid in interest and repayments of principal a total of \$94,588,561.75 to REA on their loans, against \$75,810,770.56 due at that time.

During the year, REA borrowers were very active in the preparation of plans to extend electric service on an area-wide basis—averaging in the thin areas with those more densely settled—to unserved rural consumers as soon as war conditions would permit the use of materials for this purpose. The relaxation of War Production Board regulations in May 1945 permitted borrowers to begin the execution of their plans. The rapid expansion in rural electrification anticipated in the immediate future was contained in a report of the United States Department of Agriculture Committee on Postwar Programs outlining an REA 3-year program for the construction of lines to bring service to about 1,300,000 additional consumers and a 5-year program for all agencies to provide service to 3,655,000 rural consumers. On June 30, 1945, REA reported that it had loan applications totaling nearly \$240,000,000.

An important development during the fiscal year was the passage in September 1944 of legislation liberalizing REA loan terms and expanding the administration's lending authorization which opens the way for a broadening of REA-financed rural electrification into thinner territory. Under these provisions, borrowers will be enabled to extend service on the new terms into many areas that might not have been considered economical under the old terms. Borrowers thus will be able to extend further the principle of area coverage on which the REA program is based.

REA was established by Executive Order on May 11, 1935, as an emergency agency. The Rural Electrification Act of 1936, approved May 20, 1936, created REA as a continuing agency and authorized the lending of funds to finance facilities to furnish central station service to persons in rural areas not receiving it. On July 1, 1939, REA became an agency in the Department of Agriculture. REA headquarters are in Washington, D.C. Claude R. Wickard is the administrator.

ROBERT T. BEALL,

Economist, Rural Electrification Administration.

RURAL TELEPHONES. See TELEPHONE PROGRESS, Section 5.

RUSSELL, James Earl, American educator: b. Hamden, Delaware County, N.Y., July 1, 1864; d. Trenton, N.J., Nov. 4, 1945. Over a span of almost 50 years as a professional educator, Dr. Russell had a great influence on educational standards in the United States and many foreign countries. Dean of Teachers College, Columbia University, from 1897 to 1927, he campaigned unceasingly for the scientific movement in education and closer co-operation between the school and the community. Starting with a small private normal school of 169 girl students when he became dean, Dr. Russell, at his retirement, had

built Teachers College into what is considered by many the leading school of education in the United States, with an enrollment of 5,000 students, a teaching staff that had increased from 20 to 250, and an endowment of \$3,000,000.

After graduating from Cornell University in 1887, Dr. Russell studied at the universities of Jena, Leipzig, and Berlin (1893-95), receiving his Ph.D. degree from Leipzig in 1894. He had served as principal of Cascadilla School in Ithaca (1890-93); European commissioner for the regents of the University of the State of New York, and European agent for the United States Bureau of Education (1893-95); and as professor of philosophy and pedagogy at the University of Colorado (1895-97). He was president of the American Association for Adult Education from 1926-30, and chairman since 1930.

RUSSELL SAGE FOUNDATION. Established by Mrs. Russell Sage in 1907 for the purpose of promoting the improvement of social and living conditions in the United States of America, the original gift amounted to \$10,000,000, to which Mrs. Sage later added \$5,000,000 by will. The general aim of the foundation is to study the causes of adverse social and living conditions and to make available to citizens information which will assist them to relieve, remedy, or prevent such conditions. The departments of the foundation which carry on this work are: Charity Organization; Consumer Credit Studies; Industrial Studies; Social Work Interpretation; Social Work Year Book; Statistics; Studies in the Professions; The Arts and Social Work; Library; Publications; and General Administration. The foundation, while not primarily a contributing organization, also makes grants to agencies with kindred objectives, presently devoting less than one third of its income to this purpose.

Officers.—The officers and trustees of the foundation are: Morris Hadley, president; Joseph P. Chamberlain, vice president; Arthur H. Ham, treasurer; John M. Glenn, secretary; Lindsay Bradford, Harry Woodburn Chase, Eli Whitney Debevoise, Johnston de Forest, Robert M. MacIver, Dave H. Morris, Jr., Lawson Purdy, and Harold T. White. Shelby M. Harrison is general director.

Charity Organization.—The interests of this department have for several years centered in studies of public welfare objectives and methods, government relief policy, the social security program, and social work organization and activity. The problems currently having the consideration of the department are: (1) community organization for health and welfare in the postwar period; (2) measures for the administration of overseas relief; (3) public assistance policy in the light of governmental practices during the past decade.

Consumer Credit Studies.—The work of this department is directed toward improvement of the conditions under which credit is available to families of limited means, prevention of abuses of small debtors by creditors, furtherance of statistical knowledge concerning consumer credit, and the interpretation of the social and economic significance of developments in the field of consumer credit. The director, while retaining responsibility for the department's work, was lent to the federal government for emergency work during the period from May 1941 to February 1944. He participated in the development of facilities and techniques for restricting consumer credit as a wartime measure, which represented

the practical application of information gathered by this department in several years' study of the economic effects of consumer credit fluctuations. Later he served successively as chief of the Automobile Rationing Branch, chief of Consumer Requirements Branch, and director of the Credit Policy Office in the Office of Price Administration; as associate chief of the Civilian Food Requirements Branch of the War Food Administration. Since February 1944 he has been on leave for work with UNRRA, first as economic adviser to the Bureau of Supply and currently as deputy chief of the Yugoslav mission. The department has continued to advise with federal and state governments, social agencies, and individuals on regulatory legislation in the consumer credit field.

Industrial Studies.—The scientific discovery of the ways of releasing atomic energy which led to the production of the atomic bomb was recorded as a new source of power in the department's study, *Technology and Livelihood*, published in January 1944. The discovery was mentioned as illustrative of dynamic change in methods of production resulting from science which presents to society the problem of social adjustment to technological change. The department is carrying on a further study of this problem, under the title *New Productivity for Living Standards*.

In accord with the foundation's aim to improve social and living conditions, this department includes in its area of interest trade unions as a social institution capable of promoting progressively higher standards of living. A continuing study which the department is carrying on deals with the history of the unions in their relations with industrial management and with government in the period 1929-45.

Social Work Interpretation.—This department seeks to increase public understanding of social and health problems and services. Its studies, publications, and other services are directed toward development of suitable training for public relations personnel and more effective use of public information programs on the part of both governmental and voluntary agencies. The main activity of the department at present is a continuation of its case studies dealing with public relations and publicity in national, state, and local agencies. Two of these studies have been published, one in 1943 and the other in 1944. Two others are nearing completion.

Social Work Year Book.—The foundation publishes biennially the *Social Work Year Book*, a concise encyclopedia describing the current status of organized social work and related fields. The *Year Book* is intended for use by social workers, practitioners in related fields, publicists, students of the social sciences, legislators, public administrators, librarians, teachers, agency board members, and other interested persons. The 1945 edition reflects the many changes in social work brought about by the war.

Statistics.—This department advises concerning statistical procedure in foundation studies and reviews statistical material intended for publication by the foundation. Much of its work has been directed to the improvement of statistics of social work, and consultation on this subject represents an important part of its function. At present, operating statistics of selected agencies in family and medical social work are published monthly. Personnel and salary studies in several divisions of social work have been made and published recently.

Studies in the Professions.—Prior to 1944 when this department was established for continued examination of questions relating to the professions, the work had been conducted for some ten years as a special project of the Department of Statistics. Monographs have been published, some in several editions, on engineering, medicine, law, nursing, and social work. They have been primarily concerned with the adequacy, both in quantity and quality, of the service rendered by each profession. Because of their influence in determining adequacy, the following topics have been considered: professional training, professional associations, number and distribution of personnel within the particular profession, demand versus need for service, salaries. At present the department is preparing three pamphlets on the responsibility of the law school to train for public service. It is also making an examination of legal aid and other forms of legal assistance for persons of small economic means.

The Arts and Social Work.—This department conducts studies of the influence of the arts upon people in everyday life. It attempts to bring art, in its broad sense, into closer relation with social work. Its studies are intended to aid workers, particularly in rural areas, in improving their standards of craftsmanship, and to contribute to the establishment of handicrafts on a more permanent basis. Its reports have pointed out the important values which come to both makers and users from the practice of handicrafts. Experiments are also carried out in creative expression in the visual arts among several groups of adults untrained in the arts, and in institutions for handicapped persons. An exhibition of beauty for the blind is in preparation.

Library.—The library of the foundation contains approximately 43,000 bound volumes—including research reports, periodicals, and conference proceedings—and 165,000 unbound reports, bulletins, and pamphlets, all covering social welfare and related fields. The library is available to students of social problems daily, except Sundays and legal holidays, from 8:45 A.M. to 5:00 P.M. From October 1 to June 15 it is open also five evenings a week until 9:00 P.M. It is closed on Saturday afternoon from June 1 through September 30. Nearly 35,000 persons used its facilities in the last year, October 1944–September 1945.

Publications.—All books and pamphlets issued by the foundation (125 books and over 200 pamphlets to date) are moderately priced to facilitate their wide distribution among interested persons. Important recent publications are the following: *Technology and Livelihood*, by Mary L. Fledderus and Mary van Kleeck; *Institutions Serving Children*, by Howard W. Hopkirk; *Building a Popular Movement*, by Harold P. Levy; *The Recent Trend of Salaries in Child Welfare Agencies, and Operation Statistics of Selected Family Casework Agencies*, 1943, by Ralph G. Hurlin; and a bibliography on *Rehabilitation of the Disabled Serviceman*. Joanna C. Colcord's *Your Community* had its seventh printing and has become the second most widely distributed of all foundation books.

The offices of the foundation are at 130 East 22d Street, New York 10, N.Y.

RUTHENIA. Formerly a province of Czechoslovakia known as Podkarpatska, Carpatho-Ukraine, or Subcarpathian Ukraine, now incorporated in the Soviet Union as the Transcarpathian Region of the Ukrainian S.S.R. As a Czechoslovak province, the area (1935) was 4,871 square miles, and the population numbered (1930) 725,357. The country is mountainous and heavily timbered and, lying on the western slopes of the Carpathian Mountains, has great strategic value. Lumbering and stock raising are the principal occupations of the people, and chemicals are manufactured on a small scale. Hungarians constituted 15 per cent of the inhabitants of this most sparsely populated province of Czechoslovakia, and Czechs 5 per cent; the overwhelming majority are Ruthenians (people of the place), a mixture of Slavic races speaking a dialect of Russian.

Ruthenia had been part of Hungary for 11 centuries prior to 1918, when, following that country's defeat in the First World War, councils representing the three major ethnic groups voted for incorporation into the newly constituted Czechoslovak state as an autonomous province. In November 1938, when the Sudetenland was detached from Czechoslovakia and annexed by Germany, the latter countenanced Hungarian occupation of part of Ruthenia; and Hungary seized the remainder of the country on March 14, 1939, 24 hours after it had declared its independence. Russian troops expelled German occupation forces from Ruthenia in October 1944, and early the next year it resumed its position as part of reconstituted Czechoslovakia. By an agreement signed in Moscow on June 29, 1945, the Czechoslovak government ceded Ruthenia to the Soviet Union, provision being made for two commissions to fix the new boundaries between the two countries and to liquidate property in Ruthenia. While the majority of the inhabitants might have been expected to vote for Russian sovereignty, before the decision was taken there had been neither international consultation nor a plebiscite of the people concerned. Up to January 1946, however, Slovaks and Czechs in Ruthenia had the right to apply for Czechoslovak citizenship, and Russians and Ukrainians in all parts of Czechoslovakia might choose to become citizens of the Soviet Union. Czechoslovakia no longer has a common frontier with Rumania, and the project for a like frontier between Hungary and Poland has been forestalled; and by crossing the Carpathians, the traditional "boundary of Europe," the Soviet government acquires a common frontier with Hungary, fulfilling an ambition formulated first in the era of the Russian Empire.

RYAN, John Augustine, American ecclesiastic: b. Dakota County, Minn., May 25, 1869; d. St. Paul, Minn., Sept. 16, 1945. Monsignor Ryan, whose efforts played a large role in writing minimum wage laws into American social legislation and whose work was one of the chief factors in rousing social consciousness among the American people, was the leader of the liberal wing of the Roman Catholic Church in America.

Monsignor Ryan prepared for the priesthood at the St. Paul Seminary and was ordained in 1893, when he was sent to Catholic University in Washington, D.C., for four years of postgraduate

study. He returned to St. Paul Seminary in 1902 and spent the next 13 years there as professor of moral theology and economics. In 1906 his doctoral dissertation, *A Living Wage: Its Ethical and Economic Aspects* was published. This book made minimum wage legislation a goal of American progressives and prepared the way for state and federal laws. Monsignor Ryan himself wrote the Minnesota Minimum Wage Law, the pattern for subsequent acts. In 1909 he presented the first of his programs for social reform by legislation. It included the minimum wage, the eight-hour day, child labor, conciliation and arbitration boards, state employment agencies, and social insurance, as well as control of public utilities, monopolies, and speculation, and taxation of incomes, inheritances, and land values. Returning to Washington in 1915, he joined the faculty of Catholic University and Trinity College, teaching moral theology, industrial ethics, and political science. During the First World War, he drew up a program for social reconstruction. It was adopted by the bishops who were members of the administrative committee of the National Catholic War Council, predecessor of the National Catholic Welfare Conference (NCWC), and promulgated by them in 1919 as the Bishop's Program. To achieve the goals of this program, the social action department of the NCWC was established and Monsignor Ryan in 1920 was installed as director. He was an influential supporter of the late President Franklin D. Roosevelt and served as a member of the Industrial Appeals Board of the National Recovery Administration. In 1937 he was elevated to the monsignori, and two years later retired from Catholic University.

Among Monsignor Ryan's many books are *Distributive Justice* (1916); *The Church and Socialism* (1919); *Social Reconstruction* (1920); *Declining Liberty* (1927); *The Catholic Church and the Citizen* (1928); *A Better Economic Order* (1935); and *Social Doctrine in Action* (1941), an autobiography.

RYE. According to the October 1 estimate of the Department of Agriculture, the rye crop of the United States in 1945 amounted to 27,883,000 bushels, compared with the 1944 crop of

25,872,000 bushels, and the 1934-43 average crop of 41,434,000 bushels. South Dakota nosed out Nebraska for first place by producing 4,495,000 bushels against 4,472,000 bushels. Minnesota was the third largest producer with 2,178,000 bushels.

RYUKYU ARCHIPELAGO (also called **NANSEI SHOTO** and **LUCHU**), a chain of 55 islands belonging to Japan extending from a point 80 miles south of Kyushu to a point 73 miles northeast of Formosa. Their area is 935 square miles and the population about 455,000. The Ryukyus are divided into three main groups, the northern called Oshima Shoto, the central called Okinawa Gunto, and the southern, Sakishima Retto. The words *shoto*, *gunto* and *retto* are translatable, respectively, as "archipelago," "island cluster," and "string of islands." The city of Shuri in Okinawa was the ancient capital; the modern capital is neighboring Naha.

History.—Though the Chinese several times invaded the islands, beginning early in the 7th century A.D., they never annexed them. But in 1372 the Luchuans conceded Chinese overlordship. After a long period of friendship, the Japanese under the prince of Satsuma in 1609 invaded the islands and took the Luchuan king captive. A few years later they restored him to his throne upon condition of his acknowledging Japanese suzerainty. From that time the Luchuans paid tribute to both the Chinese and the Japanese empires. This anomalous state of affairs continued until 1879 when the Japanese de-throned the reigning prince and incorporated the Ryukyus as a prefecture under the name of Okinawa. When the Chinese government remonstrated, a conference was held at Peking where plenipotentiaries signed an agreement dividing the archipelago between the two claimants. The Chinese government never ratified the agreement, and the Japanese proceeded to establish their administration throughout the entire archipelago. After the Japanese conquest of Formosa in 1895, the Chinese ceased to make further claims for the Ryukyus. For the Battle of Okinawa see under **MARINE CORPS, U.S.; WORLD WAR, SECOND.**

S

SAINT CHRISTOPHER. See **LEEWARD ISLANDS (B.W.I.).**

SAINT HELENA. A British colony in the South Atlantic; comprises the island of Saint Helena (955 miles south of the equator, 1,200 miles west of Africa) and two dependencies: Ascension (700 miles northwest of Saint Helena); and Tristan da Cunha (an island group 1,500 miles south-southwest of Saint Helena). A governor (Maj. William Bain Gray appointed March 18, 1941) is assisted by an Executive Council of 5 officials and an Advisory Council having 6 nominated unofficial members. Jamestown (pop. 1,381), Saint Helena's port, is the capital of the colony.

Saint Helena.—This island 47 square miles in area, has a population (est. 1940) of 4,710. It was loaned by the (British) East India Company in 1815 as a place of exile for Napoleon

Bonaparte, and after his death there (at Longwood) in 1821 the island was ceded to the crown. Revenue in 1940 amounted to £33,720, and expenditure was £33,365; with no public debt, at Dec. 31, 1940 the colony's assets exceeded liabilities by £4,857. There were 9 elementary schools (3 government, 6 state-aided) with 984 pupils in 1940. Only one third of the island can be cultivated. Nine mills (one of them operated by the government) prepare hemp from phormium flax, which is grown on a relatively large scale; fiber, tow, rope and twine constitute the island's chief exports. Lace-making is a small industry. Exports in 1940 were valued at £29,672, and imports at £50,932. During 1940-45 the British treasury provided £78,139 to be expended on a five-year program of agricultural development (£26,000), increased educational facilities (£6,000) and housing (£20,000), and such other schemes

as improvement of the water supplies. The island's roads total 62 miles in length.

Ascension.—With an area of 34 square miles, and a population (1940) of 169, the island had no inhabitants when first occupied in 1815. It was administered by the British Admiralty until 1922, when it was annexed to the colony of Saint Helena. A resident magistrate (S. H. Cardwell), at Georgetown, is subordinate to the colonial governor. The value of Ascension has long lain in its use as a cable and wireless station. Since March 30, 1942, United States troops have been stationed on the island, where they have built an airbase used by planes en route to Africa or patrolling the South Atlantic. A distillation plant has replaced large catch basins atop Green Mountain to provide drinking water. A wide variety of vegetables has been grown for the garrison by hydroponics (the science of chemical agriculture) since January 1945, chemicals mixed with water causing the infertile volcanic gravel to yield rich crops; plants on the island grow about 10 per cent faster than they do in temperate zones.

Tristan da Cunha.—This group comprises four small islands with an aggregate area of 45 square miles: Tristan (16 square miles), Inaccessible (4 square miles), Nightingale (1 square mile), and Gough (24 square miles). Tristan, the only inhabited island (pop., 1944, 222), was annexed in 1816; the group became a dependency of Saint Helena in 1938. Authority is represented by a chief of the islanders, and an Island Council of three. Crops and livestock do well, and fishing is abundant. After Japan entered the Second World War, the British government stationed a naval detachment on Tristan Island.

SAINT KITTS. See LEEWARD ISLANDS.

SAINT LUCIA. See WINDWARD ISLANDS.

SAINT PIERRE AND MIQUELON, pyâr and mik ê-lôn'. Largest islands of two small groups off the south coast of Newfoundland and belonging to France. The area of the St. Pierre group is 10 square miles, with a population estimated in 1944 at 3,600; and of the Miquelon group, 83 square miles, with a population of 520. The chief town and capital is St. Pierre. Elementary education is free. There are six schools with 900 pupils, a number of infant schools with 150 pupils, two private schools, and a private boarding school. Cod fishing is the chief industry. Being mostly barren rock, the islands are not adapted to agriculture. Imports, consisting of textiles, salt, foodstuffs, meat, and wines, had a value of 30,338,370 francs in 1943, while exports, wholly of fish and fish products, were valued at 10,259,434 francs. The budget for 1940 balanced at 13,738,690 francs. There is regular steamer communication with North Sydney and Halifax and telegraphic connection with Europe and the American continent.

SAINT VINCENT. See WINDWARD ISLANDS.

SAIPAN. See JAPANESE SOUTH SEA ISLANDS.

SAKHALIN, sà-kà-lên'. An island off the east coast of Siberia, north of Japan. Formerly part of the Chinese Empire, it was occupied by the Russians between 1875 and 1905, being used by them as a penal colony. After the Russo-Japanese War, the Japanese, by the Treaty of Portsmouth (1905), obtained the part of the island south of 50° N., the section north of that point being assigned to Russia. The Japanese, however, did not give up the Russian section until 1925. This northern part, with an area of about 15,700

square miles, has been developing under the Five-Year Plan. Modern machinery is being used in the extraction of coal and crude petroleum, motor boats have replaced fishing smacks, refrigeration is used to preserve the fish, and lumbering and ship building industries have been started. Agriculture has been collectivized and is being mechanized. Schools, hospitals, and modern housing have been introduced. The Nivkhi (Gilyaks), and other aboriginal inhabitants of Sakhalin, formerly very backward and believed to be dying out, are increasing in numbers. The population of the territory as a whole, which in 1926 was about 12,000, increased 10-fold between 1925 and 1936. Plane service connects the Soviet part of Sakhalin with Khabarovsk on the mainland.

The southern part of Sakhalin continued in Japanese possession under the name of Karafuto until August 1945, when it was captured by the Red armies. The Soviet government, it was understood, had never given up its claim to southern Sakhalin despite the Treaty of Portsmouth. On Sept. 3, 1945, Premier Joseph Stalin announced that south Sakhalin, and the Kurile Islands would be taken over by the Soviet Union. Under Soviet control, he said, they could no longer be used as a springboard for Japanese aggression against the USSR, or as a means of blocking Soviet Pacific Ocean approaches. On September 4 the *New York Times* reported that the United States had "tacitly agreed" to Soviet possession of southern Sakhalin and the Kuriles. The area of the former Karafuto is 13,935 square miles. In 1938 its population was 339,357, mainly Japanese, with 7,623 Koreans and 338 Europeans. The chief city is Toyohara (pop. 37,922). Although large areas of the land are adapted to agriculture and pasturage, under the Japanese, fishing had remained the most important industry, although the lumber and wood pulp, petroleum and coal of Karafuto had also figured significantly in Japan's war effort. In 1939 Karafuto produced 3,869,000 barrels of petroleum. Alluvial gold is also found. Railways, with a total length of 404 miles, connect the main centers. Industries, particularly fish canneries and pulp mills, and the leading ports—Odomari (Otomari) and Honto, as well as Toyohara, the capital—are situated toward the southern end of the territory.

SALT. According to the United States Bureau of Mines the total domestic salt production in 1944 was 15,717,171 short tons valued at \$45,989,264, as compared with 15,214,152 tons valued at \$43,878,266 in 1943, representing an increase of 3 per cent in quantity and 5 per cent in value compared with totals in 1943. Compared with 1943, rock salt output in 1944 increased 6 per cent and brine 5 per cent, but the output of evaporated salt declined 1 per cent. The chief factors contributing to the increases were expanded chemical uses and augmented production of synthetic rubber.

In 1944, salt was produced in 81 plants of 53 companies operating in 13 states and Puerto Rico. As in years past, Michigan led in total salt produced, followed by New York, Ohio, Louisiana, Texas, Kansas, and California. The Midwest section (Kansas, Michigan, and Ohio) produced 51 per cent of the national total in 1944. Michigan and New York together produced 46 per cent of the 1944 output, Michigan leading in evaporated salt, and New York in rock salt.

SALTEN, Felix (the pseudonym of FELIX SALZ-MANN), Austrian novelist, essayist, and play-

wright: b. Budapest, Hungary, Nov. 6, 1869; d. Zurich, Switzerland, Oct. 8, 1945. Internationally known for his animal stories, Felix Salten was the author of *Bambi* (German ed., 1923), the sensitive and poetic story of a fawn who grew up to be a princely deer.

Born of Jewish parents, Salten was brought to Vienna as a child and educated at the gymnasium in that city. For a time he served as dramatic critic on the Vienna *Neue Freie Presse*, and in 1927 his translation of *Abie's Irish Rose* was produced with great success in Vienna by Max Reinhardt. When Hitler invaded Austria, Salten fled to Switzerland. In 1942 Walt Disney released a full-length color cartoon film based on *Bambi*. Among Salten's other books are: *Die kleine Veronika* (1903); *Neue Menschen auf Alter Erde* (1925); *Fünfzehn Hasen* (1929); *Freunde aus Aller Welt* (1930); *Gute Gesellschaft* (1931); *Louise von Koburg* (1932); *Dieses Kleines Mädchen* (1934); *Florian das Pferd des Kaisers* (1935); *Kaisertochter* (1936); and *Die Jugend des Eichhörnchens Perrg* (1938). English translations include *Bambi*; *Hound of Florence*; *Fifteen Rabbits*; *Samson and Delilah*; *City Jungle*; *Florian*; *Perri*; *Bambi's Children*; *Renni the Rescuer*; *Good Comrades*; and *Forest World*.

SALVADOR (EL SALVADOR). The smallest of the Central American republics and the second smallest Latin American republic, Salvador has an area of 13,176 square miles. Its population of 1,896,168 (1943 est.) makes it the second most densely inhabited Latin American state, with an average of more than 140 per square mile. More than three fifths of the population is rural. Mestizos constitute 80 per cent and Indians 19 per cent of the population. Important cities are San Salvador, the capital (1945 est., 105,193), Santa Ana (90,618), San Miguel (48,643), Zacatecoluca (29,474), Santa Tecla (Neuva San Salvador, 35,587), Ahuachapán (33,652), and San Vicente (31,362). Salvador is bounded on the west by Guatemala, on the north and east by Honduras, and on the south by the Pacific Ocean; it is the only Central American country without a Caribbean coastline. Much of the country is a volcanic highland but in no case do the mountains reach 8,000 feet in height. Fertile intermont basins have an average elevation of about 2,000 feet. From the second quarter of the 16th century until independence from Spain was attained in 1821, Salvador was part of the captaincy general of Guatemala. After a futile attempt to annex itself to the United States, it was a province of the Central American confederation from 1824 to 1839, following which it became an independent state. A constitution drafted in 1939 under the domination of the dictator, Maximiliano Hernández Martínez, governed the republic until after the resignation of Martínez under pressure in 1944, whereupon a modified form of the constitution of 1886 was restored. A convention in 1945 worked on a new constitution, not completed, however, by September 1945. Salvador is divided into 14 territorial departments.

Religion and Education.—The predominant religion is Roman Catholicism though religious freedom has prevailed for many years. An archbishop is located at San Salvador and bishops at San Miguel and Santa Ana.

Education is free and theoretically compulsory. The latest general figures for literacy are only 21.2 per cent, however; this has probably been improved, as 1942 marriage statistics for

12,932 persons showed 47 per cent of the men and 36 per cent of the women as literate. The latest education statistics showed 1,330 primary schools with 89,792 pupils, 58 intermediate schools with 3,309 pupils, and one university with 506 enrolled; there are also commercial and normal schools.

Communications.—Total railway mileage is 385, operated by two lines, the more important of which is the International Railways of Central America (IRCA) linking Salvador and Guatemala. Passengers carried in 1941 totaled almost 900,000. Salvador has 3,709 miles of highways, not all of which are improved, however; all-weather roads now total 1,377.7 miles in length. Systematic highway improvement dates from 1926 with the organization of a national Bureau of Roads. The major project in recent years has been the completion of the Pan American Highway through Salvador; its length in that republic is 193.2 miles. An excellent highway connects San Salvador and the closest port, La Libertad. Airplane service is furnished principally by Pan American Airways. Vehicle registrations in 1943 included 2,700 passenger cars, 676 buses, and 698 trucks. The 4,411 telephones are connected by more than 3,500 miles of line; 257 telegraph offices have been served by 2,412 miles of line. Radio statistics for 1943 showed four broadcasting stations and approximately 11,000 receiving sets. Post offices number 223.

Production.—Salvador is primarily an agricultural country and its land is utilized more fully than that of any other Central American republic, approximately four fifths of it being under cultivation. Coffee is much the most important crop, Salvador being exceeded in coffee exports only by Brazil and Colombia. Important quantities of corn, sugar, beans, rice, cotton, and henequén are grown for local consumption. The approximately 270,000 acres devoted to coffee growing are exceeded by the acreage in corn though the latter is not an important cash crop. Fruits grown in Salvador include pineapples, papayas, bananas, avocados, oranges, and others; the lack of an extensive warm coastal plain has prevented Salvador from becoming an important banana-producing region, however. Forest products include mahogany, cedar, and walnut, small amounts of rubber, and the important (and misnamed) balsam of Peru, a medicinal gum. The only developed mineral resources are gold and silver, although presence of coal, iron, zinc, copper, lead, and others has been reported. In general, minerals exist in small quantities and in areas difficult of access. Gold production has fluctuated widely, the recent peak (1940) being a value of \$1,766,111. Industrial production is dependent primarily upon the agricultural products of the country. It includes sugar refining, alcohol distillation, tanning, tobacco processing, textile and clothes manufactures, matches, soap, cement and cement blocks, henequén bags for coffee. The government for some years has attempted to encourage industrialization (e.g., by the requirement that coffee be shipped only in bags of national manufacture) but important unfavorable factors have included the lack of raw materials, skilled labor, and fuel, and the small domestic market.

Finances.—Though customs receipts have been falling steadily since 1936–37, they still form the major item of revenues, representing almost one third. National defense has been the major item of government expenditures. The year 1943 showed a treasury surplus of \$1,100,000; the

debt in that year was 51,300,000 colones (colón = 40 cents), C45,600,000 of which was external debt. Internal debt by 1943 had doubled from that of 1939 and external debt was about one third greater. The government in 1944 attempted to work out a debt refunding plan but with only partial success. Salvador has no system of exchange control but foreign exchange was reported at the end of 1944 as adequate to meet commercial needs; almost all exchange is in dollars, a small amount in sterling.

Foreign Trade.—Exports in 1943 totaled \$22,530,000 or \$11.98 per capita; imports for the same year were \$11,943,000 or \$6.35 per capita. Diversification of agriculture has lowered the percentage of coffee in total exports, although it is still far in the lead; the percentage in 1943 was 79 but in 1938 it was 87. Salvador's basic quota for coffee has been fixed at 600,000 bags of 60 kilograms. This figure was increased for the 1944-45 crops to 845,838 bags. Export of coffee to the United States in the 1943-44 crop year was 762,182 bags. The estimate of exportable coffee from the 1944-45 crop was 920,000 bags (as against 1,090,000 bags in 1943-44). Actual exports from Oct. 1, 1944 to June 30, 1945 were 767,757 bags. Salvador's coffee has always been a quality product and has commanded a favorable price in foreign markets, most of it going to the United States. Total exports to the United States in 1943 were valued at \$14,492,000 and total imports from the United States at \$7,013,000. The share of United States trade substantially increased during the war. The government early in 1945 extended its commercial *modus vivendi* with Mexico to Oct. 3, 1945. Foreign trade, especially in the export of coffee, was seriously interrupted early in 1945 by the rail embargo imposed by Guatemala during the period of strained relations; this led to the temporary accumulation of more than a million bags of export coffee.

Principal Events.—Salvador's history during the first three fourths of 1945 was much less turbulent than it had been in 1944. The harsh and repressive government headed by Col. Osmin Aguirre y Salinas, which came into power by revolution Oct. 20, 1944, continued in office at the beginning of 1945, though maintaining that it would hold elections as scheduled in January. By January 11 two of the three presidential candidates, Napoleón Viera Altamirano and Gen. Antonio Claramount Lucero, had withdrawn in the face of the obvious support of Gen. Salvador Castañeda Castro by the Aguirre regime. The elections, beginning Jan. 14, 1945, resulted in a naturally sweeping victory for the sole remaining candidate, the official results being announced as follows: Castañeda, 312,754; Aguirre (write-in), 2,030; all other former candidates, 1,050. The exiled oppositionist civilian leader, Dr. Arturo Romero, called upon "all American democratic governments" to refuse recognition to Castañeda, whose government, he charged, was "born by the imposition of bayonets." Diplomatic recognition, which had generally been withheld from the Aguirre government, began, however, with action by the United States, Great Britain, Bolivia, and other states on February 19; other governments withheld their recognition until the change of administration on March 1. United States Ambassador John Simmons presented his credentials to Provisional President Aguirre on February 22. The regular session of the National Assembly opened February 15. Gen. Castañeda and Vice President Manuel Adriano Villanova

were sworn in March 1. The government-in-exile established after the Aguirre coup by Supreme Court Justice Molina, first at Guatemala City and then at Mexico City, declared on March 4 that it had ceased to exist as of February 28. Many exiles, including ex-Provisional President Menéndez, began returning to Salvador soon after Castañeda's inauguration. The early nonrecognition of Salvador raised the question of its admittance to the Mexico City conference in late February but this was solved by the reception of "observers" until March 1 and their subsequent accrediting as delegates. The foreign minister on May 22 announced the imminent establishment of relations with the USSR. A serious impasse existed between Salvador and Guatemala during most of the Aguirre regime because of his charge that Guatemala harbored anti-Aguirre exiles. After the demonstration of apparently more democratic tendencies by Castañeda, however, he and President Arévalo of Guatemala entered into a series of discussions in the spring of 1945 looking to the union of the two countries as a forerunner to Central American union. Salvador and Guatemala concluded an economic-financial protocol June 19, 1945, recommending reciprocal elimination of customs except on coffee, sugar, tobacco, and products subject to monopolistic control; other proposed steps taken toward union covered especially customs, finance, and transportation. The executive branch of Salvador's government was reorganized by decree of February 28 to include five ministries. A plot allegedly headed by Aguirre culminated in an attempted revolution June 10, 1945, but some 205 military officers were summarily exiled. A plane that dropped bombs near a police barracks caused no damage. Castañeda faced serious potential discontent in July because of food shortages and consequent pillaging. The government thereupon seized large quantities of staple food stocks and put them on public sale at low prices. A second alleged army plot was nipped July 24 and Aguirre, the asserted leader, was held for court-martial.

RUSSELL H. FITZGIBBON,
Associate Professor, Political Science, University
of California, Los Angeles.

SALVATION ARMY, The. A religious body operating in 98 territories of the world, preaching the gospel of Christ in 102 languages, and ministering in practical ways to emergency needs of humans. Its followers are estimated to number 5,000,000 persons, led by 27,000 trained officers.

The founder was William Booth, a Methodist minister in London, who in 1864 defied church tradition of the day by holding meetings for the poor in the worst slums of the city. When converts were refused membership in churches, Booth banded them in an organization called the Christian Mission. In 1878 the name was changed to The Salvation Army; uniforms for men and women were inaugurated; and a semi-military system of leadership adopted.

From its earliest days The Salvation Army recognized that acute material needs often temporarily stood in the way of spiritual benefit. As the army grew it continued to meet emergency human needs: a vast global network of places to worship arose, accompanied by a twin network of rehabilitation services for social casualties; industrial homes where men could rebuild their character; hospitals for unmarried mothers; free or low-cost lodging houses; nurseries for working mothers; fresh air camps; boys' clubs;

welfare work with prisoners which proved so valuable in America that The Salvation Army is a semiofficial adjunct of the penal parole system.

A small group of missionaries established the army in the United States in 1880. One of its unique features has been its public expression of joyous Christianity through street corner musical services and personal testimonies, followed by invitations to indoor meetings. In country after country this method of carrying the gospel to the populace has been viewed first with disdain, then tolerance, then affection and generous financial support as the constant devotion of its workers and strict business integrity of the organization became known.

In the First World War, The Salvation Army won imperishable laurels in France when "lassies" braved the misery and risk of front line fighting to carry cheer and refreshment to the soldiers.

In the Second World War the army merged its global facilities to meet the challenge of global warfare. Its first mobile canteen—to provide hot food to Britain's unemployed hungry in 1927—grew to a fleet of 1,000 mobile canteens to keep pace with mobile warfare, and to reach the forgotten men at outposts on the home front. More than 2,000 rest and recreation centers were established for servicemen and women, staffed by Salvation Army officers. In addition to its mobiles and Red Shield service clubs, The Salvation Army activated the interfaith effort which resulted in the United Service Organizations (USO) and, as one of its six member agencies, operates many USO units.

The year 1945 was marked in the United States by a national spiritual campaign and intensification of youth activities. War service increased, with emphasis on aiding returned veterans to adjust to civilian life and on giving spiritual guidance for the bereaved and wounded. The co-ordination of the work was directed by Commissioner Donald McMillan, National Secretary, at National Headquarters, 120-130 West 14th Street, New York 11, N.Y.

BARBARA TAYLOR,

National Public Relations Department, The Salvation Army.

SAMOAN ISLANDS. A Polynesian group in the South Pacific, 4,150 miles southwest of San Francisco; total area, 1,209 square miles, pop. (1941-44) 82,458. Politically, the islands east of long. 171° W. constitute American Samoa, and west of that line lies Western Samoa, a League of Nations mandate administered by New Zealand.

American Samoa.—This United States possession has a land and water area of 76 square miles, and population (1941) of 14,458. It comprises Tutuila (40.2 square miles), the Manua Islands (Tau, Ofu, and Ollesega), and Rose and Swain's islands. In 1899 the United States acquired rights over all the islands except Swain's, and over the latter in 1925. Pago Pago, on Tutuila, situated in a fine harbor, is the seat of administration and a naval base. The commandant of the naval base exercises the governorship; he is assisted by the fono, a native advisory body. Local government is in the hands of native chiefs. Elementary education was available in 1943 in 32 public and 4 missionary schools, with enrollments of 2,315 and 500 pupils respectively. Alligator pears, bananas, breadfruit, coconuts, limes, mangoes, oranges, pineapples and yams are grown. Copra is the principal export. Imports in 1940-41 were val-

ued at \$263,703, and exports at \$93,839. There are 34 miles of highways.

Western Samoa.—This mandated territory has a land area of 1,133 square miles, and a population (1944) of 68,000, of whom 300 are white. It comprises the islands of Savaii (703 square miles) and Upolu (with dependent islets, 430 square miles). A former German possession, on Dec. 17, 1920 it was assigned to New Zealand as a League of Nations mandate. Apia, on Upolu, is the capital and chief port. The administrator (A. C. Turnbull appointed Feb. 24, 1943) is assisted by a Legislative Council of 12 members (6 officials, 2 elected European unofficials, and 4 nominated native Samoans). Prime Minister Peter Fraser of New Zealand visited Western Samoa in January 1945; native spokesmen asked that Samoans be given a greater share of self-government and responsibility (similar to the system prevailing in Fiji and Tonga), that road communications be improved, and that facilities for education be increased. Government revenue in 1942-43 amounted to £NZ212,996, and expenditure was £NZ203,492. Besides 13,258 pupils at 101 government schools in 1942, others attended mission schools. Coconuts, cacao, bananas, and rubber are cultivated on a commercial scale; a record output in 1945 was anticipated. Exports in 1943 were valued at £NZ278,213, and imports amounted to £NZ605,911. Highways totaled 180 miles (30 miles surfaced). During 1942-44 the United States maintained a large airbase on Upolu Island.

SAN FRANCISCO CONFERENCE. See PAN AMERICAN AFFAIRS; UNITED NATIONS CONFERENCE; WORLD POLITICS.

SAN MARINO. Overlooking Rimini on the Adriatic Sea, San Marino is the world's smallest independent republic, with an area of only 38 square miles, and (according to its own claim) Europe's oldest state, having been founded in the 4th century. It is entirely surrounded by Italian territory, its integrity being pledged, however, by Italy in a treaty concluded in 1897 and renewed in 1939. Its population in September 1939 was 14,545. The capital town, San Marino (population about 2,000), is built on the slope of Mount Titano, the mountain constituting a large proportion of the territory of the republic. Its defenses, long believed impregnable, have made it the refuge for some famous fugitives. Legislative power is exercised by a popularly elected council of 60, two of whom are appointed to act as regents for six-month periods. The regents exercise executive power, being assisted by various nominated congresses—the State Economic Congress, the Congress of Studies, the Military Congress, etc. There are several elementary schools, and a high school, the diplomas of which are recognized by the Italian universities. The republic falls within two Italian dioceses. San Marino has its own small coins, but uses Italian and Vatican City currency in the higher denominations. Its budget for 1939-40 was estimated to balance at 6,009,919 lire. The republic's main exports are building stone, wine, and cattle. Its postage stamps are of especial interest to philatelists. The principal industries are cereal growing, the production of cheese, oil and wine, cattle raising, stone cutting, and the manufacture of white and hydraulic lime. An electric railway 20 miles long connects San Marino and Rimini.

Elections held on March 14, 1945, resulted in

a Leftist victory for the Popular Front, Communists and Socialists each winning 18 seats out of the 60 seats in Parliament; Republican Democrats winning 4; and various Rightists winning the remaining 20. On August 1 it was reported that San Marino had qualified for aid from the United Nations Relief and Rehabilitation Administration.

SAND AND GRAVEL. The domestic production of sand and gravel declined 17 per cent in 1944, according to the United States Bureau of Mines. Industrial sands used in war production reached a new record, but building and paving materials which constitute the bulk of the sand and gravel tonnage were caught in a declining period following the height of war construction. The total output of sand and gravel was 194,783,000 short tons valued at \$125,164,000 in 1944 compared with 234,064,000 tons valued at \$152,793,000 in 1943. Approximately 77 per cent of the output was supplied by commercial plants and 23 per cent by contractors and construction or highway maintenance crews employed by federal, state, county, and municipal governments.

SASKATCHEWAN. The central prairie province of Canada, lying between Manitoba and Alberta and bounded on the south by North Dakota and Montana, is composed of the old Northwest Territorial Districts of Assiniboia East, a part of Assiniboia West, and the eastern portions of Athabaska. It extends along the border of the United States for a distance of 393 miles. Its northern boundary is 227 miles and it is 761 miles from north to south. Created a province in 1905, it has an area of 251,700 square miles, of which 8,784,000 acres are under water. Population, which is about two thirds rural, was 895,992 in 1941.

The government is vested in a lieutenant governor and a Legislative Assembly of 55 members elected for five years. The last provincial election was in June 1944, when the first C.C.F. government in Canada was elected to power. The present membership is made up of 47 Co-operative Commonwealth Federation (C.C.F.); five Liberal, and three armed forces' members. The province is represented in the Dominion Parliament by six senators and 21 members of the House of Commons.

An outstanding character of Saskatchewan soils is the large proportion of vegetable matter and wealth in nitrogen content; this and the climate account for its production of the famous hard wheat and make it one of the most productive grain areas of the world. Winters are bright and cold but the atmosphere is dry and the summers are warm. There are over 2,200 hours of sunshine in a year.

One of Canada's richest provinces in natural resources, northern districts are abundantly watered by lakes and rivers and aerial surveys have explored and opened up new timber wealth. Rich in mineral resources, gold discoveries have been made at Goldfields in the Lake Athabaska region of the northwest and in the eastern portion of the province on the Manitoba-Saskatchewan border is located the famous Flin Flon copper-gold-zinc deposit.

Estimated revenues for the fiscal year 1945-46 were \$36,243,335 and expenditures \$36,212,143. Net debt in 1945 was \$170,030,417.

Gross value of agricultural products in Saskatchewan in 1944 amounted to \$624,608,000, made up of fields crops, \$444,281,000; farm animals, \$106,334,000; wool, \$614,000; milk production, \$36,194,000; fruits and vegetables, \$1,888,000; poultry and eggs, \$32,393,000; fur farming, \$650,000; clover and grass seed, \$1,539,000; honey and wax, \$715,000.

Besides 966 privately-owned industrial establishments whose gross value of production in 1942 totaled \$120,257,000 a number of provincial government industries were set up in 1945 at a cost of over \$1,000,000. Among them are two fish filleting plants, a woolen mill, a leather products factory, a brick plant, and a fur marketing service. Two private power companies have also been acquired, while the provincial government has announced that it will operate bus lines in the province.

Railway mileage in Saskatchewan totals 8,780, and there are 203,500 miles of roads, including over 5,000 miles of surfaced roads.

Education is provincially controlled. In 1944 there were 5,202 school districts with 179,372 students enrolled, of which 32,511 were in the high school grades. There is a university at Saskatoon.

In public health, free treatment of venereal disease in government clinics has been extended to include free penicillin therapy. Penicillin for venereal disease is also supplied free to private physicians. Old age and blind pensioners, and mothers in receipt of widow's pensions and their dependents, receive free medical treatment. Care is also provided free for inmates of mental hospitals. Cancer and tuberculosis treatment is free also.

Principal cities are Regina, the capital (pop. 58,245); Saskatoon, (43,027); Moose Jaw (20,753); Prince Albert (12,508); Weyburn (6,179); and Swift Current (5,594).

SCHUSCHNIGG, Kurt von, Austrian statesman: b. Dec. 14, 1897. Austria's chancellor from 1934 until he was taken into custody by the Germans in March 1938. Dr. Schuschnigg was freed by Allied forces near the Brenner Pass in early May 1945. With Leon Blum, former French premier, and Rev. Martin Niemöller, German anti-Nazi pastor, he had been imprisoned at Itter Castle, Austria. In the First World War, he fought on the Italian front, and in 1917, was taken prisoner. After the war, he took his law degree at the University of Innsbruck. From 1932 to 1934, as minister of justice under Dr. Engelbert Dollfuss, he supported the Dollfuss regime in its fight against socialism. After Dollfuss' assassination in July of the latter year, he became Austria's chancellor. The English translation of Dr. Schuschnigg's autobiography, *My Austria*, was published in 1938.

SCHWELLENBACH, Lewis Baxter, United States Cabinet officer: b. Superior, Wis., Sept. 20, 1894. On May 23, 1945, Federal Judge Schwellenbach was appointed secretary of labor in the Truman Cabinet to succeed Frances Perkins. He is a close friend of President Truman, and was inti-

mately associated with the late President Franklin D. Roosevelt. During his years as United States senator from the State of Washington (1935-40), he was frequently called to the White House for conference with the chief executive. Outstanding among Schwellenbach's activities in Congress was his unrelenting campaign as member of the Foreign Relations Committee to stop the sale of scrap iron to Japan; from 1937 on, he sponsored legislation to prevent shipments being made, and often carried his fight to the Senate floor and to the nation at large. In December 1940, he resigned as senator to become United States district judge for the Eastern District of the State of Washington.

A graduate of the University of Washington Law School in 1917, Mr. Schwellenbach became president of the board of regents of the university, 1933-34. In September 1944, he was appointed dean of the Gonzaga University Law School in Spokane. Admitted to the Washington bar in 1919, he was for several years member of a law firm in Seattle; and from 1931-35, practiced alone. In 1938, he was a delegate to the Interparliamentary Union, the Hague.

SCIENTIFIC RESEARCH AND DEVELOPMENT, Office of. See OFFICE OF SCIENTIFIC RESEARCH AND DEVELOPMENT.

SCOTLAND. A kingdom occupying the northern part of the main island of Great Britain. Politically, it is part of the United Kingdom of Great Britain and Northern Ireland. Scotland is represented in the House of Lords by 16 peers, elected for the duration of Parliament; and in the House of Commons by 74 elected members (3 of them representing the universities). For area, population, education, etc., see GREAT BRITAIN.

During the Second World War, after German occupation of France and the Low Countries had necessitated the closing of British south and east coast ports to ocean-going shipping, two new ports were built on the west coast of Scotland. Port Number One is in the Gare Loch, a north arm of the Clyde, and Port Number Two further south at Cairn Ryan, on Loch Ryan, in Wigtownshire. The ports are served by 50 miles of new railroad track, and each covers more than 1.5 miles of waterfront with deep locks; Gare Loch has six and Cairn Ryan five 500-foot long deepwater berths, with 35 feet of water at low tide. Large numbers of United States personnel and a great tonnage of American supplies were landed at the ports.

SEABROOK, William Buehler, American author and explorer: b. Westminster, Md., Feb. 22, 1886; committed suicide, Rhinebeck, N.Y., Sept. 20, 1945. William Seabrook was best known for his popular accounts of personal adventures and experiences. His travels took him among the whirling dervishes and Zezidee devil worshippers in Arabia, the voodoo worshippers in Haiti, and cannibals in West Africa. Educated at Mercersburg (Pa.) Academy and Roanoke College, Seabrook received a Ph.B. degree and an M.A. degree from Newberry (S.C.) College in 1905 and 1906 respectively. During 1906 he worked as a reporter and city editor of the *Augusta (Ga.) Chronicle*, and the next two years he tramped through Europe as a free lance writer, taking

time out to study philosophy at the University of Geneva, Switzerland, in 1908. He returned to Georgia in 1909 as a reporter on the *Atlanta Journal*, later became a partner in the Lewis-Sea-brook Advertising Agency in Atlanta (1911-15), and enlisted in the French Army in 1915. He was awarded the Croix de Guerre after having been gassed at Verdun. In 1917 he became a reporter on the *New York Times* and later a feature writer for newspaper syndicates. After 1924 he engaged in travel, exploration and writing. His works include *Adventures in Arabia* (1927); *The Magic Island* (1929); *Jungle Ways* (1931); *Air Adventure* (1933); *The White Monk of Timbuctoo* (1934); *Asylum* (1935); *These Foreigners* (1938); *Witchcraft* (1940); and *No Hiding Place* (1942), an autobiography.

SECOND WORLD WAR. See WORLD WAR, SECOND.

SECRET SERVICE, United States. The year's biggest job for Secret Service agents of the Treasury Department was the mapping and execution of security plans to protect the late President Roosevelt at the "Big Three" conference at Yalta and President Truman in the historic Potsdam meeting. Agents detailed with the president at the United Nations Conference in San Francisco also safeguarded the signed Charter until its delivery to the State Department June 28. Many distinguished visitors were also protected by the Secret Service, including Prime Minister Winston Churchill, the Earl of Athlone (governor general of Canada), Sergio Osmeña, president of the Philippines, Madame Chiang Kai-shek of China, Princess Juliana of The Netherlands, and Norway's Crown Prince Olaf, Princess Martha and their children.

The uniformed force of the Secret Service protected nearly 233 billion dollars in money, stamps, bonds and other government securities in transit, and another 285 billion dollars in production and storage in Washington and Chicago.

Public losses through acceptance of counterfeits were low, totaling only \$28,852 out of a total of \$68,325 in bogus bills and coins seized during the year. There were 58 persons arrested on counterfeiting charges.

Forgeries of government checks and war bonds comprised most of the enforcement work of the service. Unusual cases involved the seizure of manufacturing plants for the production of counterfeit treasury checks and the captures were made before the counterfeiters succeeded in defrauding many merchants. Some 16,380 forged checks were received for investigation and there were 1,722 persons arrested for stealing and forging government checks, including 706, or about 41 per cent, under 21 years of age. The Secret Service continued its "Know Your Endorser" campaign to prevent forgeries by minors by warning money handlers to use extreme care in cashing checks for juveniles. There were 31 juvenile forgers arrested one case in New York City alone.

Agents made 241 arrests of persons who forged or altered war bonds and a total of 2,587 such bonds were received for investigation.

Convictions for check forgery in the fiscal year 1945 totaled 1,594 as against 1,480 in 1944. Bond forgers convicted totaled 192 in 1945 as against 68 in 1944. Convictions for currency counterfeiting numbered 42 in 1945 and 54 in 1944. Of all types of cases brought to trial in 1945, convictions were obtained in 97.8 per cent as compared with 97.9 per cent in 1944. Fines in criminal cases in 1945 totaled

\$126,713 and imprisonments about 2,178 years. Additional sentences aggregating about 2,338 years were suspended or probated. The Secret Service disposed of 21,493 criminal investigations during the year.

The Secret Service Crime Prevention Program, which for several years has substantially reduced the financial losses suffered by the public, was actively continued in the "Know Your Money" and "Know Your Endorsers" campaigns in accordance with the Treasury Department's effort to stimulate public respect for federal law and to secure the public's co-operative assistance in preventing crime by pointing to the stake which the honest citizen has in the effort.

FRANK J. WILSON,
Chief, U.S. Secret Service.

SECURITIES AND EXCHANGE COMMISSION.

At June 30, 1945, the members of the commission were: Chairman Ganson Purcell and commissioners Robert E. Healy, Sumner T. Pike, Robert K. McConnaughey, and James J. Caffrey. During the fiscal year ended June 30, 1945, the commission's activities under the acts administered by it were as follows:

Securities Act of 1933.—Registration of securities for public distribution aggregated \$3,280,589,071; this was the highest volume of annual registrations since 1937, and brought to \$28,625,981,071 the total amount of securities registered under the act. Registration statements under examination by the commission during the year numbered 446 (including 46 pending at the beginning of the period), of which 83 were pending at the end of the year. The commission's examination concerns the adequacy and accuracy of the information required to be disclosed for the protection of investors. The act does not empower the commission to approve or otherwise pass upon the merits of security offerings; it provides, instead, for the disclosure of information upon which investors may appraise the merits of securities being offered and determine for themselves whether to purchase them. Accordingly, registration is not to be taken as a guarantee against loss.

The commission's regulations governing exemptions from registration were modified during the year to give effect to an amendment to the act which increased from \$100,000 to \$300,000 the amount of securities which could be publicly offered for sale without registration, under conditions prescribed by the commission.

Enforcement activities against securities violations are discussed hereinafter.

Securities Exchange Act of 1934.—At June 30, 1945, 3,675 separate security issues of 2,185 issuing companies were listed and registered upon the 19 national securities exchanges. Important annual and other periodic and special reports are filed by these companies with the exchanges and the commission; these are subjected to examination by the commission as to the adequacy and accuracy of the information required to be disclosed for the protection of investors. Included are financial and other operating information; descriptions of business and properties; management and other contracts; executives' salaries; and security holdings and transactions by directors, officers, and persons holding more than 10 per cent of the companies' securities. Holders of listed securities are afforded additional protection through requirements of the act governing the solicitation of proxies and designed to provide disclosure of information which will enable them to exercise

an informed judgment in voting upon the affairs of their companies.

The commission's other activities under this act had to do with its surveillance of securities markets (both exchange and over-the-counter). This is in accordance with provisions of the act designed to protect the interests of investors and the public through maintenance of just and equitable principles of trade, by prohibiting misrepresentation, deceit, market manipulation and other fraudulent practices in the purchase and sale of securities, and by affording various sanctions against law violators. The latter includes administrative actions to suspend or revoke a broker's or dealer's membership in a national securities exchange or registered association of dealers or to revoke his registration with the commission (thus barring his continued conduct of a securities business in interstate commerce), as well as civil actions to enjoin securities violations and criminal prosecutions for fraudulent acts or practices. Persons or firms against whom administrative action was taken numbered 16; other prosecutions are discussed under "Enforcement Activities."

Public Utility Holding Company Act of 1935.—The commission's activities under this act during the year related primarily to (1) the supervision of the issuance and sale of securities and the sale and acquisition of securities and physical properties by registered holding companies and their operating subsidiaries; and (2) furtherance of the act's objectives of integration of utility properties into economically integrated and co-ordinated systems and the simplification of corporate and system structures and equitable redistribution of voting power among the security holders of such companies.

The issuance and sale of securities by such companies in the aggregate amount of \$1,308,641,520 were passed upon by the commission as meeting those standards prescribed in the act by Congress as necessary for the protection of investors, consumers and the public. Strengthening of the financial condition of these companies is basic to this protection, and is accomplished through such measures as debt reductions, increased depreciation accruals, and elimination of write-ups and other inflationary items from balance sheets. Other measures provide for improved mortgage indenture provisions; maintenance of competition in the sale of securities, and of reasonable fees and commissions.

Continued and substantial progress was made during the year in the field of integration and simplification. At the year-end, properties aggregating approximately \$4,182,000,000 had been divested from holding company systems pursuant to commission orders directing compliance with these objectives of the act or in anticipation thereof. Other properties, the subject of divestiture orders, aggregated \$3,500,000,000. Holding companies with total system assets of \$3,850,000,000 at end of the year were subject to liquidation or dissolution orders. In the field of corporate simplification and redistribution of voting power, 146 plans had been filed by the end of the year by holding companies and their subsidiaries to accomplish these objectives; 56 had been approved by the commission in whole or in part; 26 were withdrawn or denied, and 64 were pending. These plans, which in many cases result in needed rehabilitation of the subject companies, included proposals for mergers and consolidations, as well as recapitalizations and reorganizations involving the simplification of corporate structures and readjustment of the interests of the several classes

of security holders and of their voting rights in light of existing equities.

Trust Indenture Act of 1939.—Debt securities issued under indentures qualified during the year as meeting the standards of this act aggregated \$1,791,190,320, of which \$1,736,016,400 also were registered under the Securities Act. The Trust Indenture Act prescribes standards designed for the protection of investors which must be included in indentures, and requires that the indenture trustee be disinterested so as to assure that he will have no conflicting interests when acting in behalf of security holders.

Investment Company Act of 1940.—The commission's principal activities under this act consisted of (1) the review and examination of annual and other reports of registered investment companies, as well as their selling literature and proxy soliciting statements, to determine the adequacy and accuracy of the information required to be disclosed for the protection of investors; and (2) consideration of applications for approval or exemption of specific transactions or activities not otherwise permitted, and observance of activities to assure adherence to those standards of conduct prescribed in the act as additional protection. At the year-end, 366 companies with aggregate assets exceeding \$3,250,000,000 were registered with the commission.

Investment Advisers Act of 1940.—Surveillance of the activities of investment advisers (of whom 783 were registered at the year-end), to the end that investors will be protected through establishment and maintenance of higher standards of conduct and disqualification or prosecution of those who fail to observe such standards, constituted the commission's primary activity under this act during the year.

Bankruptcy Act, Chapter X.—In the exercise of its role as independent adviser to federal courts in corporate reorganizations under Chapter X, the commission participated in 116 proceedings for the reorganization of 141 debtor companies during the year. As part of its advisory service, 53 plans of reorganization were reviewed during the year and the commission's views as to their fairness and feasibility presented to the courts. In three of the larger cases, advisory reports were prepared for consideration by the courts and security holders.

Enforcement Activities.—During the year, the commission filed 13 civil actions in federal courts seeking to enjoin securities transactions or activities in connection therewith which were alleged to be violative of law and to constitute fraud or deceit upon investors. In 13 of these and similar actions pending at the beginning of the year, 32 companies and persons were permanently enjoined from continuing the acts and practices complained of. Indictments were returned in 23 cases during the year charging 87 companies and individuals with fraudulent activities in the purchase and sale of securities; 35 persons were convicted in 17 such cases during the year, bringing the total of persons so convicted to 1,135.

—GANSLOW PURCELL,

Chairman, Securities and Exchange Commission.

SELANGOR. See **BRITISH MALAYA.**

SELECTIVE SERVICE. By midsummer of 1944, the war on both fronts had taken a turn favorable to the United Nations. This was accompanied by a gradual decline in the size of calls on the Selective Service System for men to be delivered to the army and navy for induction. This downward trend continued throughout the remainder of the

year, as indicated by the following figures showing the total of calls by the armed forces for each month from July through December, 1944:

July	110,950	October	87,050
August	104,350	November	84,050
September	81,050	December	82,075

Preparations for the "knock-out" blow at both Germany and Japan brought a slight increase in calls during the early months of 1945. Following are the figures:

January	101,283	May	129,470
February	126,720	June	128,920
March	148,720	July	101,200
April	143,220		

Immediately after the capitulation of Japan, the president ordered a sharp reduction in the number of inductions from the previous figure of about 90,000 a month to approximately 50,000 monthly. Further, in compliance with a presidential order, instructions were issued restricting calls to men in the 18 through 25 age group other than volunteers.

Manpower.—Early in 1945, the director made it clear that the situation demanded an ever-increasing war effort, particularly on the part of men in the 26 through 37 age group. Selective Service issued instructions to local boards to consider continuance of occupational deferments for registrants ages 26 through 37 more carefully. Boards also were instructed to classify as available for service any man with an occupational deferment who left the employment for which he was deferred unless (1) the registrant requested a determination and a determination was made that it was in the best interest of the war effort for him to leave such employment for other work or (2) the local board found that there were adequate reasons involving the registrant or his family which justified the registrant in leaving such employment. At the same time, at the request of the director of war mobilization and reconversion, Selective Service instructed its local boards to survey anew the cases of men in the 18 through 25 age group deferred for agricultural activities to provide "to the full extent permitted by law" for the reclassification of men so deferred.

Soon after the fall of Germany, a critical manpower situation developed in the shipyards on the west coast engaged in repairing damaged naval vessels. As a result, Selective Service instructed state directors of California, Washington and Oregon to "postpone the induction of any registrant employed in specific west coast repair yards, irrespective of age or state of registration."

When the full force of the war effort was shifted to the Pacific after VE-Day, the army and navy began to place greater emphasis on the need of men under 30 years of age, and in May, Selective Service requested local boards to liberalize occupational deferments so as to reduce the total number of men to be inducted in the 30 through 37 age group, and to review cases of registrants in the 18 through 25 age group who previously had been rejected for general military service or found qualified for limited service only, and to forward for re-examination those whom they had reason to believe might qualify for military service. At about the same time, the army announced it would accept a limited number of registrants under 26 with minor physical defects who did not meet the physical standards for general military service.

Late in June, an unprecedented burden was placed on the transportation facilities of the nation, especially in the West, and resulted in a

directive by Selective Service to its local boards calling for special consideration to requests for deferment of western railroad employees in specified occupations.

The end of the war brought further liberalization of deferment policies and on Sept. 4, 1945, Selective Service announced the elimination of the II-B classification in which had been placed all registrants deferred because they were "necessary to and regularly engaged in an activity in war production." All registrants in this classification, if qualified, were placed in Class II-A, in which classification are placed registrants found to be "necessary to and regularly engaged in an activity in support of the national health, safety and interest."

Shortly after VE-Day, Selective Service announced a plan for the discharge of a "very limited number" of conscientious objectors.

At the opening of the school year in September, Selective Service announced a revised procedure that would permit all youths who entered high school before reaching the age of 18 to continue in school until completion of the high school course, or until 20 years of age, whichever is sooner. Similarly, a college student who entered college before becoming 18 years of age, is permitted to remain in college until completion of the current semester or quarter, or "until he ceases to pursue continuously and satisfactorily such course of instruction, whichever is the earlier."

Veterans.—Under the provisions of Section 8 of the Selective Training and Service Act of 1940, as amended, a major responsibility of Selective Service is to assist the veteran either in obtaining re-employment in a former position or new employment. The Selective Service System's Veterans' Assistance Program has three objectives:

(1) To assist veterans of the Second World War in obtaining re-employment in former positions, or positions of like seniority, status and pay, and to assist them in obtaining new employment, where desired;

(2) To furnish information to veterans and to the public regarding rights, benefits and privileges of veterans under existing federal, state and local laws and to refer inquirers to the proper agency or organization or person where such rights can most readily be obtained; and

(3) To stimulate national, state and community awareness of their responsibilities for providing sufficient job opportunities to accomplish full employment for veterans.

This program was designed to be carried out through the full co-operation of all Selective Service agencies and personnel, compensated and uncompensated, and through full use of the facilities of other governmental agencies such as the United States Employment Service of the War Manpower Commission; the United States Civil Service Commission; the Railroad Retirement Board, and the War Food Administration, as well as by means of assistance from labor organizations, veteran groups and other civic agencies.

The activities of the program are carried out by national headquarters, state headquarters and local boards of the Selective Service System, under the direction of the director of Selective Service. The Veterans Personnel Division of national headquarters has the responsibility for general co-ordination of the program.

Each local board has been officially designated as a Veterans' Information Center. Each local board has attached to it one or more re-employment committeemen. These men serve without compensation. They are prominent business or professional men of the community who are in position to advise the veteran, particularly in matters of employment, and to assist him in obtaining a job.

In addition to rendering service to honorably

discharged veterans of the United States Army, Navy, Marine Corps and Coast Guard, in connection with their employment problems, Selective Service, at the request of the administrator, War Shipping Administration, has assumed responsibility of assisting former members of the United States Merchant Marine in securing their re-employment benefits under the provisions of Public Law No. 87, which contains substantially the same provisions as the act providing re-employment rights for other veterans.

SENEGAL. See FRENCH WEST AFRICA.

SERT, José Maria, Spanish painter: b. Barcelona, Spain, 1876; d. there, Nov. 27, 1945. Internationally famous Spanish artist, Señor Sert is probably best known in the United States for his murals in the main floor lobby of the RCA Building, Rockefeller Center, and in the Sert Room of the Waldorf-Astoria Hotel, New York City. His works have been described as baroque in style, executed with a controlled exuberance, and presenting subjects with the greatest attainable measure of dramatic effect.

At the age of 20, Sert went to Paris to study. He met Degas there, and the two were good friends. He lived and worked in that city for the greater part of his life. His first American exhibition was at the Wildenstein Galleries in New York in 1924. In Europe he painted the walls and ceilings of the Council Hall of the Palace of the League of Nations, executed murals for the duke of Alba's Liria Palace in Madrid, and many other palaces and churches. His mural, interpreting the spirit of contemporary America, replaced the incomplete mural by the Mexican artist, Diego Rivera, in the RCA Building. Rivera's mural became the subject of a violent controversy when work on it was ordered halted because of the inclusion of a portrait of Lenin. A close friend of the late King Alfonso XIII of Spain, and of other Spanish royalty, Sert supported Franco in the Spanish Civil War, and later became an attaché of the Franco embassy in the Vatican City. Sert's first wife was a grandniece of the composer, Franz Liszt. They were later divorced, and in 1928 he married Roussadana Mdivani, sister of Alexis, Serge, and David Mdivani.

SEYCHELLES. An island group in the Indian Ocean, 800 miles east of Zanzibar, constituting a British colony. With dependencies, there are 92 islands, having a combined area of 1564 square miles; the population (1943 est.) numbered 33,621. The capital and chief port is Victoria (pop. 5,286), on Mahé (56 square miles), the largest island. The governor (Sir William Marston Logan appointed Jan. 5, 1942) is assisted by an Executive Council of 3 members (2 ex officio and 1 nominated) and a Legislative Council which, since 1944, has had 12 members (6 officials and 6 nominated un-officials); the 6 unofficial members are to be elected after the war. In 1944 the revenue of the colony amounted to 991 rupees and the expenditure was 947 rupees. The 1945 budget provided for an expenditure of 1,155,700 rupees. In 1943 there were 29 primary schools (26 state-aided) and 2 secondary schools, all operated by the Roman Catholic and Anglican communities. Plans for improving educational and health facilities have been undertaken through grants from the British treasury (1941-45) of £8,115. The principal crops are cassava and corn; coconuts are also cultivated by the Sey-

chellois on a large scale, and smaller quantities of sugarcane and tobacco. The principal export is copra; cinnamon leaf oil, vanilla, patchouli, and other essential oils are also exported on an increasing scale as methods of distillation are improved, as well as guano, tortoise shell, and birds' egg yolk. The United States and Great Britain are the sole importers of the oils. The Indian rupee currency is used. A Seychelles Chamber of Commerce was formed in 1944. There are some 60 miles of roads on Mahé. Victoria is a port of call for scheduled steamship services between Bombay, India, and Mombasa, Kenya Colony. During the Second World War, British naval and air stations were established in the colony.

SHAFF. See SUPREME HEADQUARTERS, ALLIED EXPEDITIONARY FORCE.

SHAPOSHNIKOV, Boris Mikhailovich, Soviet army officer: b. Zlatoust, Russia, 1882; d. reported on March 27, 1945. One of the outstanding commanders of the Red Army, Marshal Shaposhnikov was chief of the Supreme Soviet Military Academy and had served as chief of the general staff during the first year of the German invasion of Russia, until ill health forced him to retire in the fall of 1942.

The son of a minor government employee, Shaposhnikov was a graduate of the Moscow Military Academy, from which he won a scholarship to the Imperial Academy of the General Staff. He graduated at the head of his class. At the time of the Russian revolution he held the rank of colonel in the Czarist army. He did not immediately join the revolutionary party, but accepted a commission in the new Red Army. In 1925, he was commandant of the Leningrad military zone; in 1927, he received the Moscow command; and in 1928, was appointed chief of the general staff. In February 1932 he started the reorganization of the General Staff School, as he was considered the best person to bring the Soviet Army up to date in military science. He was made a marshal in May 1940, and resumed his position as chief of general staff in 1941, having retired from that post the preceding year because of ill health. He took over the campaign against Finland and brought it to a swift conclusion. As the Second World War became imminent, Stalin called upon him to devise military plans to insure Russia's security. During the siege of Moscow, he served under Stalin as military adviser and deputy commissar of defense. In October 1942 he was appointed commander in chief of the Red Army and Air Force. He received in January 1940 the decoration of the Order of Lenin, and, in February 1944, the Order of Suvorov, first class, Russia's highest military award. Plans to erect a monument in his honor at Moscow were announced at the time of his death.

SHETLAND ISLANDS. A group of more than 100 large and small islands northeast of the Orkney Islands, off the northern coast of Scotland, with a total area of 551 square miles, and an estimated population of 19,700 (1940). For several centuries under Scandinavian sovereignties, the islands were transferred to Scotland in 1468 and now form its northernmost county. The inhabitants are largely of Norse extraction. Mainland, Yell, Unst, Fetlar, Bressay, Whalsey, and Foula are the largest of the islands, about two thirds of the entire area being on Mainland. The capital is Lerwick, on Bressay Sound, on Main-

land. Cereal crops and vegetables are grown, and domestic animals—notably the small Shetland ponies—are raised. Herring fisheries, however, comprise the chief industry, others being the manufacture of woollens and gloves. Exports include fish, oil, cattle, horses, eggs and gloves. Scalloway, on Mainland, is the largest village.

Shortly after the German occupation of Norway in 1940, a ferry service was started which, until the end of the war, ran regularly between a secret base at Skalloway, on the west coast of the Shetland Islands, and Norway; secret agents and munitions were regularly shipped over to the Norwegian underground, and Norwegian volunteers were brought back for training in Britain. The ferry service consisted of United States armed subchasers flying the Norwegian flag and manned by Norwegian seamen. See also SCOTLAND.

SHIMADA, Shigetaro, Japanese admiral: b. Tokyo-fu, Japan, September 1883. Sixty-two-year-old Admiral Shimada, minister of the navy at the time of Japan's attack on Pearl Harbor, was arrested as a war criminal by American occupation authorities at his home in Tokyo on Sept. 12, 1945. A member of the Tojo clique, he resigned with the Tojo Cabinet after the fall of Saipan to the Americans in July 1944; in January 1945, he gave up his post as a supreme war councillor. Shimada is a graduate of Japan's Naval War College. In the First World War, he was an attaché at the Japanese embassy in Italy. He was promoted admiral in 1929. In 1938, he became commander in chief of the Kure Naval Station in China waters; was later commandant of the Yokosuka Navy Yard near Tokyo. He became Tojo's navy minister in October 1941.

SHIPS (NAVAL AND MERCHANT) LOST IN WAR. See NAVAL PROGRESS.

SIAM (formerly THAILAND). A kingdom of southeastern Asia north of British Malaya, 200,-148 square miles in area. The Vichy government of France ceded to Siam under duress in 1941 parts of the French Indo-China provinces of Laos and Cambodia (26,664 square miles); and in 1943 Japan "presented" Siam with four unfederated states of British Malaya (14,776 square miles) and two of the Shan states of Burma (15,388 square miles). The population of Siam proper was estimated in 1940 to number 15,718,000; at that period the country contained, besides Siamese, about 500,000 Chinese and large numbers of Burmese, Indians, and Malays. Siam signed an offensive and defensive alliance with Japan on Dec. 21, 1941, and declared war on the United States and Great Britain on Jan. 25, 1942; the regent of Siam issued a proclamation on Aug. 16, 1945, stating that the war declaration was "null and void, as unconstitutional and contrary to the will of the Thai people." The words *Thai* and *Thailand*, designations in the native language for the people and the country, became effective by proclamation for use in all foreign languages on June 24, 1939; on Sept. 8, 1945, it was announced that the use of *Siamese* and *Siam* should be resumed in all foreign languages, the native forms being retained only within the country. Bangkok (pop. 684,994), the capital, was known as Phetchabin during Japanese occupation of the country; on Jan. 1, 1945, the capital was removed to Saraburi, 108 miles to the northeast, Bangkok continuing as the commercial center.

Government.—Theoretically, Siam is a constitutional monarchy. King Ananda Mahidol (b. Sept. 20, 1925) is being educated in Switzerland, his powers being exercised by a Regency Council of which Nai Pridi Phanomyong became the head in 1945. Legislative power is exercised by the Regency with the advice and consent of a People's Assembly, and executive power through a State Council (a Cabinet) selected from the membership of the legislature; half of the 156 members of the People's Assembly are elected, the rest being nominated by the Regency. In practice, the president of the State Council (the prime minister) exercises wide authority; on Sept. 2, 1945, Nai Thawi Bunyakit became premier, announcing a policy of restoring good relations with the United Nations.

Finances.—With adoption of the Gregorian calendar in 1941, the financial year begins on January 1. Revenue in 1942 amounted to 210,000,000 bahts (in 1941, a baht equaled U.S. \$0.3697), and expenditure was 259,000,000 bahts. The treasury reserve on Jan. 1, 1942 was 31,857,000 bahts. Note circulation on July 31, 1941, was 225,709,717 bahts the reserve against it totaling 250,192,580 bahts.

Religion and Education.—The prevailing religion is Buddhism. In 1937 there were in Siam 13,752,091 Buddhists, 626,907 Mohammedans, 69,227 Christians, and 15,880 others. Primary education is compulsory and free in local public and municipal schools. The following table gives the educational statistics as of March 31, 1939:

Type of School	Number	Number Teachers	Number Pupils
Government	429	3,626	61,297
Local public	10,768	32,208	1,325,891
Municipal	304	1,644	58,592
Private	1,308	5,596	121,965

There are two universities, but no statistics in regard thereto are available.

Production.—Predominantly agricultural, Siam is part of the "rice granary" of the Far East, rice being the outstanding item in the country's economic life. Its cultivation occupied 9,517,453 acres in 1941 (90 per cent of the total arable land), and engaged about 80 per cent of the population; the yield of clean rice in 1940-41 was 4,923,350 tons. The cultivation of rubber in southern and eastern Siam is an important industry; exports in 1940 totaled 49,600 short tons. Other agricultural products include coconuts, cotton, pepper, and tobacco. Livestock includes about 6,000,000 cattle, 5,500,000 water buffalo, and 400,000 horses. There are also some 11,000 domesticated elephants, used to a considerable extent for logging operations in the teak forests of northern Siam.

Tin is the principal mineral mined; in 1940 the output of metallic tin amounted to 19,500 short tons. Wolfram is another important mineral product; and other deposits, some of which are also mined commercially, include antimony, copper, gold, iron, lead, manganese, molybdenum, rubies, sapphires, silver, zinc, and zircons.

External Trade.—Under normal trading conditions, rice constitutes about 53 per cent of Siam's exports; tin ore and rubber, each 14 per cent; and teak 5 per cent. Other exports include hides, resins, and fishery products. While China is the main market for Siam's rice, considerable quantities are also exported to British Malaya and Ceylon. The total value of exports in 1940-41 was 257,600,000 bahts, this including

rice, 142,800,000 bahts; tin ore, 48,400,000 bahts; rubber, 39,300,000 bahts; and teak, 5,900,000 bahts. Imports in 1940-41 had a total value of 163,400,000 bahts; the principal imports were textiles, foodstuffs, metal manufactures, tobacco, automobiles, and fuel oil.

Communications.—At outbreak of war Siam's railroads aggregated some 2,000 miles in length. A line southward from Bangkok connected with the system of British Malaya, and one eastward from the capital extended into Cambodia. The railroad northward from Bangkok reached Chienmai (410 miles); after the fall of Singapore, some 60,000 prisoners of war, mainly British and Australian, were employed in extending this line for 300 miles toward Moulmein, Burma, nearly half the men dying from the terrible conditions under which they worked. Highways open to traffic have a total mileage of 2,200, but most of them are impassable during the monsoon weather. A government-subsidized air transport service between principal centers was in operation prior to Japanese occupation of the country.

Principal Events.—Siam's release from Japanese thralldom in 1945 was welcomed by all save a few of the people. Traitorous Siamese statesmen had made enemy penetration of the country easy once French Indo-China had capitulated to Japan in 1941, but the ensuing declarations of war by Siam upon the United States and Great Britain had little significance as far as the majority of Siamese was concerned, the Japanese being thoroughly unpopular. The United States, in fact, did not retaliate by declaring war in turn, continuing to accord recognition to M. R. Seni Pramoj, the country's minister in Washington.

During the war, Siam had not yielded to Japan the benefits which the latter had anticipated. The kingdom had been rewarded for its nominal adherence to the "East Asia Co-Prosperty Sphere" by accretions to its territories at the expense of its neighbors, and for military reasons Siam's northern railroad was extended into Burma by the ruthless use of prisoners of war, but Japan had not been able to extract more than a fraction of the country's agricultural and mineral wealth because of the ravages wrought upon Japanese shipping by the United States Navy. In the later stages of the war, too, Japanese installations in Bangkok were bombed repeatedly by United States aircraft based in India, and by Royal Air Force and British naval planes operating from Burma. Adding to these difficulties, moreover, Japanese and quelling administrators in Siam were faced with a steadily growing resistance movement, Anglo-American agents dropped into the country by parachute working in close conjunction with many secret leaders of the guerrillas.

With the end of Japanese occupation in sight, on Aug. 16, 1945, Regent Nai Pridi Phanomyong proclaimed "null and void" the 1942 war declaration against the Allies, promising repeal of laws "prejudicial to our interests" and compensation for damages resulting from those laws. While Siam also undertook to restore to British control the Malayan and Burman territories which the Japanese had awarded to her, retrocession of areas detached from French Indo-China was presumably to be negotiated directly between France and the Siamese government. The day after publication of the regent's proclamation brought resignation of the Cabinet of Premier Kuang Kovid Aphaiwong;

on August 31 the premiership was filled by Nai Thawi Bunyakit, who also assumed the ministry of foreign affairs and other portfolios. On taking office the new premier assured the People's Assembly that it would be the policy of his government to strengthen the bonds between Siam and the Allied nations. It was, perhaps, as a token of the intent to return to the former cordial relationship that announcement was made on September 8 of discontinuance of use abroad of the designation Thailand and resumption of the term Siam, by which the country had been generally known prior to 1939.

Lieut. Gen. Akdi Sena Narong, deputy commander in chief of Siam's Army, flew from Bangkok to Kandy, Ceylon, on September 2 to discuss with Admiral Lord Louis Mountbatten, supreme Allied commander in Southeast Asia, arrangements for formal capitulation, the seizure of 113,000 Japanese troops still in the country, and the release of some 20,000 surviving prisoners of war—mainly British, Netherlands, and Australians, and including about 300 Americans. Troops of the British 7th Division entered Siam on September 4, and all Japanese forces in the kingdom were included in the surrender signed with Mountbatten in Singapore on Sept. 12, 1945, by Lieut. Gen. Seishiro Itagaki, deputy of Field Marshal Count Juichi Terauchi, commander in chief of all the Japanese southern armies. The Japanese had completely merged the Siamese economic system into their own, and had seized all foreign-operated enterprises—commercial, educational, and religious. With the end of hostilities, the new government of Siam reversed all confiscatory acts which had been taken under Japanese duress, and on Jan. 1, 1946, Prince Viwat Anajai Jaiyant signed in Singapore, on behalf of Siam, a treaty of peace with Great Britain and India. This was the first such agreement since the war's end.

SIBERIA. See UNION OF SOVIET SOCIALIST REPUBLICS.

SICILY. The largest, most fertile, and most populous island in the Mediterranean. It has belonged to Italy since Giuseppe Garibaldi wrested it from the king of Naples in 1860. It has an area of 9,926 square miles and a population (1936) of 4,000,078. Palermo, the capital and largest city, has a population of 411,879; other large cities are Catania (pop. 244,972), Messina (192,051), Agrigento (32,951), Trapani (63,540), and Syracuse (53,166). The island is mountainous, especially in the north. The most remarkable natural feature of Sicily is the active volcano Mount Etna which attains a height of 10,758 feet. There are three universities, at Palermo, Catania, and Messina. Agriculture is the chief occupation of the inhabitants, the chief products being grapes, olives, oranges, lemons, and almonds. Industries are largely confined to the making of wine (two thirds of Italy's wine normally comes from Sicily), olive oil, fruit and vegetable canning, and there are extensive fisheries. Sicily accounts for nearly three fourths of the total Italian sulphur output and for approximately one tenth of the entire world production.

The Allied Invasion.—American, British and Canadian forces landed in Sicily from North Africa on July 10, 1943, and conquest of the island was completed August 17, with the capture of Messina. Gen. George C. Marshall, chief of staff of the United States Army, in his biennial report issued in October 1945, stated that Axis casualties in Sicily numbered 167,000, of whom

37,000 were Germans. Allied losses (killed, wounded, and missing) totaled 31,158. Italy was invaded from Sicily on Sept. 3, 1943 by the British Eighth Army under Lieut. Gen., later Field Marshal, Sir Bernard L. Montgomery, followed six days later by the United States Fifth Army under Lieut. Gen. Mark W. Clark.

Principal Events.—Resentment caused by the draft law, by the scarcity of food, clothing and housing, and by the fantastically high cost of living, flared into violence at Ragusa, Sicily, early in January 1945. Clashes with government troops were reported, and in February civil disorders spread to other parts of the island, in some localities taking the form of separatism. The separatist movement was fostered by the latifundists, or large landowners, who feared for their property holdings under the Left wing movement sweeping the rest of Italy. One faction of the separatists adopted the American flag for its emblem and advocated annexation by the United States, demanding that Sicily become the 49th state. Increasing amounts of Allied relief supplies ameliorated the economic situation, and as conditions improved the separatist movement dwindled. Lack of fuel and transportation continued to handicap economic rehabilitation, however; exports were limited by the lack of shipping; and in the absence of imported manufactured goods, business remained at a standstill at midyear. The cotton crop of 1943-44 was reported to have broken all records, totaling 8,000 metric tons as compared with a prewar average of 3,000 to 5,000 metric tons; and superphosphate production recovered sharply, four of the island's five large plants having resumed operation. The citrus fruit crop was large, but lack of transportation affected its exportation, and living costs remained abnormally high. See also ITALY.

SIERRA LEONE. See BRITISH WEST AFRICA.
SILESIA. See CZECHOSLOVAKIA.

SILOTI, Alexander, Russian pianist and conductor: b. Kharkov, Russia, Oct. 10, 1863; d. New York City, Dec. 8, 1945. Siloti was one of the few pianists who had preserved the grand manner of the illustrious period typified by the Liszt-Rubenstein school of pianistic interpretation. Together with Moriz Rosenthal, he was one of the two surviving pupils of Franz Liszt.

Siloti was a piano pupil of Sverev and Nikolai Rubinstein at the Moscow Conservatory, where he also studied theory and harmony with Tchaikovsky. He won the conservatory's gold medal when he was graduated in 1881. The previous year he made his first appearance as soloist with an orchestra in Moscow. From 1883 to 1886 he studied with Liszt at Weimar, returning to the Moscow Conservatory in 1887 as a professor. He remained there until 1890, when he began appearing in concert recitals throughout central and western Europe. After touring England and the United States (1898-99), he returned to Russia in 1901 to conduct the concerts of the Moscow Philharmonic Society for a season, and two years later he organized his own orchestra in St. Petersburg (now Leningrad), with which he gave an annual series of symphonic concerts, playing many new works by younger Russian composers. After the Russian revolution, he escaped to England in 1919, and then in 1922 came to the United States, where he taught at the Juilliard Graduate School in New York City from 1925 until 1942. Siloti was a cousin and teacher of Serge Rachmaninov.

SILVER. The final estimate of refinery production of silver in the United States and Alaska during 1944 was 35,851,049 fine ounces, as compared with 40,900,121 ounces in 1943, according to the report compiled by the United States Bureau of the Mint, with the co-operation of the Bureau of Mines. The value of the silver production, calculated at \$0.7111 per fine ounce, was \$25,351,857 in 1944 compared with the 1943 value of \$29,084,530. Of the total 1944 silver output, Idaho yielded 10,645,179 fine ounces; Utah, 8,104,520 ounces; Montana, 6,669,273 ounces; Arizona, 4,674,097 ounces; Colorado, 2,136,140 ounces; and Nevada, 1,408,259 ounces. Alaska's output in 1944 was 15,240 ounces.

At the end of the war with Japan, the United States Treasury still held about 550,000,000 ounces of free silver, but 300,000,000 ounces subsequently have been monetized, leaving only about 250,000,000 ounces to meet domestic and foreign needs.

SIMONS, Moises, Cuban composer: b. Havana, Cuba, 1889?; d. Madrid, Spain, June 28, 1945. A distinguished composer of both light and serious music, Moises Simons is probably best known for his famous popular song, *The Peanut Vendor*, which shortly after its publication in 1930 became the hit of the European continent. Mr. Simons studied music with his father, Leandro Simons, and played the organ as a boy in the Jesus Maria Roman Catholic Church in Havana. In 1930 he received first prize of \$5,000 for his operetta, *La Nina Merse*, from the Spanish government, when it was presented at the World's Fair at Barcelona. His money and property were confiscated by the Nazis when they marched into Paris just after he had escaped from the French capital, where he was residing. In 1943, the Cuban government awarded him a gold medal for his contributions to music. He recently had gone to Madrid to complete an operetta. Among Mr. Simons' most popular compositions were *Negra Quirina* (Cuban Belle), *A Gozar* (Let's Be Gay), and *Serenata Cubana* (Cuban Serenade).

SIMPSON, William H., United States Army officer: b. Weatherford, Texas, May 19, 1888. Lieutenant General Simpson commanded the United States Ninth Army for the Allied assault on Nazi Europe in 1944 and 1945. In its issue of April 9, 1945, *Life* magazine said of the Ninth and its commander, "Ninth is the only American army under Field Marshal Sir Bernard L. Montgomery. Its commander, Lieut. General William H. Simpson, is a man after Montgomery's heart. Both are infantrymen, yet both have the greatest respect for machines—especially artillery. They both believe in sending the foot soldier forward only after a terrific barrage. That is one reason they work well together."

General Simpson was graduated from West Point in 1909. In February 1917, he accompanied Gen. George Bell, Jr. to France on an observation tour. He went overseas for a second time in May 1918 as the 33d Division's assistant chief of staff, later becoming its chief of staff. He is a graduate of the Army General Staff School, AEF (France); the Infantry School, Fort Benning (1924); the Command and General Staff School (1925); and the Army War College (1928). From 1932-36, he was professor of military science and tactics, Pomona College, California; and from 1936-40, a member of the Army War College faculty. He received his first army

command, that of the Fourth, in October 1943, and in June 1944 was named commanding general of the American Ninth. He holds the Distinguished Service Medal, the Silver Star, the French Croix de Guerre, and the Legion of Honor for his First World War service.

SINGAPORE. See **BRITISH MALAYA.**

SLADEN, Fred Winchester, United States Army officer: b. Massachusetts, Nov. 24, 1867; d. New London, N.H., July 10, 1945. Major General Sladen commanded the 5th Infantry Brigade in France during the First World War and served as superintendent and commandant of the United States Military Academy at West Point from July 1922 to March 1926. Graduating from West Point in 1890, General Sladen served in various posts before he returned to West Point as commandant of cadets, in 1911. He served in China, 1914-16; on the Mexican border, 1916-17; commanded the first and second officer's training camps at the Presidio, San Francisco, 1917; and then for six months, until he went overseas in April 1918, he was secretary of the general staff at the War Department. In Europe he saw action on the Aisne, the Marne, at Château Thierry, St. Mihiel, and in the Meuse-Argonne. He took part in the march into Germany and the occupation of the Rhineland, remaining there until the summer of 1921, when he returned to the United States to take command of Fort Sheridan for seven months. He was commander of the Philippine Department, 1926-28, and of the 3d Corps Area at Baltimore from 1928 until his retirement in 1931.

SLATE. Slate production in the United States in 1944 amounted to 477,840 short tons valued at \$5,004,195, according to the United States Bureau of Mines. This was an increase of 2 per cent in quantity and 3 per cent in value over the 1943 production of 468,860 short tons valued at \$4,870,237. The total sales of roofing slate in 1944 amounted to 89,090 squares valued at \$802,179, a decrease of 7 per cent in quantity and 5 per cent in value from the previous all-time low record of 1943, when sales were 96,220 squares valued at \$841,750.

SLOVAKIA. See **CZECHOSLOVAKIA.**

SMITH, Clifford Peabody, American jurist, editor, and religionist: b. Geneva, Ind., Mar. 4, 1869; d. Waban, Mass., Aug. 8, 1945. In 1908 he relinquished his post as a judge of the District Court of Iowa and soon became an important figure in the Christian Science Mother Church, The First Church of Christ, Scientist, in Boston.

He was graduated from the University of Iowa in 1891, began the practice of law that year, and nine years later was elevated to the bench. After becoming interested in Christian Science in 1896, he joined The Mother Church six years later. His first official service to Christian Science was as a member of a committee to define and preserve the legal rights of Christian Scientists, whom he represented in litigations. He was called to Boston as First Reader of The Mother Church in 1908, and later that year was also appointed a trustee of the Christian Science Publishing Company. During his long service, Judge Smith was twice elected president of the Christian Science Society (1911-12; 1937-38). He was a member of the board of lectureship (1911-14); manager of the committee on publication (1914-29); and editor of the *Christian Science Journal*, *Sentinel*, and *Herald*. Since 1932

he had devoted his official time as editor of The Mother Church's bureau of history and records.

SMITH, Lowell H., United States Army officer: b. Santa Barbara, Calif., Oct. 8, 1892; d. Tucson, Ariz., Nov. 4, 1945. One of the nation's pioneer aviators, Colonel Smith set 16 world flying records for speed, duration, and distance. In 1924, he commanded the army's first round-the-world airplane flight for three fourths of the route, after the plane carrying the original flight commander, Maj. Frederick L. Martin, was lost in an Alaskan blizzard. This flight covered a distance of approximately 26,103 miles in 365 hours 11 minutes flying time, and took a total of 175 days between the departure from Seattle on April 6 and the return to that city on September 28.

In 1915, Colonel Smith was with the Aviation Service of the Mexican Army, and in 1916-17 he was a mechanical engineer working in Nevada silver mines. He enlisted as an aviation private in the army in April 1917. In December 1917 he was commissioned first lieutenant, and in October 1918, captain. He played a prominent part in an army transcontinental endurance flight in 1919, and gained further fame in 1923, when he and Lieut. John Richter, another army flier, broke eight world aviation endurance records on August 27-28 over Rockwell Field in San Diego. Their flight lasted more than 37 hours, during which they refueled their plane in the air. With Gen. George C. Kenney, he worked out an entire procedure for massed airborne troop landings, in the 1930's, and piloted the first plane to participate in mass parachuting. During the Second World War, he trained heavy bombardment crews at Davis-Monthan Field, Tucson, which he commanded. He was twice awarded the Distinguished Service Medal, for his service in the First World War, and for his world flight prowess; the Mackay Medals, in 1919 and 1924, as the outstanding American military flier during those years; the Distinguished Flying Cross, in 1924, for the first refueling of airplanes in flight; and the Helen Culver Gold Medal in 1925.

SMITHSONIAN INSTITUTION, The. This institution was created by act of Congress in 1846, according to the terms of the will of James Smithson, of England, who in 1826 bequeathed his property to the United States of America "to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." The affairs of the institution are administered by a board of regents whose membership consists of the chief justice of the United States, the vice president, three members of the Senate, three members of the House of Representatives, and six citizens other than members of Congress. The executive officer directly in charge of the institution's activities is the secretary. Dr. Alexander Wetmore is the present secretary.

The stated purpose of the institution, "the increase and diffusion of knowledge," is carried out by research, exploration, and publication. In normal times explorations form a major part of this program, but the usual program has been curtailed, owing to wartime conditions, and the few field expeditions that were carried on were concerned in the main with matters connected with the conduct of the war or with commitments dating back to the prewar period.

The institution's publications constitute its primary means for accomplishing the "diffusion of knowledge." They are issued by the institution proper and by the bureaus under its administra-

tive direction and appear in 14 distinct series as follows: Smithsonian Institution, *Annual Report* (with general appendix made up of selected articles reviewing the year's advances in science), *Contributions to Knowledge* (suspended), *Miscellaneous Collections*, a new series called *War Background Studies* (now terminated), and special publications; National Museum, *Annual Report*, *Bulletin*, *Proceedings*, and *Contributions from the National Herbarium*; Bureau of American Ethnology, *Annual Report and Bulletin*; Astrophysical Observatory, *Annals*; National Collection of Fine Arts, *Catalog*; and Freer Gallery of Art, *Oriental Studies*. Copies of all publications in these various series are distributed free to a large list of libraries, learned societies, and specialists throughout the world, and certain of the less technical publications, such as the Smithsonian Reports, are widely distributed among the general public. During the year 56 publications were issued, and the total number of publications distributed was 141,635.

The Smithsonian library, made up of 10 divisional libraries and 35 sectional libraries, now contains 918,460 volumes, pamphlets, and charts. Accessions during the year numbered 4,844 volumes, pamphlets and charts.

The staff of the institution continued to devote a considerable part of its time until the end of the war to furnishing technical information to the army, navy, and war agencies. Many of the requests called for extended research, reports, or conferences. The subjects on which information was most frequently requested were the peoples, geography, climate, and fauna of Pacific war areas; disease-bearing insects and other animals; shipworms and ship-fouling organisms; molluscan hosts of Oriental parasites; edible and poisonous fishes, and fishing kits for life rafts; edible and poisonous plants, and plants for camouflage purposes; sources of strategic minerals; fiber substitutes; American and foreign woods for construction purposes; and material for survival manuals.

The institution continued to take its part in the government's program for the improvement of cultural relations with the other American republics. Of the five volumes of the monumental *Handbook of South American Indians* being prepared and published by the institution, four are in press and the fifth is practically completed. The new Institute of Social Anthropology created within the institution is continuing co-operative work in anthropology in Mexico and Peru. Several members of the staff conducted field expeditions in South and Central American countries in co-operation with scientists of those countries.

All the priceless and irreplaceable material from the collections of the United States National Museum that had been evacuated to a safe place during the war was returned safely to the institution. It occupied some 29,000 cubic feet of space and weighed 117,500 pounds.

It is expected that the Smithsonian Institution's program of research and exploration will be resumed as soon as possible after the re-establishment of normal conditions.

ALEXANDER WETMORE,
Secretary, Smithsonian Institution.

SNYDER, John Wesley, United States government official: b. Jonesboro, Ark., June 21, 1896. A banker by profession, and since July 23, 1945, director of the Office of War Mobilization and Reconversion, John W. Snyder has been in government service almost continuously for more than 13 years. He began his government career

in 1930, entering the office of the Comptroller of Currency in Washington, and was for 7 years engaged in the liquidation of Missouri banks which had failed in the 1929-30 crash. In 1937, he was named manager of the St. Louis loan agency of the Reconstruction Finance Corporation. In July 1940, he went to Washington as special assistant to the RFC chairman, retaining control of the St. Louis agency. In July 1941, he became executive vice president of the Defense Plants Corporation, RFC subsidiary. He held this position throughout the crucial years of the war, but resigned in August 1943 to become vice president of the First National Bank in St. Louis. From 1940 to 1944, he served as a special assistant to the board of directors of the RFC. In April 1945, he was recalled to Washington to take over the direction of the Federal Loan Administration, succeeding Fred M. Vinson. Three months later he again succeeded Vinson as OWMR director, when Vinson entered the Truman Cabinet as secretary of the treasury. As head of the Office of War Mobilization and Reconversion, Mr. Snyder has the gigantic task of directing the rechanneling of his country's economy from a wartime to a peacetime basis. Mr. Snyder was educated in the Jonesboro, Ark., public schools and at Vanderbilt University. In the First World War, he served overseas as a captain in the Field Artillery. From 1919 to 1930, he held various banking positions in Arkansas and Missouri.

SOCCER. See SPORTS IN 1945.

SOCIAL SECURITY BOARD. The 10 years since August 1935, when the Social Security Act established the Social Security Board, have brought great economic changes and world-wide concern with the types of programs which the board administers either directly or through collaboration with the states—federal old-age and survivors insurance, federal-state unemployment compensation, and federal-state public assistance. The board has also been responsible, since February 1942, for providing civilian war benefits, civilian war assistance, and assistance to enemy aliens and others affected by restrictive governmental action; these emergency programs declined as victory neared. For more comprehensive information and current data on social security programs, see the monthly *Social Security Bulletin*, the *Social Security Yearbook*, and the board's *Annual Reports* to Congress.

Old-age and Survivors Insurance.—This is the only program under the Social Security Act which is completely federal in administration and financing. It is providing at least a start toward social insurance protection against old age or death to the families of some 71 million workers who have acquired wage credits in industrial or commercial employment at some time in the years 1937-44.

During the wartime labor shortage, thousands of eligible persons postponed filing benefit claims because they had covered employment, and others who had filed claims had payments deferred or suspended while they could earn. Nevertheless, the beneficiary rolls rose throughout 1944 and in 1945. The Social Security Board maintains more than 1,900 full or part time offices throughout the country, which provide local services to workers, their employers, and actual and potential beneficiaries. The average monthly number of claims received rose from the nearly stationary levels of 35,000 in 1941-42 to 63,000 in August 1945.

By July 31, 1945, about 530,500 workers aged 65 and over were on the benefit rolls, at a total rate of \$12,654,000 a month, though some continued in covered jobs and so did not draw benefits currently. Nearly one third of these retired workers had wives aged 65 or over who were also entitled to benefits based on their husbands' wage records; the average monthly benefit in force for an aged couple was \$38.

Monthly benefits to survivors of deceased insured workers, including insured workers who died while serving with the armed forces, were in force for about 610,400 persons in July 1945, at a total rate of \$9,340,000 a month. The 85,300 aged widows on the rolls were entitled to an average of \$20.20 a month. Families consisting of a widow and one child beneficiary averaged \$34.20 a month; for those with three or more such children the average was \$50.40. Monthly benefits were payable also to 5,800 dependent parents of deceased insured workers who left no unmarried child under age 18 and no widow. In addition to the monthly benefits payable to survivors, \$2,032,000 was distributed in July 1945 in lump-sum death payments on behalf of workers who left no one eligible for monthly benefits for the month in which the worker died.

In January-March 1945 approximately 2,100,000 employers and 36,500,000 workers contributed 1 per cent each on \$18,242,000,000 in wages taxable under the Federal Insurance Contributions Act. Contributions are paid and benefits are based on only the first \$3,000 received in a year by any one worker or paid by any one employer to an individual employee. An increase in the contribution rate scheduled for 1945 was postponed by Congress. Amounts equivalent to contributions collected are appropriated to the old-age and survivors insurance trust fund from which are paid the benefits and administrative costs of the program. As of July 31, 1945, this fund held a balance of \$6,649,300,000 to meet current and accumulating liabilities for benefits.

It is estimated that, on Jan. 1, 1945, 38,900,000 workers were insured, of whom 31,700,000 workers were fully insured and 7,200,000 were currently insured. For the remainder, or 45 per cent of those who had some wage credits, work in covered employment had been so brief or intermittent that the worker had not yet met the requirements for insured status.

Unemployment Compensation.—Under the Social Security Act, the board must determine that state unemployment compensation laws and their administration conform to certain specified conditions and make grants to states for proper and necessary costs of administering the state law. The 44 million industrial and commercial workers who earned wage credits in 1944 under the 51 laws of the states and territories are subject to the eligibility conditions and benefit provisions of these separate laws.

Nearly all operations in the fiscal year 1944-45 reflected the end of the war in Europe and its approaching end in Asia. Increases over the preceding year were 6 per cent for continued claims, 4 per cent for number of weeks of unemployment compensated and average weekly number of beneficiaries, and 17 per cent for the benefit expenditures. Declines in civilian employment were reflected immediately in these state systems. A weekly average of 529,600 initial claims for benefits was filed in the United States in the last two weeks of August 1945, one and one-half times the average in the previous peak month of April 1940. In July 1945 benefits under the 51 laws

totaled \$14,352,000 and went to a weekly average of 185,500 beneficiaries.

In 1945, 36 states substantially revised their unemployment compensation laws. As of July 1, 1945, the maximum weekly benefit amount was \$20 or more and the maximum duration 20 weeks or more in states which together include about 80 per cent of all covered workers in the United States. About a fourth of the covered labor force was in states which provide uniform duration of benefits—compensating for the same number of weeks all eligible workers who remain unemployed for as long as the maximum number. As of July 1945, however, no state provided a maximum of \$25 per week for 26 weeks to all unemployed persons. Almost seven eighths of the covered workers are in the 38 states which require no more than a one-week waiting period before benefits are payable to eligible workers. Four states now pay additional amounts to beneficiaries with dependents.

In the fiscal year 1944-45 the states collected \$1,251,958,000 in contributions from employers (in four states employees also contribute). States deposit collections in their accounts in the federal unemployment trust fund and withdraw funds from that account to pay benefits. Collections totaled \$101,314,000 less than in the preceding fiscal year, largely because of the experience-rating provisions of 43 states which reduce contribution rates of employers if unemployment among their workers has been relatively low. As of July 31, 1945, the unemployment trust fund held \$6,726,954,000 to the credit of the 51 state accounts. State reserves, however, vary greatly in relation to the potential drains on their accounts. To assure payment of benefits even if state funds become depleted, the War Mobilization and Reconversion Act of 1944 authorizes federal advances to states under certain conditions.

Public Assistance.—The Social Security Act provides federal grants to states to meet a share of state expenditures for assistance to needy persons aged 65 or over; to children deprived of support or care because of the death, absence from home, or incapacity of one or both parents; and to the needy blind. Eligibility requirements, methods of determining need, and amounts of payments are matters of state responsibility, except that the federal act specifies certain conditions for approval of state programs and limits to federal financial participation.

In July 1945, payments to these groups of needy persons represented 91 per cent of the total bill for public aid in the United States. In the fiscal year 1944-45, federal funds bore two fifths of that bill through grants to 51 jurisdictions with approved plans for old-age assistance, to 49 for aid to dependent children, and 46 for aid to the blind.

During the war, recipient rolls declined because many people who otherwise would have needed aid got jobs or received more help from relatives. The number of recipients of old-age assistance in July 1945 (2,035,000) was 10 per cent below that in the peak month, June 1942. The 254,000 families receiving aid for dependent children in July 1945 were 36 per cent below the number in March 1942, the high month. Even in aid to the blind, the 55,400 recipients in the 49 states granting such aid were 11 per cent fewer than the number in the peak month of that program, September 1942.

Payments to needy persons under state assistance programs supplement any other resources the recipient may have. Payments to individuals

therefore vary greatly and hence do not necessarily represent all that a recipient has to live on. Declines in recipient rolls have made it possible for many states to provide higher payments to needy persons than in earlier years and to recognize increased living costs. For the United States as a whole, the average payment for old-age assistance was \$29.76 in July 1945 as compared with \$27.71 a year earlier; in the same period, under state plans approved by the board, the average payment per family receiving aid to dependent children rose from \$43.48 to \$47.55, and in aid to the blind from \$28.84 to \$30.35. These averages, however, mask wide differences among states and among localities within states. The range from high to low state in average payments in July 1945 was from \$48.88 to \$11.44 for old-age assistance, from \$91.06 to \$20.82 for aid to dependent children, and from \$53.24 to \$12.98 for aid to the blind.

ARTHUR J. ALTMAYER,
Chairman, Social Security Board.

SOCIALISM. The greatest advance made along socialist lines in 1945 was the election of a labour government in Great Britain—a government which within a few months had passed through the House of Commons a bill to make the Bank of England, the staid "Old Lady of Threadneedle Street," a state institution. A leading government spokesman had declared in the House of Commons that within the life of the current Parliament (which could continue until 1950) the country's coal, iron and steel, electricity, and gas industries, and its transportation services (with the exception of shipping, but including dock and harbor facilities) would be nationalized.

Great Britain was an outstanding example of socialist-oriented moves made during the year in many countries, namely, moves toward the extension of public control over the primary means of production and exchange—factories, banks, mines, railways, power plants; and land—and of various services of benefit to all or most of the people. An important obverse side of this extension of public control was the concern shown for safeguarding minorities: the participation of women in the French elections; the preservation of the various nationalities in the Yugoslav federation; and the protection of the remaining Jews in Poland from renewed Fascist terror. In various countries, including Great Britain, socialist-oriented measures were opposed by some declared Socialists, and in more than one case were supported, or even initiated, by non-Socialists. In most of the liberated countries of Europe the moves in the direction of socialism were carried on by national regimes composed of various political groupings—Socialists, Communists, Agrarians, Laborites, Christian Democrats, and in some instances representatives of the employing classes—all committed, although in varying degrees, to programs of national rebuilding with socialist features. In Italy, 70 per cent of the reconstituted Socialist Party, in its first postwar congress, voted to continue the party's co-operation with the Communists in the reconstruction program. The French municipal and cantonal elections showed large gains for both the Socialists and the Communists over their prewar standing, and sharp losses for parties opposed to a break with the past. The bitterly contested national elections (October 21) gave the Communists some 152 seats in the Constituent Assembly (out of a total of 522 seats for continental France), and the Socialist and Popular Republi-

can parties each a few less, insuring strong representation in the prospective reorganized government for the parties favoring socialism. The Soviet Union, with its 16 constituent republics, prepared to launch a new five-year plan of socialist construction, involving all departments of the socialized economy, but stressing the heavy industries, and particularly transportation.

The newly elected government of Great Britain, like the governments of France and of the Netherlands—all variously committed to programs with socialist elements—soon faced nationalist movements in countries which they had regarded as their colonies. Commentators regarded these movements as a further expression of pleas put forward at the San Francisco Conference on behalf of some 1,000,000,000 people in colonial and semicolonial regions for a more equitable share in the world's material wealth, particularly for more control and use of their local resources and industries. The program of socialism was posed on a world scale.

In the United States, as in Europe, the close of the Second World War in 1945 brought threats of mass unemployment and inflation, and renewed demands for the setting up of safeguards against these evils—demands which coincided with, if they did not reflect, world trends in the socialist direction. Official declarations were made, and measures introduced (with varying success), calling for jobs for all workers, adjustment of wages to meet costs of living indexes, continued rent controls and increased housing facilities in crowded areas, a freer flow of consumers' goods, with continued control of prices to prevent inflation, a comprehensive national program of publicly organized medical services, and the extension of full political and economic equality to Negroes and other minority groups.

Sharp theoretical differences between Socialists and non-Socialists continued during 1945. But the theoretical question as to whether control by the state should be increased or diminished was subordinated to the necessity for insuring minimum necessities and a tolerable future for majorities which had suffered deeply in the war and had become essential, conscious participants in their own liberation.

SOCIETY ISLANDS. See FRENCH OCEANIA.

SOCIOLOGY. Notwithstanding the continued disruption of the graduate schools of sociology by the absence of both students and faculty in the armed forces and other war-connected work, a considerable amount of research of more than ephemeral interest was published during 1944-45.

Methodology.—A number of monographs dealing with the more fundamental methodological problems of the field have appeared. Otto Neurath's *Foundations of the Social Sciences* is written from the standpoint of logical positivism, and embodies both the strength and weaknesses of that position. Felix Kaufmann's *Methodology of the Social Sciences* has been influenced by the same general tradition; but it is a more systematic and critical work, and it incorporates the modifications of logical positivism necessitated by recent researches, especially in its discussion of the extreme physicalism and radical behaviorism of the earlier work of the Vienna circle. Unlike many of his colleagues, Kaufmann recognizes that "the social sciences differ from the natural sciences" because of the "central position" held by value problems in the former field. "Teleological concepts correspond to teleological methods, and there is no reason for disputing the legitimacy of

such concepts in the social sciences." Judgments of fact and judgments of value are both analytic propositions, but they differ in that the former are made according to rules of scientific procedure, while the latter are determined by axiological rules. On the other hand, Ray Lepley, in his *Verifiability of Value* attempts to show how the study and treatment of value judgments may be brought within the methodology of natural science. He finds the main difference between descriptive and evaluative judgments to be that in the former "all desires are (ideally) excluded, except the desire for truth," whereas in the latter "all relevant desires must be brought within the arena of deliberation . . . and the decision . . . is ultimately determined wholly or more largely by the wish, preference, or purpose which wins in competition with other desires." It is a work of high competence, but it oversimplifies the problem by neglecting the historical distinction between intrinsic values, or what is desirable for its own sake, and instrumental values, or what is desirable as a means to something else.

Clarence Marsh Case's *Essays in Social Value* approaches the same problem from the standpoint of a general theory of culture. It endeavors to work out the logical connection between the objective investigation of social values and their philosophical standardization, and to formulate the factual and ethical relationships between the social and other values of modern society. C. L. Stevenson's *Ethics and Language* attempts less to provide a contribution to the problem of value than a methodology whereby a greater degree of critical exactness may be attained in this highly controversial field. Also of importance in this connection is H. A. Hodges' *Wilhelm Dilthey: An Introduction*, the first comprehensive treatment in English of the system of thought of a German philosopher whose theory of "understanding" poses a major methodological issue in contemporary social and psychological science. Morris Cohen's *Preface to Logic* is also of sociological interest because of its trenchant criticism of the pretensions of positivism.

Research Techniques.—A number of important works dealing with the theory and application of specific research techniques have also been published, notably Ernest Greenwood's *Experimental Sociology: A Study in Method*; Angell's essay in *The Use of Personal Documents in History, Anthropology and Sociology*, by Louis Gottschalk, Clyde Kluckhohn, and Robert Cooley Angell; and *A Constant Frame of Reference for Sociometric Research* by Urie Bronfenbrenner. Greenwood has given a convincing demonstration of the unexploited opportunities confronting the sociologist in testing causal hypotheses by the use of comparative field studies in which all but one relevant factor have been controlled, but to define all such studies as "social experiments," and the *loci* where they occur as "social laboratories," is to broaden these concepts so extensively as to render them valueless in precise methodological theory. Bronfenbrenner's work is one of a series of *Sociometric Monographs*, by J. L. Moreno and his collaborators. Moreno has also further developed his psychodramatic technique in a series of *Psychodrama Monographs*, the most recent of which are *Psychodrama and Therapeutic Motion Pictures*, and *Role Analysis and Audience Structure* by Zerka Töman.

Human Nature, Personality and Culture.—The perennial interest in this subject which sociologists share with biologists and psychologists is reflected in the monographs devoted to two of the most in-

fluent pioneers in the field, *The Social Theory of James Mark Baldwin*, by Vahan D. Sewny, and *George Herbert Mead: Philosopher of the Social Individual*, by Grace Chin Lee. In *Human Nature: The Marxian View*, Vernon Venable has attempted a purely expository presentation of the synthetic theory of Karl Marx and Friedrich Engels on this subject, a theory which they nowhere systematically formulated, but which must be laboriously extracted from their manuscripts, letters, and printed works. This Venable has painstakingly done, to the complete neglect of later writers whose contributions are important for a competent understanding of the contemporary Marxian position. The result is an exposition of Marxian theory which bears the same relationship to current communist thought that a critical analysis of Darwin's *Origin of Species* would bear to the theory of evolution in modern biology. This topic is further developed in Ralph Linton's *Cultural Background of Personality* and in Abram Kardiner's *Psychological Frontiers of Society*. The latter work consists of descriptive summaries of preliterate or retarded cultures by field investigators for which Dr. Kardiner, a psychoanalyst of neo-Freudian views, provides the theoretical analysis and interpretation. The book is an attempt to work out the technical problems originally treated by Dr. Kardiner in his *The Individual and His Society*, mainly those centering in the theory that each society presents a basic personality type arising from the early experiences shared in common by all members of the culture and providing the complex of value-attitude systems as a nucleus about which the total personality configurations of the individual members develop.

Translations.—A number of excellent translations of foreign works of sociological interest have appeared. The most important of these is a new edition of the Henry Reeve text of Alexis de Tocqueville's great classic, *Democracy in America*, revised and edited by Phillips Bradley. Its most valuable section is the 100-word essay in which the editor analyzes de Tocqueville's views of the basic issues of democracy in theory and practice, and charts the course along which its aspirations may become realities. Translations from the German of Levin L. Schücking's *Sociology of Literary Taste* and Alfred von Martin's *Sociology of the Renaissance* are noteworthy, as is also the appearance of Ernst Casirer's *Essay on Man*, in which the author responds to repeated American requests for a translation of his three-volume *Philosophie der symbolischen Formen* by providing a fresh reappraisal and condensation of its basic ideas. Translations from the Italian include: the *Autobiography* of Giambattista Vico, which provides the only complete edition in English of any of Vico's works; Luigi Sturzo's *The Inner Laws of Society: A New Sociology*, which furnishes American readers with an authentic account of the social theory and program of a form of Catholicism which has good prospects of increasing its influence on both shores of the Atlantic; and Benedetto Croce's *Politics and Morals*, which contains the negative reactions of a critical mind to the sociology of Vilfredo Pareto. A translation of *Casa-Grande e Senzala*, the major work of the Brazilian sociologist, Gilberto Freyre, is also in preparation.

Applied Sociology.—Perhaps no problem in this field transcends in importance the loss of the sense of community resulting from modern technology and urbanization. There is no more comprehensive treatment of the sociology of the resulting

group tensions on the national and international scale, and no clearer demonstration of the significance of this field as an area of co-operative research of all the social and psychological sciences, than the symposium, *Approaches to National Unity*, edited by Lyman Bryson. George Bernard de Huszar's *Practical Applications of Democracy* is a study of the ways in which the average citizen can participate more fully in the political, industrial, educational and cultural life of the community, and rediscover in modern urban society some of the values formerly derived from the town meeting. In *The Story of the Springfield Plan*, Clarence L. Chatto and Alice L. Halligan present programs for effecting community integration through the schools, while Henrik L. Infeld's *Co-operative Communities at Work* gives brief accounts of several sectarian and folk communities, with suggestions for resettlement programs.

Periodicals.—*The Journal of Social Issues*, a new non-technical quarterly designed to pool the insights acquired by applied scientists from their experience and research in various fields of social action, appeared in February. Since the social scientist "must have emotional understanding of the situations he deals with" as well as techniques for ordering his data, it will to a large extent enlist the services of persons who are technical authorities and at the same time members of the groups whose problems are under discussion. There is a promising field for such a journal, although the first two issues, devoted to "Racial and Religious Prejudices in Everyday Living," do not carry their analysis of the problem much beyond the level of common sense.

In celebrating the sesquicentennial of the founding of the University of North Carolina and the quarter-centennial of the Institute for Research in Social Science, *Social Forces* devoted its March number to the history of the development of the concept of regionalism and to a series of papers on regional analysis and interpretation. *The American Journal of Sociology* marked its semi-centennial by bringing out a special issue in May dealing with the developments of the last fifty years and the prospects for the proximate future in sociology and allied disciplines.

Bibliography.—The following have been selected from among many other works of sociological interest that deserve mention: Beal, O. F., *The Development of Sociology in the United States*; Bodein, V. P., *The Social Gospel of Walter Rauschenbusch*; Bontemps, A., and Conroy, J., *They Seek a City*; Drake, St. C., and Cayton, H. R., *Black Metropolis: A Study of Negro Life in a Northern City*; DuBois, W. E. B., *Color and Democracy*; Eklirk, A. A., *The Idea of Progress in America, 1815-1860*; Elmer, M. C., *The Sociology of the Family*; Embree, J. F., *Japan in the Making*; Flügel, J. C., *Man, Morals, and Society*; Geordani, I., *The Social Message of the Early Church Fathers*; Glueck, S. and E., *After Conduct of Discharged Offenders*; Hewett, E. L., *Man and Culture*; Hofstadter, R., *Social Darwinism in American Thought, 1860-1915*; Hughes, E. J., *The Church and Liberal Society*; Huntington, E., *Main Springs of Civilization*; Leighton, A. H., *The Governing of Men*; Laidler, H. W., *Socio-Economic Movements*; Lasker, B., *Asia on the Move*; Linton, R. (ed.), *The Science of Man in the World Crisis*; Lorwin, L., *Time for Planning*; Mumford, L., *City Development*; Malinowski, B., *Dynamics of Cultural Change*; Ordan, H., *Social Concepts of the Child Mind*; Paul, L. A., *Annihilation of Man*; Pelzer, K. J., *Pioneer Settlements in the Tropics*; Reik, T., *The Unknown Murderer*; Richardson, H. B., *Patients Have Families*; Stoup, H. H., *Jehovah's Witnesses*; Strasz-Hupe, R., *The Balance of Tomorrow*; Violich, F., *Cities of Latin America*; Warner, A. L., and Srole, L., *The Social Systems of American Ethnic Groups*; West, J., *Plainville, U.S.A.*

HOWARD E. JENSEN,
Professor of Sociology, Duke University

SOIL CONSERVATION SERVICE. By the close of 1945, all of the states had enacted legislation authorizing programs to restore eroded lands and establish soil conservation systems of agriculture

based on scientific findings and precise knowledge of land conditions and land capabilities. Formation of soil conservation districts by local referendum was authorized by the laws of 46 of the states. In New Hampshire, the statute set the state up as one soil conservation district, while the law of Connecticut provided for needed land-use adjustments and conservation farming through group action under guidance of the state commissioner of agriculture, assisted by the state soil conservation advisory committee.

During the war years, agricultural producers more than doubled their endeavors, both in putting conservation on the land and in organizing and planning for greatly accelerated effort for conservation after the war. By the end of the harvest season, 1,395 soil conservation districts including approximately 770,684,685 acres and 3,544,751 farms had been organized in 45 states. At the same time, thousands more farmers and ranchers were requesting on-the-ground assistance in order that they might start their individual programs without delay.

The Soil Conservation Service, in its role of technical leadership in soil conservation planning and action, continued to serve these districts with the greater part of its available resources. An outstanding trend was toward design of efficient conservation farming, based on the needs and capabilities of the land, yet flexible enough to permit production increases or decreases, or shifts to new crops, to conform with demands likely to develop in the immediate postwar period. With this trend an important factor, conservation farming plans for an additional 5,186,429 acres were prepared during the year by technicians of the service working with farmers and ranchers in all states, Puerto Rico and the Virgin Islands. This brought the total acreage planned to approximately 130,000,000 acres.

In this climactic year of the war, pressure for unlimited farm production had a retarding effect on establishment of new conservation plans for farms and also in some measure on the functioning of plans already in process of establishment. In addition, in many instances there was a lack of sufficient technical personnel to assist farmers directly on their land. Despite handicaps, however, conservation treatment was completed on more than 12,000,000 additional acres throughout the country. At the same time, soil depletion and erosion were known to have affected from one to three million acres as a direct result of production of necessary wartime crops, such as peanuts and soybeans, without adherence to planned rotations and other conservation methods. Erosion occurred also in western regions where hilly land, or land with shallow topsoil, was plowed and planted to wheat. Some of this land was in the "dust bowl" area of the 1930's and had been regressed by farmers and conservationists co-operating to save vast areas from devastation by wind erosion. It was estimated that constant effort over a decade might be required to restore these scattered plowed areas.

Crop residue management was emphasized by the service as one method of conserving soil moisture and preventing erosion, and the method had been established as a permanent practice on more than 7,000,000 acres, largely in the Great Plains states, by the summer of 1945. Contour cultivation with grassed waterways had been adopted as a permanent pattern for growing row crops on approximately 14,500,000 acres. Strip cropping was established on approximately 5,000,000 acres, and construction of 438,445 miles of con-

tour terraces had been completed. Important progress had been made, also, in planning and establishment of high-yielding crop rotations, suited to land conditions and capabilities, especially in the nine southeastern states. In all regions of the United States, farmers using scientifically designed rotations with contouring, strip cropping, terracing, and adapted residue management realized yields from 20 to 40 per cent higher during the war period.

During the year, the land-capability classification, developed by the Soil Conservation Service, was widely used as a guide to planning land-use adjustments and conservation programs. In this classification there are eight land-capability classes, based on those physical characteristics that affect economic choice of crops, farming methods, and needs for conservation: Class I land is nearly level, not subject to serious erosion, easily worked and fairly productive. This type of land requires no special practices other than maintenance of fertility and good physical conditions to keep it productive. Lands of Classes II and III are productive lands requiring special practices to control erosion, improve drainage, or correct deficiencies in natural fertility. By using these necessary precautions, these lands are suitable for cultivation and a wide range of crops. Class IV land is suitable for occasional or limited cultivation and should be used to produce only soil-conserving crops. Class V land is nearly level and suitable for grazing or woodland but too wet, rocky, or subject to overflow to permit cultivation. Good vegetative cover should be maintained at all times on such land. Classes VI and VII include land that is steep or erodible, thin or unproductive, together with large areas too dry for safe crop production but useful for grazing or forestry if vegetation is not allowed to deteriorate. Class VIII land is rough, swampy, or otherwise unsuitable for grazing or forestry, although usually it will support some useful vegetation and wildlife.

The conservation-needs inventory of the total land of the 48 states, based on the land-capability classification, and made available to the public in June 1945 by the service, shows, for each state, the current land uses, the land-capability classes indicating needed land-use changes, the remaining acreages that should be placed under one or several of 54 soil and water conservation practices, and the amounts of labor, motor and horse equipment, seed, and tree and shrub plantings required to complete the work. The service assisted several hundred soil conservation districts in outlining their total remaining conservation jobs, by applying the conservation-needs inventory data and information directly to districts' areas and individual farms. For example, in the Upper Mississippi Region (Ohio, Michigan, Indiana, Illinois, Iowa, Minnesota, Missouri, and Wisconsin) where interest in soil conservation increased markedly during the last war year, 125 of the 294 soil conservation districts in the region had worked out such detailed postwar plans by the autumn of the year. Priority areas were developed by the service to aid the governing bodies of the districts with this planning; areas having a 20-year deterioration rate were placed in the high-priority category as most urgent for conservation treatment, and these lands were marked for immediate attention by farmers within the districts and service technicians assisting them.

• In connection with the continued acute demand for meat and other animal products, the service made studies of the nation's ranges from

the standpoint of the physical capabilities of the land to determine effective means of increasing range acreages, improving grass stands on run-down ranges, and keeping good ranges in top-producing condition. During the year, approximately 10,000,000 acres of range land in soil conservation districts were brought under proper systems of stocking through assistance given ranchers by service technicians. At the same time, some 324,000 acres in the 17 western states were seeded to grass under Soil Conservation Service programs, making a total of more than 2,000,000 acres seeded. This seeding work has resulted in making available nearly 1,000,000 animal-unit-months of grazing capable of producing an additional 50,000,000 pounds of meat annually.

A new Water Conservation Division, established as a part of the Soil Conservation Service June 30, 1944, began water conservation surveys on 28 watersheds. The functions of the division are to conduct investigations for appraisal of water resources, determine the feasibility of proposed water projects, and provide information on water to departmental agencies, soil conservation districts, other state and federal agencies, and civic groups and individuals.

Intensive research studies were carried on throughout the year in all states to refine soil conservation practices, adapt them to local conditions, and determine results in profit to land users through per-acre yields and maintenance of critical areas in periods of high production. In this connection, field experiments were carried on to improve methods of establishing meadow cover on cultivated lands, use of improved grasses and legumes, and contouring methods for very irregular topography. A study of the effect of depth of topsoil on corn yields, completed during the year in Missouri, showed cumulative losses in yield in proportion to topsoil losses:

Topsoil 12 inches deep produced	64 bushels per acre
Topsoil 10 inches deep produced	60 bushels per acre
Topsoil 8 inches deep produced	46 bushels per acre
Topsoil 6 inches deep produced	46 bushels per acre
Topsoil 4 inches deep produced	38 bushels per acre
Topsoil 2 inches deep produced	25 bushels per acre

Examples of water conservation experiments in progress included sedimentation studies in the southwest where silting of reservoirs is a critical problem in the water utilization of the region; development of methods for soil conservation and supplementary sediment control on reservoir watersheds in various areas; and studies to explore the possibilities of recharging ground water through water spreading on soils treated to maintain infiltration rates.

The service continued assisting farmers with construction and management of fish ponds: during the year, 4,319 ponds were stocked with 6,150,000 fish and placed under management for production of 250 pounds of palatable fish per acre of pond annually. Two million shrubs from the service's nurseries, including native plums and cherries, grapes, improved elder, hybrid filbert, and berries, were planted on gullied slopes and banks and in hedges and field borders. The nurseries also supplied soil conservation districts with 1,000,000 pounds of grass and legume seed and 50,000,000 seedlings for erosion control plantings on eroded fields, sand-blow areas, in shelterbelts and streambank field borders, and for demonstrations of new pastures, crop rotations, cover crops, and reseeding range and abandoned lands. The service had more than 2,000 farm conservationists working in areas where farm woodlands comprise 10 per cent or more of farm

lands, and in all these areas farmers were assisted with improvement cutting methods as they harvested pulpwood, sawlogs and fuel to supply wartime needs.

The Soil Conservation Service managed 32 land utilization projects in 34 states, comprising 7,141,000 acres, and administered leases with 27 different state agencies covering 334,469 acres in 22 projects. More than six million acres of this land were used for grazing by livestock owners; hay and other crops were grown in some projects; and 22,000,000 boardfeet of timber were harvested during the year. Soil conservation practices were spreading to a marked degree, in and near these projects.

An intensive training program was conducted by the service in all regions to train new technical personnel, returning veterans, visiting students from foreign countries, and local farm people, in the most up-to-date objectives, plans and methods of the work of the service and the soil conservation districts.

Total funds available to the service for the fiscal year 1945 amounted to \$31,456,999. As of September 1, its personnel numbered 9,146 employees in Washington, all 48 states, Puerto Rico, and the Virgin Islands.

PHOEBE O'N. FARIS,
Division of Information, Soil Conservation Service.

SOLOMON ISLANDS. Groups in Oceania and the Indian Ocean under British administration. In Oceania is a Melanesian group of islands with a total area of 16,500 square miles; 12,400 square miles constitute the British Solomon Islands Protectorate (see *WESTERN PACIFIC ISLANDS, BRITISH*), and 4,100 square miles form part of the mandated Territory of New Guinea (q.v.). In the Indian Ocean, one of the lesser dependencies of Mauritius is a group also known as the Solomon Islands.

SOMALILAND, British. See *BRITISH SOMALILAND*.

SOMALILAND, French. See *FRENCH SOMALILAND*.

SOMALILAND, Italian. See *ITALIAN EAST AFRICA*.

SOMALILAND PROTECTORATE. British territory in East Africa on the coast of the Gulf of Aden, bounded on the northwest by French Somaliland, on the southwest by Ethiopia, and on the southeast and east by former Italian Somaliland. The area is about 68,000 square miles, and the population numbers some 500,000, of whom 344,700 are Somalis. Berbera (pop. 30,000 in the cold season) is the principal port, and others are Zeila and Onkor; towns in the interior include Hargeisa, the capital, Sheikh, and Burao. The country was occupied by Italian forces from Aug. 16, 1940, till March 21, 1941; since the latter date the protectorate has been under military government. The military governor (Brigadier G. T. Fisher appointed March 1943) has his headquarters at Hargeisa, to which place the civil administration has been transferred from Berbera. Revenue in 1942-43 amounted to £249,032, and expenditure was £137,834, representing a net surplus of £111,198.

Although most of the population is nomadic, there are government-operated primary and technical schools at Sheikh, and elementary schools at district centers; a school for girls opened at Burao in February 1945 was the first in the protectorate, where previously there had

been religious (Moslem) objection to the education of women. In 1945 the British government provided £268,650 for the provision of increased medical and educational services, improvement of communications and pastures, and development of water supplies; and £46,850 to make an economic survey of the protectorate. The Somalis tend large numbers of cattle, sheep, and goats, the hides and skins of which constitute staple exports; large quantities of goatskins are imported into the United States for leather manufacturing. Under a new agreement signed in 1944 for a term of two years, tribes of the protectorate continue to enjoy grazing rights in reserved areas in Ethiopia for six months each year (a practice of the last half century); while these grazing lands, which extend as far as Dire Dawa, on the Djibouti-Addis Ababa railroad, remain the property of Ethiopia, they are administered by the military government of the protectorate, which is also responsible for the Ogaden district of former Italian Somaliland. The principal crops are millet, corn (maize), and dates; because of limited production, rice and dates are also imported, in larger volume than normal after failure of the 1943-44 rains. Guano, collected on Mait Island, mother-of-pearl shell, gums, and resins are other exports; and sugar and textiles are imported. Both Indian and East African currencies are legal tender. No railroads have been built, but there is an increasing mileage of highways fit for motor traffic.

SOMERVELL, Brehon Burke, United States Army officer: b. Little Rock, Ark., May 9, 1892. As chief of the United States Army Service Forces from March 1942 until V-J Day, General Somervell had the stupendous task of supplying food, clothing, munitions, and transportation for America's global army. Additionally, he was responsible for the Service Forces' handling of army pay and allotments; the processing of some 75 billion dollars in army contracts; the operation of base port organizations; and the administration of the army's medical service. In 1933, General Somervell made an economic survey of Turkey, gathering much valuable data on transportation and supply problems in the Near East. From 1936 until 1940, he directed New York City's WPA. He was assistant chief of staff in charge of the Supply Division, General Staff, from 1941 until he took over the Service Forces in 1942. He is a graduate of the United States Military Academy (1914), and in the First World War, served with an engineering unit. His military awards include the Distinguished Service Cross and the Distinguished Service Medal with oak leaf cluster. On Nov. 20, 1945, it was revealed in Washington that General Somervell had requested retirement from the army.

SOUTH AFRICA, Union of. A self-governing dominion of the British Commonwealth of Nations. Constituted by the Union of South Africa Act, Sept. 20, 1909, by which the self-governing colonies of the Cape of Good Hope, Natal, the Transvaal, and the Orange River Colony were united in a legislative union, these provinces became original provinces of the Union, the last-named being now called the Orange Free State. The Union has a total area of 472,494 square miles, and an estimated population (June 30, 1944) of 11,068,000, of whom 2,300,000 are Europeans and 8,768,000 non-Europeans, including over 7,250,000 Bantu. Executive authority is vested in a governor general, appointed by the

crown, assisted by an Executive Council of 12 ministers. Legislative power is vested in a Parliament, consisting of the king (represented by the governor general), a Senate, and a House of Assembly. The Senate originally consisted of 40 members, 8 of whom were nominated by the governor general, and 32 were elected (8 from each province, under a system of indirect representation). Since 1936, however, it may include 4 additional native members, directly elected, one from each of the four electoral areas, for five-year terms. All senators must be registered voters, at least 30 years of age, British subjects, five-year residents of the Union, with unencumbered property amounting to at least £500, and with the exception of the four native senators, must be of European (white) descent. The House of Assembly originally consisted of 150 members. Cape native voters are entitled to elect three additional members. Women over 21 and all adult males of white extraction exercise the franchise. A Natives Representative Council reviews legislation and other matters affecting the native population. The chief cities, with their populations (census of 1936) are Johannesburg (519,384), Capetown (344,223), Durban (259,606), Pretoria (128,621), Port Elizabeth (109,841), and Germiston (79,440).

Religion.—According to figures based on the census of 1936 the population was organized along religious lines as follows:

Sects	Europeans	Non-Europeans
Christian		
Non-Catholics	1,804,058	3,673,745
Roman Catholics	92,453	273,773
Jews	90,645
Hindus	160,117
Mohammedans	79,088
Buddhists and Confucians	3,671
No religion	3,349,977
Others, or unspecified	16,701	45,670
Totals	2,003,857	7,586,041

Over 1,000,000 of the Europeans are adherents of the Dutch churches, and about an equal number of non-Europeans are adherents of the Native Separatist churches. The 3,349,977 non-Europeans classified under "No religion" are mainly Bantu and non-Christian Hottentots and Bushmen.

Education.—Under the South Africa Act, higher education (including the universities) and vocational and technical education are exclusive functions of the Union government, primary and secondary education being directed by a provincial education department in each of the four provinces. There are five universities—those of Capetown, Stellenbosch, Witwatersrand, Pretoria, and South Africa, this latter including constituent colleges at Bloemfontein, Wellington, Grahams-town, Pietermaritzburg, and Potchefstroom. The average total enrollment in the universities and colleges in 1942 was 11,801. Various technical colleges are under the Union ministries of mines, labor, social welfare, and education. In all provinces primary education is free, separate schools being maintained for European and non-European pupils. European schools in 1941 numbered 3,622, with 388,925 pupils (over 16 per cent of the European population); non-European schools, 5,229, with 678,161 pupils (roughly 9 per cent) of the non-European population. The Union has two official languages, English and Afrikaans, the latter based mainly on the Dutch language of the Netherlands.

• **Finances.**—The Union budget for the year ending March 31, 1946, anticipated revenues of £118,277,000, as compared with estimated rev-

venues of £112,000,000 for 1944-45. Between March 31, 1938, and the same date in 1945 the internal debt increased from £161,494,698 to £522,098,589. During the same period the external debt was reduced from £101,123,208 to £18,159,805, mainly through the repatriation of London loans. Estimated civil expenditures for 1944-45 amounted to £59,813,500; defense expenditures, £102,500,000.

Defense.—Every citizen between the ages of 17 and 60 is liable for wartime service, and those of European descent between 17 and 25 are liable for periods of prescribed peacetime training with certain units, distributed over four consecutive years. On June 30, 1937, the permanent force consisted of 196 officers and 3,957 other ranks, including 1,440 members of the South African Air Force. In September 1939 the total strength of the Union's armed forces was 28,000 men, including the part-time soldiers of the Active Citizen Force. Although enlistment for service in the war was entirely voluntary, by 1944 the original force had increased to more than 160,000 Europeans and 100,000 non-Europeans. More than 86,000 Europeans and 39,300 Africans had seen service outside the Union.

Agriculture.—In 1939, the number of European-owned farms in operation was approximately 108,000, comprising a total area of about 213,181,000 acres. Maize (corn) and wheat are the principal cereal crops. The corn crop, the chief source of food for most of the natives, was very small in 1944-45, amounting to only 3,700,000,000 pounds, as compared with the crop of 4,612,000,000 pounds for 1942-43. It was estimated that some 2,500,000 bags (of 200 pounds) of corn might have to be imported. Increased prices were being paid to producers, and the price to consumers was advanced sixpence a bag. It was also anticipated that about 1,000,000 bags of wheat would have to be imported in 1945, and double that amount in 1946. The 1944-45 potato crop amounted to 375,000,000 pounds, representing an increase of about 19 per cent over that of the preceding year; and the bean crop was unofficially estimated at 60,000,000 pounds, an increase of about 45 per cent. The estimated yield of oats for 1944-45 was 333,300,000 pounds (compared with 243,750,000 pounds in 1943-44), and that of barley 151,950,000 pounds (96,000,000 pounds in 1943-44). Plans were under way for making South Africa (which formerly imported over \$1,000,000 worth of rice each year from India and Burma) an important rice-producing country.

Of the industrial crops, sugar (produced mainly along the coast of Natal) amounted in 1944-45 to 614,158 tons (of 2,000 pounds), compared to 585,000 tons in 1943-44. In 1943-44, tobacco amounted to over 32,000,000 pounds (compared with 24,000,000 pounds in 1942-43). In 1939-40 tea production reached a total of 3,352,000 pounds.

In 1943 there were in rural areas: 13,068,000 cattle, 37,888,000 sheep, 6,151,000 goats, and 1,174,000 pigs. In 1936-37, there were 750,000 horses, 126,000 mules, and 822,000 donkeys. The estimated production of wool for 1944-45 amounted to approximately 710,000 bales, about 60,000 bales less than in 1943-44. The dairy industry has shown substantial increases in the manufacture of condensed and powdered milk. Between 1929 and 1944 the amount of fresh milk used annually by factories increased from about 1,000,000 gallons to over 10,000,000, and considerably more fluid milk was also consumed

by the public. During 1943-44 factory production of butter amounted to 42,741,000 pounds, and of cheese, to 15,250,000 pounds.

Since 1912 at least £11,340,000 has been spent on government irrigation schemes in addition to considerable government assistance given to private projects. The Vaal River project (the Union's largest irrigation enterprise), completed at a cost of about £4,300,000, has a dam with a water storage capacity of 62 square miles, and has brought over 20,000 acres under cultivation. Government plans were reported in 1945 for an expenditure of £8,000,000 for the construction of a 50-mile irrigation canal from the Orange River, at Bothulio to the Brak River.

The output of whale oil, much reduced since 1940, was expected to reach 500,000 barrels in 1945-46 through the reconversion of former whaling vessels which had been used during the war as minesweepers and through the acquisition of new factory ships.

Minerals.—Gold continued to be the supreme mineral product, output for the first six months of 1945-46 being 6,115,726 fine ounces (compared with 6,129,950 fine ounces for the same period of 1944-45). A rise in the British Treasury price of gold, from 168 shillings an ounce to 172 shillings threepence was expected to be partly offset by the gold realization charge and by increases in wages granted by the government to native mine workers in 1944. The government's plan provided for increases of 4d-5d per shift over the current average wage of 2s 3³/₄d (about 47 cents) a shift paid to the native workers, and for time and a half for Sunday work. The diamond industry had a prosperous year in 1944, gross profits of the De Beers Company reaching £8,018,000, of which £3,719,000 was reported to have been distributed in dividends. Of the total sales of minerals from before 1910 to 1944 inclusive, gold accounted for 80.4 per cent, diamonds to 11.8 per cent, coal to 5.3 per cent, copper to 1.2 per cent, and other minerals (including silver, platinum, osmiridium, tungsten, antimony, chrome, iron ore, tin, manganese, and asbestos) to 1.4 per cent.

Manufacturing.—In 1942, the gross value of the industrial output (apart from that of minerals, and of industries conducted by the state) was £272,875,859. The Union's industrial establishment included nearly 10,000 enterprises, with land and buildings valued at more than £55,000,000, and a total annual payroll of almost £63,000,000. The majority of the factories were engaged in the processing of foods, beverages, and tobacco; but the 1,263 plants producing engineering and related materials employed 113,000 workers, nearly half of whom were Europeans. All the industries accounted for about 150,000 European and 247,000 non-European workers.

Foreign Trade.—Gold, upon which the economy of the country largely rests, normally accounts for 70 per cent of the value of all exports, followed by wool (12 per cent), diamonds and fresh fruit (each 3 per cent), and sugar (2 per cent). The remaining 10 per cent is accounted for mainly by manganese, coal, iron ore, chrome, copper, asbestos, hides and skins, mohair, corn, wines and wattlebark. In 1938, the last year prior to the Second World War, the main imports (machinery, metals and metal products) amounted to about 40 per cent of the total, with textiles, fibers, yarns, and clothing ranking next, in the order named. In 1940 the exports of the Union (other than gold) amounted to a total value of £34,090,637; its imports—mainly ma-

chinery and machine supplies, clothing materials, and foodstuffs—amounted to £105,009,934.

Communications.—In 1945, South Africa had 13,931 miles of railways, including 13,080 miles of 3-foot 6-inch gauge, and 851 miles of 2-foot gauge. In 1944 the railways carried 44,576,428 tons of freight and over 200,000,000 passengers. The railways, which are state-owned and operated, employ a total staff of 142,000, of whom 82,100 are Europeans, and 59,900 natives, Indians, and other non-Europeans. In the fall of 1945, the Union had 285,048 passenger automobiles (not including government cars), 2,287 buses, 56,093 trucks, 5,334 tractors, and 17,543 motorcycles. Most of the passenger cars were reported to be at least seven years old, many being discarded every year. Apart from 6,000 trucks (many of only limited serviceability) converted from military to civilian use, it was anticipated that as before the Second World War, from 85 to 90 per cent of the motor vehicles required in the Union would be purchased in the United States or Canada. Postal, telegraph, and telephone services are under unified government direction. Radiotelegraph and submarine cable circuits link the country with the rest of the world by way of Great Britain. In 1944 there were 219,204 subscribers' telephones, and 21,597 farm line telephones. Wireless licenses (also under the Postal Department) issued to Dec. 31, 1944, numbered 365,250. The Union is linked with Great Britain by air mail service through Cairo, and with countries of the Western Hemisphere through West Africa and Brazil.

Principal Events in 1945.—*Political.*—At their New Year conference, the South African Labour Party decided to remain in the government and to continue the coalition. Parliament assembled January 20 and the session was largely devoted to postwar plans for housing, demobilization, health, and social security. Finance Minister J. H. Hofmeyr's budget in March was unspectacular and was dubbed the "Transition Budget," promising encouragement to secondary industries in the face of overseas competition.

The most important bills passed were the Social Security Bill, allocating £16,000,000 for this purpose, and the Housing Bill, giving the state the widest powers. The food shortage was very grave, especially in respect to meat, and the government investigated the possibilities of rationing but decided against this step owing to the unhomogenous character of the population.

In February the House of Assembly passed a vote of confidence in Field Marshal Smuts by 92 votes to 40.

The pro-government United Party scored a notable victory in the South West African elections and soon after the party called for the incorporation of the territory in the Union and the confiscation of land held by pro-Nazi Germans. In view of the San Francisco deliberations, however, Field Marshal Smuts did not accede to this request and, following a conference in Pretoria in September, announced the retention of the status quo. At the San Francisco Conference the South African delegation gave notice of the Union government's intention to claim at a later peace conference that its mandate over South West Africa be terminated and that the territory be incorporated as part of the Union of South Africa.

In two by-elections in South Africa the United Party retained the Port Elizabeth seat against an Independent and lost Kimberley to the Nationalists.

Commercial and Economic.—The most impor-

tant event was the Southern Africa Air Conference in March attended by the British minister for air, Lord Swinton, who arrived in Capetown in a recordbreaking flight of less than three days. The conference set up a Southern Africa Air Transport Council and it was decided by the airline operating countries concerned to establish an operators' association. It also announced plans to inaugurate a landplane service from London to Johannesburg to be operated jointly by the Union government and the British Overseas Airways Corporation. The minister of transport, Mr. F. C. Sturrock, indicated that other countries, including the United States, were to open airlines in South Africa. The internal air services of the South African Airways were resumed in February, gradually expanding later. Work was begun early in the year on national airports at Capetown and Durban and an international airport near Johannesburg which will be an ambitious project.

Big undertakings in the Union completed during the year have been two huge floating docks built at Durban and the Cape for the Admiralty, and the Sturrock graving dock, costing £3,500,000 and the largest in the Southern Hemisphere, opened at Capetown toward the end of September. During the year the Union ports handled large ship repairing and conversion jobs.

Despite food shortages internally, South Africa exported much food to Britain, principally citrus, jams, butter, and cheese. A campaign was started to donate a large quantity of food to Britain in recognition of her war services. A prolonged drought, involving severe cattle and crop losses, affected the Eastern Cape Province in the early summer.

In an attempt to improve the Union's water supply, an expedition led by Senator A. M. Conroy, minister of lands, traveled in July to the Kalahari Desert to investigate a theory advanced by Professor Schwarz some years ago that rainfall would improve by joining the Zambesi and Cunene rivers to form a lake. After extensive traveling in the desert, the expedition found the suggestion impracticable but returned with valuable data for improving irrigation and for the future development of the territory. Continued prospecting in the Free State during the year revealed big possibilities for gold mining; attention has focused on the province for future developments and new companies have been formed.

Military.—After a few weeks' rest in February, the 6th South African Armoured Division rejoined the Fifth Army on the Italian front line and undertook their greatest assault in April with Gen. Mark Clark's men, capturing Montesole and Monte Caprara and entered Bologna. The Springboks ended their war record with the capture of Treviso just before V-E Day. South African casualties for the war totaled 37,962 including 9,027 deaths of whom over 6,813 were whites. By July war factories had turned out South Africa's five millionth grenade and the quarter millionth bomb.

General.—The jubilee of the opening of the Lourenço Marques-Transvaal Railroad 50 years ago was marked in July by a celebration on the border attended by the minister of transport, Mr. F. C. Sturrock, and the governor general of Mozambique, General J. A. DeBettencourt.

South Africans accorded a great welcome to Field Marshal Smuts on his return from San Francisco and "Thank you, General Smuts" gatherings were largely attended at Pretoria, Johannesburg and Durban.

The biggest disaster in many years occurred at Pretoria on March 1 when an ammunition magazine exploded, killing 34 and injuring 90. Two air tragedies outside the Union involved returning South African soldiers in July. A Dakota transport leaving Kisumu crashed into Lake Victoria killing all 28 occupants on July 11, and on July 19 a Ventura crashed on landing at Khartoum, killing 16. The shuttle air service repatriating springboks from the Middle East was consequently curtailed, slowing down the homecoming.

Dr. S. F. N. Gie, South African minister to the United States, died April 9, and was succeeded in Washington by Harry T. Andrews.

H. M. MOOLMAN,

Director, Union of South Africa Government Information Office, New York.

SOUTH AUSTRALIA. See AUSTRALIA.

SOUTH CAROLINA. South Atlantic state, United States; one of the original thirteen states. Population (1940): rural, 1,433,693; urban, 466,111; total, 1,899,804. Land area, 30,594 square miles, divided into 46 counties. Chief cities, with 1940 populations: Charleston, 71,275; Columbia, the capital, 62,396; Greenville, 34,734; Spartanburg, 32,249; Anderson, 19,424.

Chief State Officers, 1945.—Governor Ransome J. Williams; secretary of state, W. P. Blackwell; treasurer, Jeff B. Bates; comptroller, E. C. Rhodes; attorney general, John M. Daniel.

Judiciary.—Chief justice of the state supreme court, D. Gordon Baker; associate justices, E. Ladson Fishburne, Taylor H. Stukes, Claude A. Taylor, G. Dewey Oxner.

Legislature.—South Carolina's General Assembly (Senate, 46 members; House of Representatives, 124) convenes annually on the second Tuesday in January.

Education.—Public elementary schools (1944-45), 3,594; teachers, 11,492; pupils, 364,639; average yearly salary of elementary school teachers, \$864. Public senior high schools (1944-45), 491; teachers, 3,589; students, 89,345; average yearly salary of senior high school teachers, \$1,269. Education in South Carolina is compulsory for all children between the ages of 7 and 16, inclusive. There are 15 colleges and universities for whites and 5 for Negroes in the state. Total state appropriation for public school education (1944-45), \$14,516,642; appropriation by cities and counties (1944-45), \$8,733,091. State superintendent of education, J. H. Hope.

Finances.—Following is a statement of South Carolina's finances for the fiscal year 1943-44, the latest report available:

Balance in treasury, beginning of fiscal year 1943-44	\$ 47,263,911.45
Receipts, 1943-44	89,153,964.51
Total	\$136,417,875.96
Disbursements, 1943-44	83,458,148.23
Balance, beginning of fiscal year 1944-45	\$ 52,959,727.73

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	Final 1944	Preliminary 1945
Corn (1,000 bu.)	23,398	24,160	24,123
Oats (1,000 bu.)	11,083	15,064	16,023
Wheat (1,000 bu.)	2,238	3,653	2,964
Barley (1,000 bu.)	111	195	185
Rye (1,000 bu.)	156	225	221
Cotton (1,000 bales)	755	864	635

CROP (and unit of production)	Average 1934-43	Final 1944	Preliminary 1945
Hay:			
Tame (1,000 tons)	427	410	475
Pecans (1,000 lbs.)	2,422	2,600	3,496
Peanuts (1,000 lbs.)	14,501	25,400	25,000
Sweet potatoes (1,000 bu.)	5,119	7,056	6,200
Tobacco (1,000 lbs.)	90,079	132,250	140,400
Potatoes (1,000 bu.)	2,618	1,464	2,583
Peaches (1,000 bu.)	2,039	2,460	5,760
Pears (1,000 bu.)	128	160	191
Grapes (tons)	1,340	1,200	1,400

SOUTH DAKOTA. West North Central state, United States; admitted to the Union Nov. 2, 1889. Population (1940): rural, 484,874; urban, 150,087; total, 642,961. Land area, 76,536 square miles, divided into 69 counties. Principal cities, with 1940 populations: Sioux Falls, 40,832; Aberdeen, 17,015; Rapid City, 13,844; Huron, 10,843; Mitchell, 10,633; Watertown, 10,617; Pierre, the capital, 4,322.

Chief State Officers, 1945.—Governor, M. Q. Sharpe; lieutenant governor, Sioux K. Grigsby; secretary of state, Mrs. L. M. Larsen; treasurer, E. V. Youngquist; auditor, S. E. Anderson; attorney general, George T. Mickelson.

Judiciary.—The state's supreme court is composed of five members, all of equal rank. The position of presiding judge is one held in rotation among the five judges.

Legislature.—South Dakota's legislature (Senate, 35 members; House of Representatives, 75) meets biennially in odd years on the first Tuesday after the first Monday in January.

Education.—Public elementary schools (latest school year reported, 1943-44), 4,140; teachers, 5,523; pupils, 86,903; average yearly salary of elementary school teachers, \$1,067. Public high schools (1943-44), 345; teachers, 1,769; students, 29,415; average yearly salary of high school teachers, \$1,560. State teacher training and education courses are offered in 6 state institutions. There are 9 privately owned schools in South Dakota. Education in South Dakota is compulsory for all children between the ages of 7 and 16, inclusive.

Finances.—The following statement of South Dakota's finances for the fiscal year 1944-45 was supplied by the state treasurer's office:

Balance in treasury, beginning of fiscal year 1944-45	\$18,327,728.72
Receipts, 1944-45	32,958,617.91
Total	\$51,286,346.63
Disbursements, 1944-45	27,486,473.13
Balance, beginning of fiscal year 1945-46	\$23,799,873.50

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	Final 1944	Preliminary 1945
Corn (1,000 bu.)	47,634	140,292	119,250
Oats (1,000 bu.)	47,258	92,430	146,759
Wheat (1,000 bu.)	23,082	38,847	53,098
Barley (1,000 bu.)	28,353	28,448	33,615
Rye (1,000 bu.)	6,751	4,508	4,495
Sorghums for grain (1,000 bu.)	1,022	2,091	962
Flaxseed (1,000 bu.)	1,570	2,799	4,785
Hay:			
Alfalfa (1,000 tons)	329	540	530
Tame (1,000 tons)	772	917	901
Wild (1,000 tons)	1,150	2,788	2,354
Potatoes (1,000 bu.)	2,016	2,550	2,904

SOUTH GEORGIA. See FALKLAND ISLANDS.
SOUTH ORKNEYS. See FALKLAND ISLANDS.

SOUTH SANDWICH ISLANDS. See FALKLAND ISLANDS.

SOUTH SHETLANDS. See FALKLAND ISLANDS.

SOUTH WEST AFRICA. A mandate of the League of Nations administered by the Union of South Africa. The area, including the Caprivi Zipfel strip (which gives access to the Zambezi), is 317,725 square miles; in 1942 the population was estimated at 344,564, of whom about 30,000 were whites (two thirds of them South Africans, the rest of German origin). Walvis Bay (374 square miles), actually part of the Cape of Good Hope province of the Union, is an enclave within the mandate (and its chief port), and is administered with it. Windhoek (pop. 20,413) is the capital of South West Africa. Under the mandate (which dates from Dec. 17, 1920), the Union of South Africa was granted full power of administration and legislation over South West Africa as an integral portion of its own territories, with authority to apply the laws of the Union to it. Administration of the mandate is vested in the governor general of the Union, who delegates his powers to an administrator; the latter is assisted by an Executive Committee of 4 members elected by the Legislative Assembly, the latter body having 6 nominated and 12 elected members. The Legislative Assembly has submitted a request for incorporation of the territory as part of the Union; at San Francisco on May 7, 1945, South Africa's delegation to the United Nations Conference on International Organization gave notice of its intention to claim at a later peace conference, when territorial questions are discussed, that the Union's mandate over the territory be terminated and that South West Africa be incorporated as part of the Union of South Africa. Revenue in 1943-44 amounted to £SA1,856,141, and expenditure was £SA1,046,660. Native reserves (districts) have reached a high state of economic development, and through native councils the people have a voice in the management of their own affairs. The government maintains 2 schools for natives and 1 for colored (half-caste) children, and makes grants-in-aid to 93 mission schools for natives and colored; for white children, there are 55 government and 17 private schools. Stock raising is the principal industry; some 3,000,000 karakul sheep are bred exclusively for their pelts, export of which is of growing economic importance. Dairying is on a relatively small scale. The mandate is rich in mineral deposits. Diamonds constitute 25 per cent of the exports; in 1944 prospecting for diamonds commenced in the 40,000-square-mile Kaokoveld area, in the northwest of the country. Pollucite, a rare metal containing caesium, was first found, in 1945, in the Karibib district. Salt deposits are exploited, and vanadium and tin are mined on a small scale; the copper mine at Tsumeb was closed at outbreak of the Second World War. Exports in 1943 were valued at £SA6,639,618 (overseas, £SA3,913,385; Union of South Africa, £SA2,726,233). The country is economically dependent upon the Union, from which it draws the great bulk of its supplies; imports in 1943 from the Union of South Africa amounted to £SA3,244,382, and those from overseas were valued at £SA71,584 (a total of £SA3,315,966). The administration of the state-owned South African Railways operates the railways within the country (1,584 miles) and the motorbus services (1,774 route miles);

one bus line links railroad at Tsumeb with the border of Angola (Portuguese West Africa).

SOUTHERN RHODESIA. See RHODESIA.

SOYBEANS. Within comparatively recent years soybeans have come into their own in the United States and are now rated as one of the country's most important crops from many standpoints. Production in 1945 was estimated by the Department of Agriculture at 196,587,000 bushels, as compared with the 1944 crop of 192,863,000 bushels, and the 1934-43 average crop of 86,732,000 bushels. Illinois is the leading producing state. Its crop in 1945 was 73,062,000 bushels; Iowa was second with 36,195,000 bushels, and Indiana was third with 28,640,000 bushels.

SPAATZ, Carl A., United States Army Air Force officer: b. Boyertown, Pa., June 28, 1891. Top American commander in the strategic air campaign that crippled German war industry, General Spaatz was transferred to the Pacific theater in the summer of 1945 to command the United States Strategic Air Force, newly created to carry out the B-29 raids on Japan. His command embraced Lieut. Gen. James Doolittle's Eighth Air Force and Maj. Gen. Curtis E. LeMay's Twentieth. General Spaatz was graduated from West Point in 1914, and in 1915, transferred to the San Diego Aviation School for flight training. He was among the first 25 army men to win his wings. In the First World War, he served as officer in charge of flight instruction at Issoudon, France; later commanded a pursuit squadron. He holds the Distinguished Service Cross for heroism in action. In 1925, he studied at the Tactical School, and in 1936, attended the Command and General Staff School. He was ordered to Great Britain in 1940 as a special military observer and studied German air tactics during the severest part of the Battle for the British Isles. Soon after the Japanese attack at Pearl Harbor, he was made chief of the Air Force Combat Command. In July 1942, he was ordered to the European theater as American air commander, and in December of the same year, was transferred to the Mediterranean. In April 1943 he was attached to Air Chief Marshal Tedder's staff, as chief of operations and commander of the Northwest African Air Forces. He later directed his air forces for the invasion of Sicily and the Italian mainland. In November 1943, he assumed command of all American air forces in the Mediterranean, and was also named chief of the newly activated United States Fifteenth Air Force. General Spaatz was Lieut. Gen. Eaker's predecessor as commander of the American Eighth Air Force in Britain, and in September 1943, received the Legion of Merit for his record of achievement with that organization. When he became air commander under Eisenhower in January 1944 for the invasion of Western Europe, he was again teamed with Air Chief Marshal Tedder.

SPAIN. A republic of southwestern Europe occupying the greater part of the Iberian Peninsula; area of Continental Spain, 189,890 square miles; with the Balearic and Canary islands, 194,720 square miles. Spain's population in 1940 was 25,877,971 (1943 estimated, 26,491,166). Ceuta, a fortified post in Africa, opposite Gibraltar, and constituting a part of the Province of Cádiz, had a population (1940) of 59,115. Melilla, also in Spanish North Africa, had a population in 1940 of 77,192. Formerly a constitutional monarchy, Spain was proclaimed a republic

on April 14, 1931, the constitution (Dec. 9, 1931) providing for a president and a Congress of Deputies, elected for four years. On July 17, 1936 a revolt broke out against the government, the insurgents setting up a dictatorial government, at Burgos, with Gen. Francisco Franco as the head. The first civil government was proclaimed on Feb. 1, 1938, and the second on Aug. 9, 1939, later modified on May 20, 1941 and on Sept. 3, 1942. A National Council of 100 members governs the country's single political party—the Falange—assisted by a Fascist political committee of 4 members. Gen. Francisco Franco is listed as leader (*caudillo*) of the empire, chief of the state, commander in chief of the armed forces, prime minister, and head of the Falange Party. The law of 1942 re-established the Spanish Cortes, charged with preparation and enactment of laws, on Fascist lines. In 1940 the Consejo de la Hispanidad was created to promote spiritual and material intercourse with other countries of Spanish origin, the Spanish-American republics and the Philippines being invited to elect corresponding members. There are 50 provinces in Spain, each with its own assembly. The chief cities, with their estimated populations in 1944, are Madrid (1,140,621); Barcelona (1,108,961); Valencia (508,072); Seville (347,997); Zaragoza (Saragossa) (266,483); Málaga (258,598); Murcia (210,617); Bilbao (208,347); and Granada (171,036).

Religion and Education.—Under the Franco regime Catholicism again became the established state religion. Religious bodies recovered their legal status, and the state again aided in supporting the clergy. The majority of the population adheres to the Roman Catholic Church, which has 9 metropolitan sees and 61 suffragan sees.

Primary education is compulsory and free; according to the latest returns available (1941-42); there were 44,572 public schools with 3,852,897 pupils. Under the Franco regime, it is reported, the church schools which had been closed by the republic were reopened, and religious instruction became compulsory in the state schools. The latest census returns (1943) showed that a total of 10,204,939 persons, including 2,607,112 children, could not read or write. For secondary education there were in 1942, 117 institutions with 170,782 pupils. There were 12 universities (at Barcelona, Granada, Madrid, Murcia, Oviedo, Salamanca, Santiago, Seville, Valencia, Valladolid, Zaragoza, La Laguna) with 34,669 students.

Finance.—The Spanish government's estimated budget for 1945 called for ordinary expenditures of 13,148,722,000 pesetas. (In December 1945 the peseta = approximately \$0.0925 in U.S. currency.)

Estimates of income amounted to 10,544,225,000 pesetas.

Expenditures from July 1936 to July 1939 were about 12,000,000,000 pesetas, and income about 3,700,000,000, the deficit thus amounting to more than 8,000,000,000 pesetas. The total state debt on Jan. 1, 1944, was 34,967,346,554 pesetas.

Defense.—According to a decree of July 24, 1939, the army was reorganized into 8 army corps in the peninsula, 2 in Morocco and 2 garrisons in the Balearic and Canary Islands. There was also an independent cavalry division. By another decree published Aug. 30, 1939, supreme military authority was placed in the High General Staff of the army. A new Ministry of Air was created to supervise all matters relating to

civil and military aviation. On Aug. 21, 1940, military service was made compulsory for two years, and on Dec. 20, 1943, it was resolved to dissolve the Falangist militia.

The navy consists of 16 destroyers, 4 sloops, 3 torpedo boats, 6 minelayers, 5 submarines, and a number of minor vessels including 7 minesweepers. The air force is an independent service dating from 1939.

Production.—The productive land of Spain comprised nearly 114,000,000 acres, about 90 per cent of the total area, but only about 56,000,000 acres are under cultivation, 60,000,000 acres consisting of pastures and mountains. The country is generally fertile and well adapted to agriculture, and the cultivation of tropical fruits, including olives, oranges, lemons, almonds, pomegranates, and dates. Agricultural products include wheat, barley, maize, oats, rice, hemp, and flax. Grapes are grown in every province; in the southwest the famous sherry and tent wines are made, and in the southeast, Málaga and Alicante. Other products are hazelnuts, esparto, pulse, cochineal (in Canary Islands), silk, honey and beeswax, resinous products, brandy and spirituous liquors. Sugar production in 1944 was estimated at only 140,000 tons, as compared with a normal production of 300,000 tons before the civil war. The wheat harvest in 1944 was estimated at 3,000,000 metric tons, which was 20 per cent higher than 1943, but 15 per cent less than annual consumption. Wheat acreage still remained almost one fifth less than the 1935 figure of 4,500,000 hectares. The barley crop was expected to be a little over 1,500,000 tons, or about 200,000 tons short of annual consumption and almost one fourth less than before the civil war. The rice yield was estimated at more than 200,000 tons, as compared with a normal consumption of 225,000 tons. Before the civil war there was usually an exportable surplus of 75,000 tons. Production of olive oil in 1944 was estimated at 240,000 tons as compared with 400,000 tons in 1943. The 1945 production was estimated at 220,000 metric tons.

Harvesting, planting, and other agricultural operations were handicapped by a continued shortage of machinery, equipment, and fertilizer, and as the principal activity in Spain, agriculture remained a retarding influence on the country's whole economy.

Spain has considerable manufactures of cotton and woolen goods, principally in Catalonia, producing yearly about 90,000 tons of manufactured articles. The 1941 strip of cork was estimated at 32,000 tons, of which about 20,000 tons would be exported, principally to Germany and Italy. No later figures were available in 1945, but the output of cork was known to have declined in 1944 as a result of transportation shortages and the cutting off of trade with central Europe. The 1944 crop of cotton in the Seville area, where 46,160 hectares were planted, was expected to be less than in 1943, when 27,000 bales of ginned cotton (220 kilograms each) were produced.

Manufacturing activity declined in 1944 principally because of power shortage and also because of continued difficulties in obtaining supplies of raw materials abroad. The output of electric power during the first five months of 1945 was substantially below that for the corresponding period of 1944, industrial consumers being limited to about 50 per cent of their 1943 consumption. The important textile industry centered in Catalonia suffered a series of reverses in 1944, and cement production in Spain during the

first nine months of 1944 amounted to 1,111,000 tons, as compared with 1,122,000 tons in the corresponding period of 1943.

Mining.—The country is rich in minerals, which have been only partially developed. Iron, coal, zinc, lead, manganese, quicksilver, silver, salt, sulphur, and phosphates have been found. The iron-ore industry expanded slightly during the first 8 months of 1944, output being estimated during that period at 1,115,565 tons, but a sharp decline occurred during the closing months of the year, exports to Germany then having been suspended. Total production of coal in Spain during the first quarter of 1945 amounted to 2,735,000 metric tons, compared with a total of 2,810,604 metric tons during the corresponding period of 1944. The production of zinc ore declined also, 43,261 tons having been produced in the first eight months of 1944, while production during the entire year of 1943 totaled 71,891 tons. The output of lead ore and metal, of fluorspar, and of mercury declined during 1945 as did that of most other nonferrous metals.

Foreign Commerce.—According to *Foreign Commerce Weekly* for April 21, 1945, total exports during the first half of 1944 amounted to 1,178,626 tons, valued at 1,641,278,864 pesetas, compared with 943,116 tons, valued at 1,474,423,160 pesetas during the first half of 1943. Total imports during the first half of 1944 declined to 865,170 tons from 886,551 tons during the first half of 1943. After trade with the Axis was cut off, an abrupt drop in both volume and value of imports and exports occurred. No official statistics were available, but it was estimated that foreign trade declined during the second half of the year by at least 25 per cent.

Communications.—Standard-gauge railways were placed under government jurisdiction in 1941, private management to be replaced by a government administrative council. In 1942 there were 10,805 miles of railways. On Feb. 1, 1941, the Spanish railways of normal gauge (22 main lines totaling 7,970 miles) passed into state ownership, and are controlled by a government board. At the end of 1940 there were 3,500 locomotives, 4,500 passenger cars, and 89,000 freight cars in service. In 1940 railways carried 168,000,000 passengers and 40,500,500 tons of freight. There are 830 miles of tramways. Madrid has 16 miles of subways and Barcelona 10.5 miles. In 1942 there were 8,963 post offices, and 26,345 miles of telegraph lines. In 1942 there were 3,385 telephone centrals and 364,923 telephones in service. Highways and roads had a total mileage of 77,574. The passenger and mail air services are well developed.

Merchant Marine.—On Jan. 1, 1943, the merchant fleet included 925 vessels with a gross tonnage of 1,019,884. The chief maritime centers are Barcelona, Bilbao, Seville, and Cádiz.

Principal Events, 1945.—The defeat of Germany in May 1945 by the Allied powers increased the steadily mounting difficulties of the Franco government of Spain by eliminating the regime's chief external political support, and at the same time destroying a principal outlet for the country's economic products. Foreign trade fell an estimated 25 per cent. Because of a shortage of materials, power, and transportation, industrial activity ebbed; the prices of bread, sugar, olive oil, potatoes, milk, wine, shoes, and clothing rose sharply; and wages declined to new levels. It was reported in September that in the textile industry no worker received more than 40 pesetas

(\$3.70 or less) a week; but profits, augmented by a flourishing black market, continued to soar. Construction activities, which in 1944 had remained at about the same level as in 1943, declined in 1945, as did industrial and agricultural production. Popular dissatisfaction grew under the continued suppression of civil rights and the deterioration of economic conditions, and arrests and executions increased. Madrid reported the execution of 16 "Communist-terrorists" on February 26, and on September 8 a third wave of political arrests within the year was reported to be sweeping Madrid, conservative estimates placing the number jailed at more than 500 within 10 days.

Externally, the country's relationships grew more difficult. Dr. Juan Negrin, premier of the former Spanish republic, stated on January 2 that the United Nations owed it to the Spanish Republicans, who first fought fascism, to break with the Franco government. On May 22 reports from Lausanne, Switzerland, stated that Prince Juan, pretender to the Spanish throne, had called on Franco to resign in order that the monarchy might be restored. On the following day the Spanish government, which had been representing Japanese interests in other countries, was forced to protest Japanese atrocities in the Philippines, where the latter were reported to have destroyed 80 per cent of Spanish property and to have killed 162 Spanish citizens. The Spanish government asked diplomatic satisfaction from the Japanese, who denied the atrocities. On March 30 the resignation of the duke of Alba, Spanish monarchist, as Spain's ambassador to Great Britain, was confirmed. Spain broke off relations with Japan on April 11. In return for a pledge made by the United States granting Spain facilities to deliver diplomatic pouches to Bern, Switzerland, the Spanish government on April 18 forbade German aircraft of any type to land on Spanish territory, thereby impeding the flight to Spain of war criminals wanted by the Allies. On April 29 it was reported from Barcelona that a meeting of Carlist Party members had openly defied the Franco regime, pledging loyalty to the "Catholic Spain of God, country, and king." Spain severed relations with Germany on May 7, the Nazi government of that country having virtually ceased to exist (it surrendered to the Allied powers on the following day). The Foreign Affairs Committee of the French Consultative Assembly on May 25 proposed that Franco be asked to resign by the Allies acting in concert, in order that a democratic government might be formed in Spain; and that, if he refused, relations between France and Spain be severed.

In an effort to counteract the cumulative effect of these events, both within and outside of Spain, the government announced on May 5 that freedom of speech and worship and the right of habeas corpus had been granted Spaniards, and on May 7 Franco announced that he had given the country a "bill of rights." This bill gave Spaniards freedom of speech as long as they did not criticize the "fundamental principle" of the Falangist state; granted freedom of assembly for "lawful purposes," and accorded freedom of "religious belief," but barred all religious ceremonies except Catholic; and set up a form of habeas corpus. On June 16, Franco announced that municipal elections would soon be held in Spain, followed by provincial and national elections, and by the formation of a Council of the Realm, which would decide upon his successor in the event of necessity. Addressing the National Coun-

cil of the Falange in Madrid on July 17, Franco stated that he expected to be succeeded by "the traditional monarchy."

Several countries severed relations with Spain during the year: Guatemala, on January 23; and Panama, on June 29. On June 19 the United Nations Conference at San Francisco voted to bar the Franco government permanently from membership; and on August 2 the Berlin Conference held by President Harry Truman of the United States, Prime Minister Clement R. Attlee of Great Britain, and Premier Joseph Stalin of the Soviet Union, issued a communiqué declaring that the Franco regime, because of its "close association with the aggressor states," was not wanted in the United Nations. This declaration was rejected as "arbitrary and unjust" by the Spanish government, which cited Spain's "peace-loving spirit" and "goodwill toward all peoples." British Foreign Secretary Ernest Bevin, outlining his government's foreign policy on August 2, justified Great Britain's noninterference policy with regard to Spain, stating that the sort of regime desired by Spain was a question for Spaniards alone to decide, and that foreign intervention would only strengthen Franco. President Truman, however, strongly denounced Franco and his government in a press conference on August 23, at which he was reported to have recalled the Berlin Conference which barred Spain from the United Nations and to have added: "None of us likes Franco or his government." On September 4 it was announced from Paris that an agreement had been reached by France, Great Britain, the United States, and the Soviet Union calling for the expulsion of Spanish troops from Tangier, which Franco had occupied in 1940 over the protests of Great Britain and the United States. In Mexico City, on August 26, completion of the first Spanish government in exile was announced by its president, Diego Martínez Barrio, who appointed José Giral premier in disregard of two mandates from Spanish Republicans calling for the reappointment of Juan Negrín. The new Republican regime, excluding Communist representatives but supported by them, as it was by Negrín himself and by all major republican factions, was soon recognized by Mexico, Guatemala, and Panama. On September 28, Bolivia severed relations with the Franco government in Madrid.

SPANISH COLONIAL EMPIRE, in Africa, comprised of Spanish Guinea, including Río Muni, the island of Fernando Po, and four smaller islands; western Sahara, including Río de Oro, Adrar, and Ifni; and Spanish Morocco. Total area, 128,570 square miles; total population, 890,000 (est. 1939).

Spanish Guinea.—Río Muni, on the mainland, and the nearby islands of Fernando Po, Annobon, Corisco, Great Elobey, and Little Elobey. Total area, 10,124 square miles; total population, 120,000 (est. 1939). Río Muni, on the west coast of Africa just north of the equator, is bounded on the west by the Gulf of Guinea, and on the north, east, and south by French Equatorial Africa, the territory of Cameroun being directly to the north, and Gabon to the east and south.

Western Sahara.—Río de Oro, known also as Spanish Sahara, is on the northwest coast of Africa, between latitudes 20° and 30° N. In addition to Río de Oro, Western Sahara includes various districts within Río de Oro known as the Adrar (Berber for uplands) regions; and Ifni, a tiny strip of coast just north of Río de Oro. Total

area of Western Sahara, 110,036 square miles; total population, 110,038 (est. 1939).

Spanish Morocco.—See MOROCCO — *Spanish Zone*.

SPECIAL LIBRARIES ASSOCIATION. This association was founded in 1909 as an international organization of librarians and information experts who serve manufacturing concerns, banks, corporations, law firms, newspapers, advertising and insurance agencies, transportation companies, research organizations, museums, hospitals, business branches and other departments of public and university libraries, government bureaus, associations, and other organizations in the fields of business, medicine, the sciences, technology, social welfare, and the arts. Membership approximately 4,000. President, Herman H. Henkle; executive secretary, Kathleen B. Stebbins. Headquarters, 31 East 10th Street, New York City 3. Publications: *Special Libraries*, published monthly, September to April, with bi-monthly issues from May to August; sponsored periodical, *Technical Book Review Index*, issued ten times a year, September to June. *Special Library Resources*, vol. 1, was published in 1941, with three additional volumes planned for 1946 publication. Other recent publications are: *War Subject Headings for Information Files*; *Index to American Petroleum Statistics*; *Handbook of Commercial, Financial and Information Services*; *Source List of Selected Labor Statistics*; *Classification and Cataloging of Maps and Atlases*; *A List of Subject Headings for Chemistry Libraries*. A convention is held each year, usually in June. The 1946 convention was scheduled for Boston, Mass.

KATHLEEN B. STEBBINS,
Executive Secretary, Special Libraries Association.

SPELMAN FUND OF NEW YORK. This fund was incorporated in 1928 with a principal fund of \$10,000,000. The trustees of the fund have power to use the principal as well as income to carry on its purposes. The charter provides that the fund "is formed for exclusively charitable, scientific and educational purposes, including the advancement and diffusion of knowledge concerning child life, the improvement of interracial relations and co-operation with public agencies." Since 1930, the fund's program has been directed toward co-operation with public agencies for the advancement of public administration. Its interest in this field is expressed through support of activities of public and quasi-public agencies engaged (1) in making significant results of current administrative experience generally available to public officials; (2) in developing improved methods and putting them to practical use; and (3) in experimenting with new administrative devices and procedures under actual operating conditions. The chairman of the board of trustees is Charles E. Merriman. Headquarters: 49 West 49th Street, New York 20, N. Y.

CONSTANCE MURDOCH,
Secretary, Spelman Fund.

SPORTS IN 1945. Opening under handicaps imposed by the constrictions of a fourth year of war, sports in 1945, under the impetus of a postwar boom beginning with the cessation of hostilities in Europe in May, exceeded all expectations. Before it ended, the year proved to be,

in many ways, the biggest and best in sports annals. Horse racing, eliminated from the picture altogether at the end of 1944, skyrocketed to unprecedented popularity in 1945, the fantastic sum of \$1,306,514,314 being wagered through the pari-mutuel machines, as compared with the \$1,126,308,645 wagered in 1944. This total did not include the uncounted millions bet privately through bookmakers, which is thought to have raised the total to well over \$1,500,000,000. Baseball, completing in October a very remarkable season, broke all previous records by attracting to both of its hotly contested pennant races a total of more than 11,000,000 paid admissions and in a seven-game world series topped all previous records with \$1,592,454 in gate receipts. Football, golf, boxing, tennis, and practically all other sports showed a similar revival of activity as they emerged from the shadows of war.

Horse Racing.—On May 12, only a few days after the surrender of Germany, the government lifted the ban on horse racing. Narragansett Park, at Pawtucket, R.I., was the first track to reopen, and activities on the turf zoomed throughout the 18 states in which races were held. There were 221 fewer racing days than in 1944, but the 17,000,000 fans who turned out during the year exceeded the previous year's betting record by more than \$200,000,000. Of the total sum of \$1,306,514,314 wagered through pari-mutuel machines in 1945, state treasuries received \$65,484,121 in taxes. In New York State alone, the sum of \$450,663,190 was bet at the tracks, of which amount \$30,333,299.02 went to the state treasury. The first \$5,000,000 betting day in history was recorded at Belmont Park, Long Island, N.Y., on September 22, and eight other days registered totals of over \$4,000,000. Among other records broken during the year were attendance totals at three tracks: Belmont, Aqueduct, and Jamaica, where a collective all-time high of 4,623,123 admissions were recorded.

For the second successive season, a filly carried off top honors when Louis B. Mayer's sensational Busher, was proclaimed "horse of the year." A new racing stable, the Maine Chance Farm of Mrs. Elizabeth N. Graham of New York, came into prominence as the leading money-winning stable, recording takings of \$503,985 on an investment total of \$299,700. The veteran trainer, Tom Smith, was credited with the new stable's success.

In the field of harness-racing, a total of \$40,000,000 was wagered during 1945, the return in taxes to New York State alone amounting to \$2,126,966. An all-time high was registered at Roosevelt Raceway, Westbury, Long Island, on August 8, when 17,000 fans wagered the sum of \$481,000. A total of \$28,000,000 was bet at this track during the year. Titan Hanover, three-year-old trotting colt owned by Maj. Elbridge T. Gary and E. Roland Harriman, won the noted Hambletonian in straight heats, but he was so outstanding a contender that the public was not allowed to bet on him.

Baseball.—One of the year's most sensational developments in baseball was the announcement, made on January 26, that Col. Larry MacPhail, retired head of the Dodgers, had formed a three-man syndicate which had bought the great Yankee American League baseball team of New York. Dan Topping, professional football promoter, and Del Webb, an Arizona contractor, were his associates. The trio purchased this vast

and most successful of all baseball organizations from the heirs of the late Col. Jacob Ruppert for \$2,800,000.

Another major development was the announcement, made on April 24 by the owners of the two major leagues, that Albert B. (Happy) Chandler, United States senator from Kentucky, had been chosen commissioner. Senator Chandler succeeded Kenesaw Mountain Landis, who had autocratically ruled the world of baseball from 1921 until his death in November 1944.

The loss of many baseball stars and of much promising baseball material to the armed services brought the quality of baseball playing to a markedly low level during 1945, but this factor failed to dampen the enthusiasm of the fans. On the contrary, the two major leagues reported the breaking of all attendance records, a total of 11,375,185 being attracted to the gates, a figure exceeding the 1944 record by almost 2,400,000. Steve O'Neill's Detroit Tigers scored highest in attendance, drawing 1,280,321.

In the American League, the Tigers, who lost to the St. Louis Browns in 1944, defeated the latter and won the league championship ahead of the Washington Senators. The homers batted by Hank Greenberg, newly released from the army, and the whirlwind pitching of Hal Newhouser, winner of 25 games, helped the Tigers climb to first place.

In the National League, the Cardinals were expected to win their fourth successive pennant, but were overtaken first by the New York Giants, then by the Brooklyn Dodgers, and finally by Charlie Grimm's Chicago Cubs, who were reinforced by the late addition of Hank Borowy, ace Yank pitcher purchased from MacPhail for \$100,000. Hank lost only 2 games and won 11, bringing a brilliant, last-minute victory to the Cubs.

The world series was notable for some of the worst playing on record, and also for some of the finest. The best-pitched game in the history of world series occurred when Claude Passeau of the Cubs allowed the Tigers only one hit. Two men got to first—one on a pass—but neither reached second. The series ended with the seventh game, when Newhouser scored for the Tigers, giving Detroit the world championship at 9 to 3.

Shortly after the series ended, it was announced that Billy Southworth, eminently successful Cardinals manager, would officiate in the same post for the Boston Braves. Phil Cavarretta of the Cubs was awarded the most-valuable player prize in the National League, and Newhouser, for the second successive year, won similar distinction in the American League.

A new chapter in baseball history was opened when Jackie Robinson, Negro shortstop of the Kansas City Monarchs, was acquired by the Dodgers for their International League farm at Montreal. This development was widely hailed as paving the way for the end of racial discrimination on the diamond.

Football.—As the first major sport to enjoy fully the benefits of peace, football went over the top in spectacular fashion. An aggregate of 103,000 fans saw Southern California defeat the University of California at Los Angeles, and on the same day, 100,000 watched the West Point cadets sink the Navy, 32 to 13. Col. Earl Blaik's Army team scored top honors for the second successive year, and was rated one of the greatest elevens in the history of collegiate football. Its two touchdown stars, Felix (Doc) Blanchard and Glenn Davis,

were ranked among the best players on record. Another team which held the limelight was the formidable Alabama eleven, chosen in the Associated Press poll as runner-up against the Army, ahead of the Annapolis team. Indiana took possession of the Western Conference championship for the first time in 46 years, under the guidance of Alvin (Bo) McMillin, who was named outstanding coach of the season. College football attendance reached 7,262,147, topping by 35 per cent the 1944 attendance figures.

Pro football recorded the surprising decline of the Chicago Bears, and the spectacular emergence of the Cleveland Rams, who climbed from obscurity to top place in the western half of the league. In the east, the Washington Redskins carried off top honors, but succumbed to the Cleveland Rams in the play-off for the league title honors by the score of 15 to 14. The latter game was watched by a record-breaking crowd at the Municipal Stadium in Cleveland, 32,178 fans paying \$164,542 into the till in spite of near-zero weather. Bob Waterfield of the Rams was voted the year's foremost pro player. A sensation was caused toward the end of the season when Dan Topping, having become a member of the newly formed All-America Conference, announced that his Brooklyn Tigers, merged for the season with Boston, would appear the following fall in the Yankee Stadium as the New York Yankees. The 10 teams in the National Football League played to 1,918,631 persons in the 1945 fall season, an average of 28,636 spectators for 68 games.

The 1945 college football season closed with the playing on New Year's Day, 1946, of the so-called bowl games. In the major one of these games (the Rose Bowl game played before 94,000 spectators, at Pasadena, Calif.) the University of Alabama, making its sixth appearance in the bowl, defeated the University of Southern California, 34 to 14. It was Southern California's first defeat in nine Rose Bowl games. Harry Gilmer, Alabama's brilliant 19-year-old back, was the star of the game. Alabama now has a Rose Bowl record of 4 victories, 1 defeat, and 1 tie. In the Sugar Bowl game, played at New Orleans, Oklahoma A. & M. College defeated St. Mary's, 33 to 13, before a record crowd for the game of 75,000. The University of Texas defeated the University of Missouri in the Cotton Bowl game at Dallas, Texas, 40 to 27. A last minute touchdown gave the University of Miami a victory over Holy Cross, 13 to 6, in the Orange Bowl game at Miami, Fla. The University of Georgia defeated the University of Tulsa, 20 to 6, in the Oil Bowl game played at Houston, Texas. The annual East-West all-star charity contest, played at San Francisco, ended in a 7 to 7 tie. Wake Forest defeated the University of South Carolina, 26 to 14 in the Gator Bowl at Jacksonville, Fla.

Golf.—Byron Nelson won top ranking for the second successive year in spite of the fact that competition was much keener, many of golf's topnotchers having returned from service. Out of 30 major tournaments in which he competed, Nelson won 18, taking \$64,600 in war bonds, a record-breaking figure in golf earnings. He maintained the remarkable average of 67.5 strokes per 18-hole round in winning the All-American open, the national Professional Golfers' Association, the Canadian Professional Golfers' Association, and the international four-ball best ball championship. In an Associated Press poll, Nelson was acclaimed No. 1 athlete of the year.

Mrs. Mildred (Babe) Didrikson Zaharias lost the Western amateur title in women's golf to Miss

Phyllis Otto, but retained her Western open title, and was voted No. 1 woman athlete in the Associated Press poll. Lieut. Patty Berg of the Marines won the All-America title, and Mrs. Estelle Lawson Page of Chapel Hill, N.C., captured the North and South title for the seventh time. The New York State championship was bagged by Miss Kathleen Byrne of the Westchester Country Club.

Boxing.—Every world champion, including Joe Louis, heavyweight king, was discharged from service in 1945, and the season of 1946 promised to shatter all boxing records. Billy Conn was signed to meet Louis in a heavyweight bout June 1946, and meanwhile boxing showed remarkable vitality. Promoter Mike Jacobs grossed over \$2,000,000 at Madison Square Garden with 42 shows. The Rocky Graziano-Red Cochrane bout, the Tami Mauriello-Lee Oma tilt, and the Graziano-Harold Green fight each topped the \$100,000 mark.

Track and Field.—Gunder Haegg, world-famous Swedish track star, experienced a surprising series of reversals on paying his second visit to the United States, where he achieved only one victory. His lone triumph was over Forest Efav in the one-mile event, which Haegg won in 4:16.7. Back in Sweden, however, Haegg's prestige rose again considerably when he defeated Arne Andersson, holder of the world's record for the mile, listed at 4:02.4, clipping this mark to 4:01.4. Jim Rafferty of the New York Athletic Club established his claim to the title of outstanding track figure for the year by winning nine one-mile events in a row.

Tennis.—Sgt. Frank Parker, 1944's ranking figure in amateur tennis, retained his national crown in 1945 at Forest Hills, Long Island, by defeating William Talbert in the finals, without the loss of a set, 14-12; 6-1; 6-2. The men's doubles were won by Talbert and U.S. Navy Lieut. Gardnar Mulloy.

Mrs. Sarah Palfrey Cooke of Los Angeles regained her national crown among the women, vanquishing Miss Pauline Betz of Los Angeles, who had reigned for three years. Miss Louise Brough and Miss Margaret Osborne retained the women's doubles championship.

Basketball.—A total of 442,293 basketball fans paid to see 26 college double headers at Madison Square Garden, New York. The Oklahoma Aggies, inspired by their 7-foot center, Bob Kurland, humbled De Paul, 52 to 44, in the Red Cross play-off. In the Western Conference, Iowa came out on top, while in the Eastern Intercollegiate League, Pennsylvania emerged victor.

Swimming.—One world mark and nearly 30 national records were broken in swimming. Richard Hough's world record for the 220-yard breast stroke of 2:22 was reduced to 2:21 by Joseph Verdeur of the Bainbridge Naval Training Center. Alan Ford of Yale cut the 100-meter mark from 0:57 to 0:55.7, and the 100-yards free style from 0:49.8 to 0:49.4. Miss Ann Curtis of San Francisco, in addition to clipping the women's short-course time for 400 yards free style from 5:02.2 to 5:00.9, won six national free style championships, broke many other records, and was acclaimed the year's outstanding swimmer.

Hockey.—Every team in the National Hockey League in 1945 toppled its previous attendance record. One of the major upsets of the year occurred when the Detroit Red Wings were beaten by the Toronto Maple Leafs, who were only third in the regular season, in the contest for the Stanley Cup, symbol of world championship. The

Montreal Canadiens turned up as victors in the regular season, the Red Wings finishing second.

Yachting.—Like most other sports, yachting experienced an extraordinary revival. Race week attracted 198 starting craft at the Larchmont Yacht Club; and Great South Bay and Manhasset Bay clubs likewise reported renewed activity on a wide scale.

Chess.—Highlighting the year's activities in chess was the match conducted by radio between the Soviet Union and the United States, in which the Russians scored a decisive victory, 15½ to 4½.

Soccer.—In this field, the Brookhatsans of the Bronx, New York, piled up victories in the American League, the National Cup competition, and the Lewis Cup series, emerging as the outstanding team of the year.

SPRUANCE, Raymond Ames, United States naval officer: b. Baltimore, Md., July 3, 1886. Admiral Spruance directed United States Fifth Fleet operations against Japan from April 1944 until V-J Day. He was in overall tactical command of the amphibious invasion of Okinawa Island on April 1, and on June 2, established a temporary headquarters on Guam. On November 8, Admiral Spruance was named deputy commander in chief of the Pacific Fleet, and of Pacific Ocean areas, and on November 20, was appointed commander in chief, succeeding Fleet Admiral Chester W. Nimitz. On Dec. 28, 1945, it was announced that Admiral Spruance had been selected to head the Naval War College. In June 1942, Admiral Spruance took part in the Battle of Midway as junior task force commander under Admiral Nimitz. After a period as Nimitz's chief of staff, he returned to active sea duty, and in November 1943, directed the Allied drive on the Gilberts. He had overall command of the American invasion of the Marshall Islands, Jan. 30, 1944; on February 16-17, sent his forces against Truk in the Carolines; and in late March, had tactical command of the assault on Japanese positions in the Palau Islands. In June, his task fleet inflicted heavy losses on the Japanese in an engagement between the Philippines and the Marianas. A graduate of the United States Naval Academy, he holds the rank of full admiral.

STALIN, Joseph, Russian statesman: b. Gori, Tiflis Province, Georgia, 1879. Premier of the USSR since May 1941, and supreme commander of all Soviet armed forces throughout the Second World War, Joseph Stalin continued to take a dominant role in international politics in 1945. On April 21, he signed a 20-year pact of "friendship, mutual assistance, and postwar collaboration" with the Polish provisional government. He stated in his V-E Day speech to the Russian people on May 9 that Soviet Russia did not intend "to dismember and annihilate Germany." On May 26, Stalin met with Harry Hopkins, President Truman's personal envoy, for a series of talks on the Polish controversy, and the procedural deadlock then delaying action at the San Francisco World Security Conference. He was promoted to the newly created military rank of generalissimo on June 27 "for service to the motherland." In late June and early July, he conferred with China's Premier T. V. Soong, and on the 17th of the latter month, met in Berlin with President Truman and Prime Minister Churchill to determine the future of defeated Germany. On September 2, Stalin followed his proclamation (August 23) of Soviet victory in Manchuria with the announcement that the Soviet would regain the southern half of Sakhalin

Island and the Kuriles, lost to Japan in 1904. See also UNION OF SOVIET SOCIALIST REPUBLICS; WORLD POLITICS; WORLD WAR, SECOND.

STANDARDS, National Bureau of. In reviewing the work of the National Bureau of Standards during 1945, it should be remembered that 90 per cent of its activities have been directly connected with the war. As a great many of its research projects are at present included in the restricted, confidential, or secret classifications, the following description is necessarily incomplete.

The regular appropriation made by the Congress for the support of the bureau during the fiscal year ended June 30, 1945, was \$2,924,500, with a supplementary appropriation of \$200,000 for special war research during the last 5 months of the year. Approximately \$7,000,000 in transferred funds and reimbursements was made available by the army, navy, National Defense Research Committee, National Advisory Committee for Aeronautics, and other agencies for projects in which they were interested.

The staff throughout the year numbered approximately 2,300. From 50 to 60 research associates were stationed in the bureau's laboratories, representing about 15 national engineering societies and trade associations. Dr. Lyman J. Briggs, director of the bureau since 1933, retired on November 5, after 49 years in the technical work of the government. He was succeeded by Dr. Edward U. Condon, associate director of Westinghouse Research Laboratories. Dr. Addams S. McAllister, assistant director in charge of commercial standardization, retired on February 28, after 24 years service at the bureau.

The bureau's grounds remain a prohibited zone under the jurisdiction of the commanding general, Military District of Washington. • An ordnance laboratory is being constructed immediately north of the present control testing laboratory, and numerous alterations and additions have been made to existing structures.

Radio.—The bureau's standard frequency radio broadcasts have been improved by announcements of actual times of day. Information on characteristics of radio transmission and on assignment of frequencies has been made available to agencies dealing with postwar planning in this field.

The Joint (Army-Navy) Communications Board transfers funds for the financial support of the bureau's radio propagation laboratory. This work is, however, of primary importance in every kind of radio communication; the board, therefore, recommended that after Dec. 31, 1945, it be paid for through appropriations made directly to the bureau.

Aircraft Storage Batteries.—Storage batteries for aircraft use are being studied in a special laboratory recently completed. Operating conditions are exceptionally severe, and previous tests have not been truly representative. An important part of the program involves substitutes for rubber as battery separators.

Improving Power Factor of Test Circuits.—By using capacitors to improve the power factor of the test circuits, the limit for tests of current transformers has been raised from 10,000 to nearly 14,000 amperes at 60 cycles.

American-Made Chronometers.—A large number of American-made chronometers have been tested. Their performance was such that it was necessary to know the 24-hour interval to 0.01 second before they could be properly standardized. These American instruments were superior in

almost every respect to the foreign-made chronometers, heretofore in universal use in this country.

Unification of Screw Thread Systems.—The bureau was represented at a conference on screw threads held in Ottawa during September. A co-operative research has been started by Canada, Great Britain, and the United States, which it is hoped will result in unifying the screw thread systems in use in these countries.

Substitute Automobile Fuels.—Many tests of substitute fuels for automobiles show that with alcohol the engine develops more horsepower by several per cent than with gasoline despite the fact that the heat available per pound from alcohol is only two thirds as much as from gasoline. The volumetric efficiency with alcohol is higher, because on vaporization in the manifold the alcohol cools the air more than does gasoline. Tests of substances to be added in small quantities to gasoline to increase mileage, confirm previous conclusions that these additives are without any measurable effect.

Refrigerator Equipment.—Plans have been made to improve the bureau's facilities for testing and developing refrigeration equipment, since a great many requests for work of this kind are received from the Office of the Quartermaster General. It seems probable, likewise, that there will be increased interest in this subject on the part of civilians, the advantages of "deep freezing" in the storage of food now being well recognized.

Adsorbing Materials.—Adsorbents, such as bone char, are being studied with the financial support of 15 large companies in this country and 5 Canadian sugar refineries. An extensive bibliography of the scientific literature on adsorbing materials has been published; it is believed to be the first of its kind in a field that is important to several major industries.

Diamond Dies.—As the result of many experiments in the cutting of diamond dies used for drawing very fine wire, it was found that when a 5,000 volt electric arc is formed at the contact between the diamond and the revolving lap, the cutting rate is at least doubled. This is the only real improvement that has been made in cutting diamonds since the art was first practiced hundreds of years ago. It is applicable to industrial and to ornamental diamonds and to diamond saws.

Aviation Lights.—Fourteen sets of filters for controlling the colors of aviation lights have been standardized. They were prepared by one of the large glass companies with the technical assistance of the bureau. Ten sets have been delivered to the Army Air Forces, and four to the Civil Aeronautics Administration.

Chemical Samples.—The distribution of standard chemical samples continues to be one of the bureau's most direct services to industrial and governmental laboratories. Samples of pure hydrocarbons and of paint pigments (color and tinting strength) are now included, as well as alloy steels for spectrographic analysis.

Hospital Paints.—The bureau has co-operated with the War Department in developing a color scheme and in selecting paints for the exterior and interior of general and convalescent hospitals. For the interiors, use has been made of soft-toned, bright, cheerful pastel colors that create an atmosphere of restfulness. The kind of paint used depends on the surface and location—flat oil paints, flat emulsion paints, and gloss enamels all find their places. Standard color chips were prepared and sent to the various Service Commands, and a representative of the bu-

reau is visiting the hospitals to assist the post engineers in carrying out the work.

Aids to Aviation.—An improved flowmeter, easily manufactured from noncritical materials, was developed for the Bureau of Aeronautics, Navy Department. It is an important part of the field test sets that are used to check the oxygen equipment on airplanes. For the same bureau, a revised data chart has been prepared giving important information on the torsional strength of aluminum alloy tubing, so largely used in aircraft construction.

Over 200 synthetic lubricants for aircraft instruments have been tested to learn whether or not they could be substituted for porpoise jaw oil. Although no wholly satisfactory synthetic lubricant is commercially available, some have given reasonably good performance if the temperature does not go below -20° F, and there is reason to believe that this limit will be lowered so that even severe service requirements can be met.

A distant-reading indicating device has been designed and constructed for measuring the forces required to actuate the controls of an airplane. It is important that these forces be confined within rather narrow limits if performance is to be satisfactory. The instrument makes use of a spring interposed between the control and the pilot's grip which deflects proportionally to the force applied. An electrical transmitter and indicator are connected to the spring, so that the readings can be noted visually or recorded photographically at any convenient location.

A long range research program has been started with the support of the Navy Department, to determine the compressive strength of airplane reinforcing members, such as channels, angles, T- and Z-sections, etc., that are frequently formed by extruding the heated metal under very high pressure through dies. The results of the first part of this work, on buckling stresses, have been prepared for publication.

Noise Suppression.—Interest in the suppression of unnecessary noise in buildings and on city streets has continued, and it is now generally realized that exposure to intense noise is definitely harmful. In co-operation with the National Aeronautics Association, a noise-level survey was made in the vicinity of the municipal airport in a Florida city. In this instance, there was no question that the noise was objectionable, but because of the location of the airport, the only way to lessen the noise is to eliminate all unnecessary flights. The selection of a proper site for an airport, bearing in mind the future growth of the community, is a matter of great importance and should receive more careful consideration than appears to have been given to it in the past.

New Binocular.—A new 6 x 42 binocular, the body of which is made entirely of plastic, was designed in co-operation with the Army-Navy Munitions Board, and is now in production. It is of the fixed focus, fixed interpupillary distance type, thus eliminating the necessity for any adjustments, and is waterproof at a depth of 100 feet. It likewise is resistant to fungi and corrosion, is compact, and weighs less than the standard binocular. It seems to be ideally suited to combat service, and is, in fact, a general-purpose instrument.

Mass Spectrometer Analyses.—The mass spectrometer is being used with success in the analysis of liquid and gaseous materials that constitute the basis of synthetic rubber manufacture. This elaborate and highly specialized instrument makes possible quick, complete, and accurate analyses of

samples of butadiene, styrene, and other monomers submitted by plant operators through the Rubber Reserve Company. A great deal of interest has been shown by industrial laboratories in the use of the mass spectrometer in their own work, and a short article on its advantages and limitations, such as high first cost and the necessity for a staff of trained operators and computers, has been published.

Rubber Research in Brazil.—The installation of equipment in the rubber laboratory established by the Brazilian government at the mouth of the Amazon, has been completed and the research program has been started. A tree has been developed that combines a strong root system, high rubber yield, and resistance to the leaf disease prevalent in South America. It is expected that this tree will be artificially cultivated, somewhat as is done in the Far East, but on smaller tracts of land, each of which will be leased to specially trained native families. This should ultimately place Brazilian rubber on a competitive footing with the natural rubber of the Pacific and, in certain fields, with the synthetic rubber of the United States. The member of the bureau's staff who was loaned to the Brazilian government to inaugurate the project, returned to the bureau in October 1944.

Textile, Paper, and Leather Research.—The research associateship of the Textile Foundation at the bureau has been discontinued. The executive offices of the foundation will remain at the bureau, but the laboratory work is now carried on at Princeton, N.J., where a building was specially equipped for the purpose.

Warfare in the tropics introduced many unusual problems. The bureau is studying means for preventing the deterioration of textiles and for producing special papers that will preserve goods during transit and storage in hot, damp locations. The waterproofing of army boots has been studied and a new protective treatment has been developed in co-operation with the Chemical Warfare Service, and the Office of the Quartermaster General.

Calibrating Carbon Arc Lamps.—A method of calibrating the hundreds of carbon arc lamps used in commercial laboratories for testing color fastness of dyed textiles has been developed. A special dyed paper made in the bureau's paper mill, is exposed for a definite length of time in the lamp to be calibrated and is then compared visually with a strip of the same paper that has been exposed in steps of 16, 18, 20, and 22 "standard fading hours" in the bureau's reference standard lamp. Books of these papers, with directions, have been distributed to interested laboratories.

Welded Ship Failures.—The bureau has examined many failures of welded ships, and it is evident that the presence of notches, because of faulty design or construction, is an important contributing factor. Steps must be taken to control either the design or material, or both. Changes in design have been made and now the problem is to insure the use of steels of low notch sensitivity. The current research program calls for impact tests on a large number of specimens at various temperatures.

Metal Corrosion.—Outdoor exposure tests of metals have been continued at the bureau's sea-coast site and have yielded important information on the corrosion resistance of aluminum, magnesium, and the light alloys used in aircraft construction. A set of full-sized wings made of a magnesium alloy were among the specimens

that have been subjected to tidewater attack in a marine atmosphere. Stress-corrosion tests, in which the specimens are bent back and forth within their elastic limit or are loaded with dead weights, have been conducted on magnesium at the same site, with the expectation that means will be found for improving its low resistance to corrosive attack—at present one of its major disadvantages.

The widely-used salt-spray test for determining the resistance to corrosion of metals and metal products has been studied with the hope of improving its reproducibility. Many experiments have shown that the "fog" in the test chamber must be maintained at uniform density if different users are to get comparable results.

Powder Metallurgy.—A start has been made on an investigation of powder metallurgy—the art of forming metal objects by compression and sintering of metal powders instead of by melting, casting, and machining to shape. An important characteristic of these powders is their rate of flow through a standard orifice; results of tests at the bureau show that this varies with the kind of metal even among powders of approximately the same fineness. In other words, sieve tests are not a criterion of the rate of flow.

Protection for Boat Mufflers.—The vitreous coating developed at the bureau for aircraft engine exhaust stacks has been applied with success to "dry" and "wet" mufflers of boats and amphibious vehicles. Because of the rapid corrosion of the sheet metal from which these parts are made, they have to be replaced frequently, causing expense and loss of time. Very severe tests in the laboratory and in service show that the new coating has a high resistance to cracking and other damage even when heated to full operating temperature and then plunged into cold water.

Putting Air into Concrete Pavements.—Concrete pavements have been found more resistant to scaling and to destruction by frost action when a little air is incorporated in the concrete at the time the pavement is laid. Air-entraining Portland cement is being produced commercially by intergrinding a small quantity of Vinsol resin in the manufacturing process. The properties of some of these cements are such that it is impossible to test them according to existing specification procedures. The bureau has developed new tests that adequately evaluate these products.

New Glass Plant Furnace.—A new furnace was designed and installed in the bureau's optical glass plant. It is so constructed that temperatures in the furnace load can be equalized in much less time than in the ordinary type. Equalization is accomplished by a continuous circulation of air by means of a powerful heat-resistant fan. Using this equipment it has been possible to anneal optical glass pressings in 3 days, instead of 10, thus saving a full week in the making of elements for fire-control instruments and other optical parts carrying the highest priority.

Splitting Mica.—A machine has been constructed for splitting mica. In its improved form, developed after many experiments, the machine consists of a disc carrying six chuck plates for holding the mica blocks, a gauge for starting the split, two stripper blades, and a suction belt for removing the thin films of mica from the machine. No time is lost in changing blocks, since one chuck is loaded while another is being split. Moreover, there is but little bending of the films which are produced at the rate of 30 or more per minute.

Simplified Practices.—Beginning with the sur-

render of Germany, a large number of mandatory limitation orders were revoked by the War Production Board. Many of these included a simplified schedule as part of their requirements. Although the necessity for enforced simplification is now past, the industries concerned are, in many cases, anxious to retain the benefits of voluntary simplified practice in the postwar period. The bureau is co-operating with all manufacturers who have shown an interest in this matter, notably with the structural steel group, the makers of dial pressure gauges, and the asphalt industry.

Prefabricated Houses.—A notable step in advance was the adoption by all interested groups of a voluntary commercial standard for prefabricated houses. This covers the structural strength of component parts, requirements for lighting and ventilation, and recommendations covering foundations, chimney, heating, plumbing, insulation, and electrical wiring. The standard should bring about a better understanding between buyers, sellers, contractors, building inspectors, and mortgagees.

The bureau has participated in a project known as "modular planning," the object of which is to co-ordinate the dimensions of building materials and to correlate building plans and details with these dimensions. This promises to develop into a major factor in lowering construction costs and in improving quality of structures. It is sponsored jointly by the American Institute of Architects and the Producers' Council, Inc., and is being carried on in accordance with the procedure of the American Standards Association.

Commodity Specifications.—The National Directory of Commodity Specifications has been revised and reprinted. This is the only complete, up-to-date compilation of standards and specifications having national recognition. These have been issued by trade associations, technical societies, and organizations that represent industry in a national way, and by governmental agencies that speak for the federal government as a whole. References to the purchase specifications of individual agencies are also included.

Mathematical Tables.—The work of preparing the series of mathematical tables which the bureau has sponsored since 1938 is now being supported by the Navy Department. Forty-eight tables have been made available to the public, and 31 of these can be purchased from the bureau; they are described in detail in a recent *Letter Circular (LC777)*. The tables have been in considerable demand and of great value in connection with many military projects.

Publications.—The results of the year's work, insofar as these are not confidential, have been made available through 111 publications (including papers in the *Journal of Research*) in the bureau's own series and 58 articles in the technical press. An up-to-date list of the bureau's publications, with index (*Circular C24* and supplements) is obtainable from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. The bureau's publications are on file in the leading technical libraries throughout the country, and plans are now being made to enter once again into exchange arrangements with libraries and institutions in Europe.

HUGH G. BOUTELL,
Chief, Information Section, National Bureau of Standards.

STEEL. See IRON AND STEEL.

STETTINIUS, Edward Reilly, Jr., United States diplomat and statesman: b. Chicago, Ill., Oct. 22,

1900. He was appointed United States member of the Security Council of the United Nations Organization (UNO), and chairman of the United States delegation in the General Assembly of the UNO on June 27, 1945, by President Harry S. Truman, who on the same day accepted Mr. Stettinius's resignation as secretary of state, submitted April 13. Mr. Stettinius had held the post of secretary of state since Nov. 27, 1944, when he succeeded Cordell Hull. He had previously served as undersecretary of state, and as such was chief of the American delegation to the United Nations Dumbarton Oaks Conference, convened in August 1944. From 1938 until he resigned in June 1940 to enter government service as a member of the Advisory Committee of the Council of National Defense, he was chairman of the board of directors of the United States Steel Corporation. When he entered the State Department in 1943, he relinquished the offices of lend-lease administrator and special assistant to the president, which he had filled with remarkable ability after September 1941.

STILWELL, Joseph Warren, United States Army officer: b. Palatka, Fla., March 19, 1883. In late June 1945, General Stilwell was named commander of the United States Tenth Army, succeeding the late Lieut. Gen. Simon Bolivar Buckner, an appointment which took him out of his post as commander of Army Ground Forces in the United States and into active combat. On Sept. 7, 1945, he represented the Allied powers at the Japanese signing on Okinawa of surrender documents authorizing the capitulation of 105,000 Japanese army and navy forces in some 60 islands of the Ryukyu group.

Until his recall to Washington in October 1944, General Stilwell was commanding general of United States Army forces in the China-India-Burma theater; deputy to Admiral Lord Louis Mountbatten; and chief of staff to Generalissimo Chiang Kai-shek. One of the most brilliant field commanders in China since "Chinese Gordon," Stilwell has been closely identified with Chinese military affairs throughout his long army career. He speaks Chinese fluently, and from 1932-39, was military attaché at Peiping. Shortly after Pearl Harbor, he was ordered to the Far East, and in March 1942, came into prominence as leader of American troops fighting the short-lived Burma campaign. In his own words, he "took a hell of a beating" in Burma, and retreated on foot through 140 miles of jungle to New Delhi, India, with remnants of his command. Until his transfer to the States in the fall of 1944, he directed his energies toward improving the combat effectiveness of the Chinese Army; forcing the opening of the Burma Road; and keeping China in the war. General Stilwell was graduated from the United States Military Academy in 1904. He took part in several major campaigns in France in the First World War. He was promoted a four-star general in August 1944, and holds the Distinguished Service Cross for his leadership in the Burma campaign.

STONE. Dimension Stone.—According to the United States Bureau of Mines, a total output of 618,620 short tons of dimension stone valued at \$14,854,816 was mined in the United States in 1944, a decrease of 26 per cent in quantity and an increase of 11 per cent in value compared with 1943. This total includes all dimension stone sold or used for rough construction, cut stone, slabs, mill blocks, rubble, monumental purposes, paving blocks, curbing, and flagging.

Crushed and Broken Stone.—In 1944 a total domestic output of 154,960,960 short tons of crushed and broken stone valued at \$160,787,341 was reported to the United States Bureau of Mines, indicating a decrease of 9 per cent in quantity and 6 per cent in value compared with 1943. Crushed and broken stone used for concrete aggregates and railroad ballast constituted 54 per cent of the industry in 1944, and amounted to 83,080,550 short tons valued at \$78,701,175.

The amount of crushed stone used for metallurgical purposes (31,080,330 short tons valued at \$25,130,113), ranking next to concrete aggregates in quantity consumed, decreased 2 per cent in quantity and increased 3 per cent in value. Limestone for agricultural purposes (18,941,220 short tons valued at \$25,316,219) increased 30 per cent in quantity and 33 per cent in value.

STRATEGIC AND CRITICAL MINERALS. During the course of the Second World War all of our preconceived ideas as to supplies of strategic and critical minerals have had to be revised throughout. In 1940 the Army and Navy Munitions Board published a list including nine strategic and six critical materials of mineral origin, as follows:

Strategic		Critical	
Antimony	Chromite	Aluminum	Asbestos
Manganese	Mercury	Graphite	Iodine
Mica	Nickel	Platinum	Vanadium
Tin	Tungsten		
Quartz Crystals			

Strategic minerals were defined as those of which the domestic supplies were so scanty that material difficulty was anticipated in maintaining an adequate supply in the event that any emergency affected the accessibility to foreign sources of supply. Critical minerals were those of which imports formed only a minor, and not a major portion of the normal supply, and hence less effort would be required to maintain the supply in the face of restrictions in imports. It should be kept in mind that this list was compiled several months *after* the beginning of the war, when already there had been serious disarrangements in the normal channels of world trade. It might also be well to point out that this list differed from its predecessor, issued several months *before* the outbreak of war, in only these points: aluminum had been shifted from strategic to critical; and cadmium, cryolite and titanium had been dropped from the critical list.

Long before Pearl Harbor made us active participants in the war, and in fact only shortly after the defense program was inaugurated, it was found that the supplies of many other items were going to be critically short of our needs. The trouble lay not so much in the bulk of the supplies as in the demands that pyramided so rapidly that they far outran anything that had been anticipated. At one time lead and gold were the only metals of which supplies were in excess of demand, and in the shortage list were copper, zinc, steel, and others about which there had been no previous concern, because it was universally thought that the potential supplies were adequate to meet any possible demand. For three years the situation went from bad to worse, with only occasional favorable turns, as when some industry, like mercury for example, pulled itself out of the shortage list by its own bootstraps.

During the latter half of 1943 supply began to catch up with demand, and items on the supply list began to shift from "short" to "adequate"

and even to the "surplus" columns. By mid-1944 the peak of demand had been passed for most of the important items, and production rates for some were being reduced. After that time serious problems in shortage were limited to a few special cases, like nickel, tin and quartz crystals.

By the time the war ended, it had been pretty definitely established that a nation as highly industrialized as is the United States could not properly maintain its supply lines for foreign imports of strategic and critical materials in the face of a major war, and it is highly doubtful if this could be accomplished as a neutral, and not as a belligerent. If adequate supplies can not be maintained under such conditions, then the only recourse is to stockpile in advance the amounts of these materials that will be necessary to meet the deficit anticipated in any future emergency.

Stockpiling.—A program of stockpiling was advocated in many quarters as far back as the early 1920's, but in spite of repeated agitation on the subject, it proved to be impossible to prod Congress to the point of taking any favorable action on the subject until June 1939. As the war started in Europe less than three months later, little progress had been made before the markets and trade channels had been so badly disorganized as to slow up progress still more. By mid-year of 1940 so little had been accomplished, and the need for action had so grown that the original plan was abandoned and the Metals Reserve Company was organized to take over and speed up the government purchases of metals and minerals necessary for the defense program.

Realizing that Metals Reserve had been created solely for the purpose of gathering the supplies required in the emergency, and that its functions would expire automatically with the end of the emergency, various efforts have been made in Congress to formulate a basis for postwar stockpiling operations, but thus far without success.

None of the several stockpiling bills that have been proposed to Congress has as yet been enacted into law. The first and only definite progress thus far was made in the passage of the Surplus Property Act in October 1944, which included provisions for placing surpluses of strategic and critical materials on hand at the end of the war into the permanent stockpile established by the act of 1939. In March the Thomas-May bill was introduced into Congress by the chairman of the Military Affairs Committees of the Senate and the House of Representatives. This bill proposed to establish a permanent stockpiling program, including the freezing of surplus war stocks, the procurement of additional supplies after the war, and the encouragement of the conservation and development of sources of strategic and critical materials within the United States. The bill was never reported out of committee.

In October, Senator Johnson again brought the subject of stockpiling before Congress with another proposal, modifying the previous bill along the lines of objections that had been raised, but leaving many of the major provisions unchanged. This bill provides for the stockpiling of material transferred for that purpose from surplus war stocks, and by later purchases. Except for rotation to prevent deterioration, and for the disposal of material no longer needed for the defense program, materials once added to the stockpile can be disposed of only on order of the President, or for use in time of war or national emergency. In previous attempts to formulate stockpiling legislation the chief targets for criticism have been the question as to whether pur-

chases shall be from domestic or foreign sources of supply, and the methods and conditions under which stockpiled material may be released. Late in November, the Military Affairs Committee reported to the Senate a revised version of the original Thomas bill, in which changes had been made to meet objections raised in committee hearings.

Army and Navy Munitions Board Report.—One of the provisions of the Surplus Property Act was that within three months after passage the Army and Navy Munitions Board should report to Congress its recommendations respecting the maximum and minimum amounts of each strategic or critical material that should be held in the stockpile. In connection with the determination of these quantities the board resurveyed the position of strategic and critical materials, and altered the setup in such a way as to ignore the previous differentiation between strategic and critical except insofar as it is manifest in the quantities to be stocked, and subdivided the entire list into three groups depending entirely on the relative desirability and feasibility of stockpiling. The basis of classification of the minerals and metal commodities is as follows:

Group A comprises those materials for which stockpiling is deemed the only satisfactory method of assuring an adequate supply for a future emergency.

Group B includes other materials, the stockpiling of which is practicable; their acquisition is recommended only to the extent that they may become available as surplus property, since adequacy of supply may be provided by stimulation of existing North American sources of supply, or by the use of substitutes.

Group C includes materials which are not recommended for stockpiling at this time, because of difficulties in storage which are sufficient to outweigh the advantages of stockpiling.

The metal and minerals commodities listed, and their group designations were as follows:

Aluminum B	Magnesium B
(May replace an equivalent amount of bauxite)	Manganese ore A
Antimony A	Battery grade A
Asbestos A	Metallurgical grade A
Rhodesian chrysotile . . . A	Mercury A
So. African amosite . . . A	Mica A
Canadian chrysotile . . . C	Muscovite block and film, good stained or better A
Barite B	Same, stained and lower B
Bauxite A	Muscovite splittings . . . A
Beryl A	Phlogopite splittings . . A
Bismuth A	Phlogopite block . . . B
Cadmium A	Molybdenum B
Celestite A	Monazite A
Chalk, English B	Nickel A
Chromite A	Petroleum and products . C
Metallurgical grade . . . A	Platinum group metals . . .
Refractory grade	Iridium A
Rhodesian A	Platinum A
Others A	Osmium B
Chemical grade B	Palladium B
Cobalt A	Rhodium B
Columbite A	Ruthenium B
Copper A	Quartz crystals A
Corundum A	Radium C
Cryolite, natural B	Rutile A
Diamonds, industrial . . . A	Sapphire and ruby . . . A
Diamond dies B	Scrap iron and steel . . . C
Emery B	Selenium B
Fluorspar A	Talc, steatite A
Acid grade B	Block or lava B
Metallurgical grade . . . B	Ground B
Graphite A	Tantalite A
Amorphous lump A	Tin A
Flake A	Tungsten A
Crystalline fines B	Vanadium A
Iodine A	Zinc A
Iron ore C	Zirconium ores A
Jewel bearings A	Baddeleyite A
Kyanite, Indian A	Zircon A
Lead A	

We find here 53 listings, not counting differentiations in grade, as compared with 15 commodities in the 1940 list. These numbers alone give a rough comparative measure of the changed status of the problem of strategic mineral supplies.

SUGAR BEETS. The United States greatly increased its 1945 sugar beet crop over its 1944 crop, and nearly equaled its 1934–43 ten-year average crop. The figures in short tons for the respective years are as follows: 1945, 9,400,000; 1944, 6,753,000; 10-year average, 9,644,000. Colorado, as usual, led in production in 1945 with a crop totaling 2,100,000 short tons. California took second place with 1,615,000 short tons, and Montana was third with 943,000 short tons.

SUGAR BRANCH. The Sugar Branch continued through the 1944–45 crop to administer the Sugar Act of 1937, as amended, which was extended to Dec. 31, 1946, in May 1944. The usual annual determinations were issued for the continental sugar-beet and sugar-cane areas, Hawaii, Puerto Rico, and the Virgin Islands as required under the conditional payment program authorized by the Sugar Act. These determinations cover minimum prices to be paid by processors for sugar beets and sugarcane, minimum wages for field laborers, and soil conservation practices. The compilation and distribution of the basic statistical data on sugar required for wartime controls continued to be centered in the branch in order to prevent duplication among the various governmental agencies interested in various phases of the sugar problem. However, the main activities of the branch during 1945 were in connection with certain war powers, the administration of which had been assigned to the Sugar Branch at the close of 1943, viz., recommending allocations of sugar to claimants for domestic or foreign account, establishing quota limitations through war food orders on shipments by primary distributors of sugar, assisting sugar producers in procuring labor and critical materials and equipment, and servicing the Commodity Credit Corporation in its formulation of sugar subsidy programs to producers and processors.

The year 1944 witnessed virtually complete breakdown of the government's efforts under wartime powers to establish a balance between supplies and requirements of sugar. This breakdown which led to serious consequences in 1945 came about as follows. On Feb. 26, 1944, the War Food Administration had announced that due to increased needs of the armed forces and our allies, and the large use of sugar-cane molasses for industrial alcohol, the total allocation of sugar for all civilian uses for 1944 would be 5,074,906 tons, a reduction of about 6 per cent below the quantity consumed in 1943. The total quantity of sugar allocated for 1944 was 6,529,098 tons, most of the difference of 1,454,000 tons between the two figures representing the allocation to armed forces and the allies. This allocation had been established after considerable difficulty in reducing the claimants' war needs for sugar to correlate with prospective supplies through the interagency allocation machinery described in last year's ar-

ticle (see *AMERICANA ANNUAL*, 1945 edition, page 673).

This public announcement was followed by a protracted and severe attack by certain elements in the sugar industry and many of the industrial interests dependent upon sugar as a raw material (soft drink manufacturers, confectioners, etc.) on the ground that diversion of a large portion of the Cuban crop into raw material for industrial alcohol was unjustified. On the other hand, those who were concerned with the industrial alcohol program and more especially with the synthetic rubber program dependent upon it, pressed aggressively for an even greater diversion of sugar-bearing materials to the alcohol program than was contemplated by the government. A decision had been reached as far back as Jan. 26, 1944, by the War Food Administrator, after a meeting with the chairman of the War Production Board and the director of War Mobilization. On that date, the War Food Administrator wrote the chairman of the War Production Board that he was making allocations for industrial alcohol at an annual rate of 1,000,000 tons of sugar (800,000 tons in the form of high test molasses, and 200,000 tons as sugar) and 158,000,000 bushels of grain. This information did not become public, however, until after investigation by the Gillette Committee late in March 1944, so that industrial and commercial interests proceeded as if the decision had been made at a relatively low governmental level and was subject to change at top levels of officialdom. Thus the so-called "Bunker Report," on sugar, which was submitted to Price Administrator Chester Bowles as late as May 10, 1944, called for: the maintenance of the civilian rationing program at the levels then established of approximately one-half pound per person per week for home use and 80 per cent of 1941 use for industrial consumers. It was recommended in the report that the amount of high test molasses diverted from sugar in Cuba should be the residual figure after sufficient quantities had been made available to meet the then established sugar rationing program and that raw materials for the industrial alcohol program should be obtained from other sources, such as grain. Antiadministration forces made use of dissatisfaction among the industrial users of sugar to attack the administration's program.

Another point of attack by interested parties was the international allocation of sugar. Under the wartime procedure in effect in 1944-45, the Combined Food Board made a recommendation to the respective governments on international allocation of scarce food commodities. Upon acceptance of these recommendations by the respective governments, the recommendation became a firm allocation carried out under authority of wartime powers in the countries involved. In the case of the United States, these powers were exercised mainly under Title III of the Second War Powers Act of 1942. In 1943, British sugar stocks had been permitted under Combined Food Board procedure to increase greatly in anticipation of possible isolation of the United Kingdom through enemy submarine action. Early in 1944 agreement was sought and accomplished to reduce United Kingdom stocks by about 300,000 tons and further reduction was contemplated to prewar levels in 1945 as the submarine menace was overcome. Since these agreements were not made public, there was considerable public criticism by sugar trade interests of what was deemed to be an excessive stock in the United Kingdom which was attributed to lend-lease ship-

ments of sugar from United States and Cuba. However, the Combined Food Board found it impossible to release either figures on stocks in the United Kingdom or the allocation agreement itself because of the wartime dangers involved in disclosure of such data. The United Kingdom had ceased publication of stocks and imports with the outbreak of the war and the United States had discontinued publication of its official import figures. Under these circumstances, public statements and rumors were circulated by some of the interested parties who did not fully appreciate the importance of the issue to the war program, criticizing the secrecy in the government proceedings and alleged excessive generosity to foreign countries. Public confidence in the government sugar allocation and rationing programs was thus undermined, and on May 19, 1944, the Office of Price Administration announced a return to 80 per cent of 1941, as the base level of rationing for industrial users during the second quarter year, after it had previously announced the rate of 70 per cent.

Liberality to industrial users precluded niggardliness in rationing to housewives and public eating places. Under such conditions it proved impossible for the allocations of the War Food Administrator to be carried out by the Office of Price Administration. Distribution of sugar increased to 7,147,709 tons in 1944 as compared with 6,334,713 tons in 1943 and reserves were reduced sharply during the year. Civilian distribution aggregated 6,158,000 tons as compared with the initial 1944 allocation referred to above of 5,074,906 tons and a revised allocation of 5,380,000 tons. The noncivilian distribution was approximately 100,000 tons below the initial allocation. The year-end stocks aggregated only 1,226,000 tons as against over 2,000,000 tons in the three year period 1940-42. An unprecedented drought in Cuba, reduced the 1945 crop tremendously so that a severe sugar shortage developed in 1945 necessitating new forms of distribution control.

Early in 1945 a new control program was worked out by the Sugar Branch to meet the distressing situation which had developed. Inter-agency problems precluded final action on this program until June 12, 1945, when WFO 131 and 131.1 were made operative by the War Food Administration after approval of the director of Economic Stabilization and full consultation with an industry committee. Under these orders for the period May-September 1945, each refiner and primary distributor of sugar was given an allocation which he could not exceed for deliveries to civilians, military and other principal categories of users respectively. In issuing this order the War Food Administration stated, "The order is being issued to limit sugar distribution to the quantities allocated during the period of shortest supply and maximum demand."

Because of the small carryover of sugar into 1945, the increased needs of liberated areas, and the severe reduction in the Cuban sugar crop of 1945 by drought, agreement upon an international allocation of sugar presented unusual obstacles. The United States, as stated, had greatly exceeded the anticipated civilian distribution in 1944, consuming 89 pounds per capita, as compared with 71.5 pounds for the United Kingdom and 85.2 pounds for Canada. Prewar average consumption for these countries was 96.9 pounds, 104 pounds, and 95.5 pounds respectively. It was necessary to agree upon a principle of division of the United Nations' supply of sugar. Es-

establishment of a civilian consumption at the same per capita level in the three countries, favored by the United Kingdom and Canada was extremely difficult for the United States because it involved a sharp reduction from the level of consumption of 1944 and serious difficulties for the industrial users of sugar. On the other hand, continuance of the relatively high 1944 level of consumption in the United States was deemed detrimental to other countries. The Sugar Branch was endeavoring to effect a compromise agreement in the Combined Food Board's Sugar Committee (of which Charles M. Nicholson was chairman), when the whole problem of international food allocations was taken up by the Interagency Committee on Foreign Shipments, appointed on March 12, 1945, by the then director of War Mobilization and Reconversion, James F. Byrnes. The committee, after consultations with representatives of the various governments concerned, announced on April 30, 1945, acceptance of the principle of parity of consumption for the United States, United Kingdom and Canada on a per capita basis, after reserving certain quantities for liberated areas, the USSR, neutrals, Middle East, etc.

Meanwhile, public dissatisfaction with reduced sugar rations resulted in a series of Congressional Investigations (see Sugar Report of Special House Committee to Investigate Food Shortages, May 21, 1945, and Hearings of the Select Committee to Investigate Acts of Executive Agencies Beyond the Scope of their Authority, March 21, 1945).

JOSHUA BERNHARDT, Chief, Sugar Branch, Office of Marketing Services, Department of Agriculture.

SUGARCANE. The 1945 sugarcane crop of the United States was estimated by the Department of Agriculture at near record proportions. Only two states grow sugarcane—Louisiana and Florida. Their 1945 crop was estimated at 7,112,000 short tons, as compared with their 1944 crop of 6,148,000 short tons and their average 1934-43 crop of 5,640,000 short tons. Of the 1945 total, Louisiana was credited with 6,098,000 short tons, Florida with 1,014,000 short tons.

SUGIYAMA, Hajime, Japanese Army officer: b. Kokura City, Japan, January 1880; d. by his own hand, Sept. 12, 1945. Field Marshal General Sugiyama, commander of the Japanese First Imperial Army and former war minister, was one of the top Japanese militarists responsible for his country's attack on the United States and her allies. He was a member of the Board of Field Marshals and Admirals. He retired with the Koiso government in April 1945; he had served as Koiso's war minister. As First Imperial Army chief, Sugiyama was the opposite number of Lieut. Gen. Robert L. Eichelberger, commander of the American Eighth Army's occupation troops; he had conferred with General Eichelberger in Yokohama shortly before his death. Sugiyama was a classmate of former Premier Hideki Tojo at Japan's Military Staff College. He first held the post of war minister in 1937; in December 1938, he became commander in chief of Japanese forces in north China, and two years later, Japanese Army chief of staff. In court circles, he was a powerful spokesman for the Kwantung Army group. Sugiyama and his wife shot themselves less than 24 hours after Tojo made his attempt at suicide.

SULPHUR. Production of crude native sulphur in the United States in 1944 totaled 3,218,158

long tons, 27 per cent greater than in 1943 and nearly as large as the record total of 3,460,686 tons attained in 1942, according to the United States Bureau of Mines. In 1944 the total of producer-owned stocks declined 361,901 long tons to 4,100,320 tons. Total stocks at the end of the year were still large and equivalent to over a year's requirements. With the growing need for sulphuric acid in munitions, fertilizer, petroleum, and in many other industries, consumption of sulphur in 1944 reached the record figure of 3,580,057 long tons, compared with 3,191,051 tons in 1943.

During the first six months of 1945, sulphur was consumed at a record rate in the United States and production was nearly as high as the record set in 1942. Production from January to June 1945 was 1,748,442 long tons, an increase of 23 per cent over the 1,426,792 tons for the same period in 1944, and sales were 20 per cent higher. As sales have consistently exceeded production, stocks declined 323,582 tons since the first of the year.

SUMATRA. See NETHERLANDS INDIES.

SUPREME HEADQUARTERS, ALLIED EXPEDITIONARY FORCE (SHAEF). Official designation of over-all agency set up by the Allied governments for the conduct of the war in western Europe. It came into official existence in England on Feb. 13, 1944. Its organization had been implied seven weeks earlier when President Roosevelt announced on Dec. 24, 1943, that Gen. Dwight D. Eisenhower had been named to command the Allied forces that would invade German-held Europe from the north and the west. Although American and British officers filled the main staff positions, the French were strongly represented and also had liaison officers in every section. Belgium, the Netherlands, Luxembourg, Norway, and Denmark had liaison missions attached to SHAEF.

The largest military staff organization of record, SHAEF's personnel numbered about 15,000 officers and men of the Allied armies. The first headquarters location was at Norfolk House in downtown London. After the liberation of the greater part of France, it moved to the historic Palace of Versailles, near Paris; and at the time of Germany's unconditional surrender in May 1945 its forward section occupied a technical school at Rheims. Following the surrender, headquarters moved to Frankfurt-on-the-Main where it occupied the I. G. Farbenindustrie offices, nicknamed the Little Pentagon Building.

At the time of SHAEF's organization it had been agreed that it would be dissolved within 90 days of the victory over Germany. Accordingly, it ceased to exist at 12:01 A.M. on July 14, 1945, 17 months after its organization. The dissolution was hastened in order to enable the international military authorities to provide equal representation for Russia in the joint occupation of Germany. Its responsibilities were absorbed by the four-power Allied Control Council in Berlin, consisting of representatives of Britain, France, Russia, and the United States.

SURGERY, Progress in. A great war is now ended. The tremendous progress in the art and science of surgery will continue despite the lessening pressure of war, for this is the great merit of medical science today. Many of the outstanding contributions to the progress of surgery during the past year will undoubtedly be attributed to the pressure of war needs; but most certainly

they are also the visible evidence of the profound interest of the American physician, of the excellent teaching of young physicians, and of the alertness of the medical research scientist. Had these been lacking, medical care and medical progress would have fallen far short of the demands of war; that they did not, is a splendid commendation of all the branches of medical science.

Despite the fact that we knew, during the past year, that there would soon be a great change in the theaters of war and that such a departure would entail great changes in demand in the field of medicine, yet the highlights of surgical progress are equally shared by ideas, methods, and treatments designed primarily for civilian surgical practice and for care of battle casualties.

Blood Vessel Surgery.—One of the most unique and outstanding developments, making its appearance as a direct result of the war stimulus, is the nonsuture method of blood vessel anastomosis or reunion. This work was begun by Blakemore and Lord in 1942 and was ready for use by late 1943. Whenever an extremity is struck by an explosive shell, land mine, grenade or bomb, a variable amount of damage is done to the blood supply to that extremity. If the main blood vessel or vessels are severed, then the part must depend upon collateral vessels for its blood supply and its ultimate survival. The high explosive missiles developed during the war have a highly destructive power which produces extensive damage, often severing not only the main artery but producing widespread destruction of adjacent tissues and as a result the adjacent collateral vessels. The authors began by using the ancient method of joining vessels by means of a hollow tube or canula. They added to this the principle of lining that tube by a vein graft. The metal used was a nonirritating alloy, vitalium. The single, rigid tube or canula of vitalium has more recently been replaced by two smaller but similar tubes placed at each end of the vein graft-artery union.

The technic introduced by Blakemore and Lord consists of everting (cuffing) the ends of the vein graft over the ends of the canula or tubes and securing them by a ligature or tie of fine silk. The artery is then drawn over the cuffed vein end and again held in place by a ligature. The ligatures are kept from slipping off the tube ends by small tying ridges a few millimeters from the ends. This procedure offers the all-important intimate contact of vein lining (vein intima) to artery lining (artery intima). This technic, when compared in experimental animals with the Carrel technic (developed during the First World War) of direct, end-to-end suture of severed vessels, gave a far higher percentage of successful vessel repair.

The authors have also used experimentally, vein grafts removed from other animals (heteroplastic grafts) and stored for varying periods, after quick freezing, in an alcohol dry-ice mixture kept at or below minus 40°C. They found that these grafts, in experimental animals, functioned adequately when used as grafts to bridge arterial defects. The use of heteroplastic tissues of all kinds has offered great attraction to surgeons for decades. In a period of war where battle casualties cannot be predicted either in time or quantity, this subject has even greater attraction. The preparation beforehand of large quantities of tissues needed would simplify and speed the repair of battle injuries. For the most

part, the use of heteroplastic grafts has been disappointing and only a prolonged trial will demonstrate whether the use of such grafts in the repair of arterial injuries and defects will be satisfactory. The application of experimental results, those demonstrated satisfactorily on animals, to humans frequently leads to failure so that more time and wider experience in this field must be allowed before widespread use is to be encouraged.

With the advent of an efficient method of blood vessel anastomosis, relatively easy of technical accomplishment, a wide variety of uses have already suggested themselves. The abnormal enlargement of arteries (aneurysms), following various diseases and the possibility of rupture of these vessels as a consequence, and the abnormal communication between artery and vein as a result of injury or disease, have both been shown to be amenable and suitable to this form of surgical treatment.

Heart Malformations.—The interest in blood vessel surgery stimulated by war injuries has resulted in a renewed interest in the treatment of congenital diseases of the heart, and of the large vessels arising there. Heretofore there has been no satisfactory treatment for the malformations resulting from the time of birth in the "blue baby." The results reported recently by Dr. Alfred Blalock and Dr. Albert Taussig have been sufficiently encouraging in three patients so that serious consideration should be given them when treating the infant born with a malformed heart.

The blue color of the skin and mucous membranes in infants born with improperly developed hearts is due to the circulation of insufficiently oxygenated blood. It is well recognized that one of the causes for improper oxygen saturation of the blood in these infants is the diminution of blood flow through the lungs. Expressed in the simplest terms, the circulation of the blood through the lungs after birth is essential for life; anyone deprived of such circulation dies. Undoubtedly the diminution of flow of blood to the lungs, which occurs in certain types of congenital heart disease and which results in a "blue baby," is only a variant in degree. The recent successful surgical attack by Blalock and Taussig upon these handicapped babies opens a large new field of surgical endeavor in a small group of diseases heretofore considered amenable to medical treatment only.

The operations performed most recently have been carried out upon those infants in whom the great vessel (pulmonary artery) at the base of the heart which leads to the lungs has an insufficiently large caliber at one point (the pulmonary valve) to admit passage of adequate amounts of blood into the lungs. The operation consists in anastomosis or union of the subclavian or innominate artery to one of the pulmonary arteries. Thus, the blood which would normally pass into the systemic circulation is diverted, beyond the area of stenosis or narrowing, into the pulmonary circulation. The great quantity of blood thus shunted is capable of taking up adequate amounts of oxygen and, after return to the heart from the lungs, of being returned to the systemic circulation fully oxygenated. Thus these infants have a return of normal color and full vigor.

The technical procedure was carried out by means of direct suture and without the use of the Blakemore tubes described above. It is important to emphasize that the operation described

by these authors is not of value to all patients with persistent cyanosis ("blue babies"). It is of value only in malformations in which the primary difficulty is lack of circulation to the lungs.

Otosclerosis.—The treatment of patients suffering from deafness, due to a specific disease, is in keeping with the progress of surgery in the cure of patients with incapacitating disease, but offers little in the domain of treatment of war injuries. Otosclerosis is the name given to a form of deafness produced by sharply circumscribed bony overgrowths occurring within the inner ear and parts connecting it with the middle ear. When these bony tumors have proliferated to a point where they have produced ankylosis (fixation) of the tiny ossicles in the middle ear deafness is produced.

Clinical otosclerosis can be cured by ignoring the tumor in the inner and middle ear, and creating instead a new opening into the inner ear. Such a newly created opening or window into the labyrinth in the inner ear replaces the normal but functionally impeded window and establishes a new air conduction mechanism which permits the perilymph and endolymph of the labyrinth to be freely mobilized again by airborne sound. Such an operation is known as fenestration and was first described by Lempert. The clinical diagnosis of otosclerosis is easily arrived at when all or most of the following classic signs and symptoms are observed in a patient complaining of deafness:

(1) A family history of hereditary deafness is obtainable.

(2) Deafness for airborne sound is slowly or rapidly progressive, beginning first with loss of perception of low-pitched sounds and ultimately involving high frequencies or high pitched sounds. Such deafness is usually bilateral, though it may appear in one ear first and follow in the other ear at some time later.

(3) Hearing for bone-conducted sound is prolonged over and above the hearing by air conduction at all the frequencies at which air conduction is impaired.

(4) The patients frequently believe that they hear conversation better in noisy places.

(5) The patients frequently complain of ringing in the ears either unilaterally or bilaterally and this may be intermittent or continuous, mild or severe.

(6) The eustachian tube, the tube connecting the middle ear with the pharynx, is patent, and tests of hearing following inflation of this tube show no improvement.

Since deafness resulting from otosclerosis is progressive and usually results in total, irreparable loss of hearing, and since there is no known satisfactory medical treatment which could either improve the hearing or arrest the process, and since experience and time have shown that in a large percentage of patients this form of deafness can be cured only by surgical treatment, the operation of fenestration is advisable providing there are no demonstrable medical or surgical contraindications. No patient with clinical otosclerosis should, as a rule, be advised to subject himself to the operation before his loss of hearing by air conduction has reached such a low level that he is deaf for all *practical* purposes.

When both ears are suitable for the fenestration operation, the ear most likely to yield the type of hearing improvement most beneficial to the patient should be the one chosen for the operation. The operation described by Lempert for the creation of a new window into the inner

ear consists first of an incision just at the margin of the external auditory canal and exposure through this of the mastoid bone lying beneath. The mastoid antrum is then opened and extended until the three semicircular canals are widely exposed. A portion of the ossicle of the middle ear is then removed and the bony covering of the vestibule of the semicircular canals is removed with a dental burr. The perilymph space is then exposed. Lempert then advises filling the opening in the vestibule with a loosely fitting stopper, or "stopple," to prevent regrowth and closure of the newly formed opening by bone. The stopple is then covered with the mobilized skin of the adjacent external ear canal.

Lempert reports that 815 cases have been done in which a preoperative diagnosis of otosclerosis was made and in which good hearing for bone-conducted sound was present preoperatively. Of these 815 cases, 571 have been completely rehabilitated for social and economic contacts as a result of restored hearing. Partial rehabilitation was accomplished in 92 cases. The hearing was unimproved in 118 cases and was further impaired in 34 patients. In 185 patients with clinical otosclerosis, poor hearing for bone-conducted sound was already present at the time of operation and of these, complete rehabilitation was obtained in 42, partial rehabilitation in 39 patients. The remainder were either unimproved or made worse. Twenty-four of 75 patients operated upon more than six years ago have retained their practical, serviceable hearing for more than six years, one patient for seven years. Thirteen patients retained improved but not practical hearing for more than six years. The operation is still in the process of development and continued improvement. The results up to the present time are indeed encouraging in a disease that frequently progresses continuously to complete, irretrievable deafness.

Tuberculosis.—The treatment of patients with pulmonary tuberculosis has progressed over a long, tortuous road to the present day level of excellence. Our present day medical therapy of pleasant surroundings, good food, expert nursing care and emphasis on high morale is a far cry from the old days of segregation in the "pest house," ostracism, callous neglect. With each new adjunct in therapy there is widespread and enthusiastic trial with later careful evaluation and allocation of new treatments into their proper niche in modern therapy. So in tuberculosis pneumothorax was accepted widely and used indiscriminately until proper evaluation and selection of patients was defined and then rigidly adhered to, and more recently, the use of phrenic nerve paralysis, pneumonolysis (severing of adhesions between lung and chest cage) and thoracoplasty have each found a place in the high degree of successful treatment of pulmonary tuberculosis.

Within the past two or three years physicians and surgeons have shown an increasing interest in the complete eradication of portions or all of a lung involved in the tuberculous process. Such eradication, if technically feasible would seem logical if the final results showed that such eradication were complete and that the means of obtaining it carried little or no mortality.

At the 25th annual meeting of the American Association for Thoracic (chest) Surgery, reports by Dolley, Janes, Bailey, Hart, Meier and Klopstock, Chamberlain, and Overholt and Wilson, brought up to date the experiences with removal of portions or all of one lung for tuberculosis.

Most of the experienced chest surgeons have, prior to the past two or three years, occasionally found removal of a lung or a portion of a lung necessary when persistent tuberculosis infection remains after completion of less radical definitive procedures. Despite this, primary lobectomy (removal of a lobe of the lung) or pneumonectomy (removal of one lung) has not been widely favored until recently.

The operations of lobectomy and pneumonectomy are running true to form. We are deep in the enthusiastic phase. It ensures beyond peradventure the permanence of these two surgical procedures in the treatment of pulmonary tuberculosis. It does not by any means, however, signify that most physicians are competent to choose the correct cases for these procedures or to manage with a minimum of risk the preoperative, operative and postoperative courses. The reports of the above physicians will go a long way in excluding those patients for whom these procedures must not be used, those who would do fully as well or better following another less radical operation, and those for whom the single or multiple removal of lung lobes is shown to be clearly the procedure of choice.

The combined figures reported by the above physicians reveal that 118 patients have had the total removal of a lung or portions of that lung for pulmonary tuberculosis. Of these patients, 28 have failed to improve, have become worse, or have died of the operation or its complications. This is by far a much too high mortality to give widespread and unequivocal acceptance to these operations on all patients; despite the fact that tuberculosis is in many instances a fatal disease and many of the patients upon whom it was carried out were desperate surgical risks. The honest publication of these results and their careful evaluation has, however, given the chest surgeon confidence in the procedure for this disease and some indication of its place in his repertory of methods of therapy of pulmonary tuberculosis.

Arteriosclerosis.—People suffering from the consequences of organic disease of the peripheral arteries such as arteriosclerosis (hardening of the arteries) are generally believed to be beyond the reach of surgical aid except in those instances where amputation of a part or all of an extremity is necessary for gangrene, or serious infection. The belief of Trimble, Cheney, and Moses is a different one; these persons can be helped, because there is in almost every instance a functional spastic factor in addition to the organic one, and this spastic factor can be removed by surgery. The reward that these physicians have obtained in 59 patients operated upon has been twofold: (1) preservation of many limbs and lives through the prevention of the onset or the spread of gangrene; and (2) the relief of distressing pain.

It is a well-known fact that there are certain functional disorders of the nervous mechanism of blood vessels causing either a vasoconstriction (constriction of the vessels) or a vasodilation (dilation of the vessels), and that the disorders causing vasoconstriction, and therefore diminution of blood to an extremity, can be dramatically relieved by surgical removal of the sympathetic nerve fibers involved.

What is not generally or widely appreciated by many physicians is that many of the organic diseases of the blood vessels have an associated vasomotor (control mechanism of size of blood vessels) spasm which may be the cumulative

factor responsible for the ensuing gangrene. The death of the part affected (gangrene) is due many times, not to the original arterial disease, but to the superimposed constriction of accompanying smaller vessels. Recognition of this fact and subsequent operative removal of the nervous mechanism causing the vasoconstriction will in proper cases result in the curing of pain and the actual salvation of the part from death from gangrene.

If the routine tests on a diseased extremity show definite circulatory improvement, then a sympathectomy (removal of the sympathetic-vasoconstrictor nerves) must be considered. The selection of patients for this operation requires the greatest care in balancing the possible benefits against the risk incurred, since arteriosclerosis is a disease primarily of older individuals. Manifestly it would be wrong to employ this operation indiscriminately on patients suffering from diminished arterial blood supply to the extremities who show no evidence of improvement after the preliminary tests for vasomotor spasm. Nevertheless, many patients in this group do benefit from removal of the sympathetic nerves, and, if their physical condition permits, should be subjected to the operation. Likewise, manifestly it is right to employ the operation in all patients suffering from the serious consequences of diminished arterial supply whose tests show that vasomotor spasm as well as organic arterial disease is a causative factor, provided the general physical condition of the patient will permit the operation.

The operation of sympathectomy attacks the disease in several ways. Extremities with poor arterial circulation are peculiarly susceptible to cold; the colder they become the more constriction take places in the vessels, and, since the nervous pathways for vasoconstriction and sweating are the same, the more vessels become constricted the more sweating takes place with further lowering of temperature. This vicious cycle is broken by operation in two places; the vasoconstrictor fibers are paralyzed and sweating is abolished. In several patients reported by the above authors, an increase in temperature of the leg and an improvement in its color were found on the side opposite to, as well as the side of, operation. This phenomenon is of considerable importance since arteriosclerosis is a generalized disease, although it may well affect one extremity more seriously or extensively than the other.

Gangrene and pain, alone or in combination, are the challenging factors in this problem. The rapid healing of a previously indolent ulcerated or gangrenous area will often follow sympathectomy. The relief of various types of pain following sympathectomy have been gratifying. In such a group of patients are found (1) the pain in the calf muscles of the leg following very short exercise (called intermittent claudication); (2) the diffuse rest pain in a foot with or without the presence of actual ulceration and (3) the rest pain localized in a small ulcer or in a gangrenous toe.

No physician or patient should minimize the great importance of measures other than operative which must be maintained in all individuals with arteriosclerosis after the operation of sympathetic nerve removal. The organic arterial disease is still present, and an increased susceptibility to injury and infection persists. Of special importance is the meticulous daily care which must be given to the care of the feet, the avoidance of injury when cutting the nails and the avoidance of

vasoconstrictor influences such as cold, mental anxiety, and tobacco.

Burns.—Perhaps one of the greatest contributions that can be attributed to the influence of the Second World War on surgical progress has been the clarification of our views on the treatment of the severely burned patient. The treatment of these individuals has been focused upon three different aspects of the burned individual: (1) the treatment of the burned area; (2) the treatment of the abnormal physiologic changes which occur in that individual's body chemistry—the treatment of burn shock and so-called burn toxemia; and (3) the treatment of the late results of severe burns—the restoration of function and appearance by reconstructive and plastic operations.

As a result of wide experience in the war theaters, the immediate treatment of the locally burned area and the late reconstructive and plastic operations have become quite uniform and universally accepted. The treatment of the abnormal changes which occur in body fluids as a result of a severe burn have also received wide attention without universally conclusive evidence of the effectiveness of salt solutions, cell-free blood components (blood plasma and serum), and whole blood in permitting immediate recovery from the burn injury.

The purpose of the quantitatively controlled experiments carried out by Moyer, Collier, Iob, Vaughan, Marty were directed toward this phase of treatment of the burned patient. Their experiments were done on carefully anaesthetized, uniformly injured (burned) experimental animals.

The first group of experiments was carried out to determine and correlate the body loads of various salt solutions and plasma with the length of life and changes in the measurable body fluids that follow injury when the various solutions were given before the injury. After determining the length of life of several control animals, a second group of animals was given physiologically equivalent amounts of (1) isotonic sodium chloride solutions (normal saline); (2) Ringer's-lactate solution; (3) saline-bicarbonate solution; and (4) plasma. The mean survival time of these various groups of animals was approximately 5 hours for the control animals, 7 hours for the animals receiving normal saline in the preburn period, 9½ hours for the Ringer's-lactate animals, 9 hours for the plasma treated animals, and 14 hours for the normal saline-sodium bicarbonate treated animals. From the above experimental findings it is quite obvious that the animals receiving the saline-sodium bicarbonate solution lived significantly longer than did all of the other groups.

Following the "load" series of experiments, a comparative study of therapy was undertaken. Again a series of control animals was run and then the survival times studied, after giving each group of animals the normal saline-sodium bicarbonate solution, combinations of serum and saline-bicarbonate solutions, blood intravenously and water freely by mouth, and whole blood intravenously, saline-bicarbonate solution freely by mouth. In this second experiment all animals were given their reparative solutions in the post-burn period rather than in the pre-burn period. Thus they simulated in so far as possible the conditions under which patients are seen after being burned.

The results in this second series of animals revealed that the survival time in the control group was again approximately 5 hours; in the

saline-bicarbonate group, 24 to 25 hours; in the animals given serum and saline-bicarbonate intravenously approximately 33 hours; in the group given whole blood intravenously and water freely by mouth 50 hours; while in that group of animals given whole blood intravenously and the saline-bicarbonate solution by mouth, the mean survival time extended up to the arbitrarily selected time for sacrifice.

Thus from the experiments performed by these workers, it was concluded that the sodium chloride—sodium bicarbonate solution was a definitely superior repair solution when compared with sodium chloride (normal saline) solution alone or plasma, and that prolongation of life up to the arbitrarily selected 100 hours' period could be brought about only by the use of whole blood transfusions and the saline-bicarbonate solution given by mouth. By the use of these two solutions in combination with each other, these animals were carried through the "shock" period *without inducing physiologic changes that may in themselves result in death in less than 100 hours.*

The general conclusions outlined by the authors as a result of their experiments were that in the case of severe injury (burn) such as obtained in their experimental animals, whole blood was the only substance tested that was capable of maintaining a blood volume compatible with life without inducing lethal complications, and that the negative load of fluid in the tissue cells and intercellular spaces could be reduced safely and more completely by the oral administration of a salt solution which approximates the normal interstitial fluid (saline-bicarbonate solution). It is obvious that these experimental observations are completely valid only for the animals used in the above experiments. But, since the application of these principles to humans has shown great promise of improvement in the treatment of individuals following severe burns, this recent contribution to our knowledge in the care of burned patients has been of inestimable value.

We are now in the process of reconcentrating our effort on the purely civilian surgical problems. A great debt is owing those physicians who contributed their whole efforts to the betterment of care and treatment of injuries received in battle. The evidence of continued progress and interest in the care and welfare of the non-combatant civilian during the past year is fitting commentary on the high ideals and aspirations of medical practice of the present day.

FREDERICK A. COLLIER,
ROBERT W. BUXTON,

Department of Surgery, University Hospital, University of Michigan.

SURINAM (NETHERLANDS GUIANA). A Netherlands West Indies colony on the north coast of South America, west of French Guiana and east of British Guiana. The area is 54,291 square miles, and the population (Dec. 31, 1943), including Bush Negroes and Indians in the interior, 189,484. Paramaribo (pop. 60,723) is the capital and principal port. The colony is administered by a governor (Dr. J. C. Brons assumed office Jan. 3, 1944) who is president of a council of four, all nominated by the queen of the Netherlands. The States of Surinam, a legislative body, has 15 members, 10 of them elected and 5 appointed by the governor (all for a term of four years). Government revenue for 1945 was put at 8,171,000 guilders, and expenditure at 8,167,000 guilders. Public and private elementary

schools in 1943 totaled 115, with 18,249 pupils.

Production.—Some 150 square miles are under cultivation, about one third in large plantations and the rest in small peasant holdings. Sugar, coffee, and rice are of greatest economic importance; rice, cultivated primarily for domestic consumption, constitutes the largest crop in terms of quantity and the second largest in value. Other crops include cacao, bananas, and corn (maize). Molasses and rum are manufactured. Balata, the latex of the bully tree, and hardwoods are obtained from the forests. Most valuable of the colony's exports is bauxite, mined at Moengo, on the Cottica River about 104 miles from its mouth; gold is also mined. During the Second World War the United States maintained a garrison in Surinam for the protection of the bauxite mines and the refining plant at Paranam, on the Surinam River about 20 miles above Paramaribo.

External Trade.—Exports in 1943 had a total value of 14,173,267 guilders. The principal products exported were bauxite (1,662,766 metric tons), sugar (2,668,702 kilos), and coffee (189,352 kilos). In 1943 goods to the value of 22,268,102 guilders were imported, these including manufactured goods, foodstuffs, and petroleum products. The United States is now a market for nearly the entire export trade of Surinam, and has practically supplanted all other countries as a supplier of the colony's imports.

Communications.—In the more densely settled areas there are fairly good roads (with an approximate length of 230 miles), and a railroad about 108 miles long extends southeastward from Paramaribo to Dam, on the Surinam River. However, transportation and communication within the colony are chiefly by water navigation. A private company operates small steamers and motor boats on the rivers. Paramaribo, 13 miles above the mouth of the Surinam River, is reached by regular steamer services from New York and Gulf of Mexico ports. The capital is also served by Pan American Airways and by the Royal Netherlands Airways (K.L.M.), the latter connecting Paramaribo with Curaçao via Trinidad.

SVALBARD (SPITSBERGEN). An archipelago belonging to Norway and situated between longitude 10° and 35° E. and latitude 74° and 81° N., and including Bear Island, 240 miles north of Norway. The distance from Norway to South Cape, southernmost point of West Spitsbergen (largest island of the group), is 360 miles. The area of the archipelago is 24,294 square miles. The chief islands are: Mainland or West Spitsbergen, Northeast Land, Prince Charles Foreland, Edge Island, Barents Land, King Karl's Land, Hope Island, and Bear Island. The total population in the winter of 1938-39 was about 2,210; the islands were later virtually deserted. There are extensive coal deposits on the islands. Coal shipments in the summer of 1938 amounted to 606,000 tons. It was from Kings Bay, Spitsbergen, that both Rear Admiral Richard E. Byrd and the late Roald Amundsen made their flights over the North Pole in May 1926. Until 1941 there were six mining camps maintained all the year round, of which the largest was Longyearbyen on Advent Bay, with 550 inhabitants.

SWAZILAND. A British protectorate in South Africa, surrounded by the Transvaal Province of the Union of South Africa except on the east, where it is bordered by Mozambique (Portuguese East Africa). Only one third of the area of 6,705 square miles is a native reserve; the

remainder being owned by white settlers; although smaller than Basutoland and the Bechuanaland Protectorate (qq.v.), it has a larger white population than those two combined. The total population in 1942 was estimated to number 160,000. The Swazis (153,270 at the 1936 census) are akin to the Zulus; among the most backward of African races, still wearing feathers and carrying assagais and knobkerries, for the most part they are superstitious pagans, the delight of anthropologists and students of primitive customs and beliefs. Administratively, Swaziland is one of the high commission territories in South Africa (see BASUTOLAND); the resident commissioner (E. K. Featherstone appointed Sept. 30, 1942) has his headquarters at Mbabane, situated amidst mountainous scenery in the northwest of the protectorate. The country is hot and wet in summer, malaria being prevalent. In the native reserve, a paramount chief shares authority with a queen mother (not the chief's real mother). Standards of literacy and education are low; about half of the 200 mission, tribal, and united schools in 1943 were assisted by government grants, the remainder being operated solely at missionary expense; there were also 9 schools for white children, and three for those of mixed blood. The Swazis are mainly on a cattle economy; in 1942 they owned 383,245 head of the 462,850 cattle in the country, and 346,898 sheep and goats; during the winter months some 300,000 sheep also pass into the country from the Transvaal and the Orange Free State to feed on the rich grasses. Corn (maize) and other cereals are cultivated, as well as peanuts, oranges, and subtropical fruits, but production does not suffice for local consumption. Cotton and tobacco do well. The country is highly mineralized. Tin and gold deposits have long been mined on the western border, and anthracite deposits exist, but the main economic asset of the country is asbestos, the mining of which (at Havelock) was commenced only during the Second World War. Swaziland has never balanced its budget without aid from the British taxpayer. In 1942-43 the revenue amounted to £210,229, and the expenditure was £179,893. Native education is being extended, and agriculture, animal industry, and forestry improved, through grants of £549,937 made (1940-45) by the British treasury. For customs purposes, Swaziland is treated as part of the Union of South Africa, which credits the country with a percentage of the annual customs receipts. Motorbuses of the South African Railways administration link the principal centers of Swaziland with the Union's railway system.

SWEDEN. A kingdom of northwestern Europe occupying, with Norway, the peninsula of Scandinavia; area 173,403 square miles; population (1943) 6,522,827. The population is entirely Swedish with the exception of about 33,929 Finns, 6,481 Lapps, and 16,475 other foreigners. In addition, when the war in Europe ended, Sweden was harboring some 175,000 foreign refugees and evacuees. Of the 1940 population (6,370,538), about 3,990,520 lived in rural districts and 2,380,912 in towns and cities. In 1943 there were 6,249 immigrants to Sweden and 687 emigrants, of whom 66 went to the United States. The chief cities of the kingdom with their populations are: Stockholm, the capital, 634,179; Göteborg, 290,494; Malmö, 163,116; Norrköping, 73,564; Hälsingborg, 64,040;

Örebro, 59,989; Borås, 50,541; Linköping, 45,664. Births in 1941 numbered 99,727; deaths, 71,910, leaving a surplus of births over deaths of 27,817.

Government.—The king, who must be a member of the Lutheran Church, is vested with the executive power, which he exercises through the Council of State, and also with a measure of legislative power in conjunction with the bicameral Riksdag, or Parliament. The First Chamber of the latter has 150 members, elected for terms of eight years by the members of the Landstings, or provincial representations, and certain qualified electors of six cities. The Second Chamber has 230 members, elected for four years by universal suffrage. The Council of State, or Ministry, or Cabinet is headed by the prime minister. The reigning sovereign is King Gustav V, who succeeded on the death of his father, King Oscar II, on Dec. 8, 1907.

Religion.—The Lutheran Protestant is the state church, which has 6,124,366 adherents. This church has 13 bishoprics with Upsala as the metropolitan see. Other creeds are the Roman Catholic with 4,818 adherents and Protestant dissenters which include 55,449 Baptists and 11,450 Methodists; Jews number 6,653, although this last figure has grown considerably recently owing to an influx of refugees.

Education.—Primary education is free and compulsory between the ages of seven and 14 years. In the elementary schools of the kingdom there are 28,756 teachers and 538,304 pupils. There are 142 college preparatory schools, with 55,104 students; 59 people's high schools with 6,301 pupils; 2 high and 11 elementary technical schools with about 4,908 students; 5 navigation schools, and a number of special schools for art, agriculture, veterinary science, deaf mutes, the blind, etc. For higher education there are the universities of Upsala with 2,561 students, Lund with 2,468, Stockholm with 2,010, Göteborg with 516, and the Carolinian Medical Institute in Stockholm (which awards the Nobel Prize in Medicine and Physiology) with 960 students.

Defense.—The defense system is based on universal military service coupled with voluntary enlistment, and was extended through Riksdag decisions in 1936, 1937, and 1942.

Army.—The army in peacetime consists of 19 infantry regiments, 3 cavalry regiments, 4 armored regiments, 7 artillery regiments, and 2 artillery corps, 3 anti-aircraft regiments and 4 anti-aircraft corps, and several regiments for maintenance and transportation. Sweden is divided into 7 military territories.

Navy.—The navy consists of 2 cruisers (2 building), 7 coast defense ships, 1 combined airplane carrier and cruiser, 1 older cruiser, two mine cruisers, about a dozen new destroyers and some old ones, several submarines (actual number not made public), an undisclosed number of motor torpedo boats, 42 minesweepers, 2 depot ships, and patrol vessels.

Coast Artillery.—In peacetime there are 3 coast artillery regiments, and one coast artillery corps on Gotland.

Air Force.—In peacetime there are 6 light bomber groups, 7 fighter groups, 1 torpedo group, and 3 reconnaissance groups (1 strategic, 1 for the army, and 1 for the navy). These groups form 4 wings. Every group consists of 3 squadrons. Sweden is divided into 5 flying base territories, each of which maintains the airfields and supplies within its area.

Finance.—Expenditures for 1944-45 were esti-

mated at 3,774,000,000 kronor and revenues at 3,240,000,000 kronor, as compared with 3,949,684,000 kronor and 3,097,340,000 kronor respectively for the previous year.

Agriculture.—There are in Sweden 3,758,458 hectares of cultivated fields; 1,019,000 hectares of hayfields and pasture land; 11,521,518 hectares of forest land (hectare=2.47 acres). Live-stock includes 2,789,780 cattle; 988,642 swine; 594,444 horses; and 619,820 sheep and lambs. The total value of field crops was 1,738,233 kronor, or about \$434,559 in 1940. The yield of the leading crops in 1943 is shown in the following table:

Crop	Production (tons)	Crop	Production (tons)
Wheat	524,215	Vegetables	52,513
Rye	404,753	Potatoes	2,171,118
Barley	232,621	Sugar beets	1,868,256
Oats	850,306	Fodder roots	2,287,356
Mixed corn	494,632	Hay	4,272,643

Lumber.—Before the Second World War lumber exports from Sweden amounted to an annual total of between 700,000 and 800,000 standards (1 standard=1,980 board feet). During the first two years of the war the annual totals were reduced to between 400,000 and 500,000 standards, and during 1943 to 195,000 standards. In 1944 the total was still lower. The average annual domestic consumption of lumber has been for some years approximately 600,000 standards.

Mining.—"Iron and steel production was well maintained during the year (1943)," according to the June 17, 1944 issue of *Foreign Commerce Weekly* (published by the U.S. Department of Commerce), "output amounting to about 800,000 metric tons, only slightly below 1942 figures." Other mining activities in 1939 included: 14,195 tons of silver and lead ore, 16,434 tons of copper ore, 63,826 tons of zinc ore, 6,085 tons of manganese ore, 242,280 tons of auriferous arsenic ore, and 191,737 tons of sulphuric pyrites. The 1939 production of coal was 443,695 tons. The production of aluminum by the middle of 1944 had reached a capacity of more than 5,000 tons annually, making the country independent of imports.

Manufacturing.—Under the heading *Mining* the output of the several branches of the metallurgical industries is given. Other industries include porcelain and glass, matches, electric meters and appliances, ice boxes, telephones, radio receiving sets, seacraft, automobiles, airplanes, locomotives and other rolling stock, cream separators, ball bearings, electric light bulbs, rubber (shoes and tires), furs, textiles, clothing, building materials, furniture, floor coverings, industrial art objects, surgical instruments, candy, foodstuffs, soft and alcoholic beverages, and sports accessories. Of the greatest importance, however, in the internal economy of the country are the timber and woodworking industries. There are 1,301 sawmills which employ 27,336 operatives and turn out 270,524,000 kronor worth of products. There are 1,943 factories for joinery and furniture with 31,721 workers and an annual output valued at 263,926,000 kronor. The 71 wood-pulp plants employ 15,076 workers and turn out goods to the value of 247,121,000 kronor. The 72 paper and pasteboard plants employ 16,298 workers and turn out goods to the value of 213,838,000 kronor annually. There are 18,753 industrial establishments employing 638,028 men and women, boys and girls. One krona (pl. kronor) equals \$0.233.

Foreign Trade.—In 1944 the total turnover of Sweden's foreign trade amounted to 11,500,000 metric tons, the lowest figure recorded since the present system of compiling statistics was inaugurated in 1912. Exports were most severely hit, amounting to only 6,300,000 tons compared with 22,000,000 tons in 1939. The corresponding figures for imports were 5,300,000 and 15,000,000 tons.

Transportation and Communication.—There are 16,716 kilometers of railways, of which 10,842 kilometers are government-owned. All major government trunk lines have been electrified. Sweden has a total of about 5,000 kilometers of electrified railway lines, including what is said to be the longest continuous electrified line in the world. Government-owned electrified lines account for 85 per cent of all traffic. Post offices number 4,506, telegraph lines have a total length of 12,369 kilometers, and telephone lines have a circuit length of 2,153,064 kilometers with 1,035,939 instruments, or 157.2 per 1,000 inhabitants. (One kilometer equals .621 mile. One mile equals 1.61 kilometers.) There are 89,185 kilometers of roads. Commercial aviation is partly subsidized by the government. Before the Second World War there was a regular air service, maintained by Swedish and foreign lines, between Stockholm, Helsinki, and Moscow, and the continent. In 1942 the SILA (Svensk interkontinental lufttrafik A.B.) was formed. It is a private enterprise with the operation of intercontinental air lines as its sole purpose. On June 27, 1945, a plane belonging to the SILA company made its first flight to the United States via Iceland. The Aktiebolaget Aerotransport (founded in 1924) is reopening its European continental traffic. It has also opened air traffic on 5 lines within the country. An extension of these lines on a large scale will be effected as soon as modern equipment and planes are available to Sweden. The Swedish merchant marine consisted on July 1, 1944, of 2,107 ships, with a total gross tonnage of 1,475,348.

Principal Events of 1945.—The first months of 1945 saw Sweden more isolated than she had been at any time before during the war. Trade and communications across the Baltic had come to a complete standstill; the intermittent safe-conduct traffic westward through the Skagerrak blockade had been halted again by the Germans. With vital imports, such as coal, completely cut off, and Swedish export staples—iron ore, wood-pulp, machinery—piling up in warehouses and on quays, the immediate future looked bleak for Sweden.

There were also constant fears of last-minute complications. Sweden, which had steadfastly maintained her neutrality through five years of war, had no desire to be dragged in at the last act. But the danger of involvement was ever present. Germany, though clearly on the brink of defeat, continued her stupid provocations. Throughout January, German buzz bombs and rockets passed across Swedish territory, apparently fired from bases on Bornholm Island toward Norway, for experimental purposes. Nazi flyers continued to violate Swedish neutrality and as late as April 3 a German fighter plane shot down a Swedish pursuit plane over southern Sweden, killing the pilot. Swedish public opinion, aroused by such incidents, and by the increasingly ruthless Gestapo terror in Norway and Denmark, demanded strong measures, but only a minority went so far as to urge open intervention on the side of the Allies.

In April, when it looked as though the Germans were preparing a last-ditch stand in the Scandinavian countries, the Norwegian government-in-exile repeatedly appealed to Sweden to help prevent this. One Norwegian request, apparently made with Allied approval, suggested that Swedish troops be kept in readiness near the border with orders to occupy Norway if the Germans should attempt to crush an uprising by Norwegian patriots. But the Swedish government was loth to undertake any "rash acts," and at a secret session of the Riksdag, held on April 27, the die was cast against any form of armed intervention.

Instead, the government decided to intensify its diplomatic action—which at the time already was well under way—designed to "talk the Germans out of Norway," and if possible to talk them into unconditional surrender to the Allies. The chief agent of this policy was Count Folke Bernadotte, a nephew of King Gustav, who had been negotiating for some time with the Germans for the release of Danish and Norwegian internees in Germany and gradually expanded his mission into the diplomatic field. After a meeting with Heinrich Himmler at Luebeck, on April 24, Count Bernadotte transmitted to the Allies the Nazis' limited surrender offer, which was rejected. However, the Count was successful in bettering the lot of the Scandinavian prisoners and his *démarches* contributed to the orderly surrender of the German forces in Denmark (on May 4) and in Norway (on May 7), when the Nazi collapse came.

News of the bloodless liberation of the Scandinavian sister countries was hailed with enthusiasm throughout Sweden. On May 7, thousands of students demonstrated their joy outside the Norwegian legation in Stockholm; the city was lavishly decorated with the colors of the three Scandinavian nations. King Gustav congratulated Denmark and Norway in a radio address and Foreign Minister Christian Guenther gave expression to Sweden's "overwhelming feeling of relief" that the war had ended. A long-prepared plan for bringing relief to starving Norway was immediately set in motion and the Riksdag voted additional credits for reconstruction work in Norway, bringing the total to 560,000,000 kronor. Early in June, 81 American Flying Fortresses and Liberators which had made emergency landings in Sweden during the war were released from internment and flown home via Britain; most of the crew members had already returned before the actual end of hostilities.

Following the Nazi surrender, Swedish authorities on May 8 took over the German legation in Stockholm and a few days later all other German official buildings in Sweden. The personnel of the legation, of German consulates throughout the country, and German journalists in Sweden, totaling about 300 persons, were interned and late in August repatriated to Germany. Seized German archives were turned over to the Allies but many important documents had been burned at the legation just before the premises were taken over by Sweden.

The government of National Union, which had been formed on Dec. 13, 1939 as a war emergency measure, resigned on July 31 and was replaced by a Cabinet formed exclusively from the ranks of the Social-Democratic Party which controls one half of the 230 seats in the Lower Chamber of the Riksdag. Per Albin Hansson continued as premier, with Prof. Oes-

ten Undén replacing Christian Guenther as foreign minister and the internationally known economist Gunnar Myrdal taking over the portfolio of commerce. Although the new government marked a swing to the left, Premier Hansson declared during a visit to Oslo, on September 5, that his administration "had no plans for complete socialization." On the same occasion he pleaded for a renewal of the policy of northern collaboration.

As soon as the Skagerrak blockade had been lifted, following the end of the war in Europe, Swedish minesweepers swept a channel through the dense minefields of the western Baltic and by the end of May the first Swedish cargoes were on their way to England, the United States, and South America, carrying woodpulp, ores, and other Swedish export commodities. Trade agreements were negotiated in June and July with Great Britain, Poland, Belgium, Argentina, and Norway, and a substantial import of badly needed coal from Poland was arranged for. A five months' strike in the metal industry, involving some 125,000 workers, was finally settled on July 6.

SWEET POTATOES. The October 1 estimate by the Department of Agriculture of the 1945 sweet potato crop of the United States was 69,071,000 bushels, as compared with the 1944 crop of 71,651,000 bushels and the 1934-43 average crop of 67,059,000 bushels. Louisiana led the states in production in 1945 with a crop estimated at 10,472,000 bushels. Georgia was second with 8,742,000 bushels, and North Carolina was third with 7,350,000 bushels.

SWIMMING. See SPORTS IN 1945.

SWITZERLAND. The Helvetia of the Romans and one of the oldest republics, consisting of a confederation of 22 cantons, is bounded on the north by Germany, east by Germany and Liechtenstein, south by Italy, and west by France, and covers an area of 15,944 square miles.

The chief executive authority is vested in a Federal Council (Bundesrat), consisting of 7 members elected for four years. The head of that body is the president, who, with the vice president, is elected by the Federal Assembly (National Council and Council of States) in joint session for a term of one year. While the president is ineligible for the term following, the vice president is usually elected to succeed the outgoing president. The legislative branch of the government is the Federal Assembly, consisting of two chambers—a Senate (Ständerat) and a House of Representatives (Nationalrat). The former has 44 members, or 2 from each canton. Their mode of election and their term of office depend entirely on the cantonal legislation. The Nationalrat, the larger of the two chambers, consists of 194 members, chosen by direct election for four-year terms and proportionally to the population, one for every 22,000.

At the last census, on Dec. 1, 1941, the population was 4,265,703. Of the four languages spoken in Switzerland, German is used by the majority in 19 cantons, French in 5, and Italian in one. (Three of the 22 cantons are politically divided: the 6 demi-cantons are here each considered as a canton.) In 1930, 2,924,313 persons spoke German, 831,097 French, 242,034 Italian, and 44,158 Romansh. The number of foreigners was then 355,522. The principal cities, according to the census of 1941 are Zurich 336,395; Basel 162,105; Bern 130,331; Geneva 124,431;

Lausanne 92,541; St. Gallen 62,530; Winterthur 58,883; Lucerne 54,716.

Official Languages.—Switzerland now has four official languages, recently having added Romansh to the already existing German, French, and Italian. Romansh, descended from the rustic Latin of the old Roman legions, and its dialectical variant Ladin, are most commonly spoken in the canton of Grisons (Graubünden). It is similar to the tongue of Austrian and north Italian mountain folk, is spoken by about half a million people, 45,000 of whom live in Switzerland, and has been a literary language for approximately a century. In Switzerland, it is the common tongue of the mountain peoples in the vicinity of such popular tourist resorts as St. Moritz, Davos, and Arosa. Dictionaries, newspapers, and grammars are now being printed in Romansh, and laws are being compiled in the new official language.

Religion.—While nominally there is full liberty of conscience, no bishoprics may be created on Swiss territory without the consent of the federal government, nor can the Society of Jesus and its affiliated societies exercise any functions, either clerical or scholastic, in the republic. The same prohibition may be extended to any other religious order whose actions may be deemed dangerous to the state, nor may new convents or religious orders be founded. Protestants are in the majority in 12 of the cantons, and Roman Catholics in 10. The latter numbered (in 1930) 1,666,350 (41 per cent of the population), and the former 2,230,303 (57 per cent). Jews numbered 17,973 (0.4 per cent). The Roman Catholics have five bishops immediately subject to the Holy See. The Protestant Church is Calvinistic in doctrine and Presbyterian in form, and is under the supervision of the magistrates of the cantons.

Education.—Primary education has been compulsory since 1874. The constitution provides that it be cared for entirely by the cantons, whereas higher education is under direct control of the federal government. Primary schools in 1942-43, the latest year for which official statistics are available, had 443,167 pupils and 13,433 teachers. The secondary schools had 39,613 boys and 33,774 girls, with 2,498 men teachers and 379 women teachers. In addition there are a great number of commercial and technical schools in Switzerland.

There are 7 universities located at Basel (the oldest, founded in 1460), Zurich, Bern, Geneva, Lausanne, Fribourg, and Neuchâtel. In the winter of 1943-44, the student body numbered 11,785, with a teaching staff of 1,232. The government maintains at Zurich a technical high school whose student body in 1943-44 numbered 2,957. Besides, there is the Institut Universitaire des Hautes Etudes Internationales at Geneva, where contemporary international topics of a judicial, political, and economic nature are taught; and there is also the Handelshochschule of St. Gallen, where economic science is taught, to which school the Federal Research Institute is attached.

Agriculture.—There are in Switzerland 236,095 farms with a total area of 1,446,447 hectares (a hectare equals 2.471 acres). Of the total area, 931,180 hectares (2,301,027 acres) is unproductive. Of the productive area, 982,540 hectares (2,427,943 acres) is in forests, and the remainder is largely under grass. In 1943, 216,489 hectares were planted to cereals; 82,846 hectares to potatoes; 4,773 hectares to sugar beets, and 17,053

hectares to vegetables. Wine produced in 1944 was estimated at 960,000 hectoliters (1 hectoliter=26.42 gallons), as compared with 747,000 hectoliters in 1943. The livestock census of April 21, 1944, showed 147,339 horses, 3,317 mules and donkeys, 209,075 sheep, 218,485 goats, 1,497,436 cattle (including 817,123 cows), and 599,521 swine. The chief agricultural industries are the production of cheese and condensed milk. A total of 27,040 tons of cheese were produced in 1943, and during the same year 24,620,000 hundredweight of milk were produced, of which about 40 per cent was used for manufacturing purposes and 30 per cent for civilian consumption, the remainder being retained by the producers or used for rearing and fattening cattle.

Manufacturing.—According to a factory census of 1943 there were 9,082 factories employing 425,972 persons. Machinery, apparatus, and instrument manufacturing was shown to be the leading Swiss industry. Watch and clock making is an important branch of industry, there having been 875 factories engaged in the industry in 1943. In 1943, 59 breweries produced 22,394,000 gallons of beer (44,215,000 gallons in 1941). There are two salt-mining districts, and iron ore and manganese ore are mined.

Foreign Trade.—Swiss imports during 1943 were valued at 1,727,100,000 Swiss francs, as compared with 2,049,300,000 francs in 1942. Exports were valued at 1,628,900,000 Swiss francs in 1943, as compared with 1,571,700,000 in 1942.

Finance.—Revenue was estimated in 1944 at 389,300,000 francs as compared with 364,362,211 francs in 1943, while expenditures were estimated in 1944 at 512,600,000 francs as compared with 507,952,302 francs the year previous. The public debt (not including the railway debt) totaled 6,174,614,085 francs of which sum 279,831,785 francs was floating debt on Jan. 1, 1944.

The unit of currency is the Swiss franc. The gold parity of the Swiss franc is not definitely fixed at the present time, and it may fluctuate between 190 and 215 milligrams gold fine, per franc.

Defense.—Ordinarily Switzerland has no standing army. Service in the national militia is popular and universal. Liability for service extends from the 18th year of age to the 60th. In peace times, the number of troops in training is approximately 46,200 officers and men a year, while the total mobilization, including auxiliary services, is 650,000. Because of European war conditions, it became necessary during the war to exceed the ordinary appropriation for defense, and large funds were used from the National Defense Loan.

Transportation and Communication.—In 1943 about 85 per cent of the total length of railways of the country, 3,700 miles, was electrified; 1,900 miles of the electrified system belonged to the government and carried 88 per cent of the total traffic. Record passenger traffic totals on Swiss railways attained in 1943 were attributed to the curtailment of road traffic and to increased holiday and military travel, despite a drop in freight traffic as compared with 1941.

The telegraph and telephone lines are government-owned. In 1943, there were 3,972 post offices and 1,864,681 miles of telegraph and telephone wires. During 1943 the number of telephones being used by individual subscribers increased from 523,440 to 567,517. Direct telephone conversations between the United States and Switzerland were introduced in July 1940.

Also in 1940, 634,000 private radio sets were registered.

Principal Events of 1945.—On Jan. 3, 1945, it was stated in Washington, D.C., that Switzerland had been cut off from Allied supplies because of the economic assistance Nazi Germany continued to receive from that country; and on January 25 the State Department announced that Lauchlin Currie, administrative assistant to President Franklin D. Roosevelt, would soon negotiate with the Swiss government for curtailment of supplies to Germany. British, French, and American representatives began negotiations on February 12; and six days later a Swiss Federal Council decree became effective blocking all German holdings in Switzerland pending examination of accounts by a mixed commission. This act responded to Allied demands that neutrals should not provide refuge for assets stolen by the Germans.

On February 22, American planes raiding southern Germany dropped bombs in five Swiss villages near Lausanne, killing 16 persons and seriously wounding 28. On March 4, both Basel and Zurich were struck by explosives dropped by American Flying Fortresses and Liberators, which descended to machine-gun cars on freight sidings in both cities, six persons being killed on this occasion and an estimated 50 injured. Swiss protests were prompt and vehement, and the American government promised immediate investigations and reparations, which were duly paid.

An Allied-Swiss trade agreement was reached on March 8 providing for the increased shipment of supplies through France to Switzerland; for the prevention of concealment there of property looted by the Germans; for the prohibition of iron and coal traffic across Switzerland between Germany and Italy; and for reducing Swiss exports to Germany to 5 per cent of the 1942 figure. Swiss electric current, which was formerly supplied to Germany under this same agreement, became available to France. On May 15, the Swiss ambassador to Washington, who had been representing German interests there, agreed to turn over the German embassy and German property to the United States, to be held in trust for the United Nations.

At a conference held on June 3, the Swiss Labor Party demanded that Switzerland drop her neutrality and adopt a foreign policy which would entitle the country to participate in the world security organization planned by the United Nations. The conference also demanded that domestic and foreign policies be adopted which would make possible the establishment of normal diplomatic relations with the Soviet Union; that German Nazis be expelled from the country; and that parliamentary elections be held without awaiting expiration of the normal term of the Federal Council then sitting.

On July 5, the Swiss Banker Association issued a statement replying to "attacks from abroad, especially from the United States, claiming that Swiss banks continued to accept considerable amounts of German capital under the cloak of professional secrecy." According to this statement, the amount of German holdings described by foreign reports was "greatly exaggerated." But on August 5, the New York Times published a communication from Bern reporting that two of Switzerland's major banking institutions had gone under, and that the country faced a "serious economic tension which might have far-reaching effects on the country's

monetary policy. . . . The Swiss public is reacting belatedly, partly because years of banking secrecy brought about a condition under which a clearing deficit for Germany alone was allowed to pile up to about 2,500 Swiss francs per capita of the population. . . . To this must be added the overwhelming government debt, for clearance was effected under government guarantee. Losses incurred by private banking establishments amount to perhaps another billion Swiss francs. Now the Allies indicate that they will demand about another 1,500,000,000 francs in German-owned assets in this country, irrespective of the date of the deposit. . . . With the Allies indicating a demand to Swiss banks to reveal all German holdings, Swiss credit institutions profess to be forced to the wall."

Meanwhile, on July 6, the Swiss government had extended recognition to the Warsaw government of Poland. In Washington, the State Department announced on July 22 that Japan had "agreed, in principle" to permit Swiss officials to visit all camps in which American nationals were held prisoner. On August 5, the signing of an air-transport agreement between the United States and Switzerland was also announced in Washington, the terms of the agreement including mutual transit rights over the respective territories of the two nations, and airport facilities in Geneva and New York. Two days after the surrender of Japan to the Allies on August 14, Maj. Gen. Kiyotomi Okamoto, Japanese military attaché in Switzerland, killed himself in his home in Zurich; and on August 30, it was reported from Bern that the Swiss government had ordered Edda Ciano, daughter of Benito Mussolini, deported to Italy.

On November 2, Switzerland recognized Chancellor Karl Renner's provisional Austrian government; and when, two days later, the Allied Control Council in Berlin promulgated a law intended to force neutral countries to surrender property owned by German nationals in their territory, the Swiss government registered prompt protest. On November 9, Robert Fisher, Swiss consul, was barred by Guatemala for "infidelity in safeguarding the archives of the former German legation in Guatemala."

In Washington, D.C., the Senate Kilgore Committee created a stir on November 14 by making public German banking correspondence which revealed moves to utilize assets in Switzerland to support the German war effort. Senator Harley M. Kilgore declared these maneuvers were made possible only by the "willingness of the Swiss government and banking officials, in violation of their agreement with the Allied powers, to make a secret deal with the Nazis." Both the Swiss Foreign Affairs office and the five major Swiss banks stated on November 18 that Senator Kilgore's charges were "totally unfounded," and defended the Bundesrat's refusal to recognize the right of the Allies to control German property in Switzerland. On December 2, the Swiss Clearing House reported from Zurich that German assets in Switzerland totaled 1,000,000,000 Swiss francs (\$250,000,000), of which amount only one half was subject to Allied negotiation. On December 5, Fred M. Vinson, secretary of the United States Treasury, lifted curbs on financial transactions with all foreign countries except former neutrals, including Switzerland, and former enemy states.

SYRIA. A republic on the eastern shore of the Mediterranean, bounded on the north by Turkey, on the east by Iraq, on the south by Transjordan

and Palestine, and on the west by Lebanon and the Mediterranean Sea. Formerly administered by France under a mandate of the League of Nations, Syria assumed during 1944 full responsibility for its own future through a series of steps by which the various functions of government were transferred to the Syrian authorities, the rate of Syrian currency on the international market being guaranteed under an Anglo-French agreement. Syria's independence has been recognized, also, by the United States, the Soviet Union, China, and other states. On Feb. 26, 1945, Syria declared war on Germany and Japan, and in April and May, participated in the United Nations Conference and became a signatory to the United Nations Charter, the Syrian Parliament ratifying the signature on September 4.

Syrian territory extends between 300 and 400 miles eastward from the Mediterranean. It is traversed by a 300-mile stretch of the Euphrates River, and its narrow northeastern section reaches the right bank of the Tigris above Mosul. On the Mediterranean side it is separated from the sea for some 125 miles by Lebanon, north of which, along the coast, lies the semiautonomous Syrian district of Latakia (Syrian, Ladhigiyyah; French, Lattaquié), with its port city of the same name, from which the district has become known as Latakia. The district of Djebel (Jebel) Druze, formerly autonomous, merged fully with Syria in September 1944. But the sanjak of Alexandretta (the Hatay, known to the Turks as Iskenderun), which formed part of Syria until 1939, was in that year ceded to Turkey by France, in the face of violent Syrian opposition, and the cession has never been recognized by the Syrian government or people.

The area of Syria (according to Fighting French figures for 1942) is 171,107 square kilometers (66,064 square miles); the estimated population (1943), 2,860,411. Damascus (Damas, pop. 261,010) is the capital; other important cities are Alep (Aleppo, 257,337), Homs (64,940), Hama (60,225), and Latakia (Ladhigiyyah, 38,500).

Government.—The Syrian Parliament elected Shukri Bey al-Quwatli to the presidency of the republic for a five-year term on Aug. 17, 1943, and he nominated Saadallah el Jabry to the premiership of the first constitutional ministry under the new independent regime. Syria's independence had been proclaimed on Sept. 16, 1941 by Gen. Georges Catroux on behalf of the Free French, and on September 27 was officially proclaimed. In December 1943 General Catroux transferred legislative and administrative functions to the new government effective as of Jan. 1, 1944. Great Britain had recognized Syria's independence on Oct. 28, 1941. Full and unconditional recognition was accorded by the Soviet Union in September 1944, and by the United States on September 19, through the designation of George Wadsworth as United States minister to both Syria and Lebanon. In regard to Syria's relations with its neighboring states, on March 22, 1945, negotiations which had been under way for some time among seven Arab states (Egypt, Iraq, Saudi Arabia, Syria, Lebanon, Transjordan and Yemen) had their outcome in the setting up of the Arab League (q.v.). Syria's representative signed this pact, and on March 31, 1945, it was ratified by the Syrian Parliament.

The People.—Although Syria has known throughout its long and turbulent history a number of peoples who have overrun it or infiltrated into it, the country is today predominantly Arab

in culture and language, sharing these two features as well as other national attributes with the rest of the Arab world. The majority of the population (some 75 per cent in 1935) are Moslems, mainly of the Sunni sect, with minorities of Alaouites (Alawiyah), Ismailis (Isma'ilyyah) and Druses. There are also Christians (about 25 per cent in 1935) of many denominations, principally Greek Orthodox. Other churches represented are the Greek Catholic, the Syriac, and the Armenian (both of which have two branches, the Orthodox and the Uniate), the Protestant, and the Maronite. In 1935 about 0.5 per cent of the population were Jews.

In addition to the system of state, religious, private, and foreign schools, there is a Syrian University at Damascus, founded in 1923, which had in 1938 faculties of law, medicine, pharmacy, dentistry, and midwifery. There is also an Arab academy in the capital; and at Selemiye and Bekaa there are agricultural colleges.

Production.—Agriculture is of prime importance in Syria. The estimated wheat yield in 1943 was 624,280 metric tons, and barley, 330,485 metric tons; other leading crops were grapes, olives, and sorghum. Cotton, tobacco, sesame, and hemp are also produced on a considerable scale. Apricot, olive, pistachio, almond, banana, mulberry, and citrus-fruit trees yield valuable crops. Besides large numbers of sheep, livestock includes camels, oxen and asses; the wool clip for 1943 was put at 2,500 metric tons.

Syrian industries are of comparatively minor, but growing, significance. Silk thread has long been made. Other leading manufactures are beverages, biscuits, cement, brass and leather goods, copperware, macaroni, matches, soap, and textiles.

Although the presence of petroleum has been indicated, the country is entirely dependent upon imports for its fuel requirements. Gypsum is widely distributed, and marble and building stone abound in some regions, while traces of phosphates, lead, copper, chrome, and nickel have also been found.

Foreign Trade.—Most recent available figures for foreign trade (for Syria and Lebanon combined) were for 1943, during which imports amounted to 246,171,000 Syrian pounds, and exports to 168,065,000 Syrian pounds. (The Syrian pound, both in 1943 and 1945 equalled between 45 and 46 cents in U.S. currency.) The chief imports were foods and beverages, various animal and vegetable products, textiles, chemicals, tools and machinery; the leading exports included textiles, vegetables, and fruits. About 75 per cent of the imports were from Turkey; about 50 per cent of the exports went to the United States.

Communications.—Railroads before the Second World War (for Syria and Lebanon combined) included some 666 miles of standard gauge and 224 miles of narrow gauge. All the lines were inland, however, the sea-coast terminals being in Lebanon, at Tripoli and Beyrouth. Extensions of the Palestinian railroads into Lebanon during 1942-43 made direct rail service possible between Egypt and Syria, and thence into Turkey. Highways for motor transport have been well developed, particularly across the desert; notably, in 1942 the trans-desert route of 550 miles linking Damascus with Baghdad, in Iraq, was made into a surfaced road. But although motor traffic is normally a leading form of transport in Syria, it was still restricted (during 1945) by inadequate equipment. There is air transport service,

however, between Damascus and Baghdad and between Damascus and Cairo. Damascus is a port for a number of international air lines.

Principal Events.—Significant political and economic developments during 1945 have been mentioned in preceding sections. Apart from these, the most noteworthy events for Syrians during the year were those relating to the dispute of the governments of the Levantine states with France over French military establishments in Syria and Lebanon, and the agreement to which it led. The French had been asked by the governments of Syria and Lebanon to release Levantines conscripted into the French territorial forces for local service. Some battalions of the Levantine troops had been transferred to Syrian control. But when the French forces in Syria were reinforced by some 500 men from the French national army, Syria broke off negotiations with the French (May 21, 1945). On May 27 street fighting broke out at Hama, and on May 28 at Homs. On May 29 the French dropped bombs on a Syrian-held strong point at Damascus, and bombarded the area of the Syrian Parliament building with artillery fire, later sending troops to occupy it. On May 31 British Prime Minister Winston Churchill (acting, reportedly with the approval of the United States administration), demanded that the French order their troops to cease fire and withdraw to their barracks. British troops in the Levant intervened to enforce these demands. The French, declaring that they had intended to keep their promise to give the Levantines full independence, accused the British of conniving with hostile local elements, and of having supplied arms to the Syrian forces. The British, denying that they had fomented resistance by the Syrians, blamed the French for having brought on the clash, and declared that they themselves had intervened to avoid the danger of general unrest in the Middle East, which could have had serious effects upon the United Nations war effort. The Soviet Union, in the meantime, had asked that the dispute be settled quickly, since it was detrimental to the outlook of the San Francisco Conference. A French proposal for a five-power conference on the Middle East (to include the Soviet Union and China), while favorably regarded by the Syrian authorities, was rejected (on June 16) by the British in favor of a conference of representatives from France, Britain, and the United States. In the meantime, on June 6, President Shukri Bey al-Quwatli of Syria, banning French newspapers from the country, declared that the Syrians would not tolerate the French in Damascus, and on June 7 the Council of the Arab League demanded complete evacuation of the French military forces from the Levant, and the release of the Levantine conscripts. The Syrian government moved to dismiss French officials and to end the operation of the French courts. On July 7 the French agreed to accept the demands of the governments of Syria and Lebanon that its Levantine recruits be released for service with the two Levantine states, and soon thereafter began evacuating their troops. On July 25 the French and British high commands in the Levant reached a formal agreement whereby the French forces would withdraw from eastern Syria (retaining control, however, of certain airfields), but would still be stationed along the Levantine coast. The evacuation of the French troops and civil officials from Syria was said to have involved a general exodus of French priests and nuns, secular teachers, and merchants, from

Syria. Syrian casualties during the fighting (in May and early June) were said to have numbered 800 killed and 2,500 wounded.

On August 21 the government of Premier

Fayez el Khoury resigned, being replaced on Oct. 1, 1945, by a government consisting of an all-national bloc under Saadallah el Jabry, a former premier. See also LEBANON.

T

TABLADA, José Juan, Mexican poet, author, and educator: b. Mexico City, 1871?; d. New York City, Aug. 2, 1945. José Juan Tablada's poetry was so popular in Mexico that he had often been called that nation's unofficial poet laureate. His 20 books of poetry and prose sold by the millions in Spanish-speaking countries. Educated at the Military School of Chapultepec, the National Preparatory School of Mexico City, and the University of Tokyo, Tablada intended to become an artist, but he found journalism a more lucrative career. He worked for *El Universal* in Mexico City and other newspapers, including *La Prensa* of San Antonio, Texas, and *Opinion* of Los Angeles. He also undertook special diplomatic missions in Venezuela, Ecuador, and Colombia for Presidents Porfirio Díaz and Venustiano Carranza. An authority on art, he had served as professor of the history of fine arts at the Academy of Fine Arts at Mexico City, professor of Mexican archaeology at the Mexican National Museum, and as professor of Mexican literature and language at the National Preparatory School. Tablada introduced a type of Japanese writing form and philosophy into Spanish lyric poetry and was a pioneer in the ideographic verse. He had written articles for *The Arts*, *International Studio*, *Theater Arts Monthly*, and *Parnassus*, and was instrumental in obtaining early recognition in the United States of such Mexican artists as Miguel Covarrubias and Carlos Orozco Romero.

TAIWAN. See FORMOSA.

TALC. Domestic mined production and sales of talc, pyrophyllite, and ground soapstone in 1944 totaled 418,228 short tons, as compared with 436,249 tons in 1943; quantities used by producers were 353,209 short tons in 1944, as against 382,668 tons in 1943. Sales amounted to 398,863 short tons valued at \$5,017,462 compared with 412,868 tons valued at \$5,121,414 in 1943. Only sales of crude material increased either in quantity or value.

TANGIER. See under MOROCCO.

TANNU TUVA. An autonomous Soviet province in Central Asia, northwest of Mongolia, having an area of about 64,000 square miles and a population of more than 90,000, of whom about 12,000 are Russians. The vast majority of the people are Tuvinians, and the remainder Mongols and Chinese. Tannu Tuva was once part politically of Outer Mongolia, and was under Chinese domination during the Manchu dynasty. Czarist Russia began colonizing and otherwise extending her influence over Tuva in the 19th cen-

tury, and in 1911 a popular movement arose which brought trade with China virtually to a close. Czarist Russia thereupon announced that Tuva would be taken under her protection, and in 1916 a czarist military force was sent there to protect Russian colonists. Czarist control was overthrown by revolution in 1917, and a Soviet regime came into being a year later. White Guard bands stationed there were defeated by Tuva partisans in July 1919. In October 1945, it was announced in Moscow that Tuva would elect two deputies to the Union of Soviets and the Soviet of Nationalities, thus becoming, as an autonomous region of the Russian Soviet Federated Socialist Republic, an integral part of the Soviet Union. The Tuvinians are mainly cattle raisers, and the chief exports are hair, hides, and wool. The capital city is Kysyl Khoto (pop. about 12,000).

TARAWA. See WESTERN PACIFIC ISLANDS, BRITISH, Section 2.

TARDIEU, André Pierre Gabriel Amédée, French journalist, diplomat, and statesman: b. Paris, Sept. 22, 1876; d. Menton, Alpes Maritimes, France, Sept. 15, 1945. Many times minister and three times premier of France, Tardieu was one of the most representative men in French politics between the two wars. After attending the Lycée Condorcet and the École Normale Supérieure, Tardieu entered the diplomatic service in 1897 as attaché at Berlin and the next year was attached to the Ministry of Foreign Affairs. In 1901 he joined the staff of *Le Figaro* and went from there to *Le Temps*, returning to Berlin as correspondent for that paper. In 1905 he was made chief political editor of *Le Temps*. During this period he lectured on modern history at the École des Sciences Politiques and the École Supérieure de la Guerre. He was elected to the Chamber of Deputies in 1914, and with the outbreak of the First World War he organized the first foreign press service for the War Office, and then joined the staff of General Foch. With the rank of captain, he was sent to the 44th Alpine Chasseurs, a unit of the famous Blue Devils. He was mentioned for bravery three times in dispatches, and was wounded, necessitating his retirement in 1916. From May 1917 to November 1918 he was in the United States as head of the French War Commission. After the armistice, he served as minister of liberated regions (1919-20) and as French plenipotentiary at the peace conference at Versailles (1919-20), where he was credited with having written a large part of the Versailles Treaty.

In 1926 he returned to the Chamber of Deputies as minister of public works in the Poincaré Cabinet, becoming minister of the interior in 1928. On Oct. 31, 1929, he was called to the premiership by President Doumergue, but on Feb. 17, 1930, his ministry was overthrown. On

March 2, 1930, he formed a new Cabinet with himself as premier and minister of interior. Although under constant attack from the extreme Right and Left, the ministry maintained itself until Dec. 4, 1930, when it was defeated in the Senate by eight votes, and Tardieu resigned. He then served as minister of agriculture in the Laval cabinet (1931-32) and as minister of war in 1932. On Feb. 20, 1932, he formed a third Cabinet, in which he became premier and minister of foreign affairs. This Cabinet, composed entirely of representatives of the Right Center parties, lasted until June 1932. When ex-President Doumergue formed the government of national union in February 1934, he appointed Tardieu and Herriot as ministers of state without portfolio. A four-man directorate headed by Premier Doumergue, to which Tardieu also belonged, was set up to handle foreign affairs.

TARIFF COMMISSION, United States. An independent executive agency of the United States government, created by act of Congress, Sept. 8, 1916, as a nonpartisan investigating and fact-finding body to assist the president and the Congress in matters pertaining to tariff and to foreign commercial policy. The present laws that prescribe the function of the Tariff Commission are the Tariff Act of 1930 as amended (secs. 330-341); section 350, the Trade Agreements Act; and section 22 of the Agricultural Adjustment Act as amended.

Beginning in the fall of 1939, the commission directed its activities largely to immediate war problems and to giving assistance to defense agencies. As war agencies succeeded defense agencies, the co-operative activities of the commission increased, and every possible assistance was given to those charged with handling the economic phases of the prosecution of the war. Throughout the war the commission continued its assistance to war agencies.

During 1945 the greater part of the commission's work was on matters relating to postwar problems undertaken largely at the request of Congress or congressional committees. A discussion of the more important of these projects follows.

Senate Resolution 341, 78th Congress, directed the Tariff Commission, under certain assumptions as to national income and tariff treatment, to estimate, for all articles imported in 1939 with a value in excess of \$100,000, postwar production, consumption, imports, and employment. Data relating to more than 450 articles or groups were closely examined in order to determine for each of them what would be the probable course of postwar production and imports under the assumptions set forth in the resolution. The report was sent to the Senate in April 1945 and was printed in a volume entitled *Post-War Imports and Domestic Production of Major Commodities*. (S. Doc. 38, 79th Congress.) The information in this volume was also issued in 9 separate documents according to commodity groups.

The Ways and Means Committee of the House of Representatives and the Committee on Finance of the United States Senate have asked the Tariff Commission to supply information which would aid in the consideration of postwar problems as they relate to the foreign trade and commercial policy of the United States. In response to these requests the following work is in progress: (1) A report is being prepared on the foreign trade position of the United

States, emphasizing the problems of commercial policy to be faced in the postwar period. (2) Reports are being drafted on a large number of major commodities or industries which have been affected by the war. With respect to each of the industries, these reports will review conditions of production and competition before the war and will indicate the changes in these conditions made by the war and the problems which will be encountered after the war due to these changes and to the general economic situation which may be expected to exist in postwar years. There will be approximately 75 reports in the series designated as "War Changes in Industry." Twelve reports have already been issued. (3) The commission is preparing a review of foreign commercial policies, with particular reference to those changes which have been made since 1929 in the international trade policies of foreign countries as they affect the industry and trade of the United States. As part of this study the commission has issued 29 reports on trade problems of the Latin American republics.

The Trade Agreements Act, which was passed in June 1934 for a 3-year period and which has been extended in 1937, 1940, and 1943 and with increased authority in 1945, requires that information and advice be sought from the Tariff Commission in connection with the negotiations of trade agreements. In this connection it is the particular and continuing function of the commission to present information regarding imported articles which may be made the subject of concessions by the United States in trade agreements. Work in connection with trade agreements is expected to bulk large among the activities of the commission in the next two years.

Commissioners.—Oscar B. Ryder, chairman; Lynn R. Edminster, vice chairman; Edgar B. Brossard; E. Dana Durand; George McGill. E. M. Whitcomb was acting secretary in 1945.

OSCAR B. RYDER,
Chairman, U.S. Tariff Commission.

TCHEREPNIN, Nikolai Nikolaevich, Russian composer, pianist, and conductor: b. St. Petersburg (now Leningrad), Russia, May 14, 1873; d. Paris, France, June 28, 1945. Primarily a composer of stage music, Tcherepnin followed the Russian nationalist tradition of Musorgski and Rimski-Korsakov, although certain of his works bear the influence of French impressionism. He is probably best known for his ballets, *Le Pavillon d'Armide* (1903), and *Narcisse*, both presented by Sergei Diaghilev's Ballet Russe; and by *A Russian Fairy Tale*, produced by the famous dancer, Anna Pavlova.

Among his other works are the operas, *The Marriage Broker*, *Poverty Is Not a Crime*, and *Ivan the Chancellor*; the ballets, *The Masque of Red Death*, *The Tale of the Princess Oulyba*, *Dionysius*, and *The Romance of a Mummy*; Prelude to Rostand's play, *La Princesse Lointaine*, *Scene in the Witches' Cavern* from *Macbeth*, *From Land to Land*, and *Eight Miniatures* (after a Russian illustrated alphabet), all for orchestra; a piano concerto, a string quartet, and the cantata, *Pilgrimage and Passions of Virgin Mary*. Tcherepnin completed Musorgski's unfinished opera, *The Fair at Sorochintzy*, which was per-

formed at the Metropolitan Opera in New York in 1930. See also under Music—*Necrology*.

TEDDER, Sir Arthur William, British air officer: b. Stirlingshire, Scotland, July 11, 1890. British Air Chief Marshal Tedder contributed in large measure to Allied victory on the European continent as General Eisenhower's deputy supreme commander. Expert in the co-ordination of land, sea, and air forces, he brought to his invasion command post experience gained in months of fighting the Italians and Germans in Africa, where he was teamed with Gen. (now Field Marshal) Sir Bernard L. Montgomery for the great El Alamein drive in October 1942, and the subsequent Tunisian campaign, as air chief marshal. He became Eisenhower's second in command in December 1943, and in October 1944, assumed additional duties as chief of Allied air operations in western Europe. He was one of the signers of the German surrender document in Berlin on May 8, 1945. On Oct. 19, 1945, announcement was made of his appointment to succeed RAF Marshal Portal as Chief of the British Air Staff, and first and senior air member of the Air Council.

TELEGRAPHY, Progress in. One of the significant advances in the communications field during 1945 was the installation of an experimental radio beam telegraph system between New York City and Philadelphia and the development of a plan for a nationwide network. The new radio system over which messages are flashed between cities operates without wires on very high frequencies—2,000 to 11,000 megacycles. Repeater stations are located on hills or mountains roughly 30 miles apart, depending on line of sight, and automatically relay the telegraph signals. Special antennas equipped with parabolic reflectors transmit the signals in a narrow beam directly to the point desired, using power of less than one watt. Whereas it has been possible to send over a pair of wires as many as 144 telegrams simultaneously in each direction, it will now be practical to transmit 1,080 messages without wires and with the speed of light on a single radio beam. Engineering tests on the New York-Philadelphia system indicate that this method of transmission will materially reduce circuit interruptions due to storms, falling trees, and electrical disturbances and will improve the quality, dependability, and speed of telegraph service.

As a result of experience with the New York-Philadelphia circuit, the Western Union Telegraph Company plans to establish radio relay telegraph systems between major cities in the United States within the next seven years. This network will ultimately replace many of the familiar pole lines and hundreds of thousands of miles of wire in the 2,300,000 mile telegraph system. The first step in this improvement program is known as "The New York-Washington-Pittsburgh Triangle." Establishment of this "triangle" in time will permit the removal of approximately 2,500 miles of pole lines, with some 54,000 miles of wires and 180 miles of aerial and underground cable.

Some additional developments of the telegraph industry follow:

Transatlantic telemeter service between Washington and London uses Varioplex equipment and operates over a pair of wires or a carrier channel between Washington and New York, and a submarine cable between New York and London. The system provides 12 two-way telegraph channels, each of which is equipped with a sending

and receiving teleprinter at each end of the circuit. Automatic cryptographic units known as "Telekrypton," provided as auxiliary units, code and decode messages automatically during transmission.

An important by-product of telegraph research is a new device called the "Concentrated-Arc Lamp." An intense cathode spot, which does not change its position, provides a point source of light as small as 0.003 inches in diameter. Efficiencies of from one to two candlepower per watt are obtained with the lamp. In addition to its use for purely telegraph communications purposes, the Concentrated-Arc Lamp undoubtedly will find important applications in such fields as lensless projection and enlargement, optical testing, photography and in many new devices which a brilliant point source will make possible.

A large volume of telegraph traffic is being handled by Telefax (the Automatic Facsimile Telegraph). The use of Telefax includes the handling of airlines reservations and the relaying of train orders by railroads. Facsimile messages and pictures have been transmitted experimentally over a microwave radio beam circuit, and it is expected that extension of these circuits will permit development of a nationwide Telefax network.

A portable device which measures and records electrical impulses was developed for use in testing teleprinter transmission. Without stopping circuit operation, this device measures transmission losses and facilitates the adjustment of equipment.

An improved method was developed for synchronizing Multiplex distributors which makes four-teleprinter operation possible on international radio circuits. Telegraph engineers also adapted Multiplex equipment for use on the submarine cables to Alaska, replacing cable code operation. This increased the capacity of the cables by 400 per cent.

GEORGE P. OSLIN,
Western Union Telegraph Company.

TELEPHONE PROGRESS. Although 1945 marked the end of the Second World War, there was little letup in the war-born demands on the telephone facilities of the nation. The prime objective of telephone people in 1945 continued to be to meet fully the vital communication needs of the government, the armed forces and essential war industry, even though that prevented meeting all the demands of the home front for telephone service. The co-operation and patience of telephone users indicated that they approved wholeheartedly the policy of meeting war needs first.

Telephone manufacturing plants, producing heavily for the armed forces, could supply but little in the way of additional telephone equipment for the home front during the first half of the year. Facilities which could be manufactured for civilian use were assigned generally to purposes essential to the war and to the public welfare. This meant that more and more applications for telephone service, particularly residential service, had to be placed on a "waiting list." Before year end, more than 2,100,000 applicants were waiting for telephones. At no time, however, did war-essential communication needs go unfilled.

The arrival of peace did not automatically insure service to all who wanted it. First, it was necessary to reconvert telephone factories from the making of military communications equipment and electronic devices to the full-

scale manufacture of peacetime telephone facilities. Instruments, central office equipment, wire and cable had to be produced. Buildings had to be erected or enlarged to house new switching equipment, which in turn had to be connected into the existing system without interrupting service . . . a complex, intricate operation involving highly skilled handwork. For example, literally millions of electrical connections must be soldered during the installation of an average metropolitan office.

It was expected that 1,000,000 telephone sets for civilian use would be made during the year. This number would be sufficient to fill the orders held initially because of instrument shortages (about one third of the total). Rapid progress in filling the remaining orders, which is dependent on the availability of central office equipment, wires and cable as well as telephone instruments, is expected during 1946.

When the war ended, the Bell System immediately got underway a \$2,000,000,000 construction program, the initial purpose of which was to speed the expansion of telephone facilities so that the system, at the earliest moment, would be able to supply service to all who want it.

(1) **Telephones in Use.**—Despite war-created shortages, the number of telephones in use increased during 1945. At the year's end, there were some 27,700,000 in operation in the United States, 21,772,000 owned by the Bell System and substantially all the remainder by about 6,100 independent companies and more than 60,000 rural systems. This compared with about 26,859,000 telephones in the United States at the end of 1944.

(2) **Local Calls.**—With more telephones in service than ever before, the number of completed local calls reached an average of approximately 104,000,000 a day for the year, compared with an average of approximately 101,800,000 a day for the previous 12-month period. Notwithstanding severe shortages of facilities and manpower, telephone employees handled this record volume of calls with traditional courtesy and efficiency.

(3) **Long Distance Service.**—After setting an all-time record in 1944, the volume of long distance telephone calls continued to climb to new highs in 1945. The daily average of completed toll and long distance calls was about 4,900,000. That compared with an average of 4,300,000 per day for the year ended in mid-1944. During the first half of 1945, the long lines department of the American Telephone and Telegraph Company reported a total of about 94,800,000 calls completed over the longer routes, compared with approximately 85,600,000 during the same period in 1944.

To handle the increasing volume without being able to add sufficiently to facilities required all the ingenuity telephone engineers could command. Intensive use was made of available equipment by means of the "carrier" technique which permits the transmission of many telephone conversations simultaneously over one or two pairs of wires. When long distance lines were especially crowded, users were asked by the operator to limit their calls to five minutes. Priority handling continued to be given to urgent war-essential messages. Under that arrangement, urgent toll calls having to do with the war effort or with public health and safety were put through on a preferred basis.

Despite wartime limitations, toll connections on the average were completed in 3.3 minutes during the first half of 1945, 84 per cent being completed while the calling party remained at the telephone.

With war's end, long distance traffic continued heavy as business swung into the job of reconversion and as hundreds of thousands of returning service personnel placed many thousands of calls from debarkation ports to families throughout the country.

(4) **War Production.**—The scope and volume of the telephone industry's contribution to war could not be revealed until war's end. Then it was learned by the public that telephone laboratories played a major part in the development of many outstanding electronic devices such as radar and electrical gun directors.

During the war, telephone factories had devoted practically their entire production capacity to building communication equipment for the Allied armies, navies and air forces. In addition to field telephones and switchboards in great quantities, they supplied more than 1,600 electrical gun directors and computers; more than 700,000 airborne, tank and artillery radio receivers; nearly a half million radio transmitters; more than 1,700,000 microphones and 1,400,000 headsets; and more than 4,300,000 miles of wire in cable. One telephone manufacturing organization—the Western Electric Company—was the largest source of radar equipment.

(5) **Telephone Developments.**—Resumption of experimental projects and expansion of services and facilities introduced before the war promise many advances in telephony in the near future. Coaxial cable systems are a development that permit handling more long distance telephone calls per circuit. The cable consists essentially of a wire conductor enclosed within a copper pipe which serves as both a shield and a return conductor. This type of cable, with amplifiers and other auxiliary equipment, allows the transmission of as many as 480 conversations simultaneously, without mutual interference, over a single pair of circuits. It also provides the broad band channels required for transmission of television signals.

Now under construction or planned are coaxial cables that will extend from New York to Miami and across the southern part of the country to San Francisco. Additional routes will run from New York to Chicago and thence to New Orleans. Designed primarily to accommodate increased telephone traffic, the cables, together with others to be added as needed, could be used in the development of a television network capable of carrying programs to a large portion of the country.

Development of an experimental radio-relay link went forward during 1945. By that method, microwaves are beamed from relay station to relay station. A radio-relay system is being constructed between New York and Boston with stations located about 30 miles apart along the route. If successful, it could provide an additional link in the nationwide system capable of multiplex telephony or of television program transmission. The major purpose of the experimental system will be to determine the merits of transmission by radio-relay in comparison with coaxial cable and conventional telephone wires.

Although two thirds of the farms of the nation are already within reach of present telephone lines, plans are going forward aggressively

for extension of service to even more rural families. About 80 per cent of all farms are close enough to existing telephone lines to be provided service without a construction charge to the user. In order to reach other farms economically, telephone laboratories are working on a practical system of transmitting telephone conversations over electric power lines. High-strength steel wire, requiring fewer poles, and rubber-covered wire that can be laid underground are other developments that will help bring telephone service to more rural areas. And to reach those who live in remote localities, the telephone companies are studying the possible use of microwave radio systems.

Experiments preceding the introduction of mobile radio-telephone service for vehicles are being conducted by the Bell System. Calls between a vehicle and any telephone travel part of the way by wire and part of the way by radio. Inauguration of such a system on a commercial basis will make possible voice communication between a properly equipped vehicle and any telephone in the country.

Overseas telephone service, limited to government and press calls to most countries during the war, was reopened in 1945 to many points for general use, with lower rates in effect. It is planned to extend overseas service so that any telephone user in the nation will be able to reach practically any telephone in the world from his own home or office.

Announcement was made during the year of progress in plans whereby a long distance operator, without the assistance of another, could dial direct any telephone in the country. Such an operating practice is now in use on certain circuits. On a nationwide basis, each telephone exchange would have its distinctive code which could be dialed by any operator.

In addition, the postwar construction program of the industry will provide the facilities necessary to restore service fully to its high prewar standards. It will mean reintroduction of such items as colored telephones, special wiring plans and switching keys, extension and portable telephones, gongs and signal lights, that made prewar service complete. And it will mean restoration of telephone plant margins generally so that all who want service may have it promptly.

NOTE: The above statistics incorporate the most recent information available on Oct. 1, 1945.

FRED BEARD,

Information Assistant, American Telephone and Telegraph Company.

TELEVISION. The biggest news to the television industry in 1945 was the assignment of definite frequency allocations by the Federal Communications Commission, permitting a resumption of television transmitter and receiver manufacture as soon as necessary parts became available. The assignments are subject to change only in the event that subsequent international agreements require it, and this is rather unlikely.

The television assignments were made in two steps because of insufficient information on the performance of frequency-modulation and television equipment in various parts of the region from 44 to 108 megacycles. This region was left unassigned when seven higher-frequency channels between 174 and 216 megacycles, each the standard 6-megacycle width, were assigned to television on May 17, 1945. Then, when the approaching end of the war called for fast action, differences of opinion were resolved and television's remaining six channels were placed at 44-50, 54-60, 60-66, 66-72, 76-82, and 82-88 megacycles, which is roughly where commercial television was during the war. In addition, the FCC (Federal Communications Commission) provided space for experimental television, presumably in color, in the ultra-high-frequency region from 480 to 920 megacycles.

The radio industry has invested approximately \$25,000,000 in research and development to prepare television for the postwar public. Probably never before has the product of a great new industry been so completely planned and so highly developed before it was offered to the public.

Large Pictures.—Development by RCA (Radio Corporation of America) of a process for molding large lenses from clear plastic makes projection of large pictures both economical and practical for home television receivers. Sample receivers demonstrated in 1945 by NBC (National Broadcasting Company) had an 18- by 24-inch screen, with a clarity and brilliance comparable to home movies and with no noticeable distortion at any viewing angle.

The optical principle of the new projection television system has been used by astronomers for many years, but the high cost of the special hand-ground correcting lens has hitherto made the system feasible only for elaborate theater projection television systems such as were demonstrated before the war.

The lens-molding process consists of applying high pressure to a clear thermoplastic material such as Lucite or Plexiglas while confined in a heated mold. After cooling, a hole is bored in the center of the plastic lens to accommodate the neck of the cathode-ray television tube. The lens is then ready for use, with no polishing or finishing being required. Though softer than glass, the plastic lens has slightly better optical qualities.

In astronomy, spherical mirrors are used in the Schmidt camera for star photography. Distortions inherent in this mirror are corrected by an aspherical lens mounted at the center of the curvature of the mirror. In the television adaptation of this principle, the spherical mirror is used both to magnify and reflect the image produced on the 3-inch diameter fluorescent screen of a small cathode-ray tube. The image so reflected is passed through the special plastic lens to correct the spherical aberration of the mirror and thus make straight lines straight. The flat mirror at the top of the cabinet merely changes the direction of the light rays, so that the image appears on the translucent vertical screen set into the front of the cabinet.

Projection television systems require a long light path. This is achieved by aiming the cathode-ray tube downward at the spherical mirror just above the floor, then letting the light rays come back past the tube and through the plastic lens on up to the mirror set diagonally across the top rear corner of the cabinet. The necessary light path of five feet or more is thus obtained with a cabinet depth of about a foot, the same as in conventional home radios.

A similarly designed General Electric large-screen receiver uses a 5-inch cathode-ray tube and gives a 16- by 22-inch picture.

Direct Viewing.—Receivers with large-screen cathode-ray tubes are also planned. The 20-inch diameter tube gives a 13½- by 18-inch picture. Advantages over projection systems are better highlight brilliance that permits viewing in a brilliantly lighted room, better contrast ratio, wide angle of viewing, better resolution, longer life, and simpler focusing, while disadvantages are the slight curvature of the screen and the need for a special mounting because of customer objections to a bulky deep cabinet. The tube is 31 inches long but one manufacturer is using a retractable mounting that swings the tube ver-

tically when not in use so that it can be mounted in a 24-inch deep cabinet. The tube projects forward out of the cabinet when in use. Direct viewing tubes can be watched from practically any angle, whereas viewers must be almost directly in front of the screen for other systems. Also, all elements are lined up within the tube and only electrical adjustments are needed during use, whereas mirror and lens systems require both electrical and mechanical focusing, and must be kept clean so the picture will not deteriorate with age.

Increased Range.—Nationwide television broadcasts from a chain of Superfortress-size planes flying in the stratosphere were proposed in 1945 by Westinghouse Electric Corporation as the solution for network television problems. The range of a station, at the frequencies employed, is the distance from the transmitting antenna to the horizon, so that putting the transmitter and antenna in the stratosphere would boost the effective range from about 50 miles for average ground locations to upwards of 200 miles for a stratosphere plane circling at 30,000 feet altitude.

Plans call for a specially designed 20-ton plane, built to stay aloft eleven hours and cruise at less than 150 miles per hour. It would carry four television and five frequency-modulation transmitters, plus necessary receivers. Climbing to 30,000 feet, it would receive programs beamed to it from conventional ground studios. For this purpose, directional ultra-short-wave radio transmitters will be used. The plane's transmitters would simply rebroadcast these programs, each on its own wavelength. Thus each of the nine transmitters in the plane would function as a separate station, increasing the economy of the operation.

Eight such planes, flying over New York, Pittsburgh, Chicago, Kansas City, Curtis, Nebr., Leadville, Colo., Salt Lake City, and Los Angeles, could provide a coast-to-coast radio relay system for chain programs. Six more over Durham, N. C., Atlanta, Dallas, Sacramento, and Portland, Oreg., would give coverage for 78 per cent of the nation's population. The cost is claimed to be far less than ground relay systems or coaxial cables.

Television Relay.—On the evening of April 17, 1945 a television program originating in Washington, D.C. was for the first time sent over a chain of four hilltop radio relay stations to television station WPTZ in Wyndmoor, Pa., and from there broadcast to the Philadelphia area. Multiple relaying tests over this chain are being continued to investigate the economy and technical feasibility of using radio links for television networks extending from coast to coast, rather than coaxial cables or the proposed system of airborne stations in the stratosphere.

Patents.—Among television patents granted in 1945 is one to George L. Beers of RCA for a system of television in color that works on the basis of two sets of color filters mounted on rotatable disks. A color wheel at the receiver operates in perfect synchronization with a master wheel at the transmitter, so that at the instant the scene at the transmitter is imaged through a red filter, the corresponding red filter at the receiver tube whirls into position.

The apparatus depends for its success on the motor-driven synchronization device actuated by groups of 500-kilocycle pulses that replace some of the standard synchronizing signals transmitted in the present system. At the receiver the

pulses are fed to a control circuit that causes a clutch to slip until the color wheels are in the desired relation. The apparatus is designed to transmit a three-color image at 40 frames per second.

A patent on a method for producing television programs in large size on motion picture screens has been assigned to Allen B. Du Mont Laboratories, Inc., Passaic, N.J. Incoming electrical signals are converted to a negative image on a cathode-ray tube. A motion picture camera records the picture directly from the cathode-ray tube onto positive stock film. This film is developed rapidly, only about one minute being required for development, and can be projected promptly in standard motion picture theater projection equipment. Such large-screen reproduction of television programs would avoid the necessity for reproduction of the television picture in a tube having sufficiently intense brilliance to allow direct projection. The life of the cathode-ray tube is claimed to be much longer in the film system than for direct projection.

By recording television programs on film it is possible to use standard projection equipment with its high brilliance provided by powerful arc lights, and programs may be edited before showing in a theater. Repeat programs would be available and programs could be scheduled at will.

Political Recognition.—The first definitely assigned position for television cameras in the House of Representatives has been granted to the National Broadcasting Company. It is on the right of the clock in the House gallery, facing the speaker and next to the position occupied by the film companies.

On Trains.—Placing of a television camera at the front end of the locomotive on each crack passenger train is being seriously considered by one large railroad line. Picture signals would be fed over wires, to receivers in lounge and dining cars, so passengers could see the country ahead of the trains on which they are traveling.

In Schoolrooms.—Much speculation exists about possible educational uses for television. The more optimistic boosters believe that every school in large communities can be connected via coaxial cable. Superintendents and principals can sit in their offices and address thousands of children and teachers, watching large television screens in individual classrooms and auditoriums. Famous and highly capable teachers can handle hundreds or even thousands of pupils, boosting the caliber of modern education.

Civic lessons can be dramatized by transmitting meetings of borough or township officials directly to the classes. On sprawling college campuses, lectures, musical programs, scientific demonstrations, and other events can be brought directly into the classrooms, so students will not have to parade from one building to another in an endless waste of time and effort.

Few, if any, television receivers appeared on the market in 1945, due partly to the complexity of the sets and resultant production problems and partly to shortages of component parts. Most of the parts made available by cancellations of military radio and radar contracts went to meet the large pent-up demand for entertainment radio receivers. Designs are ready, transmitters are on the air in the larger cities, and only receiver production problems remain to hold up the rebirth of commercial television.

JOHN MARKUS,

Associate Editor, *Electronics*.

TENNESSEE. East South Central state, United States; admitted to the Union June 1, 1796. Population (1940): rural, 1,888,635; urban, 1,027,206; total, 2,915,841. Land area, 41,961 square miles, divided into 95 counties. Principal cities, with 1940 populations: Memphis, 292,942; Nashville, the capital, 167,402; Chattanooga, 128,163; Knoxville, 11,580; Johnson City, 25,332; Jackson, 24,332. Governor, Jim Nance McCord; secretary of state, Mrs. Joe C. Carr.

Education.—Public elementary schools (latest report, 1943-44 school year), 5,067; teachers, 14,718; pupils, 496,844; average yearly salary of elementary school teachers, \$1,015. Public senior high schools (1943-44), 433; teachers, 4,710; students, 109,576; average yearly salary of senior high school teachers, \$1,311. Education in Tennessee is compulsory for all children between the ages of 7 and 16, inclusive. There are 9 junior colleges and 40 institutions of higher learning. Total state appropriation for education (1945-46), \$18,887,546; appropriation for education by cities and counties (1944-45), \$19,487,345. Commissioner of education, Burgin E. Dossett.

Finances.—The following figures relating to the financial condition of the state government on June 30, 1945, were supplied by W. M. Duncan, director of the budget:

Surpluses in the three revenue funds (general, highway, and sinking funds), June 30, 1945, \$29,050,528; general fund appropriations (1944-45), \$29,697,829, with unexpended balances of \$2,358,835; revenue collections (1944-45), \$55,638,228; general fund surplus on June 30, 1945, \$9,527,206; balance in the sinking fund on June 30, 1945, \$7,525,245; reduction in the state debt in the 1944-45 fiscal year, \$5,340,757.

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)	64,820	59,950	67,151
Oats (1,000 bu.)	1,886	3,611	4,344
Wheat (1,000 bu.)	4,942	6,714	5,688
Barley (1,000 bu.)	1,093	1,862	1,872
Rye (1,000 bu.)	343	390	315
Cotton (1,000 bales)	498	562	485
Hay:			
Alfalfa (1,000 tons)	124	186	338
Clover and timothy (1,000 tons)	184	141	218
Tame (1,000 tons)	1,995	1,601	2,628
Soybeans for beans (1,000 bu.)	302	1,044	1,232
Peanuts (1,000 lbs.)	6,700	8,250	6,200
Sweet potatoes (1,000 bu.)	4,427	4,128	3,300
Tobacco (1,000 lbs.)	98,719	125,645	131,985
Potatoes (1,000 bu.)	3,203	2,464	3,485
Apples (1,000 bu.)	304	351	405
Peaches (1,000 bu.)	1,134	686	1,862
Pears (1,000 bu.)	286	188	493
Grapes (tons)	2,250	2,300	2,200

TENNESSEE VALLEY AUTHORITY (TVA). The end of the Second World War and the resultant reconversion to peacetime activity meant a change in pace but not direction for the TVA. The objective of TVA, the unified development and wise use of the natural wealth of the Tennessee Valley—soils, forests, minerals, and waters calls for the continuation on a peacetime scale of virtually all the programs and activities through which TVA contributed to the war.

The speeded-up construction schedule made necessary by the war brought the major dam building program to virtual completion in 1945, making the Tennessee River the most completely controlled stream in the world for navigation, flood control, and production of power.

Construction of two additional dams, Watauga and South Holston, on tributary streams of the Tennessee, was authorized during the war but completion depends upon the provision of funds by Congress.

Completion of reservoir preparation for Kentucky Dam in 1945 made the project fully effective for flood control, providing over 4,000,000 acre-feet of flood storage capacity and strategically located for lowering flood crests on the lower Ohio and Mississippi rivers. The dam, one of the largest to be built by TVA, creates a lake 185 miles long on the lower reaches of the Tennessee. The dam has been producing power since September 1944.

Initial power operation of Fontana Dam, fourth highest dam in the world, began on Jan. 20, 1945. On Jan. 30, 1945, TVA took over direction of the operation of five major hydroelectric projects of the Aluminum Company of America under an agreement reached in connection with the transfer of the Fontana dam site to TVA, integrating operation of these dams into the TVA system for mutual benefit. No change of ownership was involved.

The TVA multipurpose system now consists of 27 major hydro projects, including those of the Aluminum Company; nine are on the main-stream of the Tennessee and 18 on the tributary streams. The system provides a navigation channel 650 miles long for year-round operation of craft drawing up to nine feet of water. It also provides 13,534,000 acre-feet of useful storage, including 334,000 acre-feet in the Alcoa reservoirs. Of this useful storage, more than 11,000,000 acre-feet is available for flood control on January 1 of each year, the beginning of the flood season. Besides protection in the Tennessee Valley, the system is capable of reducing flood crests on the lower Ohio and Mississippi rivers by 2 to 4 feet, depending on the characteristics of the flood.

By the end of 1945, the installed capacity of the integrated system, with 456,400 kilowatts of fuel plant capacity, was 2,513,102 kilowatts, including 311,120 kilowatts at the Alcoa dams. The system during the fiscal year ended June 30, 1945, produced about 12 billion kw.-hr. (kilowatt-hour) of electricity. TVA power operations resulted in total power operating revenues of \$39,383,000 and a net income of \$17,982,000. Return on the power investment exceeded 4% per cent. During the fiscal year 1945, as for several years past, war purposes consumed three quarters of the power. On June 30, 1945, 137 municipal and co-operative distributors were serving over 600,000 consumers. Average residential consumption was 1,754 kw.-hr. for the 12 months and average cost 1.85 cents per kw.-hr., as compared with national figures of 1,186 kw.-hr. and 3.47 cents.

Up to the end of the war, the TVA chemical plant at Muscle Shoals continued to produce elemental phosphorus for the armed services, calcium carbide for synthetic rubber production, ammonia and ammonium nitrate for military use and for fertilizer, and, so far as possible, after meeting military demands for phosphorus, phosphatic fertilizers for test-demonstration farms numbering nearly 35,000 in 29 states. With the cancellation of military requirements, increased fertilizer production was indicated.

With the end of the war, long-term objectives were re-emphasized. Farm test-demonstrations which, as the Virginia Extension Service

reported, "increased production on the whole by one third, though land in cultivation was reduced 10 per cent and 25 per cent less labor was available," were being redirected to meet changing economic conditions through the flexibility provided by diversification and sound soil-building based on proper use of mineral fertilizers. Forestry activities to further encourage modern forestry practices on the 14,000,000 acres of forest land in the valley were continued.

A wide range of research and development activities was being carried on, largely in co-operation with other agencies, in the fields of agricultural engineering, minerals development, fertilizer improvement, food processing, and other fields to aid in the region's agricultural and industrial development. States and local agencies were beginning intensive efforts, after the war, to take advantage of the recreational possibilities provided by the TVA lakes.

The TVA board of directors consists of David E. Lilienthal, chairman; Dr. H. A. Morgan, vice chairman; and James P. Pope.

KENNETH R. KENNEDY,
Information Service Staff, TVA.

TENNIS. See SPORTS IN 1945.

TEXAS. West South Central state, United States; admitted to the Union Dec. 29, 1845. Population (1940): rural, 3,503,435; urban, 2,911,389; total, 6,414,824. Total land area, 263,644 square miles, divided into 254 counties. Chief cities, with 1940 populations: Houston, 384,514; Dallas, 294,734; San Antonio, 253,854; Fort Worth, 177,662; El Paso, 96,810; Austin, the capital, 87,930; Galveston, 60,862; Beaumont, 59,061.

Chief State Officers, 1945.—Governor, Coke R. Stevenson; lieutenant governor, John Lee Smith; secretary of state, Claude Isbell; treasurer, Jesse James; comptroller, George H. Sheppard; attorney general, Grover Sellers.

Judiciary.—Chief justice of the Texas Supreme Court, James P. Alexander; associate justices, John H. Sharp, Gordon Simpson.

Legislature.—The state legislature (Senate, 31 members; House of Representatives, 150) convenes biennially in odd years on the second Tuesday in January.

Education.—Public elementary schools (latest report, 1943-44 school year), 7,175; teachers, 28,197; pupils, 953,921; average yearly salary of elementary school teachers, \$1,170. Public junior high schools, 157; teachers, 2,789; public senior high schools, 2,433; teachers, 11,927; junior and senior high school students, 289,064; average yearly salary of junior and senior high school teachers, \$1,518. Total state appropriation for education (1944), \$68,000,000 (approx.); for colleges and universities, \$14,000,000; appropriation by cities and counties, \$55,000,000 (approx.).

Finances.—The following statement of finances for the fiscal year 1944-45 was supplied by the state treasurer:

Balance in treasury, beginning of fiscal year 1944-45	\$ 48,297,359.51
Receipts, 1944-45	478,430,963.73
Total	\$526,728,323.24
Disbursements, 1944-45	454,900,050.00
Balance, beginning of fiscal year 1945—	
46	\$ 71,828,273.24

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agricul-

TENNESSEE VALLEY AUTHORITY

This picture, taken in 1935, shows a hillside in Roane County, Tennessee, once a productive peach orchard, turned into a barren waste through erosion of tilled but unprotected soil.

Courtesy Tennessee Valley Authority

The same hillside ten years later, reclaimed under TVA direction. In 1936, CCC youths constructed rock and log check dams, mulched with brush; planted lespedeza and grass; and set out 90,000 black locust and shortleaf pine seedlings. In another decade, the owner will have a crop of merchantable timber.

ture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)	77,427	69,822	68,112
Oats (1,000 bu.)	33,425	38,600	43,546
Wheat (1,000 bu.)	30,337	74,746	37,881
Barley (1,000 bu.)	3,345	10,780	5,075

THANKSGIVING DAY, Legislation Regarding. See LAW, Section 8.

THEATER. The final year of the war found the stage stammering. While there was no lack of interpretative talent during 1945 in the theater, it was given little in the way of dramatic substance with which to work. From an economic standpoint, the business of show producing remained extremely bullish, with the demand for satisfying entertainment far greater than the supply which materialized. There was little trouble in financing new offerings, as many as 43 backers having asked to invest in one exhibit. The same play-hungry public which had been in evidence for several years was on hand to welcome new attractions, but it preferred established successes to meretricious novelties. Artistically, the theater turned up little of which it could be proud.

Until V-J Day one might have ascribed this sorry state of affairs to a want of expert dramatists. But while it is true that many of our best writers were engaged in the war effort directly, or as supervisors of USO shows, during the months of late winter and spring, the start of a new season in the fall found most of them back in their chosen vocation. Several of the most disappointing efforts of the year were the work of veteran and established playwrights. They had little, if anything, to communicate to an audience, whether they concerned themselves with contemporary issues, or sought release from the pressure of immediate events in traditional melodramatic and comic devices.

As already noted, the craftsmen were on hand to infuse vitality into scripts behind footlights. The migration of actors from Hollywood to Broadway, which had already set in, became accelerated in 1945. From Frances Dee, who had never before essayed a stage role, to Spencer Tracy, returning to the theater after 15 years, as the star of Robert E. Sherwood's *The Rugged Path*, screen celebrities were willing and eager to accept assignments. Meanwhile such top directors as George S. Kaufman, Bretaigne Windust, Moss Hart, and Garson Kanin animated a variety of themes, designers outdid themselves in colorful and striking settings, and producers were prodigal in their ministrations. No show that warranted expert treatment failed to receive it.

The year started rather auspiciously. In *The Hasty Heart*, John Patrick tried with some success to reflect the courage and bitterness of a soldier in a convalescent ward. With a dour Scotsman, doomed to death by his wounds, as the protagonist and a hospital behind the Assam-Burma front as locale, the play frequently became a trenchant and moving account of what the war did to so many fighting men. Richard Basehart, as the hero, and John Lund, as a tough Yankee gave particularly fine performances. Despite its success, a lean period ensued at the turn of the year. It was not until Margaret Webster's brilliant revival of Shakespeare's *The Tempest* came to town that stage doings gained new impetus, and it was not until *The Glass Menagerie* by Tennessee Williams, which opened at the end of March, that there was genuine cause for rejoicing in the fact that the theater was still vital and imaginative.

This Eddie Dowling production was selected by the Drama Critics Circle as the best play of the season. A curious blend of fantasy and realism, it described the efforts of a seedy Southern belle in a St. Louis tenement district to marry off her crippled daughter. Dowling not only produced the play, he directed it and appeared in a leading role as the ne'er-do-well son of the family. Laurette Taylor gave an illuminating performance as the dowdy mother and Anthony Ross was excellent as the imagined suitor of the lame girl, played by Julie Haydon. Jo Mielziner's settings fitted the mood of the play perfectly.

The Tempest proved anew that any season is brightened immeasurably by a fine Shakespearean revival. With Arnold Moss as Prospero, that fine Negro actor, Canada Lee, as Caliban, and the celebrated ballerina, Vera Zorina, as Ariel, this production of the great fantasy was memorable. Staged with fluency and interpreted with eloquence, it amply deserved a return engagement on Broadway in November. Other revivals which marked the first months of the year were *You Can't Take It With You* and *The Barretts of Wimpole Street*, both of which proved extremely vigorous in comparison with most of the fresh offerings.

The new plays were particularly disappointing. Clare Kummer's comedy, *Many Happy Returns*, although it had Rex O'Malley and Mary Astor in leading roles, lasted for only three performances. *Good Night Ladies*, based vaguely on the hoary *Ladies Night in a Turkish Bath* was as dull as it was vulgar. The Daphne du Maurier dramatization of her novel, *Rebecca*, already made into a film, provided a ponderous melodramatic entertainment, chiefly distinguished for Florence Reed's sinister portrayal of the housekeeper. A *Goose for the Gander* found Gloria Swanson struggling with a bad script by Harold J. Kennedy in being a femme fatale; Vincent Lawrence's *The Overtons* commented in slipshod fashion on love, marriage, and jealousy, with Walter Greaza and Arlene Francis doing most of the acting; and *Hope For the Best*, by William McCleery, had Franchot Tone as a liberal newspaper columnist in a social comedy that was neither very funny nor pertinent.

In the melodramatic field, authors floundered rather badly. *The Stranger*, by Leslie Reade, underlined a Jack the Ripper yarn with doings in a radical club. Elizabeth McFadden's *Signature*, while employing the novelty of letting the audience in on the identity of the killer, did not let the spectators in on much entertainment. *Lady in Danger*, by Max Afford and Alexander

Kirkland, proved a sorry spy thriller. Far better than the afore-mentioned was *Dark of the Moon*, by Howard Richardson and William Berney, which employed considerable imagination and stagecraft in reconstructing a Smoky Mountains legend about conjure men and witch boys. Richard Hart and Carol Stone had leading roles.

As for the musicals, they fared better than the new dramas. *Up in Central Park* was a colorful pageant of political shenanigans in the 1870's with sentimental tunes by Sigmund Romberg and superior vocalizing by Wilbur Evans and Maureen Cannon. *The Firebrand of Florence*, an adaptation of Edwin Justus Mayer's play by Ira Gershwin and Kurt Weill, proved a colorful farcical operetta. A couple of variety shows had Ethel Waters singing brilliantly in *Blue Holiday* and the one and only Bill Robinson gracing a swing version of *H.M.S. Pinafore* with his dancing. Victor Moore and William Caxton enlivened George S. Kaufman's satirical interpolation of the same Gilbert and Sullivan operetta known as *Hollywood Pinafore*. And the Theater Guild's production of *Carousel*, a musical adaptation of *Lilom*, with songs by Oscar Hammerstein, 2d and Richard Rodgers, was an instantaneous and solid hit.

The veteran playwrights fumbled as badly as the comparative newcomers during the late winter and spring. Philip Barry's *Foolish Notion* was saved by its star, Tallulah Bankhead. George Kelly's *The Deep Mrs. Sykes* was not saved by its cast, although Jean Dixon contributed a telling bit as the drunken wife of a doctor. Elliot Nugent's *A Place of Our Own* wavered between domestic upheaval and political allegory and Edward Chodorov's *Common Ground*, although timely, proved disjointed, as it followed a USO tour in Italy. Meanwhile Elsa Shelley's *Foxhole in the Parlor*, although endowed with a fine performance by Montgomery Clift as a soldier trying to readjust to civilian life, proved a desultory stage work.

Bad as was the latter part of the 1944-45 season, it was rich in achievement compared with the final months of 1945. Not until mid-November, when the political comedy by Howard Lindsay and Russel Crouse, *State of the Union* opened, did the theater add substantially to the list of worthwhile attractions. With Ruth Hussey, Minor Watson, and Ralph Bellamy matching witty and wise material with first-rate performances, this dramatic commentary on the grooming of a Republican presidential candidate for 1948, had plenty to say and said it in engaging theatrical terms. *Deep Are the Roots*, by James Gow and Arnaud d'Usseau, was a challenging consideration of the postwar racial prejudice, dealing with a Negro war hero returning to his home in the deep South and finding prejudice greater than ever. Barbara Bel Geddes, as the right-thinking daughter of a bigoted aristocrat, gave an illuminating performance, while Gordon Heath was excellent as the ex-soldier.

Acting was again better than playwrighting. A dramatization of Emile Zola's *Therese* had Dame May Whitty performing superbly in a creaking triangle melodrama. Spencer Tracy, as already mentioned, gave immense vitality to Robert E. Sherwood's wordy and inexplicit war play *The Rugged Path*, and Edmund Gwenn was magnificent in *You Touched Me*, another drama about a returned soldier by Tennessee Williams and Donald Windham. *The Rich Full Life* by Vifla Delmar had a splendid characterization by Judith Evelyn and *A Sound of Hunting*, Harry Brown's

play of the "forgotten war" in Italy was signalized by a lusty portrait on the part of Sam Levene.

The musical shows were not particularly distinguished. *Marinka*, with a score by Emmerich Kalman, was a handsome rendition of the Mayerling legend with Joan Roberts in a leading role. *Polonaise* had Jan Kiepura and Marta Eggerth singing interpolated Chopin melodies in a supposed biography of Kosciusko. *The Red Mill* demonstrated that Victor Herbert was still popular, although it did not prove much of a show artistically, and *Are You With It?*, with music by Harry Revel joined the list of successes as it made prankish fun of the insurance business. *The Day Before Spring*, by Alan Jay Lerner and Frederick Loewe, was more sophisticated and professional than it was gay. John Archer and Tom Helmore contributed most of the humor to an exhibit which was swamped by two inferior Antony Tudor ballets.

Most of the other offerings which wound up 1945 producing were either downright bad or merely passable. *The Ryan Girl*, with June Havoc found Edmund Goulding deserting Hollywood to no avail as author and director. Dan Totheroh's *Live Life Again* was a pretentious verse drama, and Irwin Shaw's *The Assassin* became muddled in political philosophy as it described the killing of Admiral Darlan. *Beggars Are Coming to Town*, by Theodore Reeves tried unsuccessfully to compare present-day night life with that of the prohibition era and *The Next Half Hour* proved an unkempt fantasy, although it was written by the same Mary Chase who blessed 1944 with *Harvey*, and had Fay Bainter in the chief part.

The exceptions may be mentioned briefly. *The Mermaids Singing* by John Van Druten was a fragile but entertaining comedy of manners. *Strange Fruit*, Lillian Smith's adaptation of her novel about a white man's love for a Negro girl, was done with great force. George Abbott's musical *Billion Dollar Baby* was welcome in a lean year and so were the revivals of *Hamlet* and *Pygmalion*. The former found Maurice Evans in the title role. The latter had Gertrude Lawrence and Raymond Massey as principals. See also DANCE; MOTION PICTURES.

TIBET. A dependency of China, extending from the Pamir region eastward to the Chinese frontier and lying between the Kunlun and Himalaya mountains. The area is estimated at 463,200 square miles, with a population variously estimated between 1,500,000 and 6,000,000. Lhasa, the capital, has about 50,000 inhabitants. Lamaism, a form of Buddhism, is the religion of most of the people, and the civil and religious head of the government is the Dalai Lama.

After the death of the old Dalai Lama in 1933, Tibet was under a regent until September 1939, when a five-year-old Chinese boy was accepted by a secret council at Lhasa as the new Dalai Lama. He was installed as the 14th Dalai Lama on Feb. 22, 1940. Upon reaching his majority, he will share ruling power with the Tashi Lama, a junior pontiff and spiritual dignitary. The last Tashi Lama was exiled to China in 1924 and died there in 1937. According to reports from Chungking, China, a 7-year-old boy was installed as the tenth Panchen Lama, spiritual leader of Tibet on Feb. 8, 1944, in ceremonies at Hsunhwa, Chinghai Province.

Agriculture is carried on in some places, cereals and vegetables being grown, but Tibet is mainly a pastoral country, the domestic animals being sheep, yak, buffaloes, camels, and pigs. Wool spinning and knitting are carried on. Gold, borax, and salt are mined. There is a large trade with China and India, that to the latter being transported by pack animals over lofty passes of the Himalayas between 14,000 and 18,000 feet high. There is a telegraph line, 144 miles long, connecting Lhasa with Gyangtse.

TOBACCO. The 1945 tobacco crop of the United States was estimated by the Department of Agriculture on October 1 at 2,036,831,000 pounds, as compared with the 1944 crop of 1,950,213,000 pounds and the 1934-43 average crop of 1,392,390,000 pounds. North Carolina held first place among producing states with a 1945 crop of 843,925,000 pounds. Kentucky was second with 445,379,000 pounds; and Virginia was third with 150,210,000 pounds.

One of the most interesting announcements made during the year in connection with tobacco was made by Duke University on July 4 in a statement asserting that high quality Turkish tobacco, "as good if not better than overseas tobacco," has been grown on 55 small farms in North Carolina, Virginia and South Carolina, and at agricultural experiment stations in the three states.

In normal years from 50 to 75 million pounds of Turkish tobacco are imported annually by cigarette manufacturers for blending with domestic tobaccos. Whether American production of the diminutive aromatic leaf can be proved "economically feasible" remains to be seen. If this can be done, the Duke authorities assert that development of the industry in this country may prove a boon to thousands of small, marginal land farmers in the Piedmont and mountain areas of the South, "and mark one of the most important developments in tobacco growing in a century."

The experiments made in the South have been carried out on plots of one to two acres, and have been going on for five years, under the general direction of Dr. Paul Gross, chairman of the department of chemistry, Duke University. Laboratory and field research was supervised by Dr. F. R. Darkis, with Dr. F. A. Wolf in charge of brooding and genetic experiments.

It was stated in the announcement that planting costs are high, and that a large amount of hand labor is involved in the growth and curing of the Turkish tobacco. However, compensation comes from the fact that the growing crop requires little weeding or cultivation. Again Turkish tobacco thrives on comparatively poor soil, and responds better to organic types of fertilizer. The requirement for animal manures, it is asserted, would encourage the keeping of livestock, and result in a better balanced agriculture.

TOBAGO. See TRINIDAD.

TOGO, Shigenori, former Japanese Cabinet member: b. Kagoshima, Japan, 1882. Togo was foreign minister in Premier Tojo's Cabinet at the time of the Pearl Harbor attack in December 1941, and later held the same post in Premier Kantaro Suzuki's Cabinet which resigned when Japan capitulated. His was one of the names in-

cluded on General MacArthur's list of Japanese wanted for questioning on responsibility for the Pacific war. In an Associated Press interview at his home in Tokyo on Sept. 16, 1945, Togo told newsmen he had accepted the Foreign Ministry in October 1941 only after Gen. Hideki Tojo had promised him he would do his part to conclude pre-Pearl Harbor negotiations with the United States on "reasonable terms." He added further that in the Japanese Cabinet upset of August 8, 1945, he had stood firmly for ending the Pacific war, and had finally won out. In 1933, Togo was chief of the European and American bureau of the Japanese foreign office, and in 1934, of the Asiatic bureau. He was ambassador to Germany in 1937, and to the USSR, 1939. He played a major part in concluding with Russia a settlement of the Russo-Manchurian border incidents.

TOGO. Two mandates of the League of Nations lying in West Africa between Dahomey and the Gold Coast, administered respectively as French Togo and British Togoland (see below). The combined area is 34,934 square miles, and the population numbers 1,172,000. The former German colony of Togo was captured by Franco-British forces during the First World War; an agreement reached in 1919 which divided the coastline between the two countries was amended the next year, all the seaboard then being transferred to France, and Britain obtaining a larger share of the hinterland. When the mandates were approved by the League of Nations in 1922, citizens of the United States were accorded the same status in Togo as nationals of members of the League.

French Togo.—This mandate adjoins Dahomey on the east, has an area of 21,893 square miles and a population of 781,000. The capital and chief port is Lomé, population (1938) 14,380; a second port is Aneho, 27 miles west of the capital. Native foodstuffs comprise yams, plantains, Indian corn, cassava, and peanuts. There are large numbers of livestock, and native industries include weaving, straw-plaiting, pottery, and smithwork. The principal exports are oil palm products, cocoa, rubber, cotton, and copra. Three railroads with a total length of 242 miles radiate from Lomé, respectively to Blitta (143 miles), Palime (72 miles), and Aneho (27 miles).

British Togoland.—The mandate adjoins the Gold Coast on the west, has an area of 13,041 square miles and a population of 391,473. For administrative and statistical purposes Togoland is attached to the Gold Coast, the southern district as part of the Gold Coast colony, and the northern area with the Northern Territories; Ho is the headquarters of the local administration. Agricultural and pastoral activities are akin to those of French Togo. As a result of the fall in cocoa prices in 1944, the cultivation of rice has been encouraged. There are no railroads; highways suitable for motor traffic connect the mandate with the Gold Coast. Telecommunications were extended during the Second World War, linking Ho, Jasikan, and Kpandu with Accra. See BRITISH WEST AFRICA; FRENCH WEST AFRICA.

TOJO, Hideki (Eiki), Japanese army officer and politician: b. Tokyo, Japan, December 1885. Premier of Japan at the time of the Pearl Harbor attack, and until the loss of Saipan to the Americans forced his resignation in July 1944, General Tojo was taken into custody on Sept. 11,

1945, after an unsuccessful suicide attempt, made when American counter-intelligence officers went to his Tokyo home on orders from General MacArthur to arrest him for trial as a war criminal. Recovered from his self-inflicted pistol wound, Tojo was transferred from Yokohama to Omori prison camp on October 7. Tojo is the son of Gen. Eikyo Tojo, strategist of the Russo-Japanese War, 1904-05. He graduated from army officers school in 1915, and four years later, went to Germany to study military science. By 1937, he had advanced through the grades to the rank of lieutenant general and the post of chief of staff of the Japanese Army in China. From May-December 1938, he was vice minister of war, then transferred to the position of military aviation director. He returned to the war ministry as its chief in July 1940, and in October 1941, succeeded Prime Minister Konoye as head of the Japanese government.

TOLBUKHIN, Fedor Ivanovich, Soviet Army officer: b. June 16, 1894. Like so many Red Army commanders, skilful, 51-year-old Marshal Tolbukhin was born of sturdy Russian peasant stock; saw active combat service in the First World War; and later fought in the civil war. In 1915, he completed officers training, and by 1919, held a command post on the Petrograd front, and took part in that city's defense. In the years of peace, Tolbukhin remained with the Red Army; studied and taught military science; and passed through the operational faculty of Frunze Military Academy. At the time of the Nazi invasion, he was a military district chief of staff. He commanded an army for the defense of Stalingrad in 1942, and in November of that year, his troops swung to the offensive with other Soviet formations for the decisive blow against the Germans' Stalingrad grouping. Between November 19 and 25, they drove through enemy lines; forced an opening for tanks and mechanized units; and joined with troops of the Don front to complete the encirclement of von Paulus' Sixth German Army. For his share in the Stalingrad victory, Tolbukhin was promoted lieutenant general and awarded the Order of Suvorov, First Class. As a colonel general in the spring of 1943, he was sent to the southern front; August 1943 saw his brilliant break-through in the Mius sector; and October, his assault on German fortifications thrown around the approaches to the Crimea. In early May 1944, Tolbukhin joined his Fourth Ukrainian Army with General Yeremenko's Special Maritime forces for the siege and capture of Sevastopol, German-held Black Sea naval base in the Crimea. His troops later cleared the Nazis out of southern Russia, and with Malinovsky's army, overran Rumania and Bulgaria, forcing those two countries out of the war. On April 13, 1945, his Third Ukrainian Army, with Malinovsky's Second Ukrainian, completed the occupation of Vienna, second largest city of Hitler's "Greater Germany." Tolbukhin became a Marshal of the Soviet Union in September 1944.

TOLSTOY, Aleksei Nikolaevich, Russian novelist and dramatist: b. 1882?; d. Moscow, Russia, reported on Feb. 23, 1945. A descendant of the poet of the same name, and probably distantly related to Count Leo Tolstoy, the 19th century writer, Count Aleksei Tolstoy has been called by many critics Soviet Russia's greatest contemporary novelist.

Tolstoy made his literary debut in 1908, and by 1919, his *Road to Calvary*, a picture of Russia during war and revolution, was acclaimed as one

of the best modern books in the Russian language. He fled from the Bolsheviks to Paris in 1919. Three years later he dropped his title, offered his apologies to the Soviet government, and was admitted to Russia as a "repenting émigré." The government gave him wide freedom, and his books were influential in winning a greater appreciation of Russian history and traditions. Abandoning his nonpolitical role in 1938, he was named Soviet minister in Sofia, Bulgaria, and served for a time at this post. He was made a member of the Supreme Soviet, and of the Soviet Commission on Nazi Crimes in Russia. In 1939, he was one of the 30 Soviet personages on whom the honored title of "Academician" was bestowed. He had also received the Order of Lenin.

Besides *Road to Calvary*, other works by Tolstoy that have appeared in English translation are *Peter the Great* (1932); *Darkness and Dawn* (1935); *Death Box* (1936); *Bread* (1938); and *My Country* (1944). He also wrote *Nikita's Childhood* (1922); *The Way Through Hell* (1922); *Aelita* (1923); *Seven Days...* (1925); *The Year 1918* (1928); *The Flames of Paris*, which received the Stalin premium in 1942; and the trilogy, *Passage Through Torment*, winner of the Stalin premium in 1943.

TOLSTOY, Count Leo Lvovich, Russian novelist and sculptor: b. 1869; d. Hålsingborg, Sweden, Oct. 18, 1945. Third son of the famous Russian novelist, Count Tolstoy studied sculpture in Paris under Rodin for two years. During the First World War, he founded in Russia a newspaper *Vestochka*, which published editorials that the Bolsheviks branded as anti-revolutionary. His paper was suppressed and his friends and employees arrested or driven to flight. He then lived for many years in France and went to Sweden several years before his death. Count Tolstoy visited the United States three times: in 1911, to study the educational system and sociological conditions; in 1927, to give lectures on his father's life and work; and in 1928, to take part in the celebrations of the centenary of his father's birth. He was the author of *For the Children*; *Years of Famine*; *Prelude of Chopin* (revealing the blessings of marriage as a reply to his father's *Kreutzer Sonata*); and *The Truth About my Father* (1924).

TORPEDO, Wakeless. Among the best-kept secrets of the Second World War was the use by the United States Navy of an electrically propelled torpedo that sped, silent and untraceable, through enemy waters. With this weapon, prior to V-J Day, 372 Japanese ships aggregating 1,858,200 tons, and ranging in size all the way from a 42,500-ton battleship down to cargo-carrying merchant ships and naval auxiliaries of 500 tons were sent to the bottom. Developed and built for the navy by the Westinghouse Electric Corporation, the 10,000th electric torpedo came off the lines the day the Japanese surrendered. Need for something in addition to the compressed-air-driven torpedoes used for many years was realized early in the war by the navy. British and American ships were being sunk by Nazi torpedoes that could not be seen—torpedoes that were electrically driven. Less than four months after Pearl Harbor, Westinghouse was awarded the contract for developing and manufacturing the wakeless torpedo, and five completed ones

were delivered to the navy just 109 days after work started. As late as November 1944 production was speeded up to 400 torpedoes a month.

TRAIN, Arthur C., American novelist, playwright, and lawyer: b. Boston, Mass., Sept. 6, 1875; d. New York City, Dec. 22, 1945. Mr. Train was the creator of Ephraim Tutt, a fictional lawyer who invented "legal stratagems for rescuing the technically guilty but morally innocent from the toils of the law," and whose corporeal existence was taken for granted by countless numbers of readers. Taking his preparatory course at St. Paul's School, Mr. Train received a B.A. degree from Harvard University in 1896, and an LL.B. degree from Harvard Law School in 1899. He spent a few months in a Boston law office and was admitted to the Suffolk (Mass.) bar. He came to New York at the turn of the century, worked briefly for the Legal Aid Society and then for the firm of Robinson, Biddle, and Ward. He served as assistant district attorney of New York County from 1901-08 and again from 1914-15. In 1910 he was named a special deputy attorney general to investigate political offenses in Queens County. His most celebrated case was the prosecution in 1914 of Henry Siegel, operator of a chain of drygoods stores, who was accused of mulcting thousands in a savings account scheme. After spending \$50,000 preparing the case, Mr. Train won a conviction. Later he took up private practice, but in 1923 retired to devote himself entirely to writing.

Mr. Train's first story to reach print was *The Maximilian Diamond*, which *Leslie's Magazine*, later the *American*, published in July 1904. The next year his first book, *McAllister and His Double*, was published. In May 1944 Mr. Train and his publishers were sued in the Supreme Court by an irate attorney who charged that Mr. Tutt's failure to materialize in the flesh constituted fraud. Mr. Train rested his case on Defoe's *Robinson Crusoe* and Swift's *Gulliver's Travels*, which purported to be the actual experiences of the authors. Mr. Train had been president of the National Institute of Arts and Letters since 1941.

TRANSJORDAN. An Arab emirate in western Asia, east of Palestine and with it constituting a mandate of the League of Nations entrusted to Great Britain. The area is approximately 34,740 square miles, and the population is estimated to number 400,000, of whom 330,000 are Arab Moslems; 50,000 are Arab Christians, and the remaining 20,000 are Circassians or other Caucasian races. Amman (pop. 35,000) is the capital, and Aqaba a port in the Gulf of Aqaba, at the head of the Red Sea. Although legally and technically mandated territory, Transjordan's independence under British protection was recognized by the League of Nations in 1928; the high commissioner for Palestine also holds a like office for Transjordan, his representative at Amman being termed British resident (A. S. Kirkbride appointed Feb. 16, 1939). Transjordan was expressly excluded from the undertaking relative to Palestine becoming a national home for the Jews. In 1944 the British government announced its readiness

to negotiate a treaty after the war more favorable to Transjordan than the status agreed upon in 1928. The emir (Abdullah ibn Husein) is the second son of the late King Husein of Hejaz and granduncle of King Faisal II of Iraq. He administers the country with the aid of a Council of Ministers and a Legislative Council of 22 members (6 officials and 16 elected members). The country is not financially self-supporting. In 1940-41 the revenue amounted to £P483,565, which included a grant-in-aid from the British Treasury of £P95,110; expenditure was £P510,573. The public debt at Dec. 31, 1939, was £P155,107. Wheat, barley, and tobacco are cultivated in fertile areas near the River Jordan; much of the country, however, is desert, where pastoral pursuits are the chief occupations. Rich phosphate deposits remain almost unexploited, and other known minerals include iron, copper, and manganese. Prospecting has yielded indications of petroleum. The Transjordan Frontier Force, under British officers, is responsible for defense, and the Royal Air Force has stations in the country. The Hejaz Railway runs through Transjordan, north to south, from Damascus as far as Ma'an; from that point, the line was allowed to fall into disuse after the First World War. A road across the country from east to west links Haifa, Palestine, with Baghdad, Iraq, replacing the trail formerly followed by motorbus services between those two cities. The year 1945 saw completion of a north-south highway from Damascus, Syria, to Aqaba, the port at the southern end of Transjordan. The British government was also expanding the harbor facilities at Aqaba and providing a deep-water anchorage available for a large number of vessels.

The emir has displayed considerable alarm at the possible effect upon Transjordan of increased Jewish settlement in Palestine; it was evidenced by his cabled protest to President Franklin D. Roosevelt in 1944 when resolutions favoring the Jewish case came before the United States Congress. This was, perhaps, the principal motive prompting Emir Abdullah to help constitute the Arab League (q.v.) and to sign its charter on March 22, 1945. Although, in Arab opinion, Transjordan was qualified for full membership in that body, its anomalous status of quasi-independence under British tutelage debarred the country from representation at the United Nations Conference on International Organization at San Francisco.

TRANSVAAL. See SOUTH AFRICA, UNION OF.

TRANSYLVANIA. A district of southeastern Europe, a part of the kingdom of Hungary from 1868, until annexed by Rumania in December 1918. Promised to Rumania by the Allies in 1916, its final frontiers were not established until 1920 by the Treaty of Trianon. As thus constituted, the province of Transylvania embraced an area of 22,312 square miles; its population was 3,414,492, according to the latest census. Hungary remained unreconciled to the award of Transylvania to Rumania, and in 1940 the Axis intervened in the dispute and arbitrarily returned to Hungary the northern portion of Transylvania, an area of 16,642 square miles with a population of about 2,573,000. Terms of the Allied armistice to Rumania announced from Moscow Sept. 13, 1944, included the return of northern Transylvania to Rumania; and on March 10, 1945, the government of the Union of Soviet Socialist Republics accordingly gave official permission to the

Peter Gróza government to assume control and administration of the area. See also RUMANIA and HUNGARY.

TREASURY OF THE UNITED STATES. Government receipts in the fiscal year 1944-45 (exclusive of \$1,283,000,000 of social security employment taxes set aside for account of the Federal Old-age and Survivors Insurance Trust Fund) amounted to \$46,457,000,000, an increase of \$2,308,000,000 over the net receipts for the fiscal year 1943-44, the previous record year.

Total budgetary expenditures amounted to \$100,405,000,000, an increase of \$6,661,000,000 over the previous fiscal year. Expenditures for war activities amounted to \$90,029,000,000. In addition, the Reconstruction Finance Corporation and its subsidiaries had war expenditures amounting to \$472,000,000. These items, together with interest on the public debt, tax refunds and veterans' expenditures accounted for about 98 per cent of total expenditures.

The net deficit for the year was \$53,948,000,000, as compared with \$49,595,000,000 for the preceding year, an increase of \$4,353,000,000.

The table in next column shows the budgetary receipts and expenditures for the fiscal years 1944 and 1945.

Receipts.—Total receipts of the federal government in the fiscal year 1945 amounted to \$47,740,000,000, as compared with \$45,408,000,000 in 1944, an increase of \$2,331,000,000. Income taxes increased \$518,000,000. Income taxes withheld by employers under the Current Tax Payment Act of 1943 increased \$1,896,000,000, while other income taxes decreased \$1,378,000,000. All other classes of receipts, except those from customs, increased over the preceding fiscal year. Social security taxes and taxes upon carriers and their employees increased over \$40,000,000; miscellaneous internal revenue increased over \$1,658,000,000, and miscellaneous receipts increased \$189,000,000.

Customs collections of \$355,000,000 were \$76,000,000 less than the \$431,000,000 received in the fiscal year 1944, which were the largest receipts since 1937.

Included among miscellaneous receipts were more than \$2,000,000,000 on account of renegotiation of war contracts; about \$275,000,000 from the sale of surplus property, and \$188,000,000 from surplus postal revenues. The surplus postal revenues paid into the Treasury during the fiscal year 1945 exceeded the total surplus receipts from this source since the establishment of the government.

The total receipts for the fiscal year were only \$717,000,000, or 1½ per cent, more than the budget estimate of Jan. 3, 1945.

Expenditures.—The total budgetary expenditures of \$100,405,000,000 exceeded the budget estimate of Jan. 3, 1945, by \$1,492,000,000, or about 1½ per cent, due primarily to continuing high expenditures for war activities, which were \$2,029,000,000 above the budget estimate.

Budgetary expenditures classified as "war activities" amounted to \$90,029,000,000 for the fiscal year, an increase of \$2,990,000,000 compared with 1944. Increased expenditures in some of the larger war agencies were as follows: War Department, \$1,098,000,000; Navy Department, \$3,510,000,000; Treasury Department war expenditures, chiefly purchases for lend-lease export,

• Less than \$500,000.

\$30,000,000; War Shipping Administration, \$120,000,000; other miscellaneous items, \$32,000,000. Aid to China and payments for United Nations Relief and Rehabilitation Administration aggregated \$254,000,000, while there were no expenditures for these items in the fiscal year 1944. Decreases in war activities expenditures in 1945 compared with the previous fiscal year were: Department of Agriculture, mainly lend-lease food program, \$945,000,000; United States Maritime Commission, \$585,000,000, and an aggregate of \$522,000,000 under the Federal Security Agency, Federal Works Agency, and the National Housing Agency.

General expenditures, excluding revolving funds and transfers to trust accounts, amounted to \$8,751,000,000, an increase of \$2,563,000,000, as compared with 1944. However, this increase was more than offset by increases in certain items classified as general expenditures which reflect the impact of war activities, namely, interest on the public debt which increased \$1,008,000,000, refunds of taxes and duties which increased \$1,448,000,000; and veterans' expenditures which increased \$305,000,000; and by a payment of \$257,000,000 to restore the capital impairment of the Commodity Credit Corporation applicable to the fiscal years 1943 and 1944, but not appropriated by the Congress until April 25, 1945.

Expenditures representing amounts transferred to trust accounts, etc., increased \$1,090,000,000, as compared with the previous year. This increase is accounted for as follows: a \$9,000,000 payment to the Adjusted Service Certificate Fund; transfers to government employees, retirement funds of \$19,000,000 more than the preceding year; transfers to the National Service Life Insurance Fund were greater by \$1,015,000,000 than in 1944; and the amount transferred to the railroad retirement account exceeded the previous year by \$46,000,000.

The Public Debt.—The gross public debt of the United States on June 30, 1945, amounted to \$253,682,000,000 as compared with \$201,003,000,000 on June 30, 1944, an increase of \$57,679,000,000. The computed rate of interest on the total interest-bearing public debt was 1.936 per cent on June 30, 1945, as compared with 1.929 per cent on June 30, 1944.

Statutory Debt Limitation.—Under the Public Debt Act of 1945, approved April 3, 1945, the limitation on the general borrowing power under the Second Liberty Bond Act, as amended, was increased from \$260,000,000,000, applicable to public debt obligations issued under that act, to \$300,000,000,000, applicable to public debt obligations and publicly held obligations guaranteed as to principal and interest by the United States. As of June 30, 1945, the unused borrowing authorization under the limitation was \$31,329,000,000.

The Guaranteed Debt.—The contingent liabilities of the government on account of outstanding market issues of obligations of governmental corporations and credit agencies, guaranteed as to principal and interest, decreased from \$1,623,000,000 on June 30, 1944, to \$433,000,000 on June 30, 1945, a decrease of \$1,190,000,000. This decrease was largely due to the continuation of the policy announced in October 1941, under which the funds needed by governmental corporations are provided by the Treasury in lieu of having such corporations sell their obligations in the market. During the year the securities of governmental corporations and credit agencies

held directly by the Treasury increased from \$10,717,000,000 to \$12,169,000,000, an increase of \$1,452,000,000.

A statement of guaranteed obligations outstanding as of June 30, 1944, and June 30, 1945, follows:

OUTSTANDING OBLIGATIONS GUARANTEED AS TO
PRINCIPAL AND INTEREST BY THE UNITED
STATES AS OF JUNE 30, 1944, AND

TRENGGANU, trêng-gă'nôo. See BRITISH MALAYA.

TRINIDAD. The most southerly island of the West Indies, together with Tobago, 21 miles to the northeast, constituting a British colony. The total area of the colony is 1,980 square miles (Trinidad, 1,864 square miles; Tobago, 116 square miles), and the estimated population as of Dec. 31, 1944, was 546,088 (Trinidad, 512,545; Tobago, 33,543). The large majority of the inhabitants are West Indians, of African descent. The white population comprises English, French, Spanish, and Portuguese; and there are also a large number of East Indians (from British India) and several thousand Chinese. Port of Spain (pop., 1944, 105,195) is the capital and chief port; other towns of Trinidad are San Fernando (18,989), Arima (6,720), and Princes Town (6,651). Scarborough (1,635) is the chief town and port of Tobago; and other towns are Roxborough (1,805) and Plymouth (991).

American Bases.—In 1940 the United States secured bases in Trinidad (a total of 25,000 acres in all) for naval and air-defense purposes, these being leased for a period of 99 years. Considerable construction work was done on the bases during the war.

Government.—The governor (Sir Bede Edmund Clifford appointed March 25, 1942) is assisted by an Executive Council of 8 members (3 officials ex officio and 5 other persons nominated) and by a Legislative Council of 18 members (3 official and 15 unofficial, 6 of the latter being nominated and 9 elected). In 1945 the legislature unanimously endorsed the proposal of the secretary of state for the colonies that the colonies of the British West Indies federate. Revenue of the colony in 1944 aggregated \$29,158,819 and expenditure was \$31,246,441, resulting in a deficit of \$2,087,622. Included in items of expenditure was an amount of \$3,245,649 relating to schemes of development. The deficit of \$2,087,622, together with depreciation in the value of securities aggregating \$29,000, reduced the general revenue balance to \$6,740,166. The financial position of the col-

ony was satisfactory. The draft budget for 1945 provided for estimated revenue of \$28,195,080 and an expenditure of \$33,206,954; expenditure included \$5,099,350 for development schemes.

Education.—There were at the close of 1944, 291 primary and intermediate schools in the colony (257 in Trinidad, and 34 in Tobago), 46 of them being conducted by the government and 245 by missionary bodies in receipt of government aid. Queen's Royal College and its affiliated institutions provide for the higher education of boys and girls in Trinidad; and in Tobago is the Bishop's High School. In 1945 it was proposed that the government and denominational institutions for teacher training be replaced by a central Training Institute which would also serve the Leeward and the Windward Islands. The Imperial College of Tropical Agriculture is located at Saint Augustine, Trinidad.

Agriculture and Industry.—Sugar and cacao are the principal agricultural products. The sugar crop in 1944-45 amounted to 76,347 tons (74,344 tons in 1943-44). The British government undertook to meet the cost (up to £20 per acre) of a subsidy on land newly planted in canes, other than Uba cane, during 1945. Sugar quotas for the period Feb. 1, 1945-Jan. 31, 1946, provided exports of 138,000 tons and a local consumption of 20,000 tons. Cacao production in 1944 was valued at \$1,500,000, an increase of \$440,000 over 1943. During the Second World War the acreage under food crops increased from 15,000 acres to 60,000 acres. The rice crop for 1945 was the greatest in the colony's history. Coconuts, limes, and grapefruit are also grown on a commercial scale. The value of all crops produced in 1944 was \$9,469,000. Timber plantations, principally of teakwood, had an area of 5,546 acres in 1944. Output of rubber was at its maximum during the war because of the introduction of new methods of tapping the trees; 40,000 acres out of 100,000 acres of rubber are now tappable. In 1944, 18,000,000 board feet of lumber was cut; forest products, used for furniture making, the safety-match industry, and other purposes had a value of \$4,000,000. The Colonial Microbiological Research Institute established in Trinidad in 1945, financed by funds from the British Treasury under the terms of the Colonial Welfare and Development Act, 1940, is under the general supervision of the Colonial Products Research Council. Lime oil, bitters, and rum are manufactured. A phenomenon of Trinidad is an asphalt lake, 109 acres in extent, near the town of La Brea, from which 71,877 tons of natural asphalt were taken in 1944. Trinidad ranks sixth in the Western Hemisphere in the exploitation and manufacture of petroleum products. The colony enjoys more than half of the aggregate trade of the British West Indies. Total exports in 1944 had a value of \$54,106,328; and imports amounted to \$68,988,522.

Communications.—The government-owned railroad has a length of 123 miles; it links Port of Spain with Sangre Grande, on the east coast, and with Siparia, on the southwest. There are 1,849 miles of highways, of which 1,080 miles are main roads. A scenic road cut through sheer cliff was constructed by the United States Navy and handed over to the colonial government in 1944; it gives access to the bathing beach at Maracas Bay, opened up to replace other bathing beaches now included in the American bases.

Trinidad is well served with steamship and air transport lines; an air service links Trinidad with Jamaica, by way of St. Kitts, Leeward Islands, and the island is also used by air services between the United States and Africa. A radio telephone service to the United States was established in 1944, and to Barbados in 1945.

TROBRIAND. See PAPUA, TERRITORY OF.

TROPICAL DISEASES. Many of the leading authorities in the field of tropical medicine now agree that there is no great danger of the spread of tropical diseases in the United States through infections brought by returning service men and women. Tropical diseases are largely insect borne. In the tropics these pests are likely to be active every month in the year, whereas in the United States during the cold months they are largely inactive. Our better laundry and sanitary facilities to a great extent prevent the spread of infection. The well organized methods invoked by the armed forces for the protection of their personnel stationed in the tropics and the many epoch-making discoveries made during the Second World War have brought about astounding results.

Malaria, that great human killer, usually the bane of military operations in the tropics, has been well controlled. As the war proceeded the incidence was reduced to one quarter of the rate of the early months. The overall death rate from malaria in the army fell to .01 per cent. There is no record of malaria outbreaks having been started by returning service carriers. Atabrine has been found more effective than quinine. Among preventive measures, the control of mosquitoes by the wonder insecticide DDT has produced results that have never heretofore been achieved in the control of malaria. The war experience demonstrated that a daily dose of 0.1 gram of atabrine would prevent the appearance of clinical malaria, where combat conditions made it impossible to control the mosquitoes which convey the parasite. If atabrine is continued after an acute attack that has been treated with the standard dosage it will also prevent recurrences. It is generally conceded that where atabrine has failed, the cause was largely due to the failure of the patient to take the drug as prescribed. Experience shows that atabrine administered to large groups of troops in doses of 0.1 grams daily for many months has not caused any demonstrated ill effects. Atabrine also has the advantage of not being as unpleasant to take as quinine. Falciparum malaria is as yet not controlled by any known drug.

Schistosomiasis, which is so common in the river valleys of Japan and in Okinawa, is caused by a small fluke found in pools and running streams, and which in a matter of seconds burrows through the skin and infects an individual. In areas in which schistosomiasis prevails, precautions are taken to prevent the use of untreated water either as a drink or for bathing or washing. Fortunately the disease, which attacks the intestines or liver, is rarely fatal. Usually there is fever, followed by steady prolonged discomfort and ill-health.

When the Allied troops entered Naples, there was just beginning a serious typhus outbreak which might have caused several hundred thousand deaths. This was controlled in an amazingly brief period of time by simply blowing

DDT dust down the necks of the entire population. The Neapolitans were so delighted to have their lice-infested bodies freed of parasite that many came again and again for treatment.

The United States Navy, at Marine Barracks at Klamath Falls, Oregon, by careful observation proved that filariasis soon disappears among infected individuals. This confirms the experience of the British, who have held for many years that those infected with filariasis in the tropics, if in the early stages, would soon recover when the victims returned to Great Britain.

The control of dysentery in the armed forces has not been as successful as the control of other diseases, but as dysentery is often spread by flies, DDT elimination of the fly pest and newer treatment have resulted in greatly reduced incidence. Dysentery is caused by two types of organisms: bacteria, a vegetable parasite, and amoeba, an animal parasite. Serums and sulfa drugs have been of considerable assistance in combating the bacterial infections, and carbarsonone has continued to be very effective in the treatment of the amoebic form.

While syphilis and gonorrhea are not strictly tropical diseases, yet tropical conditions favor their spread. Penicillin has proved most effective in their control.

Skin diseases, particularly trichophytosis (ringworm), have been the cause of much annoyance and anxiety to the armed forces. Lack of steam laundry facilities has been largely responsible for their prevalence. Most skin diseases yield quickly to the newer treatments that have been developed, and in the United States where good laundry and sanitary bathing facilities exist there is little danger of serious spread.

VICTOR G. HEISER.

TRUCIAL OMAN. See ARABIA.

TRUK. See JAPANESE SOUTH SEA ISLANDS—*Caroline Islands.*

TRUMAN, Harry S., president of the United States: b. near Lamar, Mo., May 8, 1884. On April 12, 1945, Mr. Truman took the oath of office as the 32d president of the United States, succeeding the late Franklin Delano Roosevelt. (Mr. Truman is the seventh vice president to succeed to the presidency upon the death of the chief executive.) Born near Lamar, Mo., he grew up on a farm some 15 miles from Kansas City. He sought an appointment to the United States Military Academy after graduation from high school, but was rejected because of defective eyesight. Save for a five-year period in Kansas City, he lived with his parents until he entered the armed services at the beginning of the First World War with his National Guard company. He went overseas as a lieutenant in the field artillery; took part in the St. Mihiel and Argonne offensives; and emerged with the rank of captain. He has been a colonel in the Field Artillery Reserve Corps since 1927.

Mr. Truman entered Jackson County politics in 1922, a protégé of the Pendergast Democratic organization, and was elected Jackson County judge, an administrative, nonjudicial position. He lost his judgeship in 1924; regained it in 1926; and served until 1935, when he entered the United States Senate. His first term in the Senate was uneventful, and it was not until 1940 that he came into national prominence as chairman of the Special Committee to Investigate the National Defense Program, better known as the Truman Committee. As committee chairman, he traveled as much as 30,000 miles a year, visiting

war plants, and became one of the best-informed persons on the war production program of the United States.

Mr. Truman was nominated for the vice presidency at the Democratic National Convention in July 1944, and was elected the following November. In June 1945, he addressed the closing session of the United Nations Conference on International Organization in San Francisco, and in July, conferred in Berlin with Anglo-Russian statesmen.

TRUSCOTT, Lucian King, United States Army officer: b. Chatfield, Texas, Jan. 9, 1895. Lieutenant General Truscott commanded the American Fifth Army in Italy for the final phase of the Allied war against Germany. On Oct. 7, 1945, he assumed command of the American Third Army in Germany, replacing Gen. George S. Patton, Jr.

A former school teacher, General Truscott obtained a commission in the cavalry, Officers Reserve Corps, in the First World War; served in Hawaii from 1919 to 1921. In June 1926, he was graduated from the Cavalry School, Fort Riley, Kansas; completed courses in its advanced class a year later; and was for a time an instructor at Fort Riley. He was graduated from the Command and General Staff School in 1936. He was sent to the European theater of war in 1942, and in March 1943, was named commanding general of the 3d Infantry Division, which later distinguished itself in the North African and Sicilian campaigns under General Patton. In January 1944, he became deputy commander of the 6th Corps, and in March of that year, assumed command of the corps in Italy. He later moved with it to France, and in December, succeeded Gen. Mark Clark as commander of the American Fifth Army.

General Truscott's decorations include the Distinguished Service Medal, the Legion of Merit, the Distinguished Service Cross, and the Purple Heart. In June 1943, General Giraud decorated him with the French Legion of Honor, and in that same year, King George of England made him an Honorary Companion of the Most Honorable Order of the Bath.

TUAMOTU ISLAND. See FRENCH OCEANIA.

TUBERCULOSIS. Provisional statistics on tuberculosis mortality and morbidity for 1944, based on reports from state health officers, and published by the National Tuberculosis Association, indicate a favorable downward trend in the former, and an upward trend in the latter. The estimated death rate is 40.8 per 100,000, a decline from 42.3 in 1943. The Metropolitan Life Insurance reports of mid-1945 indicate a continuation of this downward trend. The morbidity rate increased by 5.7 per cent in 1944 over 1943. It is not thought that this represents any increase in cases, but rather a reflection of the greatly increased tempo in case finding by mass methods throughout the country. The excellent job started and continuing in induction centers is steadily expanding for civilian population groups.

Situation in Europe.—The tuberculosis situation in the warring European countries is not available in sufficient detail to appraise accurately its true significance, but that it has increased in many countries is generally conceded. The deaths in Britain increased sharply in 1940, reached a peak in 1941, but have declined each year since. The ratio of deaths to new cases increased from 0.52 in 1939 to 0.61 in 1940. The latest estimates indicate a ratio of 0.46 in 1943. Percy Stocks

and associates suggest that these ratios may not decline materially in the postwar period, due to the increasing effort in mass survey work in the British Isles.

Dublin reports increases of 50 per cent in Belgium and Holland, and a steady rise in France. Young children appear to be the greatest sufferers, and the tuberculosis is of a rapidly fatal type. Italy has had a threefold rise, and in Paris the increase was 10 per cent in 1941 over 1939, with a 30 per cent increase among children. The larger German cities between 1939 and 1942 indicated a 24 per cent increase. Preliminary reports would suggest that in other warring countries even greater increases are to be expected, but it will be some years before the populations of these countries are resettled and accurate data available.

Tuberculosis and War.—Tuberculosis has always been a major military problem in every war. During the American Civil War, the admission rate to hospitals was 6.1 and the death rate 2.2 per one thousand strength per year. For the decade prior to the Spanish American War, the admission rate was 2.7 per thousand strength per year, and it rose each year thereafter until 1900, when it was 4.9. In the First World War, the admission rate was 12.0 per thousand strength per year, but in the Second World War, Col. Esmond Long reports that the rate was but one tenth of the above. This remarkable improvement is due to two things: first, the army induction centers eliminated practically all cases by the mass X-ray method, and secondly, the prevalence of tuberculosis has steadily declined since before the turn of the century. Also the army facilities for handling cases today are much better than 30 years ago.

Approximately 150,000 men, with X-ray shadows indicating obviously active disease, or a disease that might be reasonably presumed to activate under the rigors of military duty, were rejected at induction stations. As important as this method was in eliminating tuberculous men, some were missed as was shown by a review of 50,000 X-rays of men accepted. There were from 10 to 15 cases per 10,000 men who should have been excluded at the induction centers, but for a variety of reasons were considered as satisfactory. The experience gained by the examination of the millions of men passing through the induction stations will largely correct this possible error in the future. The discharge rate per thousand men has remained below 1.0 per cent since the early part of 1942, but there was one period in mid-1943 when the rate exceeded 1 per cent, due to a change in army directives which eliminated a large number of probably stable lesions in an effort to improve the physical quality of the army personnel.

Similar experience in the navy has undoubtedly resulted from their X-ray program, but comparable figures are not yet available. The British Army and Navy have used the same technique with similar good results.

W. H. Hatfield, of the provincial board of health in British Columbia, reported that in 1944, 15 per cent of admissions to tuberculosis institutions came from the Department of Veterans Affairs. This upward trend is a reflection of an increase in pleurisy with effusion noted in 1941 by Colonel Adamson and Captain Keevil of the Royal Canadian Army Medical Corps. A similar rise was not manifest in troops in Canada, but was noted in troops overseas who had been in regions with a fairly high prevalence rate. Furthermore

this increased prevalence in pleurisy was chiefly among Canadians coming from low prevalent areas at home. Most likely they were receiving their first infection overseas. There has been no comparable rise noted in troops of the United States Army.

Familial Susceptibility to Tuberculosis.—Mildred Puffer reported some rather interesting studies on familial susceptibility to tuberculosis on the basis of data collected from the Williamson County Tuberculosis Study which was started in December 1931. The literature contains much comment on this subject over the years, but it is based upon data that may be questioned, and is by no means comparable to the above. While Puffer's findings are not conclusive, they do indicate a definite trend that is important in evaluating the danger of tuberculosis in a given individual. If the disease, when found, has reached an advanced stage, the chances of death are far greater than would be expected in the average population, whereas if found in a minimal form, the chances of survival are practically equal to that of the average population.

The behavior of the minimal lesion so often found in mass surveys is of particular interest. Persons under 45 years of age do not fare so well as those above that age. Those with family histories of tuberculosis are more likely to develop a serious form of the disease than those without such a background. A regression of their disease is less in those exposed to sputum positive contacts and greatest among those without such exposure. In other words, there is an increased susceptibility to develop serious tuberculosis when there is a family history of the disease. This is not a new discovery, but rather a substantiation of previous observations, and emphasizes the basic criteria in tuberculosis control—supervision of the active case and his contacts, and the isolation of all positive sputum cases. These simple facts need emphasis in these times when so much thought and effort are being directed to mass surveys.

X-Ray Diagnoses.—Case finding continues to be the keystone of tuberculosis control, and each year additional thousands of the general population go on record as having had a chest X-ray. These programs started 10 or more years ago and reached their real stride with the induction center examinations of recruits for the armed services. There is no available tabulation showing the numbers being X-rayed among the general population, but the never-ending reports in the literature on tuberculosis indicate that millions of people are being reached. In part, this has developed on a local basis through the departments of health and the tuberculosis and health associations, as well as through an increasing number of hospitals, industries, and other organizations controlling groups of the population. Facilities for this work will be greatly expanded during the coming years through federal funds distributed by the United States Public Health Service in its nationwide tuberculosis control program.

The X-ray manufacturing companies are entering an era never before visualized in the manufacture of equipment for this purpose. Unfortunately not all communities will be equipped with facilities to care for new cases found, and some will not provide the accepted minimum requirements for supervision of such cases. It is hoped that the detection of a case, under any circumstances whatsoever will awaken the sufferer's responsibility to seek further medical ad-

vice, and thereby lessen the further spread of infection in the home or the community.

Calcification in the Lungs.—Calcified nodules in the lung have for years been considered the residuum of a previous tuberculosis infection and disease. For some years past, however, there have been areas in the South where individuals showing these changes by X-ray were nevertheless negative reactors to tuberculin. It has been observed in occasional cases that a person may lose his sensitivity to tuberculin protein, but when as high as 75 per cent showing apparent calcium are also negative to tuberculin, it becomes obvious that either the calcium was not caused by tuberculous infection, or else there was something wrong with the tuberculin test used. This latter question has long since been resolved, but what the possible etiological agent might have been to produce calcium has remained a secret until recently. The finding of calcium in the lung almost invariably labeled a person as tuberculous. This was unjustified if not true, and in the induction centers, hundreds of men who were otherwise suitable for military service were rejected because of these shadows.

Carroll Palmer, of the United States Public Health Service, working on this problem, was led to one of the mycotic diseases—histoplasma capsulatum. His studies have shown that calcification follows infection by histoplasmin, and that a suitable skin test similar to the tuberculin test will give reactions in the majority of those with calcification and negative to tuberculin. This will open another door to our knowledge of tuberculosis and will clear many individuals of a tuberculous taint who have been so labeled in the past.

Chest Surgery.—The most noteworthy advance in chest surgery in the treatment of tuberculosis in the lung is pulmonary resection. This operation removes either a lobe (lobectomy) or an entire lung (pneumonectomy). While the method has been applied for the past decade, it has not been until the more recent years that surgical techniques have been improved sufficiently to make the operation a real possibility for many cases. The improvement of intratracheal anesthesia, and the new era of chemotherapy have also contributed to the success of this procedure. Overholt and Wilson, in reporting on 60 cases so treated, indicate operative mortality of 7 cases out of 60, or 11.6 per cent. Considering these cases on the basis of a reasonable initial risk, only 2 of 47, or 4.3 per cent died, whereas 5 of 13, or 38.5 per cent of those considered as desperate risks succumbed. The case fatality rate on those dying after operation was 13.6 per cent for 59 cases, 6.5 per cent of those of reasonable risk, and 38.5 per cent for those considered desperate risks.

These results clearly indicate that with the proper selection of cases, operative and case fatality rates can be considered as reasonably low. It is also obvious that with the marked advance in technique in the recent past, this form of surgery will come into more popularity in the coming years. See also SURGERY, PROGRESS IN.

Medicinal Treatment.—Chemotherapy of tuberculosis continues in the experimental stage, and to date there is no drug or preparation that can be accepted as specific, although some workers appear to be securing an increasing number of good results. James Edlin and co-workers have reported on promin inhalation therapy, in which they attempted to bring the drug in direct contact with the lesion. While their experience is

limited, it appears that benefit is noticed only in endobronchial ulceration, rather than parenchymal lesions. The latter lesions are by far the most common.

One of the basic problems in chemotherapy has been the lack of uniformity in technique and procedure, followed by those engaged in the field, Dr. William H. Feldman and Dr. H. C. Hinshaw, of the Mayo Foundation, have attempted to set forth an outline of laboratory procedures for testing antituberculosis substances in experimentally infected animals. This will be of the greatest value as these workers have devoted considerable time to the evaluation of chemotherapeutic agents in animals and the human. These authors in a recent report on promin used in animals, indicate that guinea pigs infected with tubercle bacilli, and treated continuously for a prolonged period, after medication is stopped, eventually die of tuberculosis. Also that in animals previously under prolonged treatment, followed by superinfection, had no significant effect on the subsequent course of the disease.

Louis Benson and Louis Goodman report the same problems with diaseone as have been previously reported. In their studies, only about 20 per cent seemed to benefit, and they noted many toxic effects of the drug. It is obviously far from being the hoped-for cure originally reported. Essentially the same conclusion may be stated at this time for other types of chemotherapy in tuberculosis. See also PUBLIC HEALTH SERVICE, U. S.

HERBERT R. EDWARDS,
*Director, Bureau of Tuberculosis, New York City
Department of Health.*

TUCKER, Beverly Randolph, American neuropsychiatrist: b. Richmond, Va., April 26, 1874; d. there, June 19, 1945. Dr. Tucker, known for his research in pellagra, advanced the theory that pellagra is a virus disease and that the skin and mucous membrane lesions are of neurologic origin. A student at Virginia Military Institute from 1890 to 1892, Dr. Tucker received his M.D. degree from the Medical College of Virginia, Richmond, in 1905. After postgraduate work in Philadelphia, New York, London, and Vienna, he became adjunct professor in 1907, and professor from 1912 to 1938 of nervous and medical diseases at the Medical College of Virginia. He was president and physician in charge of Tucker Hospital. He was author in 1914 of the pellagra section of the *British Medical Annual*, and in 1920 of the section on cranial nerves and their diseases for *Tice's Practice of Medicine*. In addition to a number of books on nervous diseases, he also wrote several nonprofessional works, including *Narna Darrell*, an historical novel (1936), and two volumes of verse.

TULAGI. See WESTERN PACIFIC ISLANDS, BRITISH, Section 1.

TULLY, Richard Walton, American playwright: b. Nevada City, Calif., 1877; d. New York City, Jan. 31, 1945. Mr. Tully is probably best known for his play, *The Bird of Paradise*, which was generally credited with being one of the first to popularize Hawaiian music, costumes and atmosphere in the United States.

Educated at the University of California, Mr. Tully was graduated in 1901 as a Bachelor of Law, but soon abandoned the profession to write plays, and presently his *The Rose of the Rancho* was given with much success. His next play, *The Bird of Paradise*, was produced two

years before the First World War with Laurette Taylor leading the cast. This play was the subject of one of the bitterest plagiarism suits on the record. A suit was brought by Mrs. Grace Fendler, of Los Angeles, alleging that it was plagiarized from her play, *In Hawaii*. Although the first decision by the State Supreme Court was in favor of Mrs. Fendler and confirmed a referee's award to her of \$608,361 against Mr. Tully and \$173,529 against Oliver Morosco, who produced the play, it was later reversed by an order of the Court of Appeals. Another of Mr. Tully's plays, *Omar the Tentmaker*, ran for nearly 1,000 performances.

TUNGSTEN. The status of tungsten in 1944 shifted from a critically short material to one of adequate supply, and throughout the year tungsten ore and concentrates, ferrotungsten, and most tungsten products were free from allocation control, according to the United States Bureau of Mines. The upward trend in production, which began in 1940 and reached an all-time high of 12,055 short tons in 1943, turned downward to 10,259 tons (60 per cent WO_3 basis) in 1944. Shipments of tungsten concentrates were 10,282 short tons (60 per cent WO_3 basis) valued at \$14,408,519 in 1944, compared with 11,945 tons valued at \$17,973,685 in 1943. California, Idaho, and Nevada supplied 94 per cent of the total output. Idaho was again the chief producing state, and the Bradley Mining Company operating the Yellow Pine mine in that state was again the largest producer.

TUNISIA. A French protectorate (regence) in North Africa, bounded north and east by the Mediterranean, south by Libya; and west by Algeria. The area is 48,300 square miles, and at the 1936 census the population totaled 2,608,313, comprising 2,395,108 natives (2,335,623 Arabs and Bedouins, and 59,485 Jews) and 213,205 Europeans (108,068 French, 94,289 Italians, 7,279 Maltese, 323 Spaniards, 454 Greeks, and 2,792 other foreigners). The country has been under French protection since 1881. Tunis (pop. 219,578) is the capital and chief port, and other ports are Sfax (43,333), Bizerte (28,468), and Gabès (18,611); Kairouan (22,991) is an inland city sacred to the Moslems, and Sousse (28,465), a town of commercial importance.

Government.—Nominal sovereignty is vested in a native ruler, the bey of Tunis (Sidi Mohammed al-Amin installed May 15, 1943); his legislative enactments, prepared by a French staff, are promulgated by the resident general. The bey is assisted by a Grand Council, composed of native and French officials; the latter include the resident general, who acts as the bey's foreign minister and has the military and naval commanders under his orders. The resident general also heads the Ministerial Commission, a civil administration divided into 11 departments; for administrative purposes the country is divided into 19 districts and 6 "military circles," district governors being French and their subordinates natives. The residents general of Tunisia and Morocco, and the governor general of Algeria, are responsible to a commissioner delegate general for North Africa, whose post was created by decree on Aug. 28, 1944; Gen. Georges Catroux was first incumbent of the post. When relations were re-established between France and Italy on March 1, 1945, Italy abandoned all special privileges which Italians had enjoyed in Tunisia since the Convention of 1887, and Italians there then became, like the rest of the population, citizens of Tunisia. Pri-

vate trade between the United States and Tunisia was resumed on July 4, 1945.

Agriculture.—Most of the acreage under cultivation is sown to cereals. Wheat is grown extensively in the plateau and northern regions, and barley in the central and southern parts; other cereals are of comparatively little importance. Legumes, particularly beans, lentils and chick peas, are grown on a large scale; other types of legumes, such as berseem, alfalfa, and vetch, are frequently planted with barley, oats, or fenu-greek, the last an annual legume with white flowers. Vineyards are concentrated in the extreme northeastern portion of Tunisia. In 1944 production of wine was estimated at 411,000 hectoliters (1 hectoliter = 26.42 gallons), as compared with 400,000 hectoliters in 1943. In addition, an estimated 28,000 metric quintals (1 metric quintal = 220.46 pounds) of table grapes and raisins were produced in 1944, and about the same amount in 1943. The country is the main olive-growing area of North Africa; normally, it ranks third among exporters of olive products. Estimates of the 1944-45 olive oil crop indicated a yield of about 80,000 tons. Potatoes are also grown for export; small areas are under flax and tobacco. Most vegetables suitable for temperate or subtropical climates do well, but production for export is insignificant. Dates are grown in the oases of the southern region; two thirds of the citrus plantations are in the Cape Bon area. Other fruit trees include the almond, apricot, fig, cherry, plum, pomegranate, peach, and banana.

Sheep and goats abound. Of beasts of burden, camels are the most numerous and of greatest importance—followed by asses, horses, and mules. The fisheries are extensive.

Mining.—The world's largest phosphate reserves are in North Africa, and the bulk of those (1,350,000,000 tons) are in the Tunisia-Algeria fields, the producing centers of which are around Sétif, the plateau of Batna, Kef, and Gafsa. Iron and lead are also mined, and other minerals include zinc, silver, mercury, and salt. Large stocks of iron ore, phosphate, and lead were accumulated in 1944 for shipment to Metropolitan France.

Manufactures.—Carpet weaving, saddle making, leather embroidery, the making of slippers, ancient style pottery, and matting, and the spinning and weaving of wool for garments constitute the chief manufactures and native industries. There has been some decline in tanning and silk weaving.

Communications.—State-owned railroads (1936) had a length of 1,000 miles, and a further 293 miles were operated by a company mining the phosphate deposits. The railroad along the North African coast through Morocco and Algeria continues into Tunisia as far as Tunis, and from that city narrow-gauge lines run southward and inland; there is also a north-south line along the border of Algeria. In 1935 there were 4,155 miles of highways; these were greatly improved and extended during military operations against the Axis forces in 1943.

TUNNELS. In September 1945, it was announced that no further approvals will be necessary from the War Production Board for carrying out the completion of the Battery-Brooklyn vehicular tunnel. That is, the city of New York was free to start work as soon as possible. Considerable preliminary work had to be done before construction was resumed about the end of the

year. Work on this tunnel was stopped at the request of the War Production Board in October 1942. At that time, about 2,800 feet of the 9,117-foot tunnel had been dug from the Manhattan end, and about 1,200 feet from the Brooklyn end has been excavated. Bids for the construction of a ventilating shaft adjacent to the end of Governors Island were advertised for in October, and when the shaft is finished, a contract will be let for the construction of a ventilator building.

In June 1945 the New York City Tunnel Authority issued a report recommending the construction of a tunnel across the Narrows under the Lower Bay of New York to connect Brooklyn and Staten Island. The cost was estimated at \$62,000,000, exclusive of street approaches. On November 16, a special committee appointed by Mayor La Guardia reported adversely to the project, saying that while it is entirely feasible from an engineering standpoint, it is not practical at this time from the financial standpoint, and therefore should be deferred for at least 10 years. The La Guardia committee dismissed as "unthinkable" a suggestion that Manhattan and Staten Island be directly connected by tunnel.

Another major tunnel project to give additional relief to crosstown traffic congestion on Manhattan Island is the proposed Crosstown Vehicular Tunnels, announced in October 1944, by the New York City Tunnel Authority. It is proposed to have four tunnels, one each under 36th and 38th streets for through traffic, and two under 37th Street for local traffic. These tunnels are to connect the Queens Midtown Tunnel, which links Manhattan to Long Island, to the Lincoln Tunnel on the west side which connects with New Jersey. Connections will also be made with the east and west side highways of Manhattan. The tunnels will go through solid rock 80 feet underground, and below the subway tunnels. The cost of this project with terminals is estimated to be \$75,200,000.

The Colorado-Big Thompson project which has been held up during the past year has now been started afresh, and the Alva B. Adams 13-mile tunnel under the Rocky Mountains is expected to be completed by May of 1946. It is to carry 90,000 acre-feet of water to the east side of the mountains for irrigation purposes during the growing season. By means of the Shadow Mountain Dam water will be diverted from the Colorado River's North Fork, whence it will flow into Grand Lake and from there to the west end of the tunnel.

In New Mexico the \$8,155,000 Tucumcari Irrigation Aqueduct is partially completed and the first 38 miles of canal and tunnel is in operation. The completed project will be 75 miles long and will include 4 tunnels and 23 siphons. These tunnels and siphons are necessary due to the steep sides of the Conchas River Valley which is followed, and which has many deep arroyos that cut-up the valley sides.

E. C. McDOWELL,
Consulting Engineer, New York.

TURKEY. Formerly known as the Ottoman Empire, since 1923 Turkey has been a republic comprising the entire territory of the peninsula of Asia Minor together with a small area of southeastern Europe east of the River Maritsa. The end of the First Balkan War in 1913 saw a considerable reduction in the Ottoman Empire's European territory, its former holdings being divided among the Balkan victors—Bulgaria,

Greece, Montenegro, and Serbia. However, these losses were minor compared with those imposed by the 1912 Treaty of Lausanne, which surrendered Tripoli and Cyrenaica to Italy, and by the 1920 Treaty of Sèvres. Turkey was an ally of Germany in the First World War, and was defeated in October 1918. By the Treaty of Sèvres, imposed by the victorious Allies, Turkey lost the Arab provinces which became the states of Syria, Lebanon, Palestine, Transjordan, Saudi Arabia and Yemen; while in Europe, Greece received in compensation for her losses Eastern Thrace as far as Çatalca (Chatalja).

In April 1920 a group of patriots organized at Angora (now called Ankara) a government calling itself the Grand National Assembly of Turkey. This revolutionary junta of young nationalists, smarting at the humiliations to which their country had been subjected by the inept policy of a weak and corrupt government, soon became by popular choice the de facto government. The National Assembly raised and equipped a powerful army, but not until two years later did its brilliant commander, Mustafa Kemal, employ it to revoke by force of arms the more odious terms of the Sèvres Treaty. Meanwhile, Turkey was under the domination of two governments: the moribund sovereignty of the sultan at Constantinople, honeycombed with nationalist sympathizers; and the National Assembly at Ankara. Late in 1921, Ankara concluded a treaty with France which, while it greatly heartened the Nationalists, correspondingly depressed and irritated Greece and her ally, Great Britain. (The First World War victors were already quarreling bitterly over the spoils.) The overwhelming defeat of the Greek forces and their ejection from Izmir (Smyrna) by Kemal in 1922 (Eleutherios Venizelos, the Greek statesman, looked in vain to Lloyd George for assistance in this crisis) led successively to the abolition of the sultanate, the transfer of the nation's capital from Istanbul to Ankara, the realistic treaty signed between the Allies and Turkey at Lausanne on July 24, 1923, and, finally, the establishment of the republic.

On Oct. 29, 1923, Ghazi Mustafa Kemal Pasha, the nationalist leader who had proved himself as brilliant a statesman as a warrior, was elected first president of the Turkish Republic. In 1927 and 1931 he was re-elected, and in 1934 a law was passed giving him the family name of Atatürk (Father of the Turks). Again re-elected in 1935, Kemal Atatürk ruled until his death on Nov. 10, 1938. The vigorous policy of westernization which he pursued has continued to motivate his successors.

Area and Population.—By an agreement concluded at Ankara on June 23, 1939, between the French and Turkish governments the sanjak of Alexandretta (the Hatay) was incorporated into the territory of the Turkish Republic. The area of the republic is estimated at 767,119 square kilometers, or 296,107 square miles. According to the 1940 census, the population was 17,820,950, of whom 1,516,005 lived in European Turkey and 16,304,074 lived in Asiatic Turkey. On Oct. 28, 1945, official announcement was made by Ankara that the population, according to the 1945 census, had increased to 18,871,000.

Religion.—Although Moslems form the vast majority of the people, Islam is no longer the state religion, a law having been passed by the Grand National Assembly in 1928 amending the Organic Statute and providing complete separation of state and church. According to the 1935

census there were in Turkey 15,838,673 Moslems, 125,046 Orthodox, 78,730 Jews, 44,526 Gregorians, 32,155 Roman Catholics, 11,229 Armenians, 8,486 Protestants, 12,965 adherents of other religions, 559 without religion, and 356 undeclared.

Defense.—The army consists of 11 army corps, comprising 23 divisions, an armored brigade, 3 cavalry divisions and 7 fortress commands. These formations would appear to indicate a war strength of about 500,000. However, the total number that could be mobilized is estimated at nearly 2,000,000, most of whom would have had prior training, since universal military service is obligatory. The navy's largest ship is the battle cruiser *Yavuz*, formerly the German *Goeben*, launched in 1911 and displacing 23,100 tons; her main armament consists of ten 11-inch guns. The effective strength of the navy at present is about 800 officers and 4,000 men. Details of the air force strength and equipment are secret, but in 1940 there were approximately 370 first-line aircraft, and a total personnel of about 8,500. The equipment is chiefly of American, British, and German types.

EVENTS OF 1945

Contribution of "Red-Light Neutrality" to Allied Victory.—The fact that Turkish neutrality, like a red light, had for four years stopped Hitler's advance into the Near and Middle East along the Balkan border, as well as along the coastal areas of the Black Sea and the Mediterranean from the Dardanelles to Syria, was recognized during 1945 by German, American, and British statesmen. The German ambassador to Japan, Hans George Stahmer, when taken prisoner near Tokyo by the American Occupation Army, admitted that it was Hitler's plan to join the German and Italian with the Japanese forces by reaching the Indian Ocean through the Near East, but that this project was frustrated by a combination of British forces in North Africa and Turkey's neutrality in Asia Minor. Documentary evidence that Hitler alternately threatened Turkey with "total annihilation," and assured her of "friendly co-operation" when the German Army marched into neighboring Bulgaria was uncovered in the ruins of Hitler's mountain chalet where shorthand notes of three letters addressed to President Ismet Inönü were discovered. A secret order No. 30, dated May 23, 1941, and produced at the Nürnberg trial, corroborated Hitler's plan to prepare a combined attack on the Near and Middle East through Turkey, Iraq and Iran.

The American ambassador to Turkey, Laurence A. Steinhardt, and also Secretary of War Henry L. Stimson made statements, the latter declaring: "We know that Hitler intended to break through to the Near East; had he succeeded, the entire course of war would have been changed." Commander Philip Young, special assistant to Leo T. Crowley, when the latter was director of the Foreign Economic Administration, elaborated this point by saying: "Turkey was an essential block in the barrier that the Allies built around eastern Europe. At the high tide of German power, Turkey was surrounded on three sides by German troops. Had she become a belligerent, Axis forces would have poured across Turkey to attack the Russians from the lower Caucasus, to cut off Allied oil supplies from Iraq, to cut the Persian corridor to Russia, to strike at Suez from the Asiatic side, and to move on India for a

Instead, the Persian Gulf-Iran route, protected by Turkey's "red-light neutrality" and reconstructed with American rolling stock under command of Maj. Gen. Donald H. Connelly, was continually available for the transportation to south Russia of about 4,380,000 tons of supplies including 143,000 vehicles and 3,087 planes.

Admiral Sir Howard Kelly, who had been stationed for more than four years in Turkey, told a meeting of the Royal Maritime Society: "The early entry of Turkey into the war would have been for us a diplomatic victory, but it might also have been proved to be a military disaster. . . . Throughout the whole war Turkish influence in the Moslem world has benefited us far more than has ever been recognized."

Declaration of War Against Germany and Japan.—The decision of the Turkish National Assembly to break off diplomatic and economic relations with Germany and Japan as from Jan. 6, 1945, was followed on February 23 by the National Assembly's unanimous approval of the government's decision to declare war on Germany and Japan. Foreign Minister Hasan Saka told the Parliament that on February 20 the British ambassador had submitted a memorandum pointing out that in accordance with decisions reached at the Yalta Conference, those associated nations which declared war on the Axis before March 1 would be invited to take part in the San Francisco World Security Conference.

By Turkey's declaration of war the Dardanelles, which in compliance with the international Montreux Convention of 1936 had until then been kept closed to warships of the combatant nations, was opened to Allied shipping and thus provided a new route to Russian Black Sea ports, the safest and shortest way, 3,000 miles shorter than the Persian Gulf-Iran route.

American Lend-Lease.—Shortly before Foreign Minister Hasan Saka addressed the National Assembly to ask for the war vote, he signed with United States Ambassador Steinhardt a formal lend-lease agreement which had been under negotiations for several months.

San Francisco World Security Conference.—The delegation to San Francisco was composed of Foreign Minister Hasan Saka, the Turkish ambassador to Washington, H. R. Baydur, and the assistant to the secretary general of the Ministry of Foreign Affairs, F. C. Erkin. From San Francisco the foreign minister went to London, where he was received by Anthony Eden on July 11. The National Assembly in Ankara ratified the United Nations Charter and the Statute of the International Court of Justice on August 16.

Denouncement of the Treaty of 1925 by Soviet Russia.—In Moscow the Foreign Commissariat announced on March 21 that on March 19 V. M. Molotov had informed the Turkish ambassador of his government's decision to denounce the Turkish-Soviet Treaty of 1925 on the ground that it no longer corresponded to the new situation created by the profound changes that had occurred, especially during the war, and that it needed great improvement. The Turkish ambassador to Moscow, Selim Sarper, went to Ankara to report and returned to Moscow after six weeks. An exchange of views between Ankara, London, and Washington followed, since the denouncement of the Turkish treaty was interpreted as an attempt by the Soviet Union to obtain dominating influence in Turkey by a new bilateral pact. Although Soviet Russia did not present any note making formal demands, it was

Moscow informally were as follows: (1) that prior to any international discussion of the revision of the Montreux Convention governing the control of the Black Sea straits (Dardanelles and Bosphorus), the Turkish government should agree to grant the USSR rights to strategic defensive bases in the Straits area, manned by Turks during peacetime but by Russians, too, during wartime; (2) that after an accord on this point was reached in principle, an international conference of interested powers should be held to draw up a new Straits agreement to replace the Montreux Convention and that the Turkish government should agree beforehand to support the Soviet position during such international discussion; (3) that specific talks should commence between the USSR and Turkey concerning the return of the Turkish border areas of Kars and Ardahan to Soviet Russian Armenia. The Turkish answer was "No" on all three points. The Turkish government informed Moscow that it could not commit itself beforehand on its attitude in an international parley on the Straits, although it desired to see such a gathering summoned. The Turkish-Soviet Treaty expired on Nov. 7, 1945.

Armenian, Georgian, Kurdish and Iranian Issues.—Linked up with Soviet Russian pressure on Turkey for control of the Dardanelles, called by a Turkish commander "the throat of the Turkish nation," is the Soviet campaign along the Turkish-Iranian-Iraqi borders, raising Armenian, Georgian, Kurdish and Azerbaijan issues involving race, religion, oil and "security." Soviet Russia's claim to the Turkish districts of Kars and Ardahan is based on the fact that this territory, after having been Ottoman-Turkish for centuries, was ceded by the Ottoman Empire to Czarist Russia in 1878 after the Russo-Turkish War; but she ignores the other fact, that it was returned by Soviet Russia to the Turkish Republic according to the terms of the Russo-Turkish treaty of friendship in 1921 after a plebiscite that gave the provinces to Turkey by a vote of 85,000 to 1,900. Although no Armenians live in the areas of Kars and Ardahan, Soviet Russia is attempting to add these territories to her Armenian Republic.

For the unofficial claim made by two Soviet-Georgian professors to 12,500 Turkish square miles, stretching westward along the Black Sea beyond Trabzon (Trebizond) to Giresun, all to be added to Soviet Georgia, two reasons are advanced: (1) that of "strategic necessity" to protect the oil fields of Batum, and (2) the existence of Georgian refugees from Czarist Russia in that area.

Prime Minister Saracoglu stated on December 1 that the government's main object was to maintain the country's integrity, for which it had adequate moral strength. "Turkey," he said, "from the Premier down to the peasant, is resolved to remain free and would fight for freedom if threatened." He affirmed that Turkey would never be willing to become a vassal state of any power. This statement was interpreted as a declaration of policy addressed to diplomatic circles which maintain that the threefold Russian pressure for the Dardanelles, "Armenia," and "Georgia" aim at forcing Turkey, the only completely independent state in the Middle East, and therefore called by the Russian press "the only gap in the Soviet security line," away from her British-French alliance and into one with Russia.

Other Foreign Relations.—The Turkish government recognized the Polish provisional govern-

ment on August 5. On the same day the Turkish foreign minister was received by the Lebanon ministers in Beyrouth to discuss the questions of Turkish recognition of Syria and Lebanon and of Lebanese properties in Turkey. On September 17 Prince Abdul Illah, regent of Iraq, with his prime minister arrived in Ankara to discuss measures to improve economic and political relations. Iraq and Turkey are, with Iran and Afghanistan, signatories of the Saadabad Treaty of nonaggression and noninterference which links them with the Arab states. Efforts to strengthen that bond aim at forming a solid Moslem bloc (Turkish-Arab-Iranian) in the Middle East to resist foreign intervention and to co-operate in schemes for regional betterment. On December 11 the Turkish prime minister declared in the National Assembly that the Greek-Turkish treaty of alliance, which would involve Turkey were Greece attacked, was still binding.

Bid for Oil.—In July discussions started with British and American representatives concerning Turkey's needs for oil, and ways of increasing the supplies from Anglo-American Middle Eastern sources. Formerly Turkey had obtained an important part of her petroleum requirements from Rumania, but after the Axis defeat, Rumanian oil was diverted to Soviet Russia, partly as reparations, partly on a commercial basis. Turkish authorities were therefore on the lookout for oil supplies to cover future needs and to free the Turkish economy from exclusive dependence on Soviet Russia.

Economic Reconversion to Peace.—Turkey's economically privileged position had its start in 1939 when both the Allies and the Axis began to make large purchases of vital war commodities from her, with a resulting boom not only for business men and speculators but for the peasants. This boom collapsed when Turkey declared war against Germany. Germany not only no longer took Turkish products but the Allies no longer needed to buy surplus products to keep them from Germany. But Turkey, even during the war, had depended on Germany, geographically the nearest great industrial power, for essential supplies of rolling stock and industrial machinery, tools, instruments and economic products. Germany's elimination, first as an enemy and then as a defeated country in a state of industrial paralysis, forced Turkey to seek elsewhere for the necessary imports. Consequently, electrical equipment and accessories are being bought in the United States; negotiations have been under way with Canada for the construction of eight maritime vessels to be delivered in 1947; a British delegation arrived in Turkey to arrange the purchase of £300,000 (sterling) worth of rail equipment. As to exports, the readjustment forces function with the removal of the 10 per cent export tax from nearly all commodities. Those which have been freed of the export tax include all of Turkey's chief exports except certain tanning materials that are in great demand in the United States. The removal of the export tax had the effect of curbing prices for foreign buyers but further cuts will be necessary to produce normal trade conditions. Foreign loans are wanted, some for construction purposes such as highways and power plants according to the five-year industrial plan, and others for short terms to bridge seasonal needs between production and organized export.

Budget.—Hitherto the financial year has started June 1, but commencing in 1946 it will start January 1. The budget for the seven months

from June 1, 1945, to Dec. 31, 1945, amounted to £T603,404,824 (1 Turkish pound = \$.77625, U.S. currency):

National defense	87,114,700
Extraordinary expenses	179,333,338
Public debts	84,662,026
Ministry of finance	45,016,657
Public education	51,012,927
Public works	37,442,734
Gendarmerie	17,729,402
Public health	17,907,024
Agriculture	14,513,245

Domestic Policy.—President İsmet İnönü, speaking to the youth of the country in Ankara on May 10, reviewed the government's plans for primary education, the distribution of land to peasants, and the development of industries, and said that as soon as precautionary measures imposed by the war were lifted, democratic principles would be given the widest scope in both the political and intellectual life of the country. On June 7 the National Assembly passed a land reform bill under which large estates would be distributed to peasants without land so that they would have sufficient land for their subsistence. On June 11 it was announced that the government had created a Ministry of Labor which would take over matters affecting labor hitherto handled by the ministries of Economy and Health. The Ministry of Education appointed the first American professor, Dr. Carroll C. Pratt, head of the department of psychology at Rutgers University, as head of the department of philosophy, psychology and sociology in the University of Ankara. On October 22 the government established a naval commando defense service to consist of all men from 16 to 60 and all women from 20 to 45. The president on November 1 stated that the government was opposed to dictatorial principles and aimed at giving the country a freer political life, that elections would be held in 1947 with the direct and secret ballot; in the meantime the laws of the press and of associations would be amended. At the end of December a new political party, the Democratic Party, was being organized by former Prime Minister Jelal Bayar, in opposition to the People's Party. Its program calls for measures of decentralization, a greater degree of local self-government, direct elections and the secret ballot, curbs on state control of industry and encouragement of private enterprise.

TURKEYS. According to the Department of Agriculture's October 1 estimate, 44,150,000 turkeys were raised in the United States in 1945, as compared with the 1944 crop of 36,342,000 birds, and the 1937-41 average crop of 30,723,000 birds. California, which took first place among producing states in 1944, held on to that position in 1945 with a total of 4,942,000 birds. Texas, the second largest producer raised 4,701,000 birds, while Minnesota came third with 4,176,000. Vermont and Maryland, whose turkeys, according to the menus, are supposed to grace every Thanksgiving and Christmas feast served in the hotels of the East, raised 207,000 and 480,000 birds, respectively, which, after all, is considerable turkey.

TURNER, Richmond Kelly, U.S. naval officer: b. Portland, Oreg., May 27, 1885. As one of the navy's experts in amphibious warfare, Admiral Turner participated in most of the major engagements of the Pacific war. In August 1942, he commanded amphibious forces in the Guadalcanal-Tulagi invasions, the first retaliatory move in force made by the Allies against Japan, and thereafter directed amphibious operations for the invasions of New Georgia Island, July 1943; Tarawa, Makin, and Abemama atolls in the Gilberts, November 1943; Kwajalein and Eniwetok atolls in the Marshalls, February 1944; Saipan in the Marianas, May 1944; and Iwo Jima, gateway to Japan's inner defenses, in February 1945.

Admiral Turner was graduated with distinction from the United States Naval Academy in 1908, fifth in a class of 196. He served in various capacities before he went to the Pacific for active sea duty in July 1942, as commander, amphibious force, South Pacific force. His service medals include the Navy Cross, the Distinguished Service Medal, gold stars in lieu of second and third Distinguished Service Medals, the Victory Medal, Atlantic Fleet Clasp. He was prompted full admiral on May 24, 1945.

TWENTIETH CENTURY FUND. Founded in 1919 by the late Edward A. Filene as an endowed foundation to promote better "economic, industrial, civic and educational conditions" in the United States. Since 1937-38 all of the fund's resources have been devoted to its own program of research and educational activities to help the American people solve some of their chief economic problems.

During the war and immediate transition period, an increasing proportion of the fund's work has been concerned with problems of postwar reconstruction. Its published reports included in 1945 a symposium by six leading economists on postwar fiscal and financial problems, a survey of trends in collective bargaining, and two reports in a popular series: on pressure groups in America and on foreign trade prospects after the war.

Current major research projects include a survey of America's postwar needs and resources, a study of the foreign trade relations of the United States, and two related surveys, one on trends toward monopoly in domestic business and the other on cartel arrangements in international trade.

The fund's research findings, together with recommendations for public policy by especially appointed committees of representative citizens, are published in book form and given further dissemination through the press, radio, motion pictures, and popular pamphlets.

The officers of the fund are: John H. Fahey, president; Henry S. Dennison, chairman, executive committee; Morris E. Leeds, treasurer; Evans Clark, executive director; J. Frederic Dewhurst, economist. Address: 330 West 42nd Street, New York 18, New York.

UNION OF SOVIET SOCIALIST REPUBLICS (USSR). *Territory and Political Divisions*.—The Union of Soviet Socialist Republics (USSR) is a federation consisting of 16 republics. Before 1917 most of its territory was part of the Russian Empire, proclaimed by Czar Peter I in October 1721. In 1917, Nicholas II, the last czar, abdicated as a result of the March revolution. A provisional government was established, which in turn was overthrown in November 1917 (October by the old Russian calendar). The second, or October Revolution, ushered in the Soviet regime. In June 1918 there was adopted the first Soviet constitution, that of the Russian Soviet Federated Socialist Republic (RSFSR). After three years of destructive civil war and foreign armed intervention the Soviet regime was victorious. In 1923 four Soviet republics—the RSFSR, the Belorussian SSR, the Ukrainian SSR, and the Transcaucasian Federation—united to form the USSR. Later five Central Asiatic republics emerged from the RSFSR; the Transcaucasian Federation broke up into three republics; and five more republics were formed on the western border of the USSR. Thus, the Union now consists of 16 republics. These republics with their capitals are as follows:

RSFSR	(Moscow)
Ukrainian SSR	(Kiev)
Belorussian SSR	(Minsk)
Azerbaijani SSR	(Baku)
Georgian SSR	(Tbilisi)
Armenian SSR	(Yerevan)
Turkmen SSR	(Ashkhabad)
Uzbek SSR	(Tashkent)
Tadzhik SSR	(Stalinabad)
Kazak SSR	(Alma Ata)
Kirghiz SSR	(Frunze)
Karelo-Finnish SSR	(Petrozavodsk)
Lithuanian SSR	(Vilnius)
Latvian SSR	(Riga)
Estonian SSR	(Tallinn)
Moldavian SSR	(Kishinev)

These 16 republics, known as Union republics, are sovereign states. Their right to secede from the Union is guaranteed by the Union Constitution; in February 1944 they also obtained the right to have their own armies and establish direct relations with other states. Prior to February 1944 defense and foreign relations were exclusively the province of the Union government.

Within the Union republics there may be further subdivisions, such as: autonomous Soviet Socialist republics, autonomous regions, and national districts. The largest Union republic, the Russian (RSFSR), is itself a federation, containing several of the above-mentioned subdivisions. As a result of the victorious termination of the Second World War, the territory of the USSR has expanded. In the west, parts of what used to be East Prussia have been added to the Lithuanian SSR. The city of Königsberg and the area surrounding it became part of the RSFSR, although separated from the rest of the territory

of that Union republic. In the Carpathian Mountains, so-called Carpatho-Russia or Carpatho-Ukraine (see RUTHENIA) has become part of the Ukrainian SSR. This area formerly belonged to Czechoslovakia. It was joined to the USSR, according to the wish expressed by the population of that area, by the treaty concluded between the USSR and Czechoslovakia (signed June 29, 1945). In the Far East, as a result of the victory over Japan in August 1945, the USSR reannexed the Kurile Islands, which belonged to Japan from 1875 to 1945, as well as the southern half of the island of Sakhalin, lost by Russia to Japan in 1905. In the north the Petsamo area was added to the RSFSR as a result of the armistice with Finland in September 1944; and in the Far East, Tannu Tuva has joined the same republic as an autonomous region.

The RSFSR has a population of over 100,000,000, of which over 70 per cent is Russian. In the other Union republics the Russians constitute a minority. At the time of the Hitler invasion the population of the USSR was estimated to equal approximately 200,000,000, and the total area was 8,337,740 square miles. At the time this is written no total figures on population changes are as yet available. In the first three years of war the Red Army lost 5,300,000 men (killed, prisoners, and missing). The losses among the civilian population are considered by most observers to be much higher.

Geography and Natural Resources.—Topographically the USSR may be divided into seven zones. Along the Arctic Ocean lies the frigid zone or tundra, where winter lasts eight months and only a thin layer of the earth's surface thaws during the summer. Next comes the forest zone, covering about one half of the entire country and containing about one third of the world's lumber supply. Moscow lies just south of this zone, where the soil is known as podzol. Farther south the forest grows thinner and the third zone has forest mixed with steppe. Black-earth soil, famous for its fertility, begins with the forest-steppe zone and extends into the fourth zone, that of the steppe. The steppe zone stretches from the Carpathian Mountains in Europe to the Altai range on the borders of China. In the southern part of the steppe zone the soil becomes light brown and less suitable for agriculture. The fifth zone is semidesert, and the sixth, desert. The deserts are either sand or clay; large sand deserts are found in Central Asia. The last zone, the seventh, is subtropical and is located in Central Asia and south of the Caucasus Mountains.

Both vegetation and animal life vary from zone to zone, as one moves from the Arctic toward the borders of India. The farther inland, the more marked become the continental characteristics of the climate, with long cold winters and short hot summers. The pole of fridity lies in northeastern Siberia, where the annual variation in temperature is greater than anywhere in the world (from +91.4°F. to -94°F.). The heaviest precipitation is found on the Pacific coast and in the Transcaucasus region.

In the European part of the USSR flows the Volga, the longest river in Europe. The Volga, Don, and Dnieper flow south, the Western and Northern Dvina, north. Since these rivers and several of their tributaries start in the center of

European Russia, they lend themselves to being connected by canals. In Siberia the several great rivers (Ob., Yenisei, Lena) flow north into the Arctic, except the Amur, which flows into the Pacific. These rivers provide natural routes of transportation. The world's largest inland sea, the Caspian, is mostly in the USSR, and Lake Baikal in Siberia is the deepest lake in the world.

The general land structure has a resemblance to that of the United States, but the relationship of plains and mountains is reversed in the USSR, where the north and west parts are flat and the east and south, mountainous. In the Crimea the elevation is 5,062 feet above sea level; the Caucasus Mountains, the highest in Europe, rise to 18,468 feet. The highest elevation in the USSR is in Central Asia, in the Tien Shan range (22,940 feet) and the Pamirs (24,590 feet). The Ural Mountains (highest elevation, 6,151 feet) bisect the great Soviet plain. The highest active volcano in the Old World (15,912 feet) is found in Kamchatka.

In mineral and vegetable resources the Soviet Union is one of the richest countries in the world. New deposits are continually being discovered. Between the two world wars the prospected deposits of coal and petroleum increased sevenfold, of lead ninefold, of zinc tenfold, of copper 28-fold. About three years ago diamonds were discovered in the Urals, an area which up to that time had yielded a variety of other minerals, but not diamonds. The coal deposits of the USSR are estimated at one fifth of the known coal deposits of the world; the Kuznetsk basin in western Siberia alone contains two and a half times more coal than the coal fields of Great Britain. The USSR possesses around 55 per cent of all "proved deposits" of petroleum in the world. Large iron deposits are located in the Ukraine, the Urals, eastern Siberia, and the Crimea. In the Urals there is a whole mountain of iron ore, near which Magnitogorsk is now located, with its iron and steel foundries. The USSR has deposits of zinc, lead, platinum, silver, gold, tin, nickel, molybdenum, wolfram, sulphur, bauxite, graphite, mercury, uranium, and many other minerals. Probably the largest deposits of peat are found in the USSR. There also exist vast deposits of so-called "agricultural ores" and salt.

The agricultural region of the USSR stretches for over 3,000 miles. As the irrigation projects develop in the southern areas, the Soviet Union is likely to become an increasingly important cotton producer. With approximately 2,500,000,000 acres of forest land, the potentialities of lumber production are very great. The USSR is already a large fur producer, and fishing and crabbing are important, particularly on the Pacific coast. The power capacity of the rivers and streams is estimated to equal slightly less than one third of the potential water power capacity of the world.

Economic System.—As a result of the October Revolution of 1917 the economic system of the USSR is markedly different from that of any other country. It is a socialist system of economy in which private ownership of the means and instruments of production (including all land and natural resources) has been abrogated. Socialist property exists either as state property (possession of the whole people) or as co-operatively or collectively held property (possession of a collective farm or of a co-operative association). Small private economy is permitted, provided it

the exploitation of the labor of others, and the constitution guarantees the right to personal property and inheritance of such. Work is both a duty for all able-bodied citizens and a right guaranteed to them by the constitution, which states: "He who does not work, neither shall he eat."

The motto of this socialist economy is: "From each according to his ability, to each according to his work." In a Communist society, the motto would be: "From each according to his ability, to each according to his needs." Since the Soviet economy does not produce in sufficient quantities for distribution "according to need," there is no communism yet, although the stated goal of the Communist Party and the Soviet state is to achieve such an end in time. Soviet leadership regards the socialism of today as the first step toward a Communist economy of the future.

Throughout the Soviet Union there exists a great variety of languages, local customs, and traditions. It is emphasized that each nationality or national group should, if it so desires, develop its own national forms. There thus exists a great diversity in forms, particularly as to language and cultural manifestations, while the economic content is made uniform by the fact that the economic life of the country as a whole is determined and directed by the state national plan. Hence, to express this combination of variety and uniformity, Soviet culture is referred to in the USSR as "national in form, but socialist in content."

Since people are recompensed in "accordance with their work" and since the quality of work differs, there are considerable variations in wages and salaries, depending on the skill of the individual and the amount of socially useful work performed. In the USSR production and distribution, capital accumulation and investments are all planned and conducted through the mechanism of the state. Thus the role of the state is not only quantitatively greater, but qualitatively different, as compared with other countries. In a planned economy, like that of the USSR, there does not exist what is known in economics as "the open market," or "the law of supply and demand." Production, distribution and prices are the result of a planning process. The Soviet Union has no unemployment and no periodic fluctuation in economic activity or crisis. One of the best indicators from which one can appraise the operations of the Soviet economy is the annual state budget, which includes items reflecting the majority of economic operations of the country.

The population consists of two harmonious socio-economic classes and one stratum. There is the working class, in which workers on soviet farms (*sovkhoz*) are included, operating with plant, tools, and equipment owned by the state. There is the peasantry, now predominantly collective farmers, who are co-operative owners of their collective farm property, but rent most of the machinery they use from the state. There are the professional workers, servicing the two classes, who are regarded as a stratum, but not a class, because of the absence of an independent economic base. The proclaimed goal of the Soviet regime is to achieve a classless society.

These basic economic characteristics and aims of the Soviet regime which had been laid down long before the Second World War, have not changed in the course of the war, and are, in the opinion of this writer, established in the So-

Government.—The highest authority in the land is the Supreme Soviet of the USSR. It consists of two houses with equal rights: the Soviet of the Union and the Soviet of Nationalities. Both houses are elected by universal, direct, equal and secret ballot. The Soviet of the Union is elected according to election areas on the basis of one deputy for every 300,000 of the population; the Soviet of Nationalities is elected on the basis of 25 deputies from every Union republic, 11 from every autonomous republic, 5 from every autonomous region, and 1 from every national district. After the adoption of the Constitution of 1936 the first general election was held in December 1937, with 91,000,000 people voting, or 96.8 per cent of all eligible voters. Numerous other bodies are also elective. In the local elections held in December 1939, 93,000,000 voters participated, electing 1,286,734 candidates, of which number 422,362 were women, to various offices. In this election over 6,000,000 citizens worked on the election boards.

Normally, the Supreme Soviet is elected for a term of four years and holds sessions twice a year, although it may also convene in special sessions. The term of the first Supreme Soviet, which held its 12th session in June 1945, was extended on account of the war. The second general election was scheduled for February 1946.

The Supreme Soviet elects a presidium, which is constantly in session. The chairman of this presidium performs the duties of titular head of the state. Hence, he is sometimes incorrectly referred to as "president" of the USSR. At the time of writing, this office is held by Mikhail I. Kalinin.

The Council of People's Commissars is appointed by the Supreme Soviet and is responsible to it. This council, or cabinet, is larger than similar bodies in other countries, since it includes people's commissars in charge of various branches of industry. The Supreme Soviet also selects the Supreme Court of the USSR for a term of five years. Lower courts have citizen judges chosen from panels, like an American grand jury.

In the USSR both the executive and the judiciary branches of the government stem from the legislative, as under the parliamentary system of European countries, and unlike that of the United States, with its system of checks and balances. Each of the 16 Union republics has its own Supreme Soviet, Council of People's Commissars, judiciary, etc.

The only political party in the USSR is the All-Union Communist Party (Bolsheviks). In the Supreme Soviet elected in 1937, of all the deputies 70 per cent were party members and 30 per cent had no party affiliation. By the end of 1943 the Communist Party had 4,600,000 members and candidates. More recent reports in the Soviet press (May 1945) place its total numbers at 5,800,000. The Communist Party is regarded in the USSR as the vanguard of the toilers and embraces the most politically conscious and active people, be they in offices, factories, on the farms, or in the armed forces. In local elective bodies such as city and village soviets (councils) Communist Party members are apt to be in a minority.

Another unusual feature of Soviet political life is the fact that in the 1937 election, at least, practically all districts ran only one candidate. Although the constitution in no way limits the number of candidates, in practice the contest appears to have developed over nomination of can-

didates, with contestants withdrawing when the nomination of someone by the majority of organized bodies of citizens in the locality seemed assured. Whether this practice of concentrating the local struggles around nominations, but having the elections uncontested, will persist is impossible to say.

A third special feature is found in the fact that important measures are often signed by both government and party representatives. During the Second World War the government and the party created a defense council, a body smaller than the Council of People's Commissars, which acted as the highest executive authority. In May 1941, Joseph V. Stalin, for many years secretary of the Communist Party, became chairman of the Council of People's Commissars (prime minister), and after the USSR was invaded, also assumed chairmanship of the new defense council.

In the Communist Party the highest authority is vested in the party congress. The last such congress (the 18th) was held in the spring of 1939. The congress elects a central committee, several bureaus, and a secretariat, which function between congresses. In case of urgent problems, nationwide conferences of all leading party members are held, as was the case early in 1941.

The present Union Constitution was adopted in 1936, superseding the earlier document of 1923, adopted when the Union was formed. The constitutions of the Union republics have been revised to conform to the Union Constitution of 1936, whose general pattern they follow.

Population.—At the time of the latest census (January 1939) the population of the USSR was 170,000,000. The addition of five Union republics in the west added about 23,000,000. At the time of the Hitler invasion (June 22, 1941) the total population of the Union was estimated to have been in the vicinity of 200,000,000 people.

The natural increase of the population in pre-revolutionary Russia was one of the highest in Europe, but so was the death rate, particularly infant mortality. The Soviet public health service, in which preventive medicine and child care play a very important part, together with the expansion of medical care in general, which in the USSR is a free public service, have lowered the mortality rate. From 1926 to 1939 (two census years) the average annual increase of the population was 12.3 per thousand. What the total population loss has been in the war, is as yet impossible to say. It may have been 10,000,000 and it may have been a considerably higher figure. Most authorities seem to agree that the Soviet population will grow at the old rapid rate of about double that of the rest of Europe, exclusive of the Balkans. The absence of figures on war losses precludes any estimates as to how long it may take to fill the gap produced by the war.

Between the censuses of 1926 and 1939 there was a marked shift of population from rural to urban. The natural increase in the rural population between the censuses was 18,200,000, but 24,400,000 migrated to the cities, leaving a net decrease in the countryside of 6,200,000. In 1926 there were 33 cities with over 100,000 inhabitants; in 1939 there were 82 such cities. In 1926 there were three cities with a population of over 500,000; in 1939 there were 11 such cities. At the time of the German invasion the USSR was about one-third urban, while at the turn of the century the country was about one-tenth urban.

At the time of the latest census slightly less than 100,000,000 people were listed as Russians, or 58.4 per cent of the total. The Ukrainians formed 16.6 per cent; eight other nationalities accounted for between 10 and 1 per cent each. The addition of other non-Russian peoples in the five Union republics that joined in 1940 and the inclusion in the Union of western Ukraine and Belorussia in the autumn of 1939 further increased the non-Russian population. At the present time it is estimated by some that the Russians form less than 50 per cent of the total, but this question can be answered only at some future date by the results of the next census.

In the course of the war great numbers of people migrated east. In the Urals, in central Asia and in Siberia the population of many cities must have more than doubled. It is too early to say whether this shift is going to be permanent and it is impossible to estimate even approximately its extent. The only thing that can be said is that the war has changed the population distribution probably in a very marked fashion. As to the extent and duration of this change, again only the next census will provide an answer.

Industry.—Before the revolution, Russian industry was not developed to correspond to the country's natural resources. In 1913 Russia produced industrially about one fifteenth of what the United States produced then; in 1937 Soviet industrial production amounted to about one third of America's. The devastation brought about during the First World War (1914-17) and the civil war (1918-21) set the country back very considerably. Only in 1926 did both the national income and industrial production exceed the 1913 level. A rapid expansion of production soon followed, reaching by 1940 an approximate elevenfold increase over 1926.

This expansion was achieved through a succession of five-year plans. The first (1928-32) created a heavy industry base through the development of iron and steel production and of new industrial bases in the east; large-scale production of agricultural machinery was also initiated. The Second Five-Year Plan (1933-37) continued the expansion of basic iron and steel production, but also laid more stress on consumers' goods and emphasized the production of motors and electrical appliances. The Third Five-Year Plan, scheduled for completion in 1942, but interrupted by the war, laid particular stress on the development of new fuel and power centers and on the expansion of the chemical industry. In the course of the five-year plans, the country, previously predominantly agricultural, became industrialized. The number of workers and employees rose from 17 per cent of the entire population in 1928 to 35 per cent in 1937. Membership in the Soviet trade unions before the war stood at over 25,000,000, a higher figure than the membership of the AFL, the CIO, and the British trade unions combined.

After 1937 very little was published on the further expansion of Soviet industry. The German General Staff very clearly under-estimated the progress being made by industry in the Urals and points farther east from 1937 to 1941, and seems to have altogether failed to anticipate the fact that much of Soviet industry would be evacuated east as the Germans advanced into the country. So far there has not been published any data on wartime Soviet production. One knows that industrial plants, equipment and

workers were evacuated to the Urals, Siberia, and Central Asia on an unprecedented scale in 1941 and 1942. Toward the end of 1942 the Soviet armies struck back at the invaders at Stalin-grad with much new equipment. The lend-lease aid was at that time quite insignificant. It was Soviet industry that provided the tools with which this battle, the second strategic turning point of the war (the Battle of Moscow in 1941 being the first), was won.

In the course of the war most of the production of Soviet industry was devoted to manufacturing for military needs, with the output of consumers' goods reduced to a minimum. In a great many instances the production of articles of consumption apparently ceased altogether. The devastation brought about by the invasion was very great; 31,850 industrial enterprises that employed approximately 4,000,000 individuals, were destroyed or damaged. Rebuilding began as soon as the territories were liberated from the enemy. A very lengthy decree on reconstruction measures was issued in August 1943. Allotments of funds for new capital investments amounted to 29,000,000,000 rubles¹ for 1944 and 40,100,000,000 rubles for 1945. Nearly half of the 1945 allotment was intended for reconstruction work. In this connection it may be interesting to note that the figure for 1945 begins to approach the figure for 1941 when the allotment of funds for new capital investments was 57,000,000,000 rubles.

On Aug. 19, 1945, the Council of People's Commissars and the Central Committee of the Communist Party gave instructions for a new five-year plan to be drawn up, to run from 1946 to 1950. At the time this is written, no details are as yet available. When the newly elected Supreme Soviet assemblies in 1946 more information may appear in print. From statements of Soviet leaders it appears that by the end of this new five-year plan it is intended to repair the damages inflicted by the war and to obtain a higher level of production than in 1941. Prior to the war the Soviet Union was devoting a good deal of attention to a 15-year plan, of which the Third Five-Year Plan was but a part, to extend into the 1950's. It was then anticipated that by the end of this plan, that is, some time in the 1950's, the USSR would catch up with the advanced industrial countries of the West in the per capita output along most lines of production. All this was, of course, shelved by the war. Now the Soviet Union intends to resume the old trend of growth.

Agriculture.—Soviet agriculture is organized along a pattern that does not exist anywhere else. The October Revolution (1917) abolished private ownership of land, both rural and urban, and did away with large nobility landholdings. However, in 1927 the Soviet Union had over 24,000,000 individual peasant households, cultivating the land by very primitive methods. The profound change came with the First Five-Year Plan, when agriculture was collectivized.

The bulk of the peasantry was organized in

¹ The gold content of the Soviet ruble is set at 11.948 grains of fine gold and that of the United States dollar at 13.714 grains of fine gold (15½ grains, nine tenths fine). Thus according to their respective gold contents the ruble can be said to be worth about 87 cents in United States money. But the fixed metallic content of the ruble is of less importance than its role as a unit of accounts for internal use only, which is not sold, bought or quoted abroad. It is, therefore, hard to express ruble values in dollars. There exists a purely artificial rate of exchange, set several years before the Second World War, of approximately 5 rubles to the dollar, at which rubles are sold to those visiting the USSR with dollars.

collective farms (*kolkhoz*). These farms are co-operative enterprises enjoying a permanent use of the land (not ownership). The members own jointly the farm facilities, except for most of the mechanical equipment, which is rented by the collective farms from state-owned machine and tractor stations (M.T.S.). There also exist state farms (*sovkhoz*) or agricultural factories operated directly by the state. In 1938 there existed 242,400 collective farms, 6,358 machine and tractor stations, and 3,961 state farms. In the course of the German Fascist invasion, 98,000 collective farms were sacked and looted. The number of villages burned and destroyed exceeded 70,000. The invaders slaughtered or shipped to Germany 7,000,000 horses, 17,000,000 heads of cattle, tens of millions of pigs and sheep, and consumed poultry in numbers that are even difficult to estimate.

Collectivization of farming, with the resulting mechanization of agriculture, raised the standard of living of the countryside, and allowed more people to leave for the city for work in industry. The average annual grain production for the entire country in the five years 1933-37 was 40 per cent higher than the corresponding figure for the period 1910-14, and the average yield per unit of land increased by 25 per cent in the later period over the earlier.

While there are as yet no figures on the wartime performance of Soviet agriculture, it is clear that in spite of all the devastation and food difficulties arising from it, the USSR did escape a famine. All Soviet authorities attribute this to both the superior organization and the higher productivity of the collective farm system of agriculture. Women and children carried the main burden of agricultural work during the war and the countryside managed to feed the army and the cities; in spite of all the shortages a general famine was averted. The most immediate task now confronting Soviet agriculture is the rebuilding of tens of thousands of villages, re-equipping the collective farms and replenishing the stock of horses, cattle, pigs, sheep, and poultry. Some livestock had been driven east to safety as the Germans advanced. On Jan. 16, 1945, it was announced that a million head of cattle, sheep, and goats, which had started west to the liberated areas in May 1944, had finally reached their destination. On Nov. 16, 1944, it was reported that for the first time since the war started, it had been possible to sow winter crops throughout the country; the area sown by that time exceeded the 1943 total by 12,350,000 acres.

Transportation.—The railroad system of the USSR is still far from adequate. In 1937 there existed 53,000 miles of railroads, four times less than in the United States, although the territory of the USSR is much greater. In spite of that, the freight turnover is very considerable; the Soviet railroads carried before the war an annual load per mile more than twice as great as the roads in the United States. In recent years several new roads were constructed, but no adequate statistical data on the activities of the war years are as yet obtainable. On Aug. 1, 1945, it was officially reported that more than 31,000 miles of strategic railroads were restored during the war. Owing to the scarcity of other good roads, the railroad lines in the USSR are of particular importance, especially as mud makes the dirt roads very difficult to use in spring and fall. It is, therefore, fair to assume, and Soviet official utterances confirm that assumption, that ex-

tensive railroad construction may develop in the USSR in the near future.

Inland waterways play an important role in the USSR. The White Sea and the Baltic are now united by canals. The Volga-Moscow canal, completed in 1937, has made Moscow a port. Although the building of canals was initiated at the beginning of the last century, large-scale construction began only in the last decade before the Second World War. Further canal building and more intensive utilization of the great rivers, particularly in Siberia, are likely to make river transportation even more important.

The immense distances have prompted the USSR to concentrate on the production of motor trucks. In the late 1930's the Soviet Union was already the second largest truck producer in the world, second only to the United States. Great stress is also laid on aviation, since many areas inside the Union are still easily accessible only by air. In its immediate postwar production Soviet industry is, therefore, apt to stress the acceleration of automobile and airplane manufacturing. On Oct. 7, 1944, it was officially announced that the government now operates a large network of civil airlines in the Soviet Far East.

Foreign Trade.—Since April 1918 foreign trade has been a government monopoly. All goods and payments going in or out of the country pass through this one agency. Soviet foreign trade had not, prior to the Second World War, reached the dimensions of Russia's foreign trade before the revolution. This was accounted for partly by political reasons and difficulties in obtaining the usual credit accommodations abroad. But also the USSR did not have the same compulsion to export as pre-revolutionary Russia, which was a debtor country and had to meet the services on her debts abroad largely through grain exports.

Foreign trade increased sharply at the time of the First Five-Year Plan when the USSR imported a lot of machinery and had to export unexpectedly large quantities of goods abroad, because of the collapse of commodity prices outside the USSR in the economic crisis of the early 1930's. In the course of the Second World War, Soviet foreign trade rose to unprecedented heights, largely owing to large quantities of equipment shipped to the USSR from the United States and England, as part of Allied aid to the Soviet Union in its war efforts. The total value of so-called lend-lease material sent to the USSR from the United States by April 1, 1945, was \$8,409,695,000. On June 26, 1945, the United States Department of Commerce reported that for the preceding year all American exports to the USSR, including lend-lease, amounted to \$3,459,008,000. With the end of the war, shipment of goods on a lend-lease basis was terminated.

As a rule, the USSR sells abroad, gets paid in the currencies of the purchasers of the goods, and uses the balances thus obtained abroad for its own purchases. The ruble is a purely internal currency, which is not quoted abroad; in its foreign trade transactions the Soviet state deals only in foreign currencies or in gold.

American-Soviet trade reached 15 years ago its prewar peak of \$130,000,000. Soviet imports to the United States were never large, one of the main items being furs. From the United States the USSR purchased mostly machine tools and other highly specialized items. Soviet purchases in the United States exceeded Soviet im-

ports, and payments for these purchases were made largely through transfer of funds from other countries or in gold. Future American-Soviet trade possibilities depend largely on the availability of American credits and the expansion of Soviet imports to the United States. While this is being written, negotiations on these points seem to be at a standstill for political reasons.

Finance and Reconstruction.—Unlike most other countries, the USSR has no privately owned banking institutions. The central bank, the State Bank of the USSR (Gosbank) is also a commercial institution with a large network of branches. There also exist special banks with branch networks of their own for the financing of long-term needs of industry, for the financing of agriculture, co-operative enterprises and municipal construction. Prior to the war there were also 41,000 savings bank offices. There is no mortgage banking and neither industry nor agriculture has any outstanding bonded indebtedness. The Soviet state budget, as already stated, includes budgets of all publicly owned enterprises, that is, industry, mining, transportation, etc. Investments are a government function. The First Five-Year Plan carried an investment figure of 51,000,000,000 rubles, the Second, 115,000,000,000 rubles, and in the Third Plan 181,000,000,000 rubles were scheduled to be invested. Revenue is derived from taxation, income from government-owned enterprises and public borrowing. For many years the Soviet state budget was balanced annually and remained balanced through the war.

The 1944 budget was set at 249,600,000,000 rubles. In the course of that year receipts equalled 268,000,000,000 rubles, or 107.4 per cent of the budgetary estimate, and expenditures were 263,000,000,000 rubles, or 105.4 per cent of the budgetary estimate. The budget for 1945 was set at 305,300,000,000 rubles, of which 137,900,000,000 rubles, or 45.1 per cent, were to be devoted to the financing of the war.

Up to the end of 1944 the war had cost the Soviet Union 420,000,000,000 rubles, according to the Commissariat of Finance, and a Soviet state commission investigating the damages brought about by the invasion gives the figure of 679,000,000,000 rubles as an estimate of the direct loss suffered by the national economy and citizens during the war. Losses in industry and agriculture have already been mentioned. In addition, 1,710 cities have been wholly or in part destroyed. In the cities and country more than 6,000,000 dwellings were destroyed, leaving about 25,000,000 people homeless. Enormous damage was inflicted on the railroad system and its rolling stock.

As was indicated earlier, reconstruction began long before the end of the war. By the end of 1944 considerable production was yielded by the industry of the liberated areas and in agriculture more than 2,000 machine and tractor stations had resumed their work in areas that were overrun by the enemy. In 1943 the expenditures for social and cultural needs (including health, education, and social services) were 37,700,000,000 rubles; in 1944 they rose to 51,000,000,000 rubles; and the 1945 budget carries an item of 66,100,000,000 rubles.

The Soviet Union financed the war largely on a pay-as-you-go basis, relying more on current receipts, than on borrowings. The total internal indebtedness of the Soviet government does not appear to be listed in any one source; at least,

this writer has not located such a listing. But the various internal loans are widely publicized. On May 5, 1945, the campaign for the Fourth State War Loan of 25,000,000,000 rubles opened; by May 13 it had been oversubscribed by 1,384,685,000 rubles. If one adds up these loans from the years before the First Five-Year Plan to the close of 1945, one obtains a figure of not more than 150,000,000,000 rubles. In other words, the internal indebtedness at the end of 1945 equals only about half the budget for 1945. Compared with other countries, the USSR comes out of this war with a very small internal debt and also a correspondingly insignificant burden of servicing this debt in the future.

No figures are as yet available on currency circulation. It is therefore impossible to say whether the currency is overexpanded or not. During the war most goods were strictly rationed and most articles of consumption, beyond the bare necessities, were very hard to obtain. Under the Soviet system more effective rationing and price control is feasible than anywhere else. On two occasions (Nov. 5, 1944, and Aug. 21, 1945), announcements were made of rather extensive price reductions on broad categories of goods, both rationed and unrationed. It appears that having suffered tremendous destruction and great loss of manpower, the USSR has emerged from the Second World War in an internally most sound and solvent financial condition. The method of financing the war out of current receipts and savings, must have added considerably to the hardships, but resulted in a very favorable budgetary situation.

Education.—For centuries the country was largely illiterate and only in the last few decades remarkable progress has been achieved in eliminating illiteracy and raising the educational level. The census of 1897 showed that only 30 per cent of the population could sign their first and last names; but the census of 1939 showed that 81.2 per cent of the population could read and write. As late as the early 1930's there were still millions of adults learning to read and write, but by the outbreak of the Second World War the USSR was approaching the abolition of illiteracy.

The school system has expanded many-fold. In 1938-39 four times as many individuals attended school as in 1914-15. In 1914 there were 91 institutions of higher learning located in 16 cities; in 1939 there were 708 such institutions located in 154 cities. Prior to the war the annual number of graduates from institutions of higher learning exceeded 100,000, and the total college population of the USSR exceeded that of England, France, Germany, Italy, and Japan combined, being still second only to that of the United States.

Secondary education is provided by the 10-year school, which exists in all cities. The countryside is still predominantly served by the 7-year school. It was intended to raise all secondary education to the 10-year school level by 1942, but the war interfered. In Soviet schools the curriculum is much more rigidly prescribed, after the European pattern, than in American schools, and pupils are passed from grade to grade on the basis of examinations. The educational system tends to use standardized texts, prepared by committees of educators and published in millions of copies. The Soviet curriculum also differs from the American in that greater stress is put on geography, history, and literature. The latter is regarded and taught as a social science.

In the course of the war, tuition was introduced in institutions of higher learning and the sexes were separated in secondary schools. The last measure was motivated by the conclusion reached by Soviet educators that boys and girls show a difference in the rate of progress in school. Younger girls appear to be studying better than boys, while older boys show more rapid progress than girls of the same age; hence, the separation of sexes in secondary schools, while coeducation remains in the primary and higher schools. Soviet primary schools started the academic year 1944-45 with 10,500,000 pupils, an increase of 3,500,000 over the previous year.

During the war the schools participated in production and particularly in the gathering of the harvest. In the war years 290,000 specialists were graduated from institutions of higher learning, and 52 new institutions of this type were opened. At the present time (autumn of 1945) the USSR has 772 higher educational institutions with 562,000 students, over 40,000 of whom had just left the army. In March 1945 it was announced that 217 women had been appointed as university professors during the past year. The outstanding event in the cultural field in 1945 was the celebration of the 220th anniversary of the Academy of Sciences of the USSR at a Jubilee Session held by the academy in June, which was attended by scientists from 17 foreign countries, including the United States.

The general rise in the cultural level for the last few decades is best illustrated by the book publishing field. In 1913 there appeared 26,200 titles, as against 40,000 in 1938. A more striking difference, however, appears in the number of copies: 86,700,000 in 1913, as against 692,700,000 in 1938. During the war publications had to be curtailed in view of the paper shortage, but the State Publishing House announced recently that while the war lasted it published 57,000 titles of books and pamphlets with a circulation of 1,000,000,000 copies. Among them were the works of the poet, V. Mayakovski, published in 47 languages, those of Alexei Tolstoy in 38 languages, and of M. Sholokhov in 41 languages. This illustrates one unique feature of both Soviet education and publishing: being a multinational country, the USSR provides instruction and reading material in a great many languages other than Russian.

Religion.—In the USSR the largest body of organized believers is found in the Russian Orthodox Church. Before the outbreak of the Second World War there were approximately 30,000 religious associations (parishes, etc.) of all kinds, with over 8,000 licensed places of worship, about half of which were of the Russian Orthodox Church. There were also over 50,000 individuals practicing religion as a profession.

At the present time there exist two government commissions dealing with matters of religion. One is the Soviet Council on Russian Orthodox Affairs; the other, the Soviet Council of Affairs of Religious Cults, handles issues involving all other faiths. Among several nationalities of the East there are numerous adherents of Mohammedanism and Buddhism. The Roman Catholic Church has a following in the West, in the Lithuanian and Belorussian republics. Among the many religious bodies that have split off from the Russian Orthodox Church, the most numerous are the Old Believers, dating back to the 17th century, and the Renovated Russian Orthodox Church, which arose in the 1920's. There

also exist various Protestant denominations and sects, among whom the Baptists appear to be the most numerous. A Moscow conference of parish delegates in October 1944 organized a United Association of Evangelical Christians and Baptists.

Up to the fall of the monarchy in 1917 the Russian Orthodox Church was the official state church. First under the authority of the patriarch of Constantinople, the Russian Church became altogether independent from its Greek mother church with the election of the first Russian patriarch in 1589. Czar Peter the Great discontinued the patriarchate, establishing in 1721 a council of bishops (the Holy Synod), with a layman appointed by the czar acting as its procurator, thus making the church virtually a subordinate part of the state apparatus. After 1917 the church was separated from the state, and the school system from the church. A new patriarch was elected, but after his death in 1925 no successor was chosen. For several years the church was in active opposition to the Soviet regime, with a vigorous struggle going on between church and government. In 1927 some preliminary steps were taken to suspend active hostilities. When the USSR was invaded in June 1941, the Russian Orthodox Church came out at once in support of the government. During the war the church contributed large sums of money, raised from among its parishioners, to the defense of the fatherland. Several church officials were decorated by the government for their services. In 1943 a new patriarch was elected. The death of Patriarch Sergei in May 1944 necessitated a new congress of bishops, clergy, and laymen (*a sobor*) early in 1945. This assembly in Moscow was attended by representatives of practically all Eastern churches. Although officially it was not a world congress of the Orthodox faith, actually it came very close to being one. The new patriarch, Alexei, was elected on Feb. 2, 1945, and there followed visits by Russian divines to the various friendly churches outside the USSR. In western Europe several Russian dioceses returned to the jurisdiction of the Russian patriarch. The same process took place in the Far East, after the defeat of Japan. In both instances relations severed soon after the revolution were resumed. At the present time only a group of Russian churchmen in Switzerland, who collaborated with the Germans, and most of the Russian churches in the United States, remain outside the fold of the mother church. At the time this is written negotiations are in progress for the resumption of relations between the Russian Church in the United States and the Moscow patriarchate, whose representative, Alexei, archbishop of Yaroslavl and Rostov, arrived in New York in September 1945.

In June 1945 the Armenian Church held a world congress at Echmiadzin in Soviet Armenia and elected a new supreme Patriarch and Catholicos of all Armenians. There were similar gatherings of other faiths. In each case the government was represented by someone specializing on religious affairs, who delivered a greeting and then withdrew. Thus, although new, cordial relations between church and state were established during the war against Hitlerite Germany, the basic principles laid down in the Soviet Constitution remain unaffected: church is separated from state, and all state schools remain strictly secular; religious belief and worship remain entirely private matters; religious believers and officials are, like all other citizens, eligible to vote and be elected to any

government office. Fundamental differences between the religious bodies and the Communist Party also remain unchanged; believers still find it impossible to accept the basic philosophic premise of the Communist Party, that of dialectical materialism, which precludes a belief in the supernatural.

Recent expansion in church activities has included the opening by the Russian Orthodox Church of a Theological Academy in Moscow and several schools where individuals aged 18 or over, who are graduates of Soviet secondary schools, may be trained for the priesthood. Whether this revival of church activity is accompanied by an increase in church membership is impossible to say, in view of the absence of adequate statistical data. The change that has taken place in the attitude of the Soviet government was motivated, one may presume, largely by the patriotic services rendered by the church from the first days of the war to its victorious conclusion.

Some Internal Events.—On July 8, 1944, the Presidium of the Supreme Soviet of the USSR issued a decree increasing state aid to expectant mothers and strengthening protection of motherhood and childhood. On Dec. 21, 1944, Lazar M. Kaganovich, commissar of transportation, was raised to vice chairman of the Council of People's Commissars (vice premier). On June 23, 1945, the 12th session of the Supreme Soviet ordered the demobilization of the 13 oldest age groups in the Red Army.

Among prominent Soviet citizens who died during this period were the following: Aleksei Tolstoy, noted writer (Feb. 23, 1945); Marshal Boris Shaposhnikov, former chief of the Red Army General Staff (March 26, 1945); Col. Gen. Alexander S. Shcherbakov, member of the Communist Party Political Bureau, secretary of the Central Committee of the party, chief of the Red Army's Political Department, and head of the Soviet Information Bureau (May 10, 1945); Alexander Fersman, noted geologist (May 20, 1945); Demyan Bedny, poet and playwright (May 25, 1945); Dzhambul Dzhambov, Kazak folk bard (June 22, 1945); Lieut. Gen. Boris G. Galerkin, director of the Institute of Mechanics of the Academy of Sciences of the USSR (July 12, 1945); Aleksei Favorsky, organic chemist, pioneer in the development of synthetic rubber (Aug. 6, 1945); Vladimir L. Komarov, botanist, former president of the Academy of Sciences of the USSR (Dec. 6, 1945).

Many Soviet citizens received awards in recognition of their services. Marshal Stalin, who received the title of generalissimo on June 27, 1945, was awarded the Order of Victory, the Order of Lenin, the Gold Star, and the title, Hero of the Soviet Union, by the Presidium of the Supreme Soviet on June 23, 1945. The Order of Victory was also given to Marshals Ivan S. Konev and Gregory K. Zhukov (March 30, 1945). Nikolai Morozov, aged 90, astronomer and geophysicist, was awarded the Order of Lenin on Aug. 15, 1944; Vladimir L. Komarov, then president of the Academy of Sciences of the USSR, was decorated on Oct. 14, 1944; and on Nov. 6, 1944, 81 members and employees of the Ukrainian Academy of Sciences were awarded the Order of Lenin. On Dec. 23, 1944, the Soviet embassy in Washington, D.C., announced that up to Oct. 1, 1944, 2,868,962 persons had been awarded decorations.

Victorious Ending of the War.—The middle of 1944 found the Red Army continuing the of-

fensive that began in 1943 after the battle of the Kursk salient and continued, with minor interruptions, until victory. On July 1, 1944, the Berezina River was forced and Borisov taken, the site of the final blows against the remnants of Napoleon's army over a century before. Minsk, the capital of Belorussia, was recaptured July 3. Vilnius, capital of the Lithuanian SSR, was liberated July 13. Pskov was taken July 23, Narva July 26, Lwów July 27, Brest-Litovsk and Przemyśl on July 28. On July 31 the Nemunas (Niemen) River, on the border of East Prussia, was forced.

Kishinev, capital of the Moldavian SSR, was liberated August 24, the Rumanian Black Sea port of Constanța was taken on August 29, and the Red Army entered Bucharest on August 31. Marshal Tito announced (September 6) that the Red Army had entered Yugoslavia, after crossing the Danube from Rumania. Tallinn, capital of the Estonian SSR, was liberated September 22, and Riga, capital of the Latvian SSR, on October 13. The entry of the Red Army into Czechoslovakia was announced on October 18. On October 20, Belgrade was liberated by Soviet and Yugoslav troops, and the Norwegian border was reached on October 23. On the same day it was announced that the Red Army had driven into East Prussia. In his anniversary address (November 6) Marshal Stalin said that during the past year the Red Army had put 120 enemy divisions out of action, but that the Red Army still faced 180 German divisions. By November 24, Soviet land and naval forces had completed the liberation of the Estonian SSR, and other Soviet forces reached the Danube north of Budapest on December 9.

With the advent of 1945, an offensive was begun in Poland and East Prussia (January 14), Warsaw was liberated (January 17), Krakow and Lodz taken (January 19). On January 20, Tilsit in East Prussia fell, and on the following day Tannenberg was taken. Also on January 21 the Red Army crossed the German border into Silesia. The Oder River was first reached on January 23, and Soviet troops entered Pomerania January 29. After a six weeks' siege, Budapest was captured (February 13), and in Poland, Poznan fell (February 23) after a siege of one month. The Austrian border was reached on March 29. Danzig (Gdansk) was taken on March 30; Königsberg, April 9 and Vienna, April 13.

On April 23 the Red Army broke through to Berlin and reached the Elbe River northwest of Dresden. A meeting with the Anglo-American troops took place near Torgau on April 25, and on the same day the encirclement of Berlin by Soviet troops was completed. The final capture of Berlin was effected by Marshal Zhukov in cooperation with troops of Marshal Konev's command on May 2.

On May 8, German Field Marshal Wilhelm Keitel signed the act of unconditional surrender of German armed forces to the Supreme High Command of the Red Army and the Supreme Command of the Allied Expeditionary Forces at Berlin. The Presidium of the Supreme Soviet of the USSR proclaimed May 9 Victory Day, but German resistance continued in some areas. Prague was taken by Soviet troops on May 9, and only on May 13 was the last shot fired. On May 15 the Soviet Information Bureau issued the final communiqué of the war, reporting that the taking of prisoners on all fronts had been completed.

UNION OF SOVIET SOCIALIST REPUBLICS

Three months after Germany's unconditional surrender, the Soviet Union declared war on Japan (August 8), effective the next day. On August 9 the Red Army crossed into Manchuria. On August 10, Soviet sources reported that the Mongolian People's Republic had declared war on Japan. Soviet Marines invaded Korea on August 12. Two days later (August 14) the Japanese government sent a surrender note to the four powers (Britain, United States, China, USSR), and on the same day Soviet forces entered southern Sakhalin. Marshal Vasilevsky, commander in chief of Soviet Far Eastern forces, received the unconditional surrender of the Japanese Kwantung Army from Japanese Gen. Hikosabura Hata on August 17, and Soviet forces entered Mukden, Harbin, and Changchun on August 20. With the capture of its emperor, the state of Manchukuo was formally dissolved on August 22. On the same day Port Arthur and Dairen (Dalny) were occupied, and Soviet troops made their first landings in the Kurile Islands. The next day (August 23), in his first order of the day of the Far Eastern war, Generalissimo Stalin proclaimed victory over Japan. The occupation of the Kurile Islands was completed on September 1. On September 2, Lieut. Gen. K. N. Derevianko signed on behalf of the USSR the Japanese surrender documents on board the United States battleship *Missouri* in Tokyo Bay. Moscow announced (September 10) that Soviet losses in the Far East war from August 9 to September 9 were 8,219 killed, 22,264 wounded, while 80,000 Japanese were killed, 20,000 wounded, and 594,000 were taken prisoner. (For information concerning the Russian Navy, see NAVAL PROGRESS.)

Foreign Affairs.—During the last half of 1944 the Soviet Union established diplomatic relations with the governments of the following countries: Syrian Republic, July 25; Poland (Committee of National Liberation), August 2; Lebanese Republic, August 4; Iraq, September 12; France (provisional government), October 23; Italy, October 25; Chile, December 11; Nicaragua, December 12. During the first eight months of 1945 diplomatic relations were established with the following: Poland (provisional government, successor to the Committee of National Liberation), January 6; Dominican Republic, March 8; Venezuela, March 14; Brazil, April 2; Bolivia, April 18; Guatemala, April 19; Denmark, May 16; Ecuador, June 16; Rumania and Finland, August 6; Bulgaria, August 15. On Nov. 1, 1944, the Soviet government rejected a proposal by Switzerland (October 11) to establish diplomatic relations.

Following the 20-year treaties of friendship and collaboration concluded earlier in the war with Great Britain (May 26, 1942) and Czechoslovakia (Dec. 12, 1943), the USSR signed similar treaties with France (Dec. 10, 1944), Yugoslavia (April 11, 1945), and Poland (April 21, 1945). On Aug. 14, 1945, a 30-year treaty of alliance and friendship was signed by the USSR and China. While the treaties with the five European powers provided for joint action in case of a recurrence of German aggression, the agreements reached with China were much broader in scope. Joint action in case of a recurrence of Japanese aggression is provided for, but agreements were reached on the independence of Mongolia and Korea, on joint Chinese-Soviet ownership and management of railroads in Manchuria, on a free port in Dairen, and on a joint Chinese-Soviet naval base at Port Arthur. In the spring

of 1945 the Soviet government denounced its friendship and neutrality treaty of 1925 with Turkey (March 21) and its neutrality treaty of April 1941 with Japan (April 5). The latter event was followed some four months later (August 8) by a declaration of war on Japan.

The Soviet military advance in Europe after midsummer 1944 resulted in the detachment of four countries in eastern Europe from the Fascist alliance. On Aug. 22, 1944, King Michael of Rumania announced that his country was out of the war, and on August 25 Rumania declared war on Germany. On September 12 of the same year the USSR signed an armistice with Rumania. On Sept. 5, 1944, hostilities with Finland ceased, and on Sept. 19, 1944, an armistice was signed with that country. On Jan. 31, 1945, the USSR and Finland signed a trade agreement, and on March 4, Finland joined in the war against Germany. Sept. 8, 1944, saw the end of the brief war between the USSR and Bulgaria (begun September 5). An armistice was signed with Bulgaria on Oct. 28, 1944, and diplomatic relations restored on Aug. 15, 1945. On Dec. 28, 1944, the provisional national government of Hungary (confirmed by the National Assembly December 22) declared war against Germany and signed an armistice with the USSR on Jan. 20, 1945. On June 15, 1945, the same government signed an agreement on reparations to the USSR, and on August 27 a Soviet-Hungarian trade agreement was signed. With the end of the war in Europe the Soviet Union, together with France, Britain, and the United States, established four-power control councils and zones of military occupation in Germany (June 5) and Austria (August 8).

In consequence of the amendment to the Soviet Constitution in February 1944, several Soviet republics have appointed people's commissars of foreign affairs. On July 13, 1944, D. Z. Manuilsky was appointed foreign commissar of the Ukrainian SSR, replacing Korneichuk. On Nov. 7, Nov. 29, and Dec. 5, 1944, similar appointments were made by the Latvian, Estonian, and Lithuanian SSR's.

Soviet relations with Poland have developed considerably since the establishment of the Polish Committee of National Liberation on July 23, 1944. Following the exchange of diplomatic representatives with the USSR on Aug. 2, 1944, agreements on population settlement were signed with the Polish Committee of National Liberation by the Ukrainian and Belorussian SSR's on September 9 and by the Lithuanian SSR on September 22. On Dec. 31, 1944, the committee was succeeded by a provisional government of Poland, formed in Lublin, which was recognized by the USSR on Jan. 5, 1945. The Soviet-Polish treaty of friendship followed on April 21, and on June 21, after a series of meetings in Moscow, the provisional government was broadened, according to the agreement reached at Yalta, by the inclusion of other Polish democratic leaders from Poland and abroad, to form the Polish provisional government of national unity. On July 7, 1945, this provisional government signed a trade agreement with the USSR, and on August 16 a Soviet-Polish treaty was concluded fixing the frontier between the two countries and agreeing on reparations to Poland from the Soviet zone of occupation in Germany.

With its allies in the anti-Hitler war coalition the Soviet Union has participated in several international conferences since July 1944: the monetary conference at Bretton Woods, N.H.

(July 1-22, 1944); the Dumbarton Oaks Conference on establishing a United Nations peace organization (Aug. 21-Oct. 7, 1944); the Crimean (Yalta) Conference between the British, American, and Soviet heads of state (Feb. 4-11, 1945), where agreement was reached on matters of Poland and Yugoslavia, on a general policy toward Germany when defeated, and on a policy intended to insure representative governments in postwar Europe; the San Francisco Conference, at which the United Nations Charter was worked out (April 25-June 26, 1945); the Berlin (Potsdam) Conference of the Big Three (July 17-Aug. 2, 1945), at which provisions were laid down for the administration of defeated Germany, and which delegated the problem of final peace settlements to a conference of foreign ministers of the Big Three. The USSR declined (Oct. 29, 1944) to participate in the International Aviation Conference. Soviet delegates participated in the first World Trade Union Congress in London (Feb. 6-17, 1945), and in the Paris meeting of that body (Sept. 25-Oct. 8, 1945), at which trade unionists from 56 countries, representing close to 67,000,000 organized workers, established a World Federation of Trade Unions. On Aug. 8, 1945, the USSR signed an agreement establishing the International Military Tribunal for the determination and trial of European war criminals. A provisional international administration for Tangier, with Soviet representation, was established by a conference in Paris, (Aug. 9-29, 1945). On Aug. 20, 1945, the Presidium of the Supreme Soviet ratified the United Nations Charter, and on August 22 and 30, similar ratifications were announced by the Ukrainian and Belorussian SSR's. This document came in force on Oct. 24, 1945.

As agreed at the Berlin Conference of July-August 1945, a Council of Foreign Ministers (United States, Soviet, British) was held in London, Sept. 11-Oct. 2, 1945, to discuss peace settlements for former allies of Germany in Europe. This conference adjourned without registering any agreement or issuing any statement. A diplomatic stalemate resulted until early in December, when another foreign minister's conference of the big three was scheduled to open in Moscow on Dec. 15, 1945.

UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION or UNCIO (also called the SAN FRANCISCO CONFERENCE). On April 25, 1945, in response to a resolution of the Yalta (Crimean) Conference in February 1945, the United Nations Conference on International Organization was convened at San Francisco, Calif. It completed its work on June 26 with the signing of the United Nations Charter by representatives of 50 nations.

The formal purpose of the conference was to formulate and adopt this charter as a continuing constitution of the United Nations, but it also had the informal purpose of maintaining a spirit among the United Nations assuring their co-operation to make the charter work. Then United States Secretary of State Edward R. Stettinius, Jr., in his report to the president, asserted that

the conference accomplished both purposes in completing the charter in "its dual quality as declaration and as constitution. As declaration it constitutes a binding agreement by the signatory nations to work together for peaceful ends and to adhere to certain standards of international morality. As constitution it creates four overall instruments by which these ends may be achieved in practice and these standards actually maintained. The first function of the charter is moral and idealistic; the second realistic and practical."

The conference was notable among international conferences in a number of respects. It was the first general political conference held outside Europe, thus symbolizing the passage of the world center of gravity from that continent. Furthermore, its membership underrepresented Europe in proportion to the representation of other sections of the world. Beginning with 46 states it ended with 50 of which 22 were American, 15 Asiatic, Pacific and African, and 13 European.

It was a conference of the United Nations, still fighting their principal enemies when it convened, although the surrender of Germany took place during the conference. Italy had surrendered nearly a year earlier and Japan was to surrender seven weeks after its close. It was therefore unprecedented in being a conference to organize peace held in the midst of war. While it had some of the aspects of a peace conference, detailed terms of peace with the enemy, territorial settlements, and economic and financial conditions were carefully excluded from its agenda. The United Nations in organizing the conference purported to act for the community of nations as a whole, and the charter which they produced provided that the organization "shall ensure that states which are not Members of the United Nations act in accordance with these Principles as far as may be necessary for the maintenance of international peace and security."

The membership of the conference was not as numerous as that of other international conferences. Nine Axis powers and eight neutral powers were excluded and one United Nation (Poland), lacking a government generally recognized, failed to be admitted. Yet, because of the size of the delegations and of the Secretariat, the personnel involved in the conference was larger than at any previous conference. Some 10,000 persons participated officially or unofficially in its work. More than 1,500 belonged to delegations including advisers, experts, and assistants. More than 1,000 officials and assistants performed the internal services of the International Secretariat and this body employed nearly 5,000 additional persons in services of transportation, guarding, and communications. In addition, some 2,500 representatives of the press, radio, and cinema informed the world's public of the proceedings.

The conference took place in the San Francisco's Civic Center. The plenary sessions and commission meetings were held in the Opera House, and the committee meetings in the Veterans Building which also housed the International Secretariat. The delegates were housed in hotels throughout the city and adequate transportation was provided by the International Secretariat.

The conference was organized into plenary sessions, commissions, committees and subcommittees. The plenary sessions presided over by the principal delegates of the sponsoring powers in rotation were occasions for general declara-

tions of policy and formal approval of agreements reached in committees, although in one session, that in which Argentina was admitted to the conference, there was vigorous debate and a vote, with not fully anticipated results. There were nine such sessions at the beginning of the conference and one at the end. They were open to the press and such of the public as could obtain tickets.

The work of the conference was divided among four commissions dealing respectively with general problems, the General Assembly, the Security Council and the Court of International Justice. These also were public but seldom did more than ratify agreements reached in committees. The real work of the conference was done in committees, several for each commission and each frequently making use of subcommittees. Every delegation was entitled to representation in each committee. Committee discussions were private but résumés were given to the press after the first two weeks of the conference, during which the press had expressed some discontent at the inadequacy of the information provided.

In addition to the committees of the commissions, there was a steering committee of the heads of the delegations and an executive committee consisting of 14 states chosen by the plenary session. A co-ordinating committee also functioned in order to bring the work of the commissions together and draft the final text.

Most important of all were the meetings of the sponsoring powers although these were not formal meetings of the conference. These took place, not in the Veterans Building, but in the apartment of the head of the American delegation. At first only the four sponsoring powers—the United States, the United Kingdom, the Soviet Union, and China—attended but France was later admitted. The important political decisions of the conference were made in these meetings. The procedure was criticized by some on the ground of secrecy and by others on the ground of its undemocratic character. The press complained that information on the Big Five meetings was not given out, but in fact, important decisions and even the debate which led to them, usually found its way into the press. Delegations frequently complained of this leakage. The great powers justified these meetings on the ground that their unity should be preserved either in maintaining, or in agreeing upon modifications of, the Dumbarton Oaks proposals. Other states felt that this solidarity prevented a fair discussion of issues upon their merits.

The procedure of the conference was probably the most democratic and public of any political international conference and the criticisms arose from the inherent difficulty of adjusting the requirements of bargaining with the requirements of developing a favorable public opinion. It was recognized that the success of the conference depended upon maintaining the solidarity of the great powers who commanded over one half of the population of the United Nations and a larger proportion of their material resources and power. Confidential discussions to achieve agreement among these powers was therefore essential. The delegations, however, were afraid that a favorable public opinion could not be maintained unless the public in all countries had a sense of participation which could only be assured through adequate publicity. The policy of official secrecy and unofficial leakages was the method of solving the difficulty.

The commissions, committees, and plenary sessions acted through a two-thirds vote, a novelty in international political conferences. This procedure led to political alignments and blocs not unlike those in national parliaments. The Latin American bloc, the Arab bloc, and the Soviet bloc usually acted as units. This was less true of the British countries; Australia, New Zealand and Canada assumed a position of leadership among the middle-sized powers which often brought them into opposition with the United Kingdom.

Apart from the opening and closing sessions, the conference was not given to oratory. It labored diligently with the single-minded purpose of reaching results. Millions of pages were mimeographed, the committees often working late into the night, and the International Secretariat was at work almost continually, preparing documents, both for the delegations and for the press. While the activities of the International Secretariat and the material arrangements of the conference at first caused some criticism, after the first few weeks the machinery was operating smoothly.

The San Francisco Conference was one of a series of United Nations conferences. Technical problems had been dealt with in earlier general conferences at Hot Springs, Atlantic City, Philadelphia, Bretton Woods, and Chicago. Major political problems had been dealt with by the leaders of the great powers at Casablanca, Moscow, Cairo, Teheran, Quebec, and Yalta. The immediate antecedent of the San Francisco Conference was the conference at Dumbarton Oaks, held Aug. 21 to Oct. 7, 1944, by the United States, United Kingdom, the Soviet Union, and China. These four powers were the sponsoring powers of the San Francisco Conference, France having declined to accept an invitation extended after the Yalta Conference to join them.

The Dumbarton Oaks proposals, together with certain proposals made by China and accepted by the sponsoring powers and the voting procedure for the Security Council agreed upon by the sponsoring powers at Yalta, constituted the agenda of the conference. Members were permitted to present amendments and revisions up to May 5 and numerous such proposals were made. All of these documents, bound in a volume of some 400 pages were placed in the hands of all delegates and provided the basis for discussion.

The conference opened with speeches from the delegations, all of which paid tribute to the late President Franklin Delano Roosevelt and gave expression to a determination to succeed in the tasks of the conference. The problem of the chairmanship presented the first difficulty. The United States, supported by Latin American countries, wished the chairmanship to go, according to custom, to the head of the host delegation but the Soviet Union pressed for rotation among the sponsoring powers. The issue was solved by agreeing to rotation in the plenary sessions and giving the chief American delegate the chairmanship of the executive committee and steering committee.

The issue, however, disclosed a solidarity among the American states, which constituted nearly one half of the conference, somewhat alarming to certain delegations. The apprehension that a solid American bloc might unduly influence the course of the conference had been augmented by the Mexico City conference of the

American powers which had closed shortly before the San Francisco Conference opened. The Declaration of Chapultepec which emerged from that conference proposed that the American states should constitute a regional arrangement under the United Nations Organization to be established at San Francisco. At Mexico City agreements were also made looking toward the admission of the Argentine Republic to the United Nations.

The Argentine issue was raised at San Francisco and was related to the issue of admission of two Soviet republics and Poland to the conference. The United States having agreed at the Yalta Conference to admit the two Soviet republics—the Ukraine and Belorussia (White Russia)—urged this action upon the Latin American states some of whom, while supporting this move, appeared to have assumed that the admission of the Argentine Republic would be a *quid pro quo*. The Soviet delegation, however, felt the admission of the two Soviet republics was a right involving no other commitments and sought to prevent the admission of Argentina which the Soviets regarded as a Fascist state. This effort failed after a moving appeal by the principal Soviet delegate in a plenary session, and Argentina was admitted by a large majority.

While taking this defeat graciously, the Soviet delegation may have thought it deserved compensation by the admission of the government of Poland which it sponsored, but its plea was unsuccessful. The United States and Great Britain were not convinced that the Polish government conformed to the requirements laid down at Yalta. A new Polish government was recognized in June but too late to attend the conference. Denmark, liberated from Germany during the course of the conference, was unanimously admitted.

The importance of the conference was indicated by the attendance of foreign ministers from the principal countries including Secretary of State Stettinius from the United States, Anthony Eden from the United Kingdom, Molotov from the Soviet Union, T. V. Soong from China, and Bidault from France. In view of exigencies arising from the termination of war with Germany and a pending election in Great Britain, these foreign ministers, with the exception of Secretary Stettinius, had to return home before the conference was over. In general, however, all of the participating states continued to be excellently represented.

The major issues concerned the veto of the great powers in the Security Council, the competence of regional organizations in relation to the Security Council, the competence of the General Assembly to recommend modifications of treaties and regulation of conditions dangerous to peace, the supervision of the administering of dependencies and the organization of trusteeship administration, and provisions for revision of the charter. On all of these matters some compromises and additions were made but the main structure of the Dumbarton Oaks proposals remained in accordance with the insistence of the great powers.

The Soviet proposal that the veto vote should apply even to the initiation of discussions in the Security Council precipitated the major crises of the conference. On this the Soviets finally yielded, as a result of negotiations conducted in Moscow involving also the recognition of a Polish government satisfactory to the Soviet government.

The powers of the General Assembly and those of the Economic and Social Council were strengthened because of the insistence of the smaller powers, especially in the fields of cultural and educational relations and the protection of human rights and fundamental freedoms.

The adequacy of the charter to perform its tasks can only be known with experience in its operation. The San Francisco Conference did, however, perform a notable task in achieving unanimous agreement among the delegations present upon a charter which commended itself both to the ratifying authorities in the respective countries and to public opinion. This success was in part due to lengthy preparation in the earlier work of the United Nations, especially at Dumbarton Oaks, in part to the world's experience with the League of Nations, and in part to the necessity felt throughout the United Nations for a more adequate organization of world affairs. A share in this success, however, belonged to the delegations present at San Francisco who were unanimously determined to succeed. The conference, whatever changes time may bring in its work, will undoubtedly stand out as a landmark in human history. See also *WORLD POLITICS*.

Professor of International Law, University of Chicago.

UNITED NATIONS CHARTER

As finally agreed upon, the charter consists of a preamble and 19 chapters, to which is annexed the Statute of the International Court of Justice. This court was established by the charter "as the principal judicial organ of the United Nations," and the statute describing its organization, competence, and procedure extends to 70 articles.

Chapter I of the charter, entitled "Purposes and Principles" and divided into two articles with subsidiary clauses, states that the purposes of the United Nations are: "To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to peace. . . . To develop friendly relations among nations. . . . To achieve international co-operation in solving international problems of an economic, social, cultural, or humanitarian character. . . . To be a center for harmonizing the actions of nations in the attainment of these common ends." Article 2 defines the principles in accordance with which the organization and its members shall act. These are: equality of all members; fulfillment in good faith by members of the obligations assumed in subscribing to the charter; peaceful settlement of international disputes; abstention from the threat or use of force against the territorial integrity or political independence of any state; support by all members for any action taken by the United Nations in accordance with the charter; the organization shall ensure that states not members of the United Nations act in accordance with these principles; nothing in the charter shall authorize intervention in matters 'which are essentially within the domestic jurisdiction of any state.'

Chapter II (Arts. 3-6) describes the rules of membership, reasons for suspension of membership, and for expulsion.

Chapter III (Arts. 7,8) establishes as principal organs of the United Nations "a General Assembly, a Security Council, an Economic and Social Council, a Trusteeship Council, an Inter-

national Court of Justice, and a Secretariat." It also provides for the establishment of "such subsidiary organs as may be found necessary," and establishes equality between men and women who participate in the various United Nations organs.

Chapter IV (Arts. 9-22) describes the General Assembly. Its composition consists of all the members of the United Nations, each member having not more than five representatives. Most of this chapter is devoted to the General Assembly's functions and powers. Two articles deal with voting, each member to have one vote, and decisions on important questions to be made by "a two thirds majority of the members present and voting"; other questions to be decided by "a majority of the members present and voting." Members in arrears in the payment of their contributions to the organization over a period of two years are deprived of their vote. The last three articles of the chapter deal with procedure: annual sessions of the assembly, and special sessions as convoked by the secretary general at the request of the Security Council or by a majority of the members of the United Nations; the assembly to adopt its own rules of procedure and elect its president for each session; authorization to establish subsidiary organs.

Chapter V (Arts. 23-32) in the same manner describes the Security Council. This council is to consist of 11 members of the United Nations. Permanent members are to be China, France, the USSR, Great Britain, and the United States. The nonpermanent six members are elected for two-year terms by the General Assembly. Each Security Council member has one representative. On the Security Council is placed "primary responsibility for the maintenance of international peace and security" on behalf of the United Nations. The Security Council is required to submit annual and special reports to the General Assembly. It is charged with planning a system for the regulation of armaments. Each member of the Security Council has one vote; decisions on procedural matters are made by an affirmative vote of seven members; but in other matters this affirmative vote of seven must include concurrent votes of the permanent members; however, a party to a dispute must abstain from voting. The Security Council is organized to function continuously; it holds periodic meetings which may, however, be held at other places than the seat of the organization; it is authorized to establish subsidiary organs, adopt its own rules of procedure, and admit to its discussions any member of the United Nations which is not a member of the Security Council; the Security Council may also invite to participate in its discussions of disputes representatives of states which are not members of the United Nations.

Chapter VI (Arts. 33-38) details methods for pacific settlement of disputes between nations.

Chapter VII (Arts. 39-51) describes the measures to be taken with respect to threats to the peace, breaches of the peace, and acts of aggression. These include, upon decision of the Security Council, "complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communications, and the severance of diplomatic relations." They also include, in the event that such measures prove inadequate, "demonstrations, blockade, and other operations by air, sea, or land forces of Members of the United Nations." To this end all members undertake to make available to the Security Council "armed

forces, assistance and facilities." Air force contingents of members are to be held ready for immediate combined international enforcement action. Plans are to be made for the application of armed force by the Security Council assisted by the Military Staff Committee which consists of the chiefs of staff of the permanent members of the Security Council or their representatives. Action required to carry out the Security Council's decisions is to be taken by all the members, or some of them, as the council may determine. It is stipulated that nothing in the charter "shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a Member of the United Nations, until the Security Council has taken the measures necessary to maintain international peace and security."

Chapter VIII (Arts. 52-54) authorizes regional arrangements, "provided that such arrangements or agencies and their activities are consistent with the Purposes and Principles of the United Nations." But it forbids enforcement action taken under regional arrangements or by regional agencies "without the authorization of the Security Council."

Chapter IX (Arts. 55-60) defines the scope of international economic and social co-operation of the United Nations "with a view to the creation of conditions of stability and well-being." Accordingly, the United Nations are pledged to promote: "a. higher standards of living, full employment, and conditions of economic and social progress and development; b. solutions of international economic, social, health, and related problems; and international cultural and educational co-operation; and c. universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." Responsibility for the discharge of the functions set forth in this chapter is vested in the General Assembly and, under its authority, in the Economic and Social Council.

Chapter X (Arts. 61-72) establishes the Economic and Social Council which is to consist of 18 members of the United Nations elected by the General Assembly, 6 members to be elected each year for a term of three years. At the first election the full number of 18 will be elected, but the terms of 6 will expire in one year, while those of 6 others will expire in two years, thus initiating the system of annual elections of 6 new members. The functions and powers of the Economic and Social Council include making studies and reports, recommendations to the General Assembly, members of the United Nations and specialized agencies, and the convoking of international conferences. It may also furnish information to the Security Council.

Chapter XI (Arts. 73-74) is a declaration regarding nonself-governing territories. It states that members of the United Nations "which have or assume responsibilities for the administration of territories whose people have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants . . . are paramount." They are pledged to ensure the advancement of these subject peoples, protect them against abuses, "to develop self-government, to take due account of the political aspirations of the peoples."

Chapter XII (Arts. 75-85) establishes a system of international trusteeship "for the administration and supervision of such territories as may be placed thereunder by subsequent individual agreements." Application of the trusteeship system is made to: "a. territories now held

under mandate; b. territories which may be detached from enemy states as a result of the Second World War; and c. territories voluntarily placed under the system by states responsible for their administration." But there is a saving clause that "It will be a matter for subsequent agreement as to which territories in the foregoing categories will be brought under the trusteeship system and upon what terms." Furthermore, the trusteeship system is inapplicable to territories which have become United Nations members.

Chapter XIII (Arts. 86-91) establishes the Trusteeship Council which consists of: "a. those Members administering trust territories; b. such of those Members mentioned by name in Article 23 as are not administering trust territories; and c. as many other Members elected for three-year terms by the General Assembly as may be necessary to ensure that the total number of members of the Trusteeship Council is equally divided between those Members of the United Nations which administer trust territories and those which do not."

Chapter XIV (Arts. 92-96) states that the International Court of Justice "shall be the principal judicial organ of the United Nations," and that "it shall function in accordance with the annexed Statute, which is based upon the Statute of the Permanent Court of International Justice and forms an integral part of the present Charter."

Chapter XV (Arts. 97-101) provides for the organization of a secretariat comprising "a Secretary-General and such staff as the Organization may require." The secretary general is appointed by the General Assembly on recommendation of the Security Council and he is "the chief administrative officer of the Organization."

Chapter XVI (Arts. 102-105) deals with miscellaneous provisions: registration of treaties and international agreements with the Secretariat; obligations of members towards provisions of the charter to take precedence over their obligations under any other international agreement; privileges and immunities of the organization in the territory of members, and like privileges and immunities for the representatives of members.

Chapter XVII (Arts. 106, 107) deals with transitional security arrangements.

Chapter XVIII (Arts. 108, 109) provides for amendment of the charter by a vote of two thirds of the members of the General Assembly, including all the permanent members of the Security Council, and for the convoking of a general conference of the members to review the present charter at a date fixed by a two-third vote of the members of the General Assembly "and by a vote of any seven members of the Security Council."

Chapter XIX (Arts. 110, 111) deals with the ratification of the charter by the signatory states, these ratifications to be deposited with "the Government of the United States of America, which shall notify all the signatory states of each deposit as well as the Secretary-General of the Organization when he has been appointed." The charter is to come into force upon ratifications by "the Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, and by a majority of the other signatory states." The final article declares that the Chinese, French, Russian, English and Spanish texts of the charter are equally authentic.

Signing and Ratification.—The charter, including the statute of the International Court of Justice, was signed on June 26, 1945, first by the representatives of the five permanent members of the Security Council, then by the representatives of the other nations in alphabetical order. A place was left for Poland's signature at a later date.

The first government to ratify the charter was Nicaragua (July 6). Under the charter's terms the five big powers and a majority of the smaller countries, or 29 out of a total of 51, had to ratify before the charter and the organization could come into force. Accordingly, when, on October 24, the Soviet government deposited its instrument of ratification with Secretary of State James F. Byrnes, the 29th state so to do, the Charter of the United Nations became a part of international law, and the United Nations World Security Organization came into being. As of Oct. 31, 1945, the charter was in effect with respect to 32 nations.

UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION (UNRRA). Established Nov. 9, 1943, when the United Nations and other nations associated with them in the war effort signed an agreement at the White House in Washington, D.C., this organization was created, according to the preamble of the agreement signed, to give effect to the determination that "immediately upon the liberation of any area by the armed forces of the United Nations or as a consequence of retreat of the enemy, the population thereof shall receive aid and relief from their sufferings, food, clothing, and shelter, aid in the prevention of pestilence and in the recovery of the health of the people; and that preparation and arrangements shall be made for the return of prisoners and exiles to their homes; and for assistance in the resumption of urgently needed agricultural and industrial production and the restoration of essential services."

It was not found feasible for the UNRRA to begin supply operations in substantial fashion until April 1945, though the need for relief and rehabilitation in many liberated areas became acute long before then. The intervening period, however, was put to good use. The international organization needed was set up and preparations for full-scale operation were completed; needed additional field workers were trained; and camps were meanwhile administered for many thousands of displaced persons.

Operations moved steadily forward at an accelerated pace in April, and by October it was reported that nearly 2,000,000 tons of food, medical supplies, and essential industrial and agricultural equipment had been shipped to the liberated countries. Full-scale operations were then in progress in Greece, Yugoslavia, Czechoslovakia, and Albania, while limited welfare programs operated in Italy and China. UNRRA teams, in co-operation with the military, had cared for or repatriated millions of displaced persons. In Germany alone, over 4,000,000 of the 6,000,000 displaced persons found there were repatriated with assistance from the UNRRA. By September relief had been granted the Philippines. Small-scale (\$10,000,000) operations in Italy and China were on the point of being converted to large-scale (\$450,000,000) operations, and the London conference of the UNRRA Council, which opened on August 7, added Korea and Austria to the list of countries eligible for aid.

Many hostile criticisms of the UNRRA, off-

cials declared, were founded upon a misconception of the organization's proper functions. The UNRRA, it was explained, assisted only those countries which solicited its aid, and which were found, after investigation, not to have adequate foreign exchange to do the relief and rehabilitation jobs themselves. Many questions, for example, as to why the UNRRA did not come to the aid of France, Belgium, and Holland, were answered by the simple fact that these countries had not requested aid, as they preferred to solve their own procurement and transportation problems. While the war was still on, moreover, the UNRRA met with gigantic difficulties in obtaining shipping and other transportation, as naturally military requirements had to be given priority. In many cases, not only were ships unavailable, but ports were closed, bridges destroyed, and internal transport practically nonexistent. The UNRRA also met with frequent and extended difficulties in obtaining supplies. Again, delay in obtaining the necessary funds wherewith to operate frequently handicapped the organization.

The UNRRA specified its total needs at \$3,700,000,000—one per cent of the annual 1943 income of the uninvaded countries, twice assessed. For the United States, the total assessment was placed at \$2,700,000,000, on the grounds that the United States had more than 75 per cent of the income of the nations not invaded during the war.

Up to September 1945 the United States had actually put into UNRRA operations \$800,000,000.

The time limit on operations for the UNRRA was set for the end of 1946 in Europe, and for the end of the first quarter of 1947 in the Far East.

UNITED NATIONS WAR CRIMES COMMISSION.
See WAR CRIMES TRIALS.

UNITED SERVICE ORGANIZATIONS, Inc. (USO). Growing out of the need to provide welfare and recreation to trainees under the Selective Service Act of 1940, USO was chartered Feb. 4, 1941. The six long-established social service organizations which sponsored it are the YMCA, the YWCA, the National Catholic Community Service, the Salvation Army, the National Jewish Welfare Board, and the National Travelers Aid Association. It has united three great religious faiths—Protestant, Catholic and Jewish—to win the battle of morale behind the lines.

More than one billion people have been served in some manner by USO since its inception. This figure includes those who attended USO-Camp Shows, and those who utilized the various clubs, information centers, lounges and associated activities.

The heart and soul of USO is the club, "a home away from home," housed in many types of buildings. USO originally planned to open but 341 clubs in 200 small communities adjacent to army camps, where recreational facilities were overtaxed or nonexistent. The basic disruption of life hastened by the actual outbreak of war increased the demand for USO services, and a growing army of millions found that USO helped to bridge the gap between civilian and military life. As of Sept. 1, 1945, there were 1,645 clubs; of these, 881 were operated by one or more of the six national agencies, 649 were community-conducted, and 115 were overseas. These clubs were run by 3,738 paid professional workers and approximately 800,000 unpaid vol-

unteers drawn from all age groups and walks of life. Based on a recent six-month average, USO reports a total monthly building attendance of 28 million people.

USO is entirely supported by voluntary contributions of the American people either to the National War Fund or to USO direct. In 1941 and 1942, USO conducted its own campaigns, raising \$14,000,000 and \$34,000,000 respectively. In 1943, USO received \$61,000,000 from the first National War Fund campaign, and in 1944 its share was \$56,000,000. The 1945-46 USO budget called for \$52,096,500, to be paid out of a total National War Fund goal of \$115,000,000. Administrative costs of USO are approximately 10 per cent of its total budget.

USO officials for 1945 include: president, Dr. Lindsley F. Kimball; honorary chairman, John D. Rockefeller, Jr.; chairman of the board, Walter Hoving; vice-chairman of the board, Harper Sibley; secretary, C. Frank Kramer, Jr.; vice-presidents, Mrs. Henry A. Ingraham, Randall J. LeBoeuf, Jr., Francis P. Matthews, Comm. Donald McMillan, W. Spencer Robertson and Frank L. Weil. USO national headquarters comprise three floors of the Empire State Building in New York City, and a separate national office for USO-Camp Shows is maintained at 8 West 40th Street, near the heart of America's theatrical world.

USO-Camp Shows, Inc.—Incorporated as an auxiliary organization to USO in November 1941, to provide organized entertainment for members of the armed forces at home or abroad, USO-Camp Shows has become the largest theatrical booking agency in the world. In continental United States the basic program is carried on by the Victory Circuit, which plays to the larger posts, camps and stations, and by the Hospital Circuit, which plays to patients in army and navy hospitals. Overseas from November 1941, 4,276 USO-Camp Shows entertainers appeared in 37 localities to provide the best available shows and concerts for American forces. For military reasons, attendance figures at overseas performances were not reported while the war was in progress; however, during this same period, 139 million troops saw USO-Camp Shows in this country. USO-Camp Shows offices are in New York, Chicago and Hollywood.

Other USO Services.—In overseas areas, ranging from Alaska to Newfoundland through Hawaii, the Philippines, Panama, Bermuda, the Caribbean and down into Brazil and Peru, where the main morale problems are loneliness and boredom, USO maintained 156 overseas operations as of Sept. 1, 1945. Hawaii, a jumping-off place for Pacific offensives since Pearl Harbor, has been the center of much USO activity, and recently the Philippines have been the scene of USO expansion. The end of the Pacific war means that USO will serve homecoming troops and also those en route to Japan for occupational duty.

Geared to the defensive and training phase of the war effort, USO Mobile and Maneuvers Services sent out specially built and equipped trucks—"USO clubs on wheels"—to servicemen guarding lonely off-shore installations and to troops on maneuvers far from recreational opportunities. On Sept. 1, 1945, there were 105 such units carrying games, books, music, light refreshments, sound recording equipment and other articles to occupation forces, newly-acquired bases and, amphibiously, to ships at sea.

The National Travelers Aid Association

joined hands with USO in 1941 to direct trainees to camp and workers to defense factories. Travelers Aid service desks, staffed by trained social workers, are located in railroad and bus terminals throughout the country. Troops-In-Transit station lounges, equipped with snack bars and sleeping facilities, have enabled servicemen to snatch refreshment and relaxation between trains. On Sept. 1, 1945, there were 148 lounges and 126 other Travelers Aid services co-operating with USO.

Service wives look to USO for information, for help in obtaining living quarters, and for companionship with other women at luncheons, discussion groups and sports programs arranged for them at USO clubs. There are whole USO clubs primarily for service women in Washington, Des Moines, Los Angeles, Seattle and other parts of the country. In certain industrial towns, women on the assembly lines, Civil Service office workers, aircraft employees and other women found at the USO Club the center for the kind of community life which they had known at home.

USO now maintains more than 400 operations in 84 communities adjacent to military general hospitals, at which disabled service men may maintain morale and learn new skills during convalescence. Through group activities, use of program opportunities in the community, and individual services, USO seeks to offset isolation and confinement to hospital, reaction to disability and combat experience, impending discharge or reassignment to duty, and problems of family relationship which emerge from or are precipitated by family visits.

More than 150 artists working in the United States for USO-Camp Shows Hospital Sketching Program devote considerable free time to this volunteer service, which covers the various army general hospitals and naval hospitals throughout the United States. Overseas, there are 26 artists and seven caricaturists. Since Aug. 1, 1944, about 30,000 drawings of servicemen have been produced. Negative and positive photostats of the original drawing are made in the New York office and sent to the person or persons whom the subject designates. Frequently, the sketch is the last likeness possible for some wounded man to send home.

USO Scrapbook Service sends interesting and entertaining reading matter to servicemen and women in camps, hospitals, foreign lands, and to ships at sea. Blank scrapbooks are bought in lots from Scrapbook Service by responsible organizations of all sorts, including USO service committees, who then distribute them to women volunteers to fill with long and short stories, cartoons and jokes, articles on light and serious subjects, pictures, quizzes, and a variety of other materials. Completed books are distributed through the Special Service Supply Division of the United States Army, the Welfare and Recreation Division of the United States Navy, the USO Overseas Department and USO Mobile and Maneuvers Services. USO clubs, Troops-In-Transit lounges, army camps and hospitals, naval stations and shipbuilding companies have all received USO Scrapbooks.

The 2,461 USO operations that existed on Sept. 1, 1945, included 1,308 administered by one or more of the six national agencies and 997 community-conducted operations. USO operations were located in 1,096 cities and towns in the 48 states and 16 overseas areas.

ALBERT E. DALE,
Director, Public Information, USO.

UNITED STATES EMPLOYMENT SERVICE (USES).
See WAR MANPOWER COMMISSION.
UNITED STATES MARITIME COMMISSION. See MARITIME COMMISSION, UNITED STATES.

UNITED STATES OF AMERICA. Territorially, the United States of America comprises the 48 states making up what is commonly referred to as the Union; the District of Columbia, the territories of Alaska and Hawaii, Puerto Rico, the Virgin Islands, American Samoa, Guam, and some smaller islands in the Pacific Ocean. Areas accruing permanently to the United States as a result of the Second World War, consisting chiefly of military bases, remained to be determined at the United Nations Conference. The gross area of continental United States, land and water, is 3,022,387 square miles; that of the outlying possessions, including Alaska and the Philippines, 712,836 square miles; making a total gross area of 3,735,223 square miles. Washington, D.C., the national capital, had a population in 1940 of 663,091, and ranked 11th in size among the cities of the country. See articles on the various states, territories, and possessions.

Population.—On Nov. 20, 1945, the Bureau of the Census announced that the population of the United States passed the 140,000,000 mark about October 1. On the basis of this estimate, the approximate increase in the population since 1940, when it stood at 131,669,275, was 8,330,725 in the five and one-half years. In the decade between 1930 and 1940 the increase was 8,894,229. The 1930 population was 122,775,046.

Government.—Republic in form, the government of the United States is divided into three branches—the executive, the legislative, and the judicial. Below are listed the various divisions of the different branches:

EXECUTIVE BRANCH

Under the Constitution of the United States, the executive power is vested in a president, who, together with the vice president, chosen for the same term, holds office for four years. The president in 1945 was Franklin D. Roosevelt until his death on April 12, when he was succeeded by Vice President Harry S. Truman. In addition to the president, the executive branch is composed of 10 departments (each headed by a member of the president's Cabinet), and also a number of independent establishments. The names of the various departments, and the head of each in 1945 were as follows:

DEPARTMENT OF STATE—Secretary, Edward R. Stettinius, Jr., of New York, until July 2; succeeded by James F. Byrnes of South Carolina.

DEPARTMENT OF THE TREASURY—Secretary, Henry Morgenthau, Jr., of New York, until July 17; succeeded by Fred M. Vinson of Kentucky.

DEPARTMENT OF WAR—Secretary, Henry L. Stimson of New York, until September 25; succeeded by Robert P. Patterson of New York.

DEPARTMENT OF JUSTICE—Attorney General, Francis Biddle of Pennsylvania, until June 14; succeeded by Thomas C. Clark of Texas.

POST OFFICE DEPARTMENT—Postmaster General, Frank C. Walker of Pennsylvania, until May 7; succeeded by Robert E. Hannigan of Missouri.

DEPARTMENT OF THE NAVY—Secretary, James V. Forrestal of New York.

DEPARTMENT OF THE INTERIOR—Secretary, Harold L. Ickes of Illinois.

DEPARTMENT OF AGRICULTURE—Secretary, Claude R. Wickard of Indiana, until June 1; succeeded by Clinton P. Anderson of New Mexico.

DEPARTMENT OF COMMERCE—Secretary, Jesse Jones of Texas, until March 1; succeeded by Henry A. Wallace of Iowa.

DEPARTMENT OF LABOR—Secretary, Frances Perkins of New York, until May 31; succeeded by Lewis B. Schwellenbach of Washington (State).

LEGISLATIVE BRANCH—CONGRESS

SENATE: 96 senators.

HOUSE OF REPRESENTATIVES: 435 representatives; 2 delegates; 2 resident commissioners.

JUDICIAL BRANCH

Supreme Court.

Circuit Courts of Appeal.

District Courts.

Special Courts:

Court of Claims.

Court of Customs and Patent Appeals.

Customs Court.

District of Columbia Courts.

Territorial Courts.

Congress.—The Congress of the United States consists of two branches—a Senate of 96 members, and a House of Representatives of 435 members. Senators hold office for six years; representatives for two years. Both senators and representatives are elected by universal suffrage, one third of the Senate every two years; the entire House every two years. To be eligible for the office of senator the candidate must be at least 30 years of age; must be a resident of the state in which he seeks election; and must have been a citizen of the United States for at least nine years prior to his election. To be eligible for election as a representative, the candidate must be at least 25 years of age; must be a resident of the state and congressional district in which he seeks election; and must have been a citizen of the United States for at least seven years prior to his election. The vice president of the United States presides over the Senate when in session; the House is presided over by the speaker, who is elected from the House membership by the members. Congress meets on January 3 of each year, "unless they shall by law appoint a different day." The president has the power to call an extra session of either or both houses of Congress when he deems such action necessary. All revenue bills must originate in the House of Representatives, but, of course, must be passed by both houses and be signed by the president (or passed over his veto) before they become law.

79th Congress.—Elected Nov. 7, 1944, the 79th Congress convened on Jan. 3, 1945, for its first session. The new Senate contained 57 Democrats, 38 Republicans, and 1 Progressive, the party division being exactly the same as obtained in the 78th Congress. The new House of Representatives consisted of 243 Democrats, 190 Republicans, 1 Progressive and 1 American Labor; it differed from its predecessor in the considerable increase (21) of Democrats with a corresponding diminution of Republicans. Deaths and resignations during the year slightly reduced the membership of both houses, so that on November 15 the Senate, having lost by death Senator John Thomas, numbered 95, while the House, having lost four of its original members, numbered 431.

During 1945, Congress gave ready assent to a series of measures which pledged full co-operation by the United States with other nations to maintain the peace and solve political, social and economic problems left by the war. In July the Senate ratified the United Nations charter, while in December both houses approved legislation to make United States military forces available for the enforcement of peace without further action by Congress. Both houses also approved by large majorities United States participation in the International Bank and the World Monetary Fund agreed upon at Bretton Woods. A measure designed to promote a freer flow of world trade authorizes the president to make additional cuts in American tariffs—of as much as 50 per cent—in postwar trade agreements with

other nations. Additional appropriations were made for the work of the United Nations Relief and Rehabilitation Administration, and membership was accepted in the World Food Organization. Other measures enacted by Congress include the following:

Bill to raise the national debt limit to \$300,000,000,000; bill extending the Selective Service Act to May 15, 1946; bills extending the price control, stabilization and food subsidy programs until June 30, 1946; bill extending the Trade Agreements Act until 1948, with the tariff reductions referred to above; bill to speed up tax refunds for reconversion; bill withdrawing shipbuilding appropriations; revenue bill providing tax reductions for 1946 totaling \$5,900,000,000, including repeal of wartime excess profits tax; bill making a cut of \$51,800,000,000 in funds for war purposes; bill extending for six months special war powers of the president; and Government Reorganization Act.

The 1945 session of Congress adjourned on December 21. Up to that time it had taken no final action on a number of measures advocated by President Truman. These included his fact-finding measure in industrial disputes; his full production and employment bill (in conference); minimum wage rate increase; price ceilings for housing; postwar salary increases for government employees and officials; liberalization of the Social Security Act; permanent Fair Employment Practice Commission; general housing and health programs, including compulsory health insurance; encouragement of scientific research and control of atomic energy; regional development; St. Lawrence power-seaway project; universal military training; selective service inductions for two years; unification of armed services; and new presidential succession act.

Contradictions in the reports of the army and navy boards on the Pearl Harbor disaster, made public by President Truman on August 29, led Congress to order a public investigation by a joint committee of both houses. It provided for a committee of 10 members—3 Democrats and 2 Republicans from each house. The investigation opened November 15, and soon became marked by partisan wrangling. The resolution authorizing the Pearl Harbor investigation called for a report by Jan. 3, 1946, but both houses voted an extension to Feb. 15, 1946, in the closing hours of the 1945 session.

Supreme Court.—As of Nov. 15, 1945, the personnel of the Supreme Court was as follows: Chief Justice, Harlan Fiske Stone; Associate Justices, Hugo L. Black, Stanley Reed, Felix Frankfurter, William O. Douglas, Frank Murphy, Robert H. Jackson, Wiley Blount Rutledge, Jr., and Harold H. Burton.

Finances.—See TREASURY OF THE UNITED STATES.

Education.—Each state has a free school system maintained by public funds. In most states the work of these public schools is supplemented by private and parochial schools, and in the newer states the federal government has set aside certain sections of land, the proceeds from which are paid into the permanent school funds of these states. The United States Office of Education is the chief advisory authority on education for the entire country. For particulars regarding the general trend of education in the United States see article EDUCATION, REVIEW OF; the subsection *Education* in the articles on the various states and other possessions; and COLLEGES AND UNIVERSITIES.

Religion.—The Constitution states that “no religious test shall ever be required as a qualification to any office or public trust under the United States” (Article VI, Clause 3), and according to the First Amendment “Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof.” Church and state have accordingly remained separate in the United States, where all religious faiths function freely. According to the Census of Religious Bodies made by the Department of Commerce in 1936 there were 256 denominations reporting membership from 199,302 local churches, as compared with 212 denominations in 1926 reporting membership from 232,154 local churches. The total church membership in 1936 was 55,807,366, as compared with 54,576,345 in 1926, and of the total 1936 church membership, 19,914,935 were Roman Catholic, 4,641,184 were Jewish, and practically all of the remainder were members of various Protestant denominations, of which Negro Baptists formed the largest group, with a membership of 3,784,464, followed by the Methodist Episcopal Church, with 3,509,763 members. There were five women church members to every four men members in 1936.

See also articles on leading churches or denominations: ROMAN CATHOLIC CHURCH; PROTESTANT EPISCOPAL CHURCH; BAPTIST CHURCHES, etc.

Agriculture.—See the following articles for detailed information on this subject: AGRICULTURAL ADJUSTMENT AGENCY; AGRICULTURAL RESEARCH ADMINISTRATION; AGRICULTURE, REVIEW OF; COMMODITY CREDIT CORPORATION; FARM CREDIT ADMINISTRATION; FARM SECURITY ADMINISTRATION; FEDERAL CROP INSURANCE CORPORATION; FOREST SERVICE, U.S.; GRAZING SERVICE, U.S.; INFLATION AND PRICE CONTROL; LUMBER; MEAT PACKING; RECLAMATION; SOIL CONSERVATION SERVICE.

Mineral Production.—See CHEMISTRY; GEOLOGICAL SURVEY, U.S.; METALLURGICAL ADVANCES; MINERALOGY; MINES, U.S. BUREAU OF; PETROLEUM; COAL; COPPER; IRON AND STEEL; also names of other specific minerals.

Foreign Trade.—According to a Department of Commerce bulletin issued on Sept. 12, 1945, exports of domestic merchandise including lend-lease amounted in value to \$6,569,355,000 (69.5 per cent lend-lease) for the first seven months of 1945, as compared with \$8,543,621,000 (81 per cent lend-lease) for the same period in 1944. General imports during the first seven months of 1945 totaled \$2,466,725,000 in value, as compared with \$2,343,785,000 for the same period in 1944.

Defense.—See the following articles: ARMY OF THE UNITED STATES; COAST GUARD, U.S.; MARINE CORPS, U.S.; NAVAL PROGRESS.

Communications.—See articles on HIGHWAYS; AERONAUTICS; CANALS; FEDERAL COMMUNICATIONS COMMISSION; PUBLIC UTILITIES; RADIO; RAILROADS, AMERICAN; TELEPHONE PROGRESS.

THE UNITED STATES IN 1945.

American experience during 1945 was divided into three periods, by two historic dates: May 7, which brought official announcement that Germany was surrendering, and August 14, when Japan followed suit. Within the first and second of these periods there befell to each another important date, for April 12 brought the death of President Roosevelt and August 6 gave news of an undreamed-of weapon. All four major events caught the people off balance; although they had

been confident of ultimate victory, Germany's big push in December had been taken to mean a lengthier fight in Europe, and military prophets thereafter foretold an additional year or two of struggle in the Pacific.

Worse, there was complete surprise and shock, totally unprepared for, in Roosevelt's passing and in the dropping of the atomic bomb. These events transpiring suddenly, the violence of their impact was not cushioned by adequate preparation for them; and as the whole world—not just the United States—was struck full force by these occurrences, there was little of familiar stability left anywhere.

It is scarcely surprising, therefore, that the third period of 1945—that between August 14 and December 31—was not marked by orderly progress in reconversion to peace. The emphasis shifted sharply, as the end of the war came, from interest in economic production for war, to interest in manipulation for gains during reconversion. The shift was hasty, self-centered in the main, and widespread. It became characteristic of peoples and governments all over the globe, marked by fumbling, by a conflict of rival purposes which at the time defied attempts to bring order out of chaos. Indeed, the twelve-month as a whole might well be called “The Year of Confusion.”

Before Germany Acknowledged Defeat.—At the outset, the administration was taking no chances of being caught short, again, in war facilities. The president submitted in January a budget which assumed that the conflict in both theaters would continue through 1946; and pleas were renewed for a tightened war effort. Full manpower, the nation was urged, must be employed in production at home and replacement of casualties abroad. Word passed around that essential industries, including airplane production, were lagging behind their scheduled goals. Such industries were placed in “categories” to protect production; servicemen were loaned by army and navy to expedite making of critical matériel; deferred men, leaving jobs without permission, were warned of induction into service; and there was talk of forcing 4-F's into war work or limited military service or combat. Roosevelt asked Congress to pass a “National Service Law” to apply to ages 18–45 the principle of “work or fight”; but this aroused opposition from some labor and educational groups, and congressional opponents of it exposed various instances of wasted manpower in military sectors, such as the navy yards. A bill making nurses subject to draft was approved by a House committee.

The War Production Board (WPB) was necessarily prominent in this picture. It shifted manufacture of reconversion machinery and tightened controls over lumber and some other short items. The Agriculture Department and Office of Price Administration (OPA) struggled to control shortages of meat, cigarettes, butter, bacon, sugar, and soap—shortages which stretched long queues of would-be buyers out from counters, through doorways and down the streets. Sugar rations were cut sharply. To save electric power WPB decreed a “brownout” which turned out the lights in signboards, showsigns, marquees, etc. With OPA, WPB curbed the production and prices of clothing and textiles, prominent in lend-lease and military shipments. To protect the domestic economy and the war effort, an “inter-agency committee” undertook to co-ordinate foreign shipments, which continued heavy with the Lend-Lease Act extended a third time. The

borrowing power of the Commodity Credit Corporation was raised; and, as the cost of the war approached \$275,000,000,000, Congress hoisted the highly elastic "debt limit" to \$300,000,000,000. The Office of Defense Transportation (ODT) canceled train-runs which were little used, or seasonal, or which served only pleasure resorts; conventions of more than 50 persons were frowned upon.

Whatever the shortages of material and manpower, there was no shortage of labor disputes. As late as April 20 the AFL and the CIO reaffirmed their "no-strike" pledge, pending complete military victory; but "unauthorized" strikes multiplied and the government occasionally took temporary control over an industry. Prominent examples of government operation included a group of 72 bituminous coal mines, returned to their owners in mid-February, and the establishment of wage increases for employees of Montgomery Ward, through army operation of that large business.

Apprehensive of widespread, postwar unemployment, which was being predicted on all sides, organized labor vigorously undertook to forestall hardship through protective legislation on unemployment compensation, full employment, and guaranteed wage minimums. Around a "Wagner-Murray Full Employment Bill," introduced as early as January 22, controversy raged all year. In February labor staged a World Trades Union Conference (which the AFL refused to attend) at Paris; and the WLB awarded a minimum wage of 55 cents per hour to 50,000 northern and southern textile workers. Against the "Little Steel" formula of stable wages labor kept up a heavy barrage, waging a war of statistics, assertion and political pressure, with greater facility, skill and effect than an opposing war waged by the industrial management group.

The astounding drive of the Allies into and across Germany in March and April put America's accent back on reconversion, although Germany's surrender waited until early May. For example, on manpower the White House in March was prophesying a 31 per cent drop in draft calls after July 1; and in April redeployment of men and matériel to the Pacific was begun. On production, April brought plans for cutbacks and for restarting the reconversion machinery prematurely set in motion the previous fall and stopped by the German drive westward. Heads of OPA, OES (Office of Economic Stabilization), WFA (War Food Administration) and WLB on April 7 sounded a warning note; they said that there was danger in relaxation of price and wage controls during the transition period. But by May 4 the WLB had apparently forgotten its own warnings and was emphasizing collective bargaining and speed in reconversion. Whether or not this shift was due in part to the change of administration was not yet known; at any rate Truman had been elevated to the presidency a scant three weeks when he began initiating and endorsing proposals for wage increases. The national shift—from emphasis on production to emphasis on wages—gathered momentum through the three remaining months of the Pacific war.

Whatever Roosevelt may have planned as reconversion policy, he was denied the opportunity to try to carry it out. He had completely exhausted his physical reserves by active leadership in a global war; and when he was attacked by a cerebral hemorrhage, on the afternoon of April

12 at Warm Springs, Ga., he succumbed within three hours. Although the newsreels of his February conference with Stalin and Churchill in Yalta (see *WORLD POLITICS*) had shown him thin and worn, the good health propaganda of the 1944 campaign and of his publicity staff had left the nation unprepared for the blow. Along the route of his funeral cortege in Washington April 14, not less than 350,000 persons attested their respect and, in many cases, open grief; many millions more, via radio, attended the services in the White House that day and the burial services the next morning at Hyde Park. Present was the newly installed chief executive, sworn in April 12.

While Finishing the War with Japan.—When the people of the United States learned on May 7 that the German surrender was official and unconditional, they heard what they had been expecting to hear for a number of days. It was an hour of great triumph and rejoicing for the nation; but many an American was saddened by regret that the news of victory over the Nazis could not have been spoken by the president who had led the fight against them. Roosevelt's death ensured that political leadership, in the tasks of concluding the war and reconverting to peace, would not be the same as had been intimately identified with prosecution of the conflict abroad and at home and laying the foundations for world peace. The nexus was broken.

Within four months two thirds of the Cabinet responsibilities had been reassigned. Only Secretary of the Navy Forrestal, Secretary of the Interior Ickes and ex-Vice President Wallace, whom Roosevelt recently had succeeded in elevating to the Commerce Department, remained. Attorney General Biddle of Pennsylvania was succeeded by Thomas C. Clark of Texas; Secretary of Agriculture Wickard of Indiana by Clinton P. Anderson of New Mexico; Secretary of Labor Perkins of New York by Lewis B. Schwellenbach of Washington state; Secretary of the Treasury Morgenthau of New York by Fred M. Vinson of Tennessee; Secretary of State Stettinius of Virginia by James F. Byrnes of South Carolina; Secretary of War Stimson of New York by Robert P. Patterson of New York; Postmaster General Walker of Pennsylvania by Robert E. Hannegan of Missouri, new chairman of the Democratic National Committee.

Political aspects of appointment changes came more into the open as partisanship was divested of the cloak of patriotism by the approach of peace. The Senate, wary of Wallace's "spend-thrift New Deal policies," would not confirm him to the Commerce portfolio until after the lending agencies were removed from it. In keeping Wallace and in appointing Byrnes, Truman followed the unwritten law that a successful nominee must find place for his chief contenders; his own nomination as vice president in 1944 had come only after the CIO had refused to consent to that of Byrnes, had failed to get its first choice, Wallace, and had then accepted the 60-year-old Missouri Senator. He inclined to name congressional friends; and a geographical shift to the westward frequently was noticeable in important Cabinet and non-Cabinet nominations. Numerous "under" secretaries were changed, but there was no great shift in personnel below the policy-making level, for Truman was a loyal party man and his predecessor had enjoyed twelve years of opportunity to fill the patronage with Democratic faithful.

As he surveyed the sprawling aggregation of

bureaus and agencies which in many cases duplicated functions within the executive branch of the government, Truman became convinced that they should be reorganized in the interests of efficiency and economy. Within the State Department, Byrnes made a reorganization and gathered under his wing the hitherto separate offices of War Information and Co-ordinator of Inter-American Affairs. To the Secretary of Agriculture was transferred authority over the War Food Administration and the OPA, with the life of the latter extended until July 1, 1946, after a struggle. But Congress hesitated to grant Truman's plea for authorization in a broader overhauling. Some members had pet agencies which they wished to protect and many believed that good government required that certain functions should not be subject to the hazards of political manipulation by successive administrations. Finally, in December 1945, Congress passed a Reorganization Act exempting the Interstate Commerce Commission, the Security and Exchange Commission, and some other vital agencies from presidential interference. Shortly before this law was enacted, Congress passed a measure requiring government corporations to be audited and budgeted in a business-like manner.

Between surrenders—May 7–August 14—most of the reconversion plans requiring to be perfected failed to get adequate attention. Presidential proposals for broad employment and social security legislation were seriously questioned and the dog days of Washington's summer climate oppressed Congress. In the domestic field, Congress raised the pay of federal employees 15 per cent and cut their hours from 48 to 44 weekly. It extended one year the Fair Employment Practices Committee, against strong southern opposition. Selective service also received a year's extension; but the compulsory peacetime military training asked by the War Department and the president was blocked by the combined opposition of the CIO, AFL, educators, and persons fearful of a military caste. These various laws may have been to some extent facilitated by committee changes resulting from the 1944 election. It had abstracted, from Congress and from their seniority assignments, such opponents of "New Deal" legislation as the Democrats:—"Cotton Ed Smith" of South Carolina, isolationist Reynolds of North Carolina, Clark of Missouri and Dies of Texas; and the Republicans, Nye of North Dakota, Holman of Oregon, Danaher of Connecticut and Fish of New York.

Much other legislation was needed, but there was not enough public opinion behind it to hold the House in Washington; the Representatives recessed July 21, planning to stay away until October 8. The Senate was no less eager to get away but more bound. It stayed two weeks longer, to handle the international business for which public pressure was very strong. The previous January the House, by the narrow vote of 207-186, had made permanent the controversial "Committee on Un-American Activities"; but the Senate had become so conscious of the rising and vocal demand for American co-operation with other nations that in the short space of ten days—July 19-28 inclusive—it accepted four propositions of international significance.

The Senate provided for United States participation in the Bretton Woods project for an international fund and bank, 61-16; the United Nations Charter, 89-2; and the United Nations, Food and Agricultural Organization. Also, the senators swelled the lending power of the Ex-

port-Import Bank by \$2,800,000,000. The United Nations Charter was ratified by enough powers to put it into effect by October 24. Bretton Woods went into effect December 27 when, Britain and France having been promised loans, their representatives and those of 26 lesser powers signed documents confirming ratification. Few, if any, liberal elements had failed to lobby for international co-operation and all four of the organizations had been largely devised by American citizens. In addition, foreign governments, during the fiscal year closing June 30, 1945, had been expending the tidy sum of \$5,000,000,000 on propaganda to Americans. Having discharged the four most pressing mandates, the Senators recessed, planning also to remain away until October 8.

There was no leaving the job, for Americans charged with handling the defeated Nazis or the fanatical-fighting Nipponese; and so the home front battle—over transportation, manpower, production, prices and wages in wartime—continued whether or not Congress was kept on the job. Partly because it was scarcely as hard fought as before May 7, the home front battle was marked by less unified effort and more bitterness. Redeployment of military personnel to the Pacific theater was the first consideration. It brought draft deferment for westerly railroad workers, loan of troops for train operation, limitation of civilian Pullman reservations to five days and to trips longer than 450 miles, and expansion of airplane transport. The Office of Defense Transportation complained that the army neglected to give the ODT advance information sufficient to enable it to arrange for the needed transcontinental trains. An incident in which United States soldiers in day coaches saw a train of prisoners in Pullmans made headlines.

Some manpower controls had been relaxed three days after Germany surrendered; but the shortage of farm help and farm machinery, became so acute by midsummer that Secretary Anderson warned Americans that they could not feed the world, that they must eat less and could expect no relief short of a year. Meat was so scarce in mid-June that 84 per cent of the independent retail stores in 56 large cities had for sale no pork loins or hams; 85 per cent no bacon; over 86 per cent no veal; 73 per cent no beef-steaks or roasts. The army cut its meat quota, virtually all lend-lease and relief shipments of meat were halted from July 1 to September 30, and ration rates of fats (like those of sugar) were raised. On wool, new restrictions were imposed and the disappearance of low-price clothing lines remained an all-year problem. However, Germany's surrender was the signal for ending controls on some 1,200 civilian items, including use of electricity and DDT.

Unfortunately, the currency supply expanded faster than goods, making price control increasingly difficult; at least the black market in gas and fuel oil was blown up, when government sleuths learned to detect re-used ration stamps. Income payments were subsiding from their all-time February high; but, as late as July, average weekly earnings in manufacturing were 95.9 per cent more than in January 1939. The price rise of the intervening six years climbed in "living essentials" 31 per cent, food 51 per cent, clothing 46 per cent, house furnishings 45 per cent, miscellaneous goods and services 24 per cent, fuel, electricity and ice, 14 per cent; but rents only 3.8 per cent. All-time highs featured government spending for war, said to exceed \$100,000,-

000,000, in the year ending June 30, 1945, and \$300,000,000,000 since 1940. In those five years the United States had spent more than \$50,000,000,000 abroad, receiving \$8,800,000,000 in goods and services in return. As less than half the government expenditures were met by taxation, bond issues multiplied. The Seventh Drive in July was set for \$14,000,000,000 and obtained \$28,313,000,000. Irrationally enough, the public demanded tax cuts as the debt and inflation grew; this made tax reduction as good politics as it was bad bookkeeping.

It was in the labor field that statistics found their fullest employment; first they were used to cry down the "Little Steel" formula as unfair in view of rising living costs; second, to cry up corporation profits as justifying a rise in wages without one in prices. The possibility of using corporation profits to lower the cost of living to the general public did not seem to enter the range of interest, regardless of the possible aid it might prove to exports and employment. Since more than one half the nation's product had been devoted to war, it was not surprising that July employment was 1,340,000 below a year earlier, and that a further fall was forecast continually. Militant labor staged 500 strikes in July; August stoppages were heaviest in the highly industrialized states of Pennsylvania, Michigan and Ohio with "unauthorized" strikes in such vital industries as hard and soft coal, ships, oil, meat-packing, trucking, rubber, engines, and automobiles. Management felt none the easier for labor's campaign to unionize shop foremen, nor for the \$418,000,000 stacked in union coffers. Employers complained because unions were not forced to pay taxes, to account for outlays, nor to eschew strikes during the life of their contracts.

Thus, warfare on the home front was assuming ever more serious proportions, when suddenly, August 6, President Truman and the War Department announced that henceforth conflicts between nations might be fought with materials 20,000 times as powerful as TNT! Just the day before, the great Japanese war-industry center of Hiroshima had been devastated, in a mere moment of time, by an atomic bomb manufactured in the United States. It had annihilated 60 per cent of a city of 375,000. On the 9th, the city of Nagasaki was similarly wrecked and Russia declared war on Japan. August 14 it was announced that Nippon was suing for peace. That day came the psychological end of the Pacific war, although delays in American occupation of Tokyo and in official surrender ceremonies postponed the naming of an official V-J Day until September 2.

After V-J Day.—The horrendous possibilities in the atomic bomb might have been expected to raise an overwhelming demand from the public for improved machinery for world peace; on the contrary, only a small minority, chiefly scientists and liberals; concentrated their talents on this imperative need. The United States had emerged from the war "top dog," for the nonce, of all nations. How soon would the responsibilities of that position be realized? The call to international leadership was superficially answered by generous refilling of the purse of UNRRA and by resuming heavy shipments of food abroad; but the main emphasis lay on narrower aspects of security. Vision seemed lacking to grasp the broader possibilities of America's opportunity to devise something better than "power politics."

The clamor raised by the vast majority in America, as elsewhere, was over their respective

prospects for bread, butter and jam. Most of the draftees wanted to scramble home and get back into jobs and civilian clothes; their families deluged their congressmen with demands for their immediate return. Little was said of the possible harm which a too-hasty demobilization might do to prospects for permanent peace in Europe and Asia. So, the military services were forced to requisition all possible ships and planes, to cut discharge "points" again and again, and to bring Johnny and Mary flying and sailing home by the thousands.

With them came American prisoners of war, among the most notable, Lieutenant General Wainwright. They warned of an undying enemy hatred, of an eternal vigilance which must be the price of safety. They were heard with respect, but not with too much thoughtful attention. Such public questioning as there was after V-J Day developed principally along three lines. Why were we caught short at Pearl Harbor? Would we be safer if all our military services were placed under a single "Department of National Defense?" Should, or could, we hoard our "know how" on the atomic bomb? The official technique was to call Congress back to Washington September 5 and to assign the problems to congressional committees, for them to find answers through hearings conducted after the fashion of party politics. Use of dispassionate, non-partisan, fact-finding commissions was avoided.

While the possibility of a Third World War was being considered rather cynically at the center of politics, Washington, demobilization was being pushed so fast and furiously over the nation that confusion was worse confounded. There was a terrific rush to end wartime controls indiscriminately, immediately if possible. Some of the things ended, obviously could be dispensed with fairly well: these included recruitment of Waacs and Waves, news censorship, which brought thrilling revelations of Allied and enemy technical advances, military set asides and war contracts.

Not quite so clear was the desirability of precipitate ending of such things as lend-lease (for which loans were substituted in some cases), transportation restrictions, federal authority over employment services, taxes on excess profits and low incomes, all rationing except for sugar and tires, and, most important, manpower and production controls practically in entirety. The chaotic conditions which soon developed raised the question of whether or not the national economy was yet equipped to run without some of these aids. Every government control had its particular opponents, who were set to end that control by use of political pressure and without much regard to the circumstances of reconversion. Those controls, which it was premature to abandon, were not likely to be retained, even if some few people did draw attention to such signs of danger as continuing scarcity of needed goods, mounting inflation and chaotic employment conditions. Only a national leadership, possessed of both vision and great political influence, could make reconversion orderly. Such leadership was slow to emerge.

The dire need and the deplorable lack were conspicuous in industry as well as in politics, in the United States as well as abroad. The solid foundation of military victory had rested on America's industrial strength, which some informed observers said would have enabled the nation to win the war singlehanded, if necessary. But that strength was also badly needed for peacetime conversion and there it was tempo-

rarily hamstrung. In this regard the United States was defeating its own ends during the closing months of 1945.

The administration took the position that wages could be raised approximately 30 per cent without hoisting prices much above the 1942 level. The added wage costs were supposed to be absorbed by the manufacturer or, if he were allowed a rise in his charges, by the middleman or retailer. Management insisted that prices must rise with wages; middlemen demanded relief from the "squeeze," and retailers claimed that they could not stay in business if they had to do the "absorbing." Some economists opined that the emphasis upon wages and prices overlooked production—that any scheme which reduced output thereby retarded reconversion.

Reduced and retarded they were. Unemployment and strikes increased. About half the workers who were laid off by cancellation of war contracts tended to refuse to enter jobs available in occupations paying less than their former war work. Strongly intrenched unions insisted that swollen war profits equipped industry to keep wages at wartime levels for peacetime production, and they struck to force either management or government to grant their contentions. Consequently, the much-vaunted "industrial capacity" which was supposed to have doubled during the war, failed to provide quickly the long-awaited civilian goods which were supposed to take the sting out of reconversion.

The Truman administration delegated the solution of the riddle to the parties at issue, stating that government action would be withheld pending their effort. They met in a "Labor-Management Conference" through much of November, without finding middle ground on which to rebuild production, and against a background of strikes growing in number and scope. In its struggles to develop a well-rounded labor policy, the federal government sought to accomplish three things: (1) increase the bargaining power of workers, (2) protect the worker's right of self-organization and (3) facilitate peaceful settlement of disputes. The first tended to prevail when in conflict with the other two. Existing labor laws were being administered in favor of large bargaining units (for the government must determine the bargaining unit) which usually was the CIO or AFL. This worked to the disadvantage of minority labor groups, with whom the employer was forbidden to bargain; but those groups could use strikes, picketing and boycotts to interfere with the rights granted another labor organization representing the majority of the workers in a bargaining unit. The many could be forced to quit work by the few.

While various types of machinery had been set up to settle labor disputes peaceably, in practically all instances labor had a free right to choose whether it would use this machinery. Its right to strike was not really limited or restricted in order to encourage its resort to peaceful settlement. It was not prevented from using strikes, picketing, and boycotts as weapons for attaining any objective, regardless of contract pledges against the use of such weapons, and usually regardless of whether such use greatly restrained interstate commerce, or violated the rights of individuals to life, liberty and property. When statutes ran counter to use of such weapons, they were very frequently left unenforced. For the nonce at least, government policy on the whole was doing little to assure labor's fulfillment of collective bargaining agreements.

Meanwhile, Congress marked time, while the cost of living rose for the general public and government expenditures caused floating of an 8th drive for a "Victory Loan" of \$11,000,000,000; individuals were called upon to purchase \$4,000,000,000 and non-bank investors the rest, in an attempt to retard inflation. Congress was delaying action of both of the major labor measures before it. A Ball-Burton-Hatch bill proposed to swing labor legislation back to a central position. The pendulum had swung too far to the right, in favor of management, before 1900; too far to the left, thereafter. The B-B-H bill sought to hold both labor and management responsible for the general welfare; this measure suffered for lack of a strong consumer lobby. The Wagner-Murray Full Employment bill, which called for government maintenance of employment when private industry failed to achieve it, won labor endorsement and therefore had better chances of enactment. However, labor and the administration found that the enlarging strike situation marred their position with some members of Congress who were less responsive to labor constituencies. There were threats of an all-out campaign to defeat such legislators in 1946.

Accompanying the industrial reversion was a political reversion. Machine rule seemed to triumph in the November elections in Boston, Detroit and New York City; and the Republicans searched in vain for a new Messiah to lead them.

"What price victory?" asked some thoughtful educators. Casting about for reasons and remedies, some of them attributed the adult warfare in industry, and also a rising crime wave among youth, to a wrong emphasis in education. Had the schools given too much stress to individual rights and too little to citizen duties? Working for a greater sense of responsibility, nearly all the great grade school systems undertook curricular changes. On the college level, a return to basic principles, with more "required" courses and fewer "electives"—in order to ensure a better "general" education—had been urged in the July Harvard report titled, *General Education in a Free Society*. Yale and other colleges were of somewhat similar mind. Schools on all levels undertook to make education attractive to demobilized GIs who were interested in taking advantage of the GI Bill of Rights enacted in 1944 to ensure financial aid for completion of their education.

The possibility that advanced knowledge might throw light on everyday national problems never had received adequate attention in the great republic, where many a man was proud that his schooling was limited to very little. Indeed, almost all the great forces in our culture had been geared to prevent serious discussion of public affairs. The atomic bomb was one of many Second World War influences which increased general appreciation of advanced learning. President Truman in his September message urged that the government admit its obligations to higher learning and establish a National Research Foundation. Many persons anxious over international trends were striving to obtain more serious discussion of public affairs.

Discussion of one sort and another certainly was rife in this "Year of Confusion"; and much of it was becoming deadly serious. Perhaps from it Americans might take into 1946 a greater sense of the responsibility inherent in their power. The benefit to the nation, and the world, might prove incalculable.

JEANNETTE P. NICHOLS,

Author, *Twentieth Century United States*.

CHRONOLOGY

The following chronological list presents a summary of the principal events of the United States during the year of 1945:

- Jan. 1**—Bureau of Census reports more than 155,000 separate governmental bodies are functioning in U.S.
- Jan. 3**—War Production Board Chairman J. A. Krug announces that the U.S. turned out 96,369 airplanes of all types in 1944.
- Seventy-ninth Congress convenes; House of Representatives re-elects Sam Rayburn of Texas as speaker.
- Jan. 18**—Alberto Tarchiani appointed Italian ambassador to Washington.
- Jan. 20**—Franklin Delano Roosevelt inaugurated president of the United States for fourth term.
- Jan. 22**—President Roosevelt nominates Henry Wallace to be secretary of commerce.
- Feb. 11**—President Roosevelt, Prime Minister Churchill, and Marshal Stalin sign report of Big Three Conference held at Yalta in Crimea, February 4-11.
- Feb. 19**—House of Representatives passes bills to establish ranks of general in Marine Corps and admiral in Coast Guard.
- Feb. 20**—White House discloses that President Roosevelt conferred with Prime Minister Churchill in Alexandria, Egypt, after Yalta Conference, when Mr. Churchill gave reassurances of active British aid in Pacific. President Roosevelt also conferred with King Farouk of Egypt, Emperor Haile Selassie of Ethiopia, and King Ibn Saud of Saudi Arabia.
- Feb. 26**—Nationwide midnight curfew for night clubs, bars, and places of amusement goes into effect.
- Feb. 28**—State Department signs lend-lease agreement with France; maximum amount stipulated, \$2,575,000,000.
- Mar. 1**—Henry A. Wallace wins Senate confirmation as secretary of commerce by vote of 56 to 32.
- Mar. 2**—President Roosevelt approves the Act of Chapultepec adopted at Mexico City.
- Mar. 8**—U.S. formally re-establishes diplomatic relations with Italy when President Roosevelt accepts credentials of Ambassador Tarchiani.
- Mar. 12**—Thousands of AFL union members go on strike in major motion picture studios in Hollywood, Calif.
- Mar. 20**—U.S.S. *Midway*, heaviest, strongest, and fastest carrier ever built, christened at Newport News, Va.
- Mar. 26**—Senate passes legislation raising national debt limit from \$260,000,000,000 to \$300,000,000,000 and sends bill, already approved by House, to president.
- Apr. 9**—U.S. and other American republics resume diplomatic relations with Argentina.
- Apr. 10**—Senate passes and sends to White House bill to extend Lend-Lease Act for another year from June 30, 1945.
- Apr. 12**—Franklin Delano Roosevelt (63) dies suddenly of cerebral hemorrhage at 4:35 P.M. (EWT) at Warm Springs, Ga., after serving for 12 years and 40 days as president of the United States. Vice President Harry S. Truman of Missouri sworn in as 32d president of the United States by Chief Justice Harlan F. Stone, in the White House at 7:09 P.M.
- Apr. 13**—State Department announces removal of all but minimum governmental restrictions from trade with France.
- Apr. 15**—Franklin D. Roosevelt, late president of the United States, is buried in the garden of his ancestral estate at Hyde Park, N.Y.
- Apr. 17**—President Truman signs third extension of Lend-Lease Act, extending it for 12 months from June 30.
- President Truman nominates John W. Snyder, vice president of First National Bank of St. Louis, as federal loan administrator.
- Apr. 18**—Senate ratifies Mexican water treaty by 76-10 vote.
- Apr. 23**—Dr. Nicholas Murray Butler presents his resignation, to take effect Oct. 1, 1945, after serving for 44 years as acting and titular head of Columbia University.
- Apr. 25**—United Nations Conference on International Organization, comprised of diplomats from 46 United Nations, opens in San Francisco, Calif.
- Apr. 27**—House passes and sends to president the Senate amendment to draft extension bill, barring army from ordering 18-year-old inductees into combat until they have had at least 6 months military training.
- Apr. 29**—The 45,000-ton aircraft carrier *Franklin D. Roosevelt* is christened at Navy Yard in Brooklyn. Built at cost of \$90,000,000.
- May 2**—Associate Justice Robert H. Jackson of the Supreme Court appointed by President Truman as chief counsel of the U.S. in preparing and prosecuting charges against Axis war criminals.
- President Truman announces that Frank C. Walker has resigned as postmaster general, effective June 30, and Robert E. Hannegan, Democratic National Committee chairman, has been appointed to the post.
- May 8**—President Truman announces final and unconditional surrender of Germany.
- Secretary of the Treasury Morgenthau announces that U.S. war cost has reached total of \$275,703,000,000.
- May 9**—President Truman signs bill extending Selective Service Act.
- Fred M. Vinson, war mobilization and reconversion director, lifts midnight entertainment curfew and ban on racing.
- May 19**—Fritz Kuhn, once leader of German-American Bund, ordered deported to Germany as undesirable alien.
- May 21**—Senate approves reappointment of David E. Lilienthal as Tennessee Valley Authority director.
- May 23**—President Truman carries out major reorganization of Cabinet by accepting resignations of Attorney General Francis Biddle, Secretary of Labor Frances Perkins, and Secretary of Agriculture Claude R. Wickard, and immediately appoints Thomas C. Clark of Dallas, Texas, now assistant attorney general, to be attorney general; Judge Lewis B. Schwellenbach of Spokane, Wash., as secretary of labor; and Rep. Clinton P. Anderson of New Mexico as secretary of agriculture; Claude R. Wickard is nominated as director of Rural Electrification Administration.
- May 24**—War Production Board allows distilling industry to return to making beverage alcohol during month of July in third 4-week holiday from war production since August 1944.
- May 28**—Senate passes appropriation bill carrying \$2,500 expense account for House members but defeats by 43-9 vote amendments to give similar funds to senators.
- May 31**—Senate confirms Lewis B. Schwellenbach as secretary of labor.
- June 1**—Senate confirms Clinton P. Anderson as secretary of agriculture.
- June 7**—House decides by 206-152 vote to keep its original \$2,500 annual expense account and sends bill to White House.
- Gen. Omar N. Bradley, commanding general, Twelfth Army Group, under General Eisenhower, designated by President Truman to succeed Brig. Gen. Frank T. Hines as administrator of veterans' affairs.
- June 14**—Senate confirms nomination of Thomas C. Clark as attorney general.
- June 21**—Senate confirms nomination of Claude R. Wickard as rural electrification administrator by 56-6 vote.
- June 26**—United Nations Conference in San Francisco adjourns after 9 weeks, following signing by 50 nations present of United Nations Charter.
- June 30**—President Truman appoints former Justice James F. Byrnes secretary of state to succeed Edward R. Stettinius, resigned.
- July 5**—Owen D. Roberts of Pennsylvania retires as associate justice of U.S. Supreme Court, effective July 31, after a service of 15 years.
- Thurman W. Arnold resigns as associate justice of U.S. District Court of Appeals, effective July 10.
- Henry Morgenthau, Jr., resigns as secretary of the treasury, making sixth change in Cabinet since Mr. Truman took office as president.
- July 7**—President Truman sails from Norfolk, Va., naval base to Big Three Conference near Berlin, accompanied by Secretary of State James F. Byrnes and large staff.
- July 17**—Senate confirms Fred M. Vinson as secretary of treasury, and debates Bretton Woods agreements.
- July 18**—Navy reveals U.S. fighting fleet now consists of 1,500 warships and about 100,000 vessels of all types, increase of 1,322 combatant ships, nearly all of which are in Pacific.
- July 20**—House accepts Bretton Woods bill and sends it to President Truman for signature. Senate approves House bill to increase lending power of Export-Import Bank by \$2,800,000,000 to total of \$3,500,000,000.
- July 21**—Senate approves American membership in United Nations food and agriculture organization.
- July 27**—Delegates to special national convention of Communist Political Association vote to disband that organization and reconstitute Communist Party.
- July 28**—U.S. Senate ratifies, 89-2, United Nations Security Charter.
- July 29**—Communist Party drops its political heads, Earl Browder and Robert Minor, and names new national officers headed by William Z. Foster.
- Aug. 1**—Federal expenditures for fiscal year ending June 30, 1946 estimated in revised budget at \$85,288,000,000, an increase of \$2,800,000,000 over January budget. Estimate of revenues cut to \$39,007,000,000 from original estimate of \$41,255,000,000.
- Jet-propelled army P-80 Lockheed Shooting Star fighter plane flies from Dayton, Ohio, to La Guardia Field, New York, in 1 hour 2 minutes, record-breaking 544-mile trip.
- Senate adjourns until October 8.
- Aug. 2**—President Truman, Prime Minister Attlee, and Premier Stalin issue joint communiqué on Big Three (Potsdam) Conference.
- Aug. 5**—U.S. and Swiss governments sign reciprocal air-transport agreement providing transit rights over their respective territories and airport facilities at New York and Geneva.

- Hawaii Mars*, largest flying boat in operation, sinks in Chesapeake Bay, 2 weeks after launching.
- Aug. 6—President Truman announces that an atomic bomb, possessing more power than 20,000 tons of TNT, had been dropped by American airplanes on Hiroshima, Japan.
- Aug. 7—President Truman returns to White House from Big Three Conference and confers with Cabinet.
- Aug. 8—New code of international law is adopted by United States, Great Britain, Russia, and France, listing wars of aggression as crime against peace.
- President Truman signs United Nations Charter.
- Aug. 14—President Truman announces at 7 P.M. EWT that Japan has accepted terms of Potsdam declaration of July 26, 1945, which amplified Cairo declaration of 1943, thus ending the war. Japanese document was forwarded through Swiss Foreign Office at Bern and Swiss legation in Washington.
- Aug. 15—Byron Price disbands Office of Censorship.
- General Bradley sworn in as veterans' affairs administrator.
- Office of Price Administration ends rationing of gasoline, fuel oil, oil stoves, and blue-point canned fruits and vegetables.
- Aug. 16—T. V. Soong, Chinese premier, arrives in Washington for conferences with President Truman and James F. Byrnes.
- Aug. 17—Office of Defense Transportation voids curb on travel to sports meets.
- Aug. 21—President Truman orders end of all further lend-lease; notifies all Allied governments that they may obtain American supplies only on cash basis. Lend-lease program supplied Allies with \$41,208,000,000 in goods and services.
- Aug. 22—Gen. Charles de Gaulle arrives in Washington to confer with President Truman.
- Aug. 30—President Truman urges Congress to write off \$42,000,000,000 debt owed to United States from lend-lease, stating that to attempt collection of this money would threaten political stability of United Nations and help to sow "the seeds of a new world conflagration."
- Sept. 5—Congress reconvenes.
- Sept. 6—Senate unanimously votes, with approval of President Truman, for congressional investigation of Pearl Harbor disaster.
- Concession for development of oil resources of Ethiopia obtained by Sinclair Oil Corporation.
- Senate approves promotion of Lieut. Gen. Jonathan Wainwright to full general.
- Sept. 9—Gen. Jonathan M. Wainwright, hero of Bataan and Corregidor, arrives in America after 40 months in Japanese prison camp.
- Sept. 11—House of Representatives votes full inquiry on Pearl Harbor disaster.
- Sept. 18—Henry L. Stimson, U.S. secretary of war, resigns; Robert P. Patterson, undersecretary, is nominated as his successor.
- Sept. 20—President Truman terminates Office of Strategic Services; orders permanent foreign intelligence division created under State Department.
- U.S. Senate unanimously confirms Senator Harold H. Burton's appointment as associate justice, U.S. Supreme Court.
- Sept. 25—Senate confirms nomination of Robert P. Patterson as secretary of war.
- Sept. 27—President Truman accepts resignation of Leo T. Crowley as Federal Deposit Insurance Corporation chairman; simultaneously abolishes Foreign Economic Administration.
- Oct. 1—President Truman orders reorganization of the navy; calls, among other things, for abolition of position of commander in chief, United States Fleet; transfer of principal command to chief of naval operations.
- Oct. 4—President Truman orders abolition of War Production Board and its replacement by new Civilian Production Administration, effective November 3.
- Oct. 7—James W. Huffman appointed U.S. senator from Ohio by Governor Frank J. Lausche to succeed Harold H. Burton, now U.S. Supreme Court justice.
- Oct. 9—War Production Board Chairman J. A. Krug reports U.S. produced more than \$187,000,000,000 worth of weapons and supplies during the war.
- Oct. 16—President Truman tells Congress Puerto Ricans should be allowed to vote now on question of independence, dominion status, statehood, or colonial status with more autonomy.
- Oct. 17—John L. Lewis ends coal strike which began September 21, spread to 210,000 bituminous miners, and caused loss of 13,000,000 tons, with announcement that he is postponing efforts to win recognition for supervisory workers.
- Russia signs agreement with U.S. for \$350,000,000 to \$400,000,000 of lend-lease goods, delivery of which was halted on V-J Day; contract calls for Russian payment within 30 years at 2% per cent interest, with first payment beginning 9 years hence.
- Oct. 24—Strike of 33 weeks in Hollywood studios ends upon orders of AFL executive council that it will settle jurisdictional dispute.
- Oct. 25—General Motors workers vote 6-1 in favor of strike if necessary to obtain 30 per cent wage increase.
- Oct. 27—In Navy Day celebration speech in New York City, President Truman outlines American foreign policy, stating U.S. will not recognize any government imposed upon any nation by force of a foreign power and that the U.S. will hold the atom bomb as secret trust.
- Oct. 30—U.S. grants new Venezuelan government full recognition.
- In radio broadcast President Truman outlines government wage-price policy, advocating higher wages for American workers but ruling that prices must be held stable.
- Nov. 1—Four B-29's complete first nonstop flight from Japan to Washington in 27 hours 29 minutes.
- Nov. 2—Provisional government of Hungary recognized by U.S. when State Department announces it will accept Hungarian Foreign Office veteran in Washington as minister.
- Nov. 5—President's Management-Labor Conference opens in Washington, D.C., attended by Philip Murray, CIO president; William Green, AFL president; Secretary of Commerce Wallace; Secretary of Labor Schwelmbach; Eric A. Johnston, Chamber of Commerce president; Ira Mosher, National Association of Manufacturers president, and others.
- Nov. 9—President Truman signs 1945 revenue bill, reducing income taxes by \$5,920,000,000.
- Nov. 10—Prime Ministers Attlee of Great Britain and Mackenzie King of Canada, and President Truman begin discussions in Washington on atomic bomb, and world affairs.
- Nov. 12—Former Secretary of State Cordell Hull awarded 1945 Nobel Peace Prize for work in laying foundation of United Nations Organization.
- Nov. 14—President Truman, Prime Ministers Attlee of Great Britain and Mackenzie King of Canada agree on turning over secret of atomic energy to United Nations Organization provided Russia clarifies her postwar aspirations and with other member nations agrees to throw her military potentials into same common pool.
- Nov. 15—Federal Bureau of Censorship comes to an end.
- Nov. 19—Rear Admiral J. O. Richardson, retired, chief of staff of Pacific Command until relieved on Feb. 1, 1941, by Rear Admiral Husband E. Kimmel, testifies before congressional Pearl Harbor Committee that he protested maintaining ships at Hawaii undermanned and ill-equipped after President Roosevelt expressed himself in 1940 as certain Japan would ultimately make a mistake compelling United States to go to war.
- President Truman asks Congress for immediate action on 5-point legislative program of preventive and curative medical aid, including compulsory health insurance system under present social security program.
- Nov. 20—B-29 establishes new nonstop record, flying 8,198 miles from Guam to Washington in 35 hours 5 minutes.
- Nov. 21—United Automobile Workers, numbering about 180,000, go on strike in General Motors Corporation plants from coast to coast.
- Nov. 23—Office of Price Administration ends rationing of all foods but sugar.
- Nov. 26—Senate confirms nominations of Dwight D. Eisenhower as army chief of staff and Chester W. Nimitz as chief of naval operations.
- Nov. 27—President Truman appoints Gen. George C. Marshall, retiring army chief of staff, as special envoy to China with rank of ambassador; accepts resignation from that post of Patrick J. Hurley who issued blistering denunciation of administration of American foreign policy by "professional diplomats."
- Secretary of State Byrnes announces "unqualified adherence" by U.S. government to Uruguayan proposal for intervention in Western Hemisphere by American republics when one of them fails to fulfill its international obligations.
- Nov. 30—Washington Labor-Management Conference ends with no outstanding or concrete results.
- Dec. 3—President Truman asks Congress for legislation to outlaw strikes, while fact-finding board investigates dispute; president also creates board to deal with General Motors strike, appeals to automobile workers to go back to work.
- Dec. 4—Henri Bonnet, French ambassador to U.S., announces signing of \$550,000,000 loan agreement by France with Export-Import Bank, supplementing previous U.S. credit of about \$500,000,000.
- Dec. 5—Office of Stabilization administrator formally sets cost of living increase since January 1941 at 33 per cent; rules that manufacturers can base applications for price increases on wage increases up to that level.
- Dec. 6—U.S. signs agreement to advance financial aid to Great Britain of about \$4,400,000,000, at 2 per cent interest over 50-year payment period; agreement also includes writing off about \$25,000,000,000 of lend-lease by the U.S., because of mutual victory benefits.
- Agreement must be ratified by Congress.
- U.S. and Italy enter agreement with regard to resumption of normal commercial relations between the two countries.

Dec. 8—National Council of United Automobile Workers rejects President Truman's fact-finding plan for strike settlement and General Motors Corporation's offer of 10 per cent increase.

Dec. 10—President Truman names 6-member group to represent U.S. on British-American Committee of Inquiry on Palestine question, with Judge Joseph C. Hutcheson, chairman.

Dec. 11—House approves conference report appropriating final \$550,000,000 of first U.S. commitment to United Nations Relief and Rehabilitation Administration.

B-29 Superfortress *Dreamboat* makes 2,464-mile trip from Burbank, Calif., to New York City in 5 hours 27 minutes 8 seconds, shattering all official records for transcontinental flight.

Dec. 12—President Truman appoints fact-finding board, headed by Judge Walter P. Stacy, to look into General Motors strike.

Secretary of State Byrnes leaves Washington for Moscow for conferences with Vyacheslav M. Molotov, Soviet Foreign Commissar, and Ernest Bevin, British Foreign Secretary.

Dec. 13—Both houses of Congress pass and send to White House compromise bill granting President Truman power to reorganize Executive Department.

Electrical Workers throughout U.S. vote to go on strike to back up their demands for \$2 daily wage increases.

U.S. invites 14 nations to meet in preparatory session for international trade conference, asking them to come prepared to negotiate agreements with U.S. for reciprocal lowering of tariffs.

Dec. 15—Gen. George C. Marshall leaves Washington for Chungking as special ambassador to China.

Dec. 17—Senate passes and sends to White House authorization for \$1,350,000,000 more for United Nations Relief and Rehabilitation Administration.

Dec. 19—President Truman asks Congress to merge armed services into single department under civilian secretary with equal status for army, navy, and air forces.

U.S. makes plans to convert part of its remaining stocks of property abroad into self-perpetuating scholarship fund which will bring foreign students to this country and finance studies of Americans abroad.

By 31-30 vote Senate overrides administration requests and extends president's wartime power for 6 months instead of a year.

Congress approves United Nations Organization bill; President Truman signs it and appoints as American representatives and alternates to the general assembly Edward R. Stettinius, chief delegate, Secretary Byrnes, senior delegate, Mrs. Eleanor Roosevelt, Senator Tom Connally, and Senator Arthur H. Vandenberg.

Dec. 20—Office of Price Administration announces tire rationing will end in January 1946.

Senate confirms President Truman's delegates to first meeting of United Nations Assembly in London.

Dec. 21—Congress adjourns until Jan. 14, 1946.

Dec. 24—President Truman rejects \$51,000,000,000 bill rescinding certain war appropriations and contracts because the measure carries a rider that would return the United States Employment Service to the states within 100 days.

President Truman pardons several thousand former federal convicts in recognition of their meritorious service in the armed forces during the war.

Dec. 26—President Truman names Fiorello H. La Guardia as his personal representative with the rank of ambassador at inauguration of Gen. Eurico Gaspar Dutra as president of Brazil.

Dec. 28—General Motors Corporation walks out of meeting of President Truman's fact-finding board, set up to consider the strike of the company's employees. The company based its refusal to co-operate on the ground that it was unable to do so as long as "ability to pay is to be treated as a subject of investigation, fact finding and recommendations."

Dec. 29—Secretary of State James F. Byrnes returns to Washington from Moscow Conference of Foreign Ministers of Great Britain, the Soviet Union, and the U.S.

U.S. Coast Guard will be returned from the navy to the Treasury Department on January 2 to resume peacetime police functions.

Joint Army-Navy Advisory Board created to work on atomic bomb project with Maj. Gen. Leslie R. Groves.

Dec. 31—Four of the five U.S. delegates to the first meeting of the General Assembly of the United Nations Organization, and an equal number of alternates, sail for London, where meeting will take place. The four delegates are: Edward R. Stettinius, Jr., Mrs. Franklin D. Roosevelt, and Senators Tom Connally and Arthur H. Vandenberg. Secretary of State James F. Byrnes, the fifth delegate, will follow in a few days.

War Labor Board goes out of existence; President Truman expected to name a wage-stabilization board to take its place until June 30.

William O'Dwyer sworn in as mayor of New York City to succeed Fiorello H. LaGuardia, who had held the office for 12 years.

President Truman signs bill authorizing expenditure of \$160,000,000 to provide emergency housing for veterans and the families of service men. President also approved acquisition of a site at Buffalo, N.Y., for the erection of a 1,000-bed general hospital for the Veterans' Administration. Congress appropriated \$10,188,664 for construction and \$200,000 for the site.

URENA, Rafael Estrella, Dominican politician: b. Sept. 19, 1889; d. Ciudad Trujillo, Dominican Republic, Sept. 16, 1945. Señor Urena was provisional president of the Dominican Republic from Feb. 28, 1930, to May 16, 1930, after he had headed an insurrection that overthrew the regime of President Horacio Vasquez. As a young man, Urena taught school while studying law. He later became private secretary to General Vasquez and fought with him in the revolutions of 1912 and 1913. He was minister to France under the Vasquez regime, before breaking with Vasquez in 1930. When the insurgent forces under Urena marched into Santo Domingo in February of that year, the American minister, Charles B. Curtis, persuaded President Vasquez that his position was hopeless and induced him to name Urena to the post of secretary of the interior and then to resign. Under the constitution, Urena became provisional president, but as such was ineligible to succeed to the presidency. However, he was nominated by the Liberal Party for the vice presidency, with General Rafael L. Trujillo, the presidential candidate. They were elected on May 16, 1930, without opposition, and Urena was named secretary of foreign affairs. Differences later arose between Urena and Trujillo, and in 1931 the Chamber of Deputies voted to impeach Urena on charges of conspiring against the government. He fled to the United States but was allowed to return in 1935.

URUGUAY, ōō-rōō-gwī'. The smallest and most densely populated republic of South America, situated on the north coast of the Rio de la Plata between the Atlantic Ocean, Brazil, and Argentina, with an area of 72,153 square miles and a population (estimated, 1944) of 2,235,000. After many attempts which were successfully repulsed, the Portuguese finally succeeded in establishing settlements early in the 17th century, only to have them captured by the Spaniards some 100 years later. From 1726 to 1814 the country was a part of the Spanish viceroyalty of Rio de la Plata, subsequently annexed by the Argentine Confederation, and later becoming a province of Brazil during the period when Brazil was held by the Portuguese. In 1825, through armed revolt, Brazilian authority was overthrown, and an independent state proclaimed. The republic was inaugurated in 1830. Under the new constitution, adopted in 1934, the president is elected for a term of four years by the legislature, which consists of a Chamber of Representatives of 99 deputies and a Senate of 30 members, elected for four years by popular vote. The republic is divided into 19 departments. Juan José de Amézagaga became president March 1, 1943. Principal towns are Montevideo, the capital (pop. estimated 770,000 in 1941); Paysandú (31,000); Salto (30,000), and Mercedes (24,000).

It is not generally realized that Uruguay is one of the most progressive of western democracies. The provisions of her social welfare laws, for example, are more liberal than those of most other countries in this hemisphere, including, in some respects, those of the United States. According to the pamphlet *Uruguay—Vigorous Democracy* published by the co-ordinator of inter-American affairs, Washington, D.C., "the fixing of wages and hours by law, the regulation of the labor of women and children, the care of mothers, child welfare, and socialized medicine, all form part of the general plan of Uruguayan social improvement. Farm laborers benefit by the same protection as other workers, with a minimum wage law which guarantees them higher earnings than those existing in many countries of the world. Uruguay's 8-hour working day law, enacted on Nov. 17, 1915, was the first in all South America."

Religion and Education.—There is complete separation of church and state and full liberty for all denominations. The majority of the population professes the Roman Catholic faith. There is an archbishopric at Montevideo as well as bishoprics at Salto and Melo.

Education is free, and primary education is compulsory. In 1943 there were 1,592 public schools with 4,981 teachers and 191,191 pupils; rural schools have 53,938 pupils; and 6,717 were enrolled in evening schools for adults. The University of the Republic of Montevideo was inaugurated in 1849. It had 19,197 students in 1937. There are 5 co-educational normal schools and numerous arts and trade schools. Federal appropriation for education in 1944 was 6,500,000 pesos.

Uruguay has been a pioneer in education. The country is the only one in the Western Hemisphere to offer free graduate courses in medicine, engineering, architecture, and the other professions. Elementary education has been both free and compulsory since 1877, and higher education is provided without charge in secondary schools, colleges and universities maintained by the state not only for Uruguayans but for foreigners also.

Army and Navy.—Uruguay has a small standing army, with a peacetime strength in 1938 of 808 officers and 7,108 other ranks (nominal war strength of 50,000), and a national guard. Service is voluntary, lasting from two to five years, with re-enlistment to the age of 44, in the Regular Army. Service in the National Guard is compulsory in the event of war from the age of 17 to the age of 45. The total strength of the entire guard is about 100,000 men. The military aviation school in 1937 had 45 planes, 8 instructors, and 320 officers and men. The naval forces consist of the torpedo gunboat *Uruguay*, the surveying vessel *Miranda*, three patrol vessels, 2 training ships, and a few auxiliary craft. A naval flying service is also being instituted.

Communications.—There are 2,611 miles of national highways, and 5,903 miles of departmental highways in Uruguay of which 323 miles are macadamized. The best roads are concentrated in the south, branching north, east, and west from Montevideo. Traffic between Buenos Aires and Montevideo is facilitated by an excellent highway and auto ferry service across the Rio de la Plata. There is more railroad mileage in Uruguay, in proportion to its size, than in any other country of South America. The total mileage of standard gauge railways open for traffic in 1941 was 1,477. The Rio de la Plata and the

Uruguay River are the most important of the many waterways of the republic, providing more than 500 miles of navigable routes. Motor vehicles (estimate 1943) number 65,000. There were 48 long-wave and 5 short-wave radio stations, and 46,656 telephone instruments in Uruguay in 1940. Pan American Airways and a domestic service connect the major cities of the country with the United States and neighbor countries. Two other airlines, one Argentine and the other Brazilian, also maintain service in Uruguay.

Agriculture and Industry.—Stock raising, meat packing and agriculture are, respectively, the most important economic activities in Uruguay. The country consists mainly of undulating grassy plains, but of the total cultivable area, only about 10 per cent is under cultivation, for the country is given up almost entirely to grazing of large herds of cattle and sheep, the wool of which is of excellent quality. The latest livestock census includes 8,296,890 cattle; 22,000,000 sheep; 600,000 horses; and 308,000 hogs. The chief agricultural products are wheat, maize, linseed, and oats. The fruits grown are grapes, peaches, oranges, and pears. In the northern departments, deposits of lead, copper, silver, manganese, gold, iron, and lignite coal have been found but have not been developed commercially. Exports of wool from Montevideo from Oct. 1, 1944 to March 31, 1945, totaled 96,823 bales (approximately 483 pounds each). Meat production figures for the first quarter of 1945 fell below those for the corresponding period of 1944, largely because of the modification of preferential exchange. Cattle slaughter reached only 126,025 instead of the 142,207 estimated; and estimates for the second quarter of 1945 continued to be substantially below production for the same period in 1944. Leather shoe production decreased to 950,000 pairs in 1944 from an average of 1,485,000 pairs during the period from 1939 to 1941. Industrial production was estimated at 425,000,000 pesos in 1944 as compared with 400,000,000 in 1943, and approached the importance of livestock and agriculture, although the capital invested in land, livestock, and agriculture remained more than three times that invested in manufacturing.

Finances.—The budget for 1944 estimated receipts at 136,894,503 gold pesos, and expenditures at 136,900,000 gold pesos, and in 1943 preliminary receipts were 101,445,395 pesos and expenditures 121,093,857 pesos.

Foreign Trade.—Total imports in 1943 were valued at 63,807,357 U.S. dollars, while exports were valued at 100,021,697 U.S. dollars. The United States (25 per cent), Great Britain (10 per cent), and Brazil (17 per cent) were the principal suppliers of imports while the United States (54 per cent), and Great Britain (33 per cent) were the principal markets for Uruguayan exports. Of the \$100,000,000 export total for 1943, meat and meat products accounted for \$46,514,000, and wool for \$39,270,000.

Foreign trade for the first 6 months of 1945 showed an export balance of \$20,175,627, as compared with \$9,751,954 for the similar period in 1944.

Principal Events.—On Feb. 15, 1945, Uruguay declared war on the Axis nations. Venezuela took similar action at the same time, Argentina then remaining the only Latin American nation at peace with the Axis. Uruguay became a member of the United Nations on February 24, when Ambassador Juan Carlos Blanco signed the declaration of that organization in Washington; and

on April 25, Uruguay was one of the 46 countries represented at the United Nations Conference at San Francisco. On April 4, nine persons were arrested in Montevideo on charges of constituting a German spy ring. An immense popular demonstration celebrating the fall of Berlin resulted in wild rioting in Montevideo on the evening of May 2-3, 43 policemen and 15 civilians being injured, and thousands of dollars worth of property being damaged when owners of the newspaper *El Dia* refused to raise the Soviet flag beside those of the United States and Great Britain. The offices of another newspaper, *El Debate*, accused similarly of pro-Fascist sympathies, were also stoned. The demonstrators, 83 of whom were arrested, carried flags of the United Nations.

The year began with a building boom. Building permits, including repairs, granted at Montevideo during the first quarter of 1945, were valued at 8,471,000 pesos, a gain of 93.6 per cent over the value of the permits issued during the corresponding period of the previous year. Expenditures under the public works program totaled 14,888,000 pesos for the first quarter of 1945, as compared with 11,245,000 pesos for the same period in 1944. Production of meat improved greatly, the total number of cattle slaughtered in May being 107,964 as compared with 53,684 in April. The deficiency in rainfall affected agricultural output, but industrial production continued to gain. Prices rose steadily, not only for imported articles, but for milk, eggs, and potatoes; and the rapidity of the rise in living costs occasioned a number of strikes and increased tension in the field of labor.

On November 28, the text of a proposal made by the government of Uruguay to United States Secretary of State James F. Byrnes was released in Washington, D.C. The Uruguayan proposal outlined a method of collective security within the Western Hemisphere, in accordance with which the nations of North and South America should commit themselves, in effect, to combating, collectively, aggression initiated by any power or group of powers. As such, the proposal met with immediate objections from Argentina, and with acclaim in many liberal quarters elsewhere. Critics of the proposal, however, pointed out that methods of dealing with aggression in any part of the world were fully provided in the charter of the United Nations Organization, and they claimed that any such pact designed to replace or reduce the functions of the UNO was in reality an attack upon it, intended to usurp and weaken its authority and its powers.

USO. See UNITED SERVICE ORGANIZATIONS.

UTAH. Rocky Mountain state, United States; admitted to the Union Jan. 4, 1896. Population (1940): rural, 244,817; urban, 305,493; total, 550,310. Land area, 82,346 square miles, divided into 29 counties. Principal cities, with 1940 pop-

ulations: Salt Lake City, the capital, 149,934; Ogden, 43,688; Provo, 18,071; Logan, 11,868.

Chief State Officers, 1945.—Governor, Herbert B. Maw; secretary of state, E. E. Monson; treasurer, Reese M. Reese; auditor, Ferrell H. Adams; attorney general, Grover A. Giles.

Judiciary.—Chief justice of the Utah Supreme Court, Martin M. Larson; associate justices, Roger I. McDonough, Lester A. Wade, James H. Wolfe, Abe W. Turner.

Legislature.—The state legislature (Senate, 23 members; House of Representatives, 60) convenes biennially in odd years on the second Monday in January.

Education.—Public elementary schools (1944-45), 370; teachers and principals, 2,356; average daily pupil enrolment, 77,241; average yearly salary of elementary school teachers and principals, \$1,796. Public junior high schools, 82; teachers and principals, 682; average daily student enrolment, 24,567. Public senior high schools, 74; teachers and principals, 1,217; average daily student enrolment, 30,601; average yearly salary of junior and senior high school teachers and principals, \$2,046. There are three teacher training schools in the state. Total state appropriation for education (1944-45), \$8,759,818; appropriation by cities and counties, \$7,706,891. Superintendent of public instruction, E. Allen Bateman. Education in Utah is compulsory for all children between the ages of 8 and 18, inclusive.

Finances.—The following statement of Utah's finances for the fiscal year 1944-45 was furnished by the state treasurer's office:

Balance in treasury, beginning of fiscal year 1944-45	\$16,942,590.25
Receipts, 1944-45	50,264,622.76
Total	\$67,207,213.01
Disbursements, 1944-45	46,163,034.49
Balance, beginning of fiscal year 1945-46	\$21,044,178.52

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following tables:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)	654	754	788
Oats (1,000 bu.)	1,462	2,107	2,132
Wheat (1,000 bu.)	5,377	7,361	7,186
Barley (1,000 bu.)	3,997	7,038	6,975
Sugar beets (1,000 short tons)	546	396	495
Hay:			
Alfalfa (1,000 tons)	927	1,040	1,007
Tame (1,000 tons)	1,000	1,140	1,115
Potatoes (1,000 bu.)	2,194	2,765	3,366
Apples (1,000 bu.)	412	629	420
Peaches (1,000 bu.)	551	850	870
Cherries (tons)	3,990	5,700	7,100
Grapes (tons)	840	800	800

UZBEK SOVIET SOCIALIST REPUBLIC. See UNION OF SOVIET SOCIALIST REPUBLICS.

V

VALÉRY, Paul Ambroise, French poet, philosopher, and critic: b. Sète (Cette), France, Oct. 30, 1871; d. Paris, July 20, 1945. A member of the French Academy since 1925, Paul Valéry is generally considered the foremost contemporary French poet.

Valéry's two important prose studies, *Introduction à la Méthode de Léonard de Vinci* (1895), and *La Soirée avec Monsieur Teste* (1895), and the poems collected in *Album de Vers Anciens* (1920) appeared in periodicals in 1892. During the winter of 1912-13 André Gide suggested that he prepare his early symbolist poems for publication in book form, and while working on this project he decided to try his hand at poetry again. What began as 25 lines of valedictory verse took more than four and a half years of work and emerged in 1917 as *La Jeune Parque*, a long poem of over 500 lines, which was universally acclaimed for its classic beauty. In 1920 Valéry published his best known poem, a philosophical meditation entitled *Le Cimetière Marin*. After the war he gained international fame and was appointed president of the Committee of Letters and Arts of the League of Nations, administrator of the Centre Méditerranéen at Nice, and professor of poetry at the Collège de France. Since the liberation of France, he had presided over the Comité National des Écrivains.

Valéry's work includes: poetry, *Charmes* (1922) and *Poésies* (1923); prose studies, *Eupalinos ou l'Architecte* (1924), *L'Âme et la Danse* (1924), *Regards sur le Monde Actuel* (1931), *Pièces sur l'Art* (1934), *Introductions à la Poétique* (1938), *Variété* (parts 1-5, 1924-1947); and two melodramas, *Amphion* (1931) and *Semiramis* (1934).

VAN ANDA, Carr Vattel, American journalist: b. Georgetown, Ohio, Dec. 2, 1864; d. New York City, Jan. 28, 1945. Active as managing editor of the *New York Times* for 28 years, Mr. Van Ande stood in the front rank of the working newspaper men of his time. After two years at Ohio University, Van Ande obtained employment as foreman of the *Auglaize Republican*, a Wapakoneta (Ohio) weekly, where he acquired practical training in the mechanical side of newspaper work. Later, he worked as a typesetter and reporter in Cleveland and Baltimore. He went to New York City in 1888, and joined the staff of the *Sun*, then edited by Charles A. Dana, as reporter and copy editor. He became night editor in 1893, and occupied that post until he was offered the position of managing editor of the *Times* in 1904. Given a free hand in the exercise of his news judgment, Van Ande had ample opportunity to display his talents in the years that followed. He was especially gifted with the ability to grasp the full news value of many events that to other newspaper men had little or no interest. In 1925 he took a leave of absence because of ill health, and never actively returned to his post, although he retained the title of managing editor until his formal retirement in 1932.

VANDEMBERG, Hoyt Sanford, United States Army Air Force officer: b. Milwaukee, Wis., Jan. 24, 1899. Lieutenant General Vandenberg commanded the United States Ninth Air Force for the Allied air war against Nazi Europe. He succeeded Gen. Lewis H. Brereton as the Ninth's commander on Aug. 10, 1944. On July 3, 1945,

he was appointed assistant chief of the Air Staff, Army Air Forces. A nephew of Republican Senator Arthur H. Vandenberg and a descendant of the early Dutch settlers of New York, General Vandenberg was graduated from the United States Military Academy in 1923 and commissioned second lieutenant in the Army Air Corps. He participated in the invasion of North Africa and in the Tunisian and Sicilian campaigns. In March 1944, after a period of service at air force headquarters in Washington, he returned to the European theater, and in April 1944, was named deputy air commander in chief of the Allied Expeditionary Air Force. General Vandenberg holds the Distinguished Service Medal, the Legion of Merit, the Silver Star, the Distinguished Flying Cross, and the Air Medal. He was promoted lieutenant general March 17, 1945.

VARGAS, Getulio Dornelles, former president of Brazil: b. São Borja, Rio Grande do Sul, Brazil, April 19, 1882. For 15 years virtual dictator of Brazil, Dr. Getulio Vargas was forced by army ultimatum to resign the office of president on Oct. 30, 1945. Washington observers, speculating on the reasons behind the coup, thought it probable the army and the people of Brazil suspected Vargas of plotting to remain in power, despite his repeated assurance that he would not be a presidential candidate in the elections scheduled for December 1945. Dr. Vargas led a successful revolution against President Washington Luiz in 1930; served as provisional president from 1930 until 1934, and in the latter year, had himself elected president under a new constitution inaugurating a second republic. In 1935, a so-called Communist revolt gave him the opportunity of ridding himself of the remaining elements of opposition, and in 1937, he assumed dictatorial powers, "in the interests of national security." In 1938, he dealt summarily with the Nazi-promoted Integralista rebellion. In August 1942, after the sinking off the coast of Brazil of five Brazilian vessels, he declared war on Germany and Italy. Under his leadership, the government pursued a distinctly nationalistic policy. Dr. Vargas is the son of Gen. Manoel do Nascimento Vargas who took part in the overthrow of the monarchy and the establishment of the Brazilian Republic in 1889. Graduated from the Military School of Rio Pardo in 1900, young Vargas entered law school; received his degree in 1907; and returned to São Borja to practice. He was elected to the state legislature in 1909; became a member of the federal Congress in Rio de Janeiro in 1923; and in 1926, Brazil's minister of finance. He was named president of his native state of Rio Grande do Sul in 1928; and two years later, was Liberal candidate for the presidency of Brazil. Losing the election, he resorted to armed rebellion, and in October 1930, was named provisional president by a junta of army and navy officers.

VASILEVSKY, Alexander Mikhailovich, Soviet Army officer: b. 1897. One of the younger members of the Russian high command, and according to *Current Biography*, certainly among the most obscure, Marshal Vasilevsky began his career as a soldier in the Imperial Army in the First World War. His development into a skillful, often brilliant, military leader has followed a familiar pattern—active combat service with the

Bolsheviks in the Revolution; years of study at Russian general staff schools, including Frunze Military Academy; and phenomenal advancement to positions of great responsibility on the basis of sheer merit. He has been a member of the Russian Supreme Command since 1941 when he was drafted to help reorganize Russia's armies, after the war with Finland (1939-40). He was at that time a major general; in the space of 18 months he had risen to the rank of marshal of the Soviet Union, and had also become vice chairman of the Commissariat of Defense. In November 1942 he succeeded the ill and aging Marshal Boris M. Shaposhnikov as the Red Army's chief of staff, although his appointment was not revealed until April 1943. (He no longer holds this post.) With the completion of Soviet plans for the Stalingrad counteroffensive (Nov. 19, 1942), Vasilevsky was ordered to the front with Marshal Zhukov to supervise the operation, and from there was hurried to the Voronezh sector in a similar capacity. He was awarded the Order of Suvorov, First Degree, for these activities; he also holds the Order of Victory, highest Soviet decoration, given him in April 1944, and the Order of the Grand Cross of the British Empire. In May 1944, Marshal Vasilevsky directed the three-day drive on Sevastopol, Black Sea naval base in the Crimea. Eleven months later, he led troops of the Third White Russian Army in the final assault on Königsberg, long-besieged East Prussian capital, and took the city in little more than 36 hours. On Aug. 8, 1945, as supreme commander, Marshal Vasilevsky directed Soviet forces in their assault on Japanese-held western Manchuria.

VATICAN CITY. That part of the city of Rome which includes the Basilica of St. Peter, the Vatican Palace, the Vatican Gardens, and some detached palaces and churches, which by treaty with Italy, signed Feb. 11, 1929, was made an independent state with the pope at its head. The treaty recognizes the sovereignty of the Holy See over the new Vatican City (Città del Vaticano) wherein the Holy Father may exercise with full liberty and independence the mission of the Papacy. By this treaty the famous "Roman Question" of 60 years' standing was settled. The treaty also provides for territorial immunities outside the Vatican confines to churches and buildings used by the Holy See for its administration. Ratifications of the treaty were exchanged at the Vatican on June 7, 1929. The area of Vatican City is 108.7 acres; the population was estimated at 970 (1941). Vatican City has its own railway station, radio station, postal system, and currency. Executive powers are exercised by the governor, who is directly and exclusively responsible to the pope. The judicial power is vested in a tribunal of first instance, with the right of appeal to the Sacred Roman Rota and the Supreme Tribunal of the Segnatura. Diplomatic relations were maintained with 35 governments (1942), and in several other countries, including the United States, apostolic delegates conducted unofficial relations. Papal coinage was resumed in 1930. The total value of the bronze, nickel, and silver coins issued in any year is not to exceed 1,000,000 lire. The reigning pope is Pius XII (Eugenio Pacelli), born at Rome, March 2, 1876; elected supreme pontiff to succeed Pius XI, March 2, 1939. Secretary of state is Luigi Cardinal Maglione. Allied bombs fell four miles east of the sovereign state on July 19, 1943. Nazi troops on September 10 'assumed protection of Vatican

City," and four days later German paratroops took over the policing of St. Peter's Square, making the pope a virtual prisoner until June 4, 1944, when Rome was retaken by the Allies. (For international events, during 1945, see ROMAN CATHOLIC CHURCH, THE.)

VENEREAL DISEASE CONTROL. See PUBLIC HEALTH SERVICE, UNITED STATES.

VENEZUELA. A republic of South America, situated on the north coast of the continent and bounded on the north by the Caribbean Sea, west by Colombia, east by British Guiana, and south by Brazil. Officially known as Los Estados Unidos de Venezuela (the United States of Venezuela), it has an area of 352,143 square miles and a population estimated in 1942 at 3,996,095 (including 100,670 Indians and 23,320 Venezuelans resident abroad). Visited by Columbus in 1498, it was named Little Venice a year later. In 1731 it was formed into the captaincy general of Caracas, remaining under Spanish rule until independence was established in 1821 through the efforts of Simón Bolívar, a native of Caracas. It was part of the Republic of Colombia from that time until an independent state was set up in 1830 after an amicable secession. According to the constitution adopted in 1936, the president is elected by a Congress of two houses, the Senate of 40 members and the Chamber of Deputies of 85 members, elected for four years. The country, however, can hardly be called a democracy. The 1936 Constitution gave the president almost unlimited powers, and left the Congress a one-party assembly subservient to him. The literacy test and the cost of registration, moreover, have thus far limited the number of ballots to about 250,000. Gen. Isaías Medina Angarita was elected president by Congress in April 1941, and his administration, which was supported by the Venezuelan Democratic Party and by the people generally, proved liberal and progressive on the whole. It inaugurated many democratic reforms, including the income tax law, social security, labor law reforms, reform of the civil code, proposed agricultural reforms, free, secret municipal elections, women's suffrage, and others of a progressive nature. General Medina's was the first Venezuelan administration to recognize the Soviet Union. The Medina regime was overthrown, however, on Oct. 19, 1945, by a military coup involving casualties estimated at 300 dead and over 1,000 wounded. The junta which organized the coup, led by intellectuals and young military officers, represented Acción Democrática, a political party of the middle class led by Rómulo Betancourt, who was named provisional president. The new regime was recognized almost immediately by Paraguay, Ecuador, and Cuba, and on October 30 by the United States. The country is divided into a federal district, 20 states, and two territories. Caracas, the capital, has a population of 203,342. Maracaibo has 110,010 inhabitants.

Religion and Education.—There is no state religion, but the majority of the inhabitants adhere to the Roman Catholic Faith. Freedom of worship is guaranteed. There are two Roman Catholic archbishops, at Caracas and Mérida, and six bishops.

Elementary instruction is free and compulsory from the age of seven to the completion of the primary grade. There were 274,645 elementary pupils and 11,645 in the secondary schools in 1943. For higher education there are the University of Los Andes at Mérida, the Cen-

tral University at Caracas, and a School of Geology at Maracaibo. The government also supports various institutes for special training.

Illiteracy has decreased from an estimated 87 per cent in 1935 to 62 per cent. Almost 10 per cent of the national budget is spent on education, but the educational system is still greatly handicapped by the lack of teachers.

Army and Navy.—All males 18 or over must serve from one to three years with the active forces of the army and remain in the reserve until 45. The peacetime active army consists of 10,000 all ranks. The naval force consists of several gunboats, coastal patrol vessels, and smaller boats. There are military and naval colleges, an air school, and a troop training school.

Communications.—There are 3,829 miles of roads in Venezuela fit for traffic the year round, and because of the absence of adequate water, rail, or air transportation, distribution within the country depends largely on road transport. Registrations of automotive vehicles at the end of 1944 totaled 29,724, including 15,095 passenger cars, 1,288 motorbuses, 8,334 trucks, and 4,239 small trucks. The proposed budget for 1945-46 included an appropriation of 13,962,000 bolívares (\$4,190,000) for road construction, maintenance projects, several bridges, and a pack trail.

Railways in 1944 totaled 684 miles, not including about 62 miles of railroad owned by the oil companies. Ten of the twelve main railway lines are national, and two are owned by the British, who also own and operate the electric tramways and the telephone system of Caracas. During the first seven months of 1945, ten air-dromes were opened for domestic service.

Agriculture and Industry.—The country is divided into three zones—the agricultural, the pastoral, and the forest. In the agricultural zone are grown coffee, cacao, sugar cane, wheat, rice, tobacco, maize, cotton, and beans. About one fifth of the population is engaged in agricultural pursuits. In the agricultural stations established in each of the 20 state capitals, scientific methods of cultivation are now being taught. The pastoral zone affords grazing for more than 3,000,000 cattle and numerous horses, sheep, and other stock. The forest zone, occupying a large portion of the country, furnishes caoutchouc, balata, tonka beans, divi-divi, copaiba, and more than 600 species of wood. Gathering of wild rubber was resumed in 1942. Coffee is the second most important export item, petroleum being the first. Estimates made in May 1945 of the 1944-45 coffee crop ranged from 950,000 bags (of 60 kilograms each—1 kilogram = 2.2046 pounds) to 1,000,000 bags. The output of oil reached a new high peak by the midyear of 965,329 barrels a daily, an increase of 30 per cent since the beginning of the year, and 138 per cent above that achieved in 1942. Venezuela is already the third largest oil producing country in the world. Venezuela imported, until some years ago, nearly all rice consumed. The 1944-45 crop totaled about 25,000,000 kilograms of rice paddy, amounting to 18,000,000 grams of rice when hulled. Only about 3,000 tons had to be imported to meet the current demand. Until a few years ago, nearly all cotton also had to be imported. The current output exceeds 5,000 tons annually, or 61 per cent of the native raw material used. There are 18,000 sugar plantations, and 13,000 cocoa plantations. Exploitation of the extensive forests has barely begun; lack of transportation has handicapped development of

the industry, and much lumber is accordingly imported from the United States. Livestock in Venezuela is estimated to include 4,264,556 oxen, 1,364,678 goats, 194,033 horses, 107,893 sheep, 355,551 pigs, 191,134 asses, and 43,042 mules. Mineral resources include gold, asphalt, coal, copper, and magnesite. The output of gold in 1943 amounted to 82,643 fine ounces. Off the north coast, pearl fishing is carried on by the government. Iron, tin, asbestos, and mica are now being mined, and the government-operated salt mines have an annual production of about 25,000 tons. Venezuela produced 16,623.10 carats of industrial diamonds in the first three quarters of 1943, and developments of iron ore and mercury deposits were under way.

Finances.—Total budgetary receipts during nine months of the fiscal year July 1, 1944, to June 30, 1945, reached 440,386,201 bolívares, more than the previous record receipts of 420,900,000 bolívares during the entire fiscal year of 1943-44. Expenditures totaled 345,451,312 bolívares for the first nine months of the fiscal year, compared with expenditures during the entire previous fiscal year of 362,600,000 bolívares.

It was announced on April 28 that Venezuela's income from oil during the calendar year 1944 totaled 242,000,000 bolívares (\$74,000,000), and that receipts from income taxes amounted to 41,286,785 bolívares (\$12,500,000). The rest of the total revenue of 541,000,000 bolívares (\$162,500,000) was derived from customs duties on tobacco and other taxes.

On April 15, according to a report made to the Congress by President Medina on April 21, there was a treasury surplus of 238,499,000 bolívares (\$71,549,000) as compared with a public debt of only 24,952,000 (\$7,485,600).

In June the Congress approved a budget providing for an expenditure in 1945-46 of approximately 500,000,000 bolívares (\$149,253,731), the largest in Venezuela's history.

Foreign Trade.—According to *Foreign Commerce Weekly* for August 18, 1945, the export of petroleum, the most important export commodity and principal source of foreign exchange, during the first quarter of 1945 were as follows:

	Cubic meters	Barrels
Crude	9,944,663	62,551,030
Refined	757,562	4,765,065

The value of other exports from Venezuela to the United States amounted to \$5,365,628, as compared with \$3,565,903 in the corresponding period of 1944. Exports to the United States constitute virtually all of Venezuela's export trade. Coffee exports in the first eight months of the 1944-45 crop year (Oct. 1, 1944, to May 31, 1945) totaled 347,681 sacks of 60 kilograms each. An export figure of 600,000 sacks for the quota year was estimated.

During the first three months of 1945, 106,016 metric tons of cargo were delivered to Venezuelan ports from the United States, compared with 106,955 metric tons during the first quarter of 1944. As in the case of exports, import trade with the United States provides virtually all supplies from overseas.

Principal Events.—On Feb. 14, 1945, Venezuela declared war on the Axis nations. Uruguay took similar action at the same time, leaving Argentina the only remaining Latin American nation at peace with the Axis. Venezuela formally adhered to the declaration of the United Nations in Washington on February 20; resumed diplomatic relations with the Soviet Union on March 13; was

represented among the 46 nations who gathered at San Francisco on April 25 to draft the charter of the world security organization; and was given presidency of the judicial agency set up on May 1 as one of the working committees to draft the United Nations Charter. On April 11, Venezuela protested the killing of the Venezuelan consul, Alberto Delfino, and his family in Manila by the Japanese on February 10. The existence of a widespread plot was revealed on May 25, when the authorities announced the arrest of 10 Germans charged with planning to sabotage the oil fields and blow up Allied tankers carrying fuel to Europe. The Venezuelan Cabinet resigned on July 13, and on the following day President Medina reorganized the body, making five changes. In Caracas, on July 22, began the Third Inter-American Conference on Agriculture, which conferred on urgent postwar problems and the reconversion of hemispheric agriculture from a war basis to peacetime conditions.

Expanding petroleum production stimulated economic activity, especially during the first quarter of the year. President Medina in his annual message to the Congress on April 21 pointed to the large surplus in the treasury and pressed for enactment of a far-reaching program of agrarian reform, upon which public attention had been focused since March 13, when the press had first published a projected "law of agrarian reform," representing the recommendations of a commission appointed by the president in January 1944. The proposed program provided a legislative basis for raising the economic status and improving the health, education, and welfare of the farming population by stimulating agriculture, conserving and improving soil, and acquiring and controlling the use of lands.

Work continued on the government's ambitious five-year program of public works, initiated in 1941, which provided for work on schools, hospitals, sewers, aqueducts, roads, bridges, airports, port installations, and irrigation products. Other projects were added to this large program during 1945, including housing for the faculty of medicine of the Central University of Venezuela, for which a supplementary appropriation of 10,000,000 bolivares (\$2,985,000) was made in January.

The rising cost of living, particularly in rents and food, was combated in Caracas through government-sponsored building projects and a large, popular-priced restaurant operated for the public. Seven modern and completely equipped apartment buildings were in process of erection, with 1,000 apartments having a capacity of 5,000 persons. Rents were scheduled at half the current figure prevailing elsewhere for similar accommodations.

Other evidences of the Medina administration's increasing liberality of outlook was the legalization of labor unions, which had been outlawed in 1944 but had nevertheless continued to function. The Communist Party was also legalized. In a strike called by 780 workers engaged in building a pier at La Guaira, regarded as a test case, the government, contrary to previous practice, failed to interfere. The new Compulsory Social System, from Oct. 9, 1944, when it was inaugurated, to Jan. 30, 1945, paid out benefits amounting to 290,598 bolivares (\$87,180), chiefly for sickness and unemployment.

The administration of Rómulo Betancourt, which succeeded that of General Medina on October 19, pledged the appointment of a National Assembly to rewrite the constitution;

election of a president by free balloting within six months; complete freedom of press and speech, and restoration of other suspended constitutional guarantees.

VERMONT. New England state, United States; admitted to the Union March 4, 1791. Population (1940): rural, 235,992; urban, 123,239; total, 359,231. Land area, 9,278 square miles, divided into 14 counties. Chief cities, with 1940 populations: Burlington, 27,686; Rutland, 17,082; Barre, 10,909; Brattleboro, 9,622; St. Albans, 8,037; Montpelier, the capital, 8,006.

Chief State Officers, 1945.—Governor, Mortimer R. Proctor; lieutenant governor, Lee E. Emerson; secretary of state, Rawson C. Myrick; treasurer, Levi Kelly; auditor, David Anderson; attorney general, Alban Parker.

Judiciary.—Chief justice of the Vermont Supreme Court, Sherman R. Moulton; associate justices, John C. Sherburne, John S. Buttles, Allen R. Sturtevant, Olin M. Jeffords.

Legislature.—Vermont's General Assembly (Senate, 30 members; House of Representatives, 246) convenes biennially in odd years on the first Wednesday after the first Monday in January.

Education.—Public elementary schools (1944-45), 951; teachers, 1,758; pupils, 40,455; average yearly salary of elementary school teachers, \$1,102. Public 4- and 6-year high schools (1944-45), 83; teachers, 672; students, 14,644; average yearly salary of high school teachers, \$1,686. Education in Vermont is compulsory for all children between the ages of 7 and 16, inclusive, or until completion of the 8th grade. There are three teacher training schools. The University of Vermont at Burlington receives financial aid from the state. Total state appropriation for education (1944-45), \$1,262,950; appropriation by cities and counties (1943-44), \$5,833,911. Commissioner of education, Dr. Ralph E. Noble.

Finances.—Following is a statement of Vermont's finances for the fiscal year 1944-45, furnished by the state treasurer's office:

Balance in treasury, beginning of fiscal year 1944-45	\$ 7,595,624.61
Receipts, 1944-45	19,259,525.15
Total	\$26,855,149.76
Disbursements, 1944-45	18,116,476.90
Balance, beginning of fiscal year 1945-46	\$ 8,738,672.86

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	PRODUCTION		
	Average 1934-43	Final 1944	Preliminary 1945
Corn (1,000 bu.)	2,722	2,553	2,553
Oats (1,000 bu.)	1,662	1,395	1,280
Hay:			
Clover and timothy (1,000 tons)	745	646	807
Tame (1,000 tons)	1,075	985	1,255
Potatoes (1,000 bu.)	1,942	1,656	1,488
Apples (1,000 bu.)	561	513	123

VETERANS, Educational Plans of. See EDUCATION, REVIEW OF; GI BILL OF RIGHTS.

VETERANS' ADMINISTRATION. As of June 30, 1945, the organization of the Veterans' Administration consisted of the following officers: Frank T. Hines, administrator of veterans' affairs (General Omar N. Bradley succeeded General Hines, Aug. 15, 1945); Adelbert D. Hiller, exec-

utive assistant to the administrator; Harold W. Breining, assistant administrator in charge of finance and insurance; Omer W. Clark, assistant administrator in charge of compensation, pension, vocational rehabilitation and education; George E. Ijams, assistant administrator in charge of medical and domiciliary care, construction and supplies; Edward E. Odom, solicitor in charge of legal activities; and Robert L. Jarnigan, chairman of the Board of Veterans' Appeals.

INSURANCE

The United States government life insurance fund is a trust fund administered by the government as trustee for the sole benefit of the policyholders. The government derives no profit whatever from the administration of this fund as it may be used only for the payment of claims under United States government life insurance contracts and as dividends to the policyholders themselves. All premiums paid by the policyholders, all interest received from policy loans, investments, et cetera, are covered into this fund in the United States Treasury.

At the close of the 1944-45 fiscal year there were in force 567,934 United States government life (converted) insurance policies amounting to \$2,454,855,781 insurance. During this fiscal year 439 policies amounting to \$1,600,792 insurance were reinstated. Monthly payments averaging \$35.10 were being paid to 10,841 permanently and totally disabled veterans. During the fiscal year ended June 30, 1945, there were approved 2,743 applications aggregating \$16,857,362. The actual disbursements made from this fund during the fiscal year totaled \$32,273,258.28.

Yearly renewable term insurance was granted to all veterans of the First World War who made application for this form of benefit within 120 days after induction into service. The amount of term insurance was limited to \$10,000 for each veteran. Monthly payments on term insurance policies are based on \$5.75 per \$1,000 of insurance in force at such time as award for disability or death is made. As of June 30, 1945, monthly payments were being made to 9,301 permanently and totally disabled veterans and to the beneficiaries of 2,042 deceased veterans.

Automatic insurance was granted to those veterans of the First World War who were disabled or who died within 120 days after being inducted into service and before application for term insurance was made. The amount of automatic insurance was limited to \$5,000. As of June 30, 1945, monthly payments were being made to 215 permanently and totally disabled veterans and to the beneficiaries of 11 deceased veterans. These payments are fixed by law at \$25 per month.

The disbursements for term and automatic insurance during the fiscal year 1945 totaled \$19,756,071.97, including \$12,941,477.28 transferred to the United States government life insurance trust fund for cases traceable to extra hazards of military or naval service, making a net disbursement of \$6,814,594.69.

The National Service Life Insurance Act, approved Oct. 8, 1940, authorized the issue of a new type of insurance to certain persons then in the active service of land and naval forces (including Coast Guard) and those thereafter entering on active duty, including persons inducted under the Selective Training and Service Act of 1940. The insurance was available to those persons then on active duty, and if in good health,

upon application made within 120 days from the date of the approval of the act. As to those who entered service after that date, application must be made within 120 days from date of entry into service. This insurance is limited to \$10,000 for each veteran and is payable only in the event of death of the insured while the policy is in force. During the fiscal year 1945 there were approved 2,206,813 applications aggregating \$20,398,204,000 of insurance. The total number of applications approved to June 30, 1945, was 17,492,388 amounting to \$135,021,405,000 of insurance. Benefits had been awarded on June 30, 1945, in 223,626 cases on insurance valued at \$2,039,255,100. The average contract insurance in force at the time of the veteran's death was \$9,191.42. Widows were the sole beneficiary in 22 per cent and parents in 68 per cent of the awarded cases.

An act to promote and strengthen the national defense by suspending enforcement of certain civil liabilities of certain persons serving in the military and naval establishments, including the Coast Guard, was approved Oct. 17, 1940. Article V of the act provides that the government will, on application of the insured, guarantee to commercial insurance companies premiums on insurance carried with such companies by persons in active service. Through June 30, 1945, 103,227 applications for insurance benefits under this act had been received, of which 87,037 representing \$216,993,141.30 insurance had been approved and 14,793 representing \$34,090,135.15 had been disapproved.

Guardianship.—The Veterans' Administration maintains supervision of all guardianship activities for incompetent veterans and minor beneficiaries. An effort has been made to utilize so far as possible the services of relatives as guardians of the person and the services of banks and trust companies as guardians of the estate of wards. As of June 30, 1945, the total guardianship load was 87,346 wards of whom 45,097 were incompetents and 42,249 minors. The value of estates of all wards approximated \$163,158,552.78 on June 30, 1945.

PENSIONS AND COMPENSATION

Yellow Fever Experiments.—An act approved Feb. 28, 1929, recognized the high public service rendered by Maj. Walter Reed and those associated with him in the discovery of the cause and means of transmission of yellow fever. This act, in addition to establishing a roll of honor, granting medals, etc., authorized a monthly payment of \$125 to each of 17 designated persons during the remainder of their lives. As of June 30, 1945, six persons were receiving this benefit. The disbursement for this type of benefit during the fiscal year totaled \$9,375.

Revolutionary War.—The last pensioner was Daniel F. Bakeman who died at Freedom, N. Y., April 5, 1869, at the age of 109 years. The last widow of a veteran to receive pension was Esther S. Damon of Plymouth County, Vermont, who died Nov. 11, 1906, at the age of 92 years.

War of 1812.—Hiram Cronk, the last veteran pensioner died May 13, 1905, at Ava, N. Y., aged 105 years. The last widow of a veteran to receive pension was Caroline King of Cheektowaga, N. Y., who died June 28, 1938, at the age of 89 years. As of June 30, 1945, the sole remaining pensioner was Esther Ann Hill Morgan, of Independence, Oreg., a dependent daughter of John Hill, deceased, private, Clark's and McCumber's Companies, New York Militia. Mrs.

Morgan was born March 9, 1857, and receives \$20 a month by special act of Congress.

Mexican War.—The last veteran pensioner was Owen Thomas Edgar, who died Sept. 3, 1929, age 98 years. On June 30, 1945, pensions were being paid to 54 widows and 1 child of veterans of this war. Disbursements made during the fiscal year 1945 totaled \$31,129.24.

Indian Wars.—On June 30, 1945, pensions were being paid to 1,115 veterans, the average age of whom was 82 years. Dependents totaled 2,709, classified as follows: widows, 2,647; children, 52; and others, 10. Disbursements during the fiscal year 1945 totaled \$955,573.20 to veterans and \$1,305,867.10 to dependents of veterans.

Civil War.—Out of a total of 2,213,365 who served in the Union forces in the Civil War, pensions were being paid to 229 veterans on June 30, 1945. The average age for this group was 98 years. Disbursements during this fiscal year totaled \$328,846.77. On June 30, 1945, pensions were being paid to dependents of 24,521 deceased veterans. The dependents totaled 24,681 and were classified as follows: 22,900 widows and remarried widows, and 1,781 children. Of the 24,521 cases there were 3,236 cases in which the monthly payment was \$30; 18,184 cases in which the beneficiary received \$40 per month as provided by law for widows of the attained age of 70 years, and 217 in which \$50 per month was being paid to widows who were the wives of veterans during their service in this war. There were 2,151 cases in which dependents were in receipt of pensions under special acts of Congress, and 733 in which the dependents were being paid pensions under general laws because of the death of the veteran from causes due to military service. Disbursements during the fiscal year 1945 totaled \$11,544,251.06.

Spanish American War.—On June 30, 1945, pensions were being paid to 128,104 veterans. Of this number 127,203 were receiving pensions for disabilities of nonservice origin or for age, 840 for service-connected disabilities and 61 were special act cases. A study of the age of these pensioners shows that 89 per cent are between the ages of 60 and 75 years as of the above date. Disbursements during the fiscal period amounted to \$111,313,837.15. As of June 30, 1945, pensions were being paid to the dependents of 71,955 deceased veterans. The number of dependents totaled 76,213 and were classified as follows: 70,526 widows, 5,520 children, 162 parents, and 5 others. During the fiscal year 1945 the amount paid to these dependents totaled \$31,483,634.89.

Regular Establishment.—As of June 30, 1945, the number of veterans receiving pensions as a result of disabilities incurred in service in time of peace totaled 42,925. Disbursements to this group during the year totaled \$18,737,740.79. On June 30, 1945, pensions were being paid to the dependents of 13,666 deceased veterans whose death was determined to be the result of disease or injury originating in line of duty in the military or naval service in time of peace. The number of dependents receiving pensions as of June 30, 1945, totaled 20,046 consisting of 6,479 widows, 5,470 children, 8,087 parents, and 10 others. Disbursements during the fiscal year 1945 totaled \$6,162,021.55.

First World War.—Veterans, Service-connected.—During the fiscal year 1945, the number of veterans receiving compensation for disabilities directly or presumptively connected with service

totalled 332,628. An analysis of the major disabilities for which this compensation is being paid discloses that neuropsychiatric diseases are the disabling cause in 19.6 per cent of the awards, tuberculosis in 15.3 per cent, and general medical and surgical conditions in 65.1 per cent. During the fiscal year 1945, \$180,349,901.86 was paid to veterans with service-connected disabilities.

Veterans, Nonservice-connected.—As of June 30, 1945, pensions were being paid to 90,477 totally disabled veterans whose disabilities were not of service origin. Of the veterans on the roll 37 per cent were over 55 years of age. Disbursements during the fiscal year 1945 totaled \$53,061,553.55.

Emergency, Provisional, Probationary, or Temporary Officers of First World War.—As of June 30, 1945, there were 2,550 officers entitled to retirement pay, of whom 2,453 were receiving full pay and 31 partial pay. In the remaining 66 cases, there was a complete forfeiture of retirement pay due largely to the fact that the officer was employed by the government at a salary in excess of \$3,000 per annum. Disbursements during the fiscal year 1945 totaled \$4,084,049.12. Of the 2,550 officers entitled to retirement pay 2,466 served in the army, 68 in the navy, and 16 in the marine corps.

Deceased Veterans, Service-connected.—On June 30, 1945, compensation was being paid to the dependents of 84,416 veterans who died in service or as a result of diseases or injuries incurred in service. These dependents totaled 108,184 and were classified as follows: 30,560 widows, 16,012 children, and 61,612 parents. Disbursements during the fiscal year 1945 totaled \$50,019,402.78.

Deceased Veterans, Nonservice-connected.—An act approved June 28, 1934, as amended July 19, 1939, authorized the payment of compensation to the widows and children of deceased veterans who at the time of death were suffering from a disability of service origin but who died as a result of a disability not incurred in service. On Dec. 14, 1944, this act was further amended to authorize the payment of pension if the veteran was discharged or released from service under conditions other than dishonorable after having served 90 days or more or for disability incurred in line of duty, or if the veteran was at the time of death, receiving or entitled to receive compensation, pension, or retirement pay for a service-connected disability. On June 30, 1945, payments were being made on 77,584 deceased veterans' cases, involving 73,263 widows and 75,094 children. Disbursements during the fiscal year 1945 totaled \$24,729,415.

Second World War.—Living Veterans, Service-connected.—On June 30, 1945, compensation was being paid to 536,541 veterans for disabilities incurred in line of duty. The average age of these veterans was 29 with the greatest incidence of disability at age 24. Disbursements to this group during the fiscal year totaled \$167,975,339.72. In addition, \$7,046,348.66 was received by this group during this year for increased pension payments because of vocational training.

Living Veterans, Nonservice-connected.—On June 30, 1945, pensions were being paid to 543 totally disabled veterans, whose disabilities have been determined to be not due to their military service. The average age of these veterans was 34 with the greatest incidence of disability at age 24. Disbursements to this group during the fiscal year totaled \$152,846.87.

Deceased Veterans, Service-connected.—On June 30, 1945, pensions were being paid to the dependents of 94,463 veterans who died as the result of disease or injury originating in line of duty. These dependents received a total of \$60,-058,586.30 during the fiscal year 1945.

Deceased Veterans, Nonservice-connected.—The acts of May 27, 1944, and Dec. 14, 1944, extended to widows and children of deceased Second World War veterans the benefits provided by the act of June 28, 1934, as amended, based on First World War service, except that in Second World War cases, pension is payable only if the veteran had a service-connected disability at the time of his death for which pension would be payable if 10 per centum or more in degree. On June 30, 1945, payments were being made on 164 cases involving 153 widows and 166 children. Disbursements to these dependents during this fiscal year amounted to \$66,-418.66.

Retired Officers of the Army of the United States (Except Regulars).—On June 30, 1945, there were 9,097 Reserve officers entitled to retirement pay for service-connected disabilities as provided under Public 18, 76th Congress, approved April 3, 1939, and Public 262, 77th Congress, approved Sept. 26, 1941. In 55 cases retirement pay had been forfeited. Disbursements during the fiscal period totaled \$10,174,646.32. The average age of the 9,097 officers was 36 years and 9,061 of the total had service in the Second World War.

Grand Total—Pensions and Compensation.—The following table shows the number on the rolls as of June 30, 1945, and the net disbursements during the fiscal year 1945 from the appropriation "Army and Navy Pensions."

War	On Roll June 30, 1945	Disbursements Fiscal Year 1945

VOCATIONAL REHABILITATION AND EDUCATION

During the year ended June 30, 1945, an expanding program was carried on under the provisions of Public Law 16, 78th Congress, approved March 24, 1943, for eligible disabled veterans

with handicaps removable by training; also the first year of a program of education and training under the provisions of part 2, Public Law 346, 78th Congress, approved June 22, 1944, for eligible nondisabled veterans in need of educational or occupational readjustment. As of June 30, 1945, 22,232 veterans had entered into training under Public 16. Of these, 14,986 were still in training, 5,013 had interrupted training, 1,469 had discontinued training, and 764 had been rehabilitated. Under title 2, Public Law 346, 22,-335 veterans were in training on June 30, 1945, and 990 veterans had completed courses of education or training.

MEDICAL

On June 30, 1945, the Veterans' Administration was operating hospital facilities at 97 locations in 45 states and the District of Columbia. The total number of beds in these facilities was 95,211, of which 81,133 were for hospital treatment and 14,078 for domiciliary care. In addition, 5,438 hospital beds in other government hospitals were being utilized.

Hospitalization.—On June 30, 1945, the hospital load was 71,439 patients. Of this number 71,229 were United States veterans, classified by service as follows: First World War, 44,788; Second World War, 20,774; Spanish American War, 2,793; Civil War, 8; all other wars, expeditions, and occupations, 41; Regular Establishment, 2,825. Other hospital patients included 47 allied veterans of the First World War and 163 miscellaneous beneficiaries. Of the 71,229 United States veterans, 47,892 or 67.24 per cent were receiving treatment for disabilities not of service origin. There were 66,818 United States veterans in facilities controlled by the Veterans' Administration, 2,958 in other government hospitals, and 1,453 in state or civil institutions. Of the patients in hospitals June 30, 1945, 62.54 per cent were receiving treatment for neuropsychiatric diseases, 27.95 per cent for general medical and surgical conditions and 9.51 per cent for tuberculosis. Admissions during the fiscal year 1945 included 241,013 United States veterans, 2,981 admissions of other patients, 130 allied veterans, 1,939 persons in active military or naval service, and 912 miscellaneous beneficiaries. Of the 241,013 United States veterans, admissions were authorized for 13,979 for observation and treatment of pulmonary tuberculosis, 25,492 for psychotic or mental diseases; 19,973 for other neurological disorders, and 181,569 for general medical and surgical conditions.

During the fiscal year 1945, there were 306,251 United States veterans under hospitalization. Of this number, 235,022 were discharged after an average of 73 in-patient days. Patients who remained until the completion of treatment numbered 190,217 or 80.94 per cent of the total discharges.

Deaths in hospitals during the fiscal year totaled 15,488 of which number 71.99 per cent occurred among patients under treatment for general conditions; 14.98 per cent for tuberculosis; and 13.03 per cent for neuropsychiatric diseases.

Domiciliary Care.—At the close of the fiscal year 1945 the veteran population present in domiciliary status in facilities under the control of the Veterans' Administration totaled 8,779. The percentage distribution of the above veteran patients by wars was: First World War, 86.43; Spanish American War, 6.71; Second World War, 4.10; peacetime service in the Regular Establishment,

2.56; other wars, expeditions, and occupations, 0.20. An analysis of the causes of disability of these veterans shows 5,520 to be general medical and surgical conditions, 3,133 neuropsychiatric diseases; and 126 tubercular ailments.

During the fiscal year 1945, there were 10,719 veterans admitted for domiciliary care. Of this number 8,240 or approximately 77 per cent had served in the First World War, 1,473 or 14 per cent in the Second World War; and 739, or approximately 7 per cent in the Spanish American War. Approximately 90 per cent of the admissions were for nonservice-connected disabilities. Of the veterans admitted to domiciliary care during this period 68 per cent were disabled by general medical and surgical conditions, 31 per cent by neuropsychiatric diseases, and 1 per cent by tuberculosis.

During the fiscal year 1945, 15,586 veterans were discharged after an average of 6½ months' domiciliary care. Deaths among domiciled veterans during this period totaled 83, the principal causes of which were diseases of coronary arteries and angina pectoris, diseases of the myocardium and syphilis, which collectively were responsible for 63 per cent of the deaths.

The federal government is required to reimburse state or territorial homes for disabled soldiers in an amount not to exceed \$300 per year for each person domiciled therein who is eligible for similar care in facilities controlled by the Veterans' Administration. During the fiscal year 1945 an average of 4,159 such persons were cared for in these homes, thereby creating an obligation of over \$1,194,353 on the part of the federal government.

Dental Care.—During the fiscal year 1945 dental care was provided 35,111 hospital patients, 4,725 domiciliary members and 6,371 out-patients in clinics maintained by the Veterans' Administration, at an actual cost of \$1,323,796. During this fiscal period, 30,402 new dentures were made and 5,429 repaired in dental clinics of the Veterans' Administration. Dental treatment was authorized to private practitioners for 2,354 veterans, at a cost of \$112,245 during the same period.

Out-patient Examinations and Treatments.—During the fiscal year 1945, there were 1,771,760 physical examinations for out-patient purposes made in field facilities. Of these examinations 98.5 per cent were medical and 1.5 per cent were dental. Treatments furnished during the year for out-patient purposes totaled 828,620, of which 91 per cent were medical and 9 per cent dental.

FINANCE

The actual net disbursements from appropriations and trust funds of the Veterans' Administration (including adjustments on lapsed appropriations) during the fiscal year 1945 were as follows:

Appropriation	Disbursements
Salaries and expenses.....\$	158,824,748.47
Printing and binding.....	553,756.46
Hospital and domiciliary facilities and services, Veterans' Administration.....	15,800,635.66
Army and navy pensions and military and naval compensation.....	771,796,516.61
Military and naval insurance.....	19,756,071.97
National service life insurance appropriated fund.....	1,117,548,383.54(1)
Adjusted service and dependent pay.....	63,909.11
Vocational rehabilitation (First World War).....	363.94(2)
Military and naval family allowance.....	2,346.96(2)

Appropriation	Disbursements
Vocational rehabilitation revolving fund (Second World War)	99,978.51
Soldiers' and sailors' civil relief, Veterans' Administration (Second World War).....	27,877.90
Penalty mail costs, Veterans' Administration.....	180,516.30
Miscellaneous.....	18,066.40
Trust funds:	
U. S. government life insurance.....	32,273,258.28
National service life insurance.....	136,846,767.35
Adjusted service certificate fund.....	11,223,396.84
General post fund.....	96,462.50
General post fund auxiliary account, Veterans' Administration.....	270,931.49
Funds due incompetent beneficiaries.....	185,223.06
Personal funds of patients, Veterans' Administration.....	5,754,543.87
Total.....	\$2,271,318,333.42

- (1) Represents net amount transferred by voucher to National Service life insurance for payment of claims traceable to the extra hazards of military or naval service.
- (2) Credit—the amount shown for the appropriation "Salaries and Expenses" includes net disbursements of \$27,036.39 from allotments made to other government agencies.

LOAN GUARANTEE ACTIVITIES

Title 3 of the Servicemen's Readjustment Act provided for the guarantee of loans for the purchase or construction of homes, farms, business property for any person who shall have served in the active military or naval service of the United States at any time on or after Sept. 16, 1940, and prior to the termination of the Second World War and who shall have been discharged or released therefrom under conditions other than dishonorable after active service of 90 days or more, or by reason of an injury of disability incurred in service in line of duty. As of June 30, 1945, the total applications received for guarantee of loans was 15,455. Of this number, 12,228 were guaranteed for a total of \$19,644,824.90, distributed by types as follows: home loans, 11,220; farm loans, 270; and business loans, 738.

READJUSTMENT ALLOWANCES

Operations under title 5 of the Servicemen's Readjustment Act, providing assistance to both unemployed veterans and those in self-employment, were begun on a nationwide basis Sept. 4, 1944. As authorized by the act, the Veterans' Administration entered into agreements with the various state unemployment compensation agencies to assume the functions of taking, processing, adjustment and determination of readjustment allowances, and payment of allowances relating to unemployment. An unemployed veteran who has met the basic entitlement requirements is eligible for allowances providing he files a claim, registers for work and is able to work and available for suitable work. A veteran in self-employment for profit in an independent establishment, business, trade, profession or other vocation who has met the basic entitlement requirement is eligible for allowance providing he has been fully engaged in such employment and his net earnings have been less than \$100 in the previous calendar month. A total of 180,798 veterans filed applications for determination of entitlement for allowances; 159,886 veterans submitted claims for unemployment allowances; and 15,221 filed claims for self-employment allowances. Disbursements for the fiscal year 1945 totaled \$23,512,150, of which \$20,123,525 represented payments to unemployed veterans and \$3,388,625, payments to self-employed veterans.

VETERANS' EMPLOYMENT SERVICE. See WAR MANPOWER COMMISSION.

VETERANS OF FOREIGN WARS OF THE UNITED STATES. In 1945, the membership strength of the Veterans of Foreign Wars, founded in 1899, passed the one million mark. According to the annual reports of officers, made public at the 46th national encampment, October 2-3-4, Chicago, more than 900 new local units were organized in 1945 to create a total of 4,500 posts of the Veterans of Foreign Wars located in the 48 states, Alaska, the Canal Zone and the Territory of Hawaii.

The first postwar "United Nations Veterans Victory Conference," planned and sponsored by the Veterans of Foreign Wars, was held in Chicago, October 1-2, in conjunction with the 1945 national convention. Combat veterans representing 22 members of the United Nations participated in this conference as guests of the Veterans of Foreign Wars.

The following officers were elected for the ensuing year: Joseph M. Stack, Pittsburgh, Pa., commander in chief; Louis E. Starr, Portland, Oreg., senior vice commander in chief; Ray H. Brannaman, Denver, Colo., junior vice commander in chief; Robert B. Handy, Jr., Kansas City, Mo., adjutant general-quartermaster general; Lyall T. Beggs, Madison, Wis., judge advocate general; Dr. Clarence R. Rungee, New Haven, Conn., surgeon general; Rev. Clarence G. Hall, Catlin, Illinois, national chaplain.

BARNEY YANOFSKY,
Director, Public Relations Dept., Veterans of Foreign Wars.

VICTORIA. See AUSTRALIA.

VINSON, Frederick Moore, United States Cabinet officer; b. Louisa, Ky., Jan. 22, 1890. On July 23, 1945, Mr. Vinson was sworn in as the 53d secretary of the treasury of the United States, succeeding Henry Morgenthau, Jr. He had previously been director of war mobilization and reconversion. One of the "strong men" of the Roosevelt and Truman administrations, the 56-year-old Kentuckian has a background of governmental experience few men have ever achieved—he has held key positions in the legislative, judicial, and executive branches of the United States government. He was for 14 years a member of the House of Representatives, and during that period, became an authority on taxation in his capacity of chairman of the tax subcommittee of the House Ways and Means Committee. In May 1938, he was appointed an associate justice of the United States Court of Appeals of the District of Columbia. In 1942, in addition to his regular appellate court work, he was named chief judge of the United States Emergency Court of Appeals, a court created by Congress providing for judicial review of decisions of the price administrator, which assignments he held until May 1943. In that year, when rising prices threatened the nation's economic structure, he was named director of economic stabilization, and given the task of holding the line against inflation. He served as vice chairman of the delegation of the United States to the United Nations Monetary and Financial Conference, Bretton Woods, N.H., July 1 to 22, 1944. His next appointment was that of federal loan administrator, succeeding Jesse Jones. In early April 1945, he became war mobilization director, succeeding James F. Byrnes. Mr. Vinson is a graduate of Kentucky Normal College

and Centre College (Ky.). He began the practice of law in 1911; from 1921-24, was commonwealth attorney for the 32d judicial district, Kentucky. He became a member of Congress in 1923. His wife is the former Roberta Dixon of Louisa, Ky.; he has two sons—Frederick Moore, Jr. and James Robert.

VIRGIN ISLANDS, British. See LEEWARD ISLANDS (B.W.I.).

VIRGIN ISLANDS OF THE UNITED STATES. A West Indian insular possession east of Puerto Rico, forming part of the chain of islands between the Caribbean Sea and the Atlantic Ocean. In addition to 50 small islets or cays (mostly uninhabited), the possession comprises three islands with a combined land and water area of 133 square miles (St. Thomas, 32 square miles; St. Croix, 82 square miles; and St. John, 19 square miles). At the 1940 census the population totaled 24,889 (St. Thomas, 11,265; St. Croix, 12,902; and St. John, 722). According to the 1930 census, 78.3 per cent of the total population was Negro and 12.4 per cent mixed. Charlotte Amalie (pop. 9,801), on St. Thomas, is the capital and chief port; on St. Croix are the towns of Christiansted (4,495), which is also a port, and Frederiksted (2,498). The islands were purchased from Denmark for \$25,000,000 in 1916, and were proclaimed a United States possession Jan. 25, 1917.

Government.—The Virgin Islands possession is within the jurisdiction of the Department of the Interior. Administration is headed by a governor (Charles Harwood assumed office Feb. 3, 1941), who is assisted by a Legislative Council empowered to enact laws applicable to the possession as a whole; the Legislative Council has a membership of 16, comprising the 7 members of the Municipal Council of St. Thomas and St. John, and the 9 members of the Municipal Council of St. Croix, meeting in joint session annually. Members of the municipal councils are elected bi-annually, the franchise being vested in residents of the possession (men and women) 21 years of age or over, who are citizens of the United States and able to read and write the English language. Revenue of the possession in 1943-44 amounted to \$1,880,000 and expenditure was estimated at \$1,972,000.

Education.—The two municipal councils conduct distinct school system, each with a board of education and a superintendent of education appointed by the Secretary of the Interior; education is compulsory for all children between the ages of 5½ and 15 years. The Municipal Council of St. Thomas and St. John conducts 12 public schools; and that of St. Croix, 10 schools. Within the possession are also 6 private and parochial schools. On St. Thomas is a teacher-training institute.

Production.—Sugar cane plantations and stock farms are the principal agricultural activities. Rum is distilled from the sugar, and bay rum is derived from the refined oil of leaves of the bay trees of the island of St. John. In 1942, 675,011 proof gallons of rum were exported. While most of the revenues of St. Croix come from agricultural pursuits, those of St. Thomas are obtained largely from commerce, trade and shipping; since outbreak of the war, defense activities have brought considerable prosperity to the latter island. Although federal deficit appropriations continue to be necessary in the case of St. Croix, since 1942 revenues have sufficed to meet ex-

penditures in the case of the municipality of St. Thomas and St. John.

VIRGINIA. South Atlantic state, United States; one of the original thirteen states. Population (1940): rural, 1,733,098; urban, 944,675; total, 2,677,773. Land area, 39,899 square miles, divided into 100 counties. Chief cities, with 1940 populations: Richmond, the capital, 193,042; Norfolk, 144,332; Roanoke, 69,287; Portsmouth, 50,745; Lynchburg, 44,541; Newport News, 37,067; Alexandria, 33,523; Danville, 32,749; Petersburg, 30,631.

Chief State Officers, 1945.—Governor, Colgate W. Darden, Jr.; lieutenant governor, William M. Tuck; secretary of state, Ralph E. Wilkins; treasurer, W. Tayloe Murphy; comptroller, Henry G. Gilmer; attorney general, Abram P. Staples. William M. Tuck of Richmond was elected governor in 1945 for the term 1946-50.

Judiciary.—Chief justice of the Virginia Supreme Court of Appeals, Preston W. Campbell; associate justices, Henry W. Holt, Edward W. Hudgins, Herbert B. Gregory, George L. Browning, John W. Eggleston, C. Vernon Spratley.

Legislature.—The state General Assembly (Senate, 40 members; House of Delegates, 100) convenes biennially on the second Wednesday in January, in even years.

Education.—At last report (1943-44), there were 3,402 public elementary schools in the state, with 10,940 teachers and 423,815 pupils; elementary school teachers received an average yearly salary of \$1,150. There were 576 public high schools, with 4,120 teachers and 121,049 students; high school teachers received an average yearly salary of \$1,469. Education in Virginia is compulsory for all children between the ages of 7 and 16, inclusive. There are four teacher training schools in the state. Total state appropriation for education (1943-44), \$16,709,980.

Finances.—Following is a statement of Virginia's finances for the fiscal year 1944-45, supplied by the state treasurer's office:

Balance in treasury, beginning of fiscal year 1944-45	\$ 23,448,795.65
Receipts, 1944-45	203,217,622.66
Total	\$226,666,418.31
Disbursements, 1944-45	206,728,229.00
Balance, beginning of fiscal year 1945-46	\$ 19,938,189.31

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)	34,502	34,272	37,913
Oats (1,000 bu.)	2,303	3,672	3,892
Buckwheat (1,000 bu.)	132	132	122
Wheat (1,000 bu.)	7,902	11,275	8,712
Barley (1,000 bu.)	1,538	2,124	1,998
Rye (1,000 bu.)	520	636	490
Hay:			
Alfalfa (1,000 tons)	109	133	175
Clover and timothy (1,000 tons)	461	392	529
Tame (1,000 tons)	1,236	1,357	1,738
Soybeans for beans (1,000 bu.)	680	945	1,581
Peanuts (1,000 lbs.)	166,981	191,180	180,400
Sweet potatoes (1,000 bu.)	3,801	3,960	3,795
Tobacco (1,000 lbs.)	104,382	144,691	150,210
Potatoes (1,000 bu.)	9,770	5,976	8,694
Apples (1,000 bu.)	10,903	14,580	3,330
Peaches (1,000 bu.)	1,110	2,150	536
Pears (1,000 bu.)	349	428	73
Grapes (tons)	1,930	1,800	350

WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS. Provisions of the Acts.—The Wage and Hour and Public Contracts divisions of the U. S. Department of Labor are under the direction of one administrator. The Public Contracts Division administers the Walsh-Healey Public Contracts Act of 1936 whose stipulations are written into government supply contracts over \$10,000. The act provides for the payment of prevailing minimum wages as determined by the Secretary of Labor, overtime pay at the rate of time and one half, the basic rate for all hours worked over eight in a day or 40 in a week, safety and health standards, and restrictions on child and convict labor. During the last war year, coverage under this act was at its highest point since the act went into effect. In the first 11 months of the year ended June 30, 1945, 117,333 contracts were reported to the divisions, exclusive of secret, confidential, and restricted

contracts, indicating that the total number for the entire year would be in the neighborhood of 128,000 contracts with an estimated value of \$34,000,000,000. This compares with fewer than 4,000 contracts valued at less than \$200,000,000 in the first fiscal year of the act's operation.

The Wage and Hour Division administers the Fair Labor Standards Act of 1938 which provides minimum wages and time and one half overtime pay for all hours worked over 40 in a week for workers engaged in interstate commerce or the production of goods for interstate commerce unless they are specifically exempt. The act also forbids "oppressive" child labor. A minimum wage of 40 cents an hour is now in effect for all workers protected by the act. As of the spring of 1945, the act covered some 20,000,000 workers, in about 530,000 establishments.

Enforcement.—In the six years and nine months that the Fair Labor Standards Act had been in

force through June 1945, about \$85,000,000 in restitution of illegally withheld wages had been agreed to or ordered paid to almost 2,500,000 workers in more than 110,000 establishments, with more than two fifths of the cases involving failure to pay the minimum wage of 40 cents an hour or less. More than this amount has probably been collected in addition over the period, through private action or negotiation by employees and their unions under a section of the act that provides double damages for failure to pay the minimum wage or time and one half overtime after 40 hours a week.

During the year ended June 30, 1945, 44,271 inspections for compliance with both acts were completed by the divisions. This was 19 per cent fewer than in the previous year because of a wartime cut in staff. Of these, 42,613 establishments were found covered and nonexempt as to the wage and overtime provisions; 32,834 or 74 per cent were found in some violation, while 22,259 or 50 per cent were in violation of the minimum wage or overtime provisions. Although about \$2,800,000 less than the previous year's total, restitution of \$15,824,377 of illegally withheld wages had been found due and ordered paid to 442,516 workers in 19,064 establishments. Failure to pay the minimum wage was involved in more than a fourth of these cases and restitution of such minimum wages affected 77,057 workers, about one sixth of all the workers found to be illegally underpaid.

Many establishments are covered under both acts so that it is impossible to give separate figures for restitution, which in many cases would be due under either act. Of the 44,271 inspections completed during the year, 9,384 were made under the Public Contracts Act, all but 160 of which were concurrent with wage-hour inspections. In 53 per cent of the public contracts inspections, violations were found and in 32 per cent, violations of the minimum wage or overtime provisions.

During the year approximately 4,500 establishments employing minors in violation of the Fair Labor Standards Act or without certificates were reported to the Children's Bureau by the Wage and Hour and Public Contracts divisions. Over two-thirds of these establishments were, in violation of the act's child labor provisions, employing an estimated total of 10,000 minors in "oppressive" child labor. Over 30 per cent more establishments were found in violation than during the preceding year and nearly 180 per cent more than during 1943, while the number of minors illegally employed increased almost 90 per cent over 1944 and more than 400 per cent over 1943.

The child labor provisions of the Public Contracts Act provide that no boy under 16 or girl under 18 shall be employed on government contracts in excess of \$10,000. A former wartime exemption permitting employment of girls between 16 and 18 years of age under certain conditions has been revoked, so that under no circumstances can girls under 18 be employed on contracts awarded after Sept. 4, 1945. Liquidated damages of \$10 are imposed for each day each minor is employed under conditions prohibited by the act. During the year 700 firms were thus assessed for child labor violations involving almost 4,400 minors. The liquidated damages amounted to almost \$800,000, more than twice the amount so assessed the year before. Although inspections under the Public Contracts Act decreased from the previous year, through a

decrease in staff, the number of establishments found violating the child labor provisions increased by about 55 per cent.

Following the Supreme Court's decision in *Gemsco v. Walling*, which sustained the administrator's authority to prohibit industrial homework in Industry Wage Orders issued under the Fair Labor Standards Act, an extensive homework enforcement program was initiated during the year in the seven industries in which homework is restricted. These industries are jewelry manufacturing, gloves and mittens, knitted outerwear, button and buckle manufacturing, women's apparel, handkerchief manufacturing and embroideries. In these industries homework is limited to workers who are granted certificates because they are unable to adjust to factory employment due to age, or physical or mental disability, or who are homebound through care of an invalid. The employee applicant must have been engaged as a homemaker in the industry prior to a date specified in the regulations unless the requirement would result in unusual hardship to the homemaker. Since April 1945, when the enforcement program began, many employers who have been in violation of the certificate requirements since 1942 have voluntarily come into compliance.

Litigation.—During the year, proceedings for injunctions against future violations of wage and hour provisions were instituted in 371 cases, as compared to the 347 cases instituted during the previous year. Of these, 106 were contested cases; last year there were only 77 contested cases. There were 39 cases in which criminal prosecutions were instituted and an additional 39 cases in which the Department of Justice authorized criminal prosecutions which had not yet been commenced at the close of the year.

The United States Supreme Court rendered decisions in 11 cases involving the wage and hour provisions of the Fair Labor Standards Act. The most significant of these were three concerning the interpretations of the overtime provision of the act: *Walling v. Helmerich & Payne*, *Walling v. Youngerman-Reynolds Hardware Co.*, and *Walling v. Harnishfeger Corp.* All three disapproved wage agreements designed to avoid payment of overtime premium, and made it clear that agreements stipulating a rate which is not the actual regular rate do not meet the statutory requirements. The court held that the "regular rate" must reflect all payments which are made to the employee for the normal non-overtime workweek, including the full amount of piecework earnings and incentive bonuses.

Another decision of great public interest was *Jewell Ridge Coal Corp. v. United Mine Workers of America*, *Local No. 6167*, which held that underground travel in bituminous coal mines was work or employment compensable under the act.

Of considerable importance also were the cases of *Armour & Co. v. Wantock*, and *Skidmore v. Swift & Co.*, in which the Supreme Court upheld the administrator's view that waiting time during which the employee is required to be on the employer's premises on call may constitute working time even though the employee is idle during such time.

Exemptions.—In the field of exemptions the Supreme Court decision of the previous year in the case of *Addison et al. v. Holly Hill Fruit Products, Inc.*, invalidating the administrator's definition of "area of production," raised problems of considerable importance to food processing industries employing a million and a quarter

workers. Following the decision, the administrator proceeded with a new effort to define "area of production" in the light of the court decision.

There was a noticeable decline in the number of learner certificates issued during the fiscal year, due in large part to the general rise in wage levels during the emergency period, which made a subminimum rate for learners unnecessary to prevent curtailment of employment opportunities. During the year a total of 1,213 applications was received and 1,002 certificates were issued, as compared with 2,100 applications and 1,753 certificates the previous year and 3,853 applications and 3,313 certificates the year before that.

NOTE: Copies of the Fair Labor Standards Act, Public Contracts Act, and various rulings, interpretations, and explanatory pamphlets relating to these acts can be obtained free from the divisions' national office, 165 West 46th Street, New York 19, N.Y., or any regional office.

WAGE RATES. See LABOR CONDITIONS IN THE UNITED STATES.

WAINWRIGHT, Jonathan Mayhew, United States Army officer: b. Walla Walla, Wash., Aug. 23, 1883. On May 6, 1942, as United States commander in the Philippines, after General MacArthur's transfer to Australia, General Wainwright had the bitter task of surrendering Corregidor and survivors of the Philippine campaign to the Japanese. Three years, three months, and ten days later—on Aug. 16, 1945—he was freed by American parachutists from a prisoner-of-war camp in Manchuria. On August 29, in Chungking, China, General Wainwright received the Distinguished Service Cross for extraordinary heroism in northern Luzon in the Philippines; the award covered the period from Dec. 21, 1941–Jan. 5, 1942. On September 2 (Tokyo time), aboard the battleship *Missouri* in Tokyo Bay, he witnessed the formal surrender of the Japanese to the Allies. Flown from Tokyo to Baguio in the Philippines the following day, he accepted the surrender of Japanese Lieut. Gen. Tomoyuki Yamashita and his once great Philippine army. He was accompanied by British Lieut. Gen. Arthur E. Percival, who had been defeated by Yamashita at Singapore in February 1942. On September 10, General Wainwright was awarded the Medal of Honor, the nation's highest military decoration, by President Truman.

A West Point graduate (1906), General Wainwright served with the 82d Division and the American Third Army in the First World War. He later attended the Command and General Staff School and the Army War College. He was ordered to the Philippines in October 1940; fought through the Bataan campaign; and in March 1942, succeeded General MacArthur as Philippine commander, receiving the rank of lieutenant general (temporary). On Sept. 6, 1945, he was promoted full general.

WAITE, Merton Benway, American horticulturist, botanist, and plant pathologist: b. Oregon, Ogle County, Ill., Jan. 23, 1865; d. Washington, D.C., June 5, 1945. An internationally known specialist in fruit diseases, and associated with the United States Department of Agriculture for over 50 years, Dr. Waite is credited with the discovery that plant diseases may be spread by insects. Dr. Waite studied botany, mycology, and bacteriology and other sciences at the Uni-

versity of Illinois, where he took his B.S. degree in 1887. He joined the scientific staff of the Department of Agriculture the next year. As a result of his studies of pear blight, he found that within certain orchard fruit varieties there must be cross-pollination to produce fruit successfully. This incidental discovery actually revolutionized the planting of apples, pears, sweet cherries, plums, and many other fruits. Dr. Waite retired in 1935, but recently he had been working again, this time as an unpaid collaborator, with his former colleagues in the Bureau of Plant Industry, Soils, and Agricultural Engineering. The author of more than 50 publications on scientific subjects, Dr. Waite was a fellow of the American Association for the Advancement of Science, and a charter member of the American Phytopathological Society.

WAKE ISLAND. A possession of the United States in the North Pacific, 1,500 miles northeast of Guam. The small islet of Wake and two adjoining islets—Peale, to the east, and Wilkes, to the west—enclose a shallow lagoon, the total area being less than four square miles. When annexed by the United States on July 4, 1898, Wake Island was uninhabited. In 1936 a small hotel was built on Peale by Pan American Airways in connection with its transpacific service, and three years later Congress appropriated funds for construction of a submarine and air base on Wake Island. The work was in progress when Japan struck. On Dec. 8, 1941, when an attack was launched by an overwhelming Japanese force, Wake contained a garrison of 516 officers and men (marines, 388; marine air group, 60; and navy personnel, 68) and 1,164 construction workers, a total of 1,680 men. These United States forces, commanded by Lieut. Col. James P. S. Devereux, managed to resist until December 23, when they were compelled to surrender; Devereux subsequently estimated that the success had cost the enemy a loss of 10 ships, 29 planes, and 3,700 men, while American casualties amounted to 96 officers and men. United States air forces raided Japanese installations on Wake intermittently through 1944, and in July 1945 the United States destroyer *Murray* intercepted an enemy hospital ship entering and leaving the anchorage. On August 1, Wake was shelled by battleships of the United States Pacific Fleet and bombed from the air, and a month later the possession was surrendered. The capitulation was made by Rear Admiral Shigematsu Sakai, who signed the surrender document aboard the destroyer escort *Levy* on Sept. 4, 1945. Sakai, who had commanded Wake since its capture, stated that during enemy occupation 2,000 Japanese had died from malnutrition and other causes.

WAKE-WALKER, Sir William Frederic, British naval officer: b. March 24, 1888; d. London, Sept. 24, 1945. Third sea lord controller of the British Navy since 1942, Admiral Wake-Walker was noted for his services in connection with the evacuation of the British forces from Dunkerque in 1940 and also as admiral of the cruiser squadron which first sighted and then trailed the German battleship *Bismarck* from the Denmark Straits in May 1941. Admiral Wake-Walker reached the rank of captain in 1927, rear admiral in 1939, and vice admiral in 1942. He was made a Companion of the Bath in 1940, received the Cross of the Order of the British Empire in 1941, and was knighted in 1943. When

air patrols reported on May 22, 1941, that the *Bismarck* and *Prinz Eugen* were lying in Bergen Harbor, Norway, preparing to put to sea, the cruisers *Norfolk* and *Suffolk*, the former carrying the flag of then Rear Admiral Wake-Walker, were sent to keep watch on the Denmark Straits between Greenland and Iceland, where they saw the German ships fleeing toward the southwest on May 23. The cruisers hung on while heavier units of the British fleet hastened to the scene, but on the evening of May 24, after a battle during which the British cruiser *Hood*, was blown up, the Germans slipped away. On the morning of May 26, the *Bismarck* was located by a plane about 550 miles west of Land's End. The next morning large warships closed in and among them the *Norfolk* was the first to open fire in the final stage of the action that sent the *Bismarck* to the bottom of the Atlantic on the morning of May 27.

WALES. A division of the United Kingdom of Great Britain and Northern Ireland, often called a principality. It is situated to the west of the central shires of England. For area, population, education, etc., see GREAT BRITAIN.

WAR CASUALTIES. See under WORLD WAR CHRONOLOGY, 1945.

WAR COSTS. According to a survey prepared by James H. Brady and the American University, the Second World War cost a total of \$1,154,000,000,000—that is one trillion, one hundred and fifty-four billion dollars—for armaments and war materials alone, while property damage amounted to another \$230,900,000,000. The survey, it was stated, did not include the money cost and the property damage resulting from the 10-year war in China, because the figures were unavailable. Mr. Brady placed United States expenditures for war material at \$317,600,000,000; Russia's at \$192,000,000,000; and the United Kingdom's at \$120,000,000,000. The war cost to the Axis powers was placed at \$468,939,000,000, of which sum Germany was credited with having spent \$272,900,000,000. Italy was estimated to have spent \$94,000,000,000, and Japan, \$56,000,000,000. See also under TREASURY OF THE U.S.

WAR CRIMES TRIALS. Such trials were instituted in 1945 by the nations allied in the war against the Axis powers. The procedure adopted fell into two divisions: (1) the collection of evidence; and (2) its presentation before national tribunals, where the crimes were localized, or before a specially created court where the crimes had no geographical localization.

The first steps were taken by the United Nations War Crimes Commission (originally, the United Nations Commission for the Investigation of War Crimes), a body constituted on Oct. 20, 1943, as an outcome of the signing in London, Jan. 13, 1942, of the Inter-Allied Declaration on War Crimes. The purposes of the commission, the headquarters of which are in London, were defined as follows: (1) to investigate all cases referred to it by any of the Allied governments of atrocities committed by, or by order of, the nationals of any of the countries at war with any of the United Nations against nationals of the United Nations; (2) to record and assess all available evidence upon such atrocities, and particularly on atrocities organized and committed in accordance with deliberate policy; (3) to report to the governments of the United Nations cases in which the commission is satisfied that an atrocity has been committed, naming, where possible, those whom it considers responsible.

Subsequently the commission was instructed, also, to make recommendations to the governments on the methods to be adopted to ensure surrender or capture of those wanted for trial, and on the tribunals by which they should be tried.

Primarily a fact-finding body, the commission investigates evidence and draws up lists of persons who, as a result of examination, are wanted as war criminals; since the commission has no machinery for directly collecting evidence itself, the responsibility for deciding what war criminals should be brought before it, and for submitting the evidence for each case, rests with the individual governments. The commission set up three committees: (1) the Committee on Facts and Evidence, which makes investigations; (2) the Committee on Enforcement, which deals with the means of ensuring that the accused persons shall be tried; (3) the Committee on Legal Questions, which studies technical loopholes in the laws of various countries which might enable a war criminal to escape the consequences of his action. In response to a request by the principal Allies, Argentina, Portugal, Spain, Sweden, and Switzerland agreed to exclude war criminals who might flee to those countries, seeking thereby to escape tribunals established to bring them to justice.

The commission was composed of 16 nations, namely, Australia, Belgium, Canada, China, Czechoslovakia, France, Great Britain, Greece, India, Luxembourg, the Netherlands, New Zealand, Norway, Poland, the United States, and Yugoslavia. While the Soviet Union was not a member of the commission, it had an observer sitting with that body. All 16 members established national war crimes offices in London, where each collects evidence on the war crimes committed against its own nationals. First chairman of the commission was Sir Cecil Hurst, the commissioner for Great Britain; in January 1945 he resigned, the chairmanship then going to Lord Wright who, although commissioner for Australia, is a judge of the British High Court. Lieut. Col. Joseph V. Hodgson was appointed commissioner for the United States by President Truman on May 12, 1945; prior to the war he was attorney general of Hawaii. The Allied governments accepted the three-point plan submitted by the War Crimes Commission in October 1944 for the trial of war criminals: the majority of war criminals were to be tried and punished by national courts in countries where the crimes were committed against their nationals or other victims; Allied military courts were to deal with war criminals in enemy countries occupied by the Allies; and United Nations tribunals were to be specially constituted to try leading war criminals not guilty under existing national laws or international law, as well as criminals accused of committing crimes in more than one country. The first two points of the plan were put into effect within a short period after V-E Day. National courts tried and sentenced such well-known figures as Marshal Henri Pétain, Pierre Laval, and Vidkun Quisling; and United States and British military courts were set up in the respective zones of occupied Germany to deal with such war criminals as those responsible for the atrocious conditions in internment camps. A longer time was required to create and set in motion the machinery for the United Nations tribunals.

International Military Tribunal.—This tribunal to try those whose war crimes had no geograph-

ical localization was evolved by a committee of representatives of Great Britain (Sir David Maxwell, lord chancellor), the United States (Robert H. Jackson, associate justice of the United States Supreme Court), the Soviet Union (Maj. Gen. I. T. Nikitchenko, vice president of the Supreme Court of the USSR), and France (Robert Falco, counselor of the Court of Cassation). The committee sat in London from June 26, 1945, until August 8, when they announced that entire agreement had been reached and published the charter of the International Military Tribunal. The procedure adopted represented a compromise between Anglo-American and European principles, an accused being assumed innocent until proved guilty (Anglo-American) and an accused being compelled to testify (Franco-Russian). While the permanent seat of the tribunal was placed in Berlin, Nürnberg was selected as the place of the first trials. The tribunal was to consist of four judges, each with an alternate, these being appointed by each of the signatories. The charter defined three categories of acts coming within the jurisdiction of the tribunal: (1) crimes against peace (planning, preparation, initiation, or waging of a war of aggression or of war in violation of international treaties); (2) war crimes (violations of the laws or customs of war—including ill-treatment of civilians and prisoners of war); and (3) crimes against humanity (inhumane acts committed against any civilian population before or during the war).

The judges (and their alternates), appointed after publication of the charter, were as follows: United States—Francis Biddle, former attorney general (John J. Parker, judge of the Fourth Circuit Court of Appeals); Great Britain—Sir Geoffrey Lawrence, lord justice of the Court of Appeals (Sir William Norman Birkett, member of the High Court of Justice); Soviet Union—Maj. Gen. I. T. Nikitchenko (A. F. Volshkoff); and France—Henri Donnedieu de Vabres (Robert Falco). Chief prosecutors for the respective countries at the war crimes trials were as follows: United States, Robert H. Jackson; Great Britain, Sir Hartley Shawcross, attorney general; Soviet Union, R. A. Rudenko; and France, Charles du Bost. On October 9 the judges met for the first time in Berlin, and there, on October 18, the court of the International Military Tribunal was opened. With Major General Nikitchenko presiding over the bench of judges, a 30,000-word indictment was presented by the prosecutors, in English, Russian, and French, charging 24 of Germany's war leaders with plotting and starting the Second World War, murdering more than 10,000,000 civilians and prisoners of war, and plundering Europe on a scale unprecedented in history. The indictment contained four counts, and to it was attached three appendices. *Count 1* was Conspiracy—formulation or execution of a common plan or conspiracy to commit crimes against peace, war crimes, and crimes against humanity; *Count 2*, Crimes against Peace—planning, preparing, initiating, and waging wars of aggression in violation of international treaties, agreements, and assurances; *Count 3*, War Crimes—the practice of total war, which included methods and practices in direct conflict with the laws and customs of war; and *Count 4*, Crimes against Humanity—the murder and persecution of all who were, or were suspected of being, hostile to the Nazi Party and to the Nazi Party's grand conspiracy to rule the world.

Appendix A named the 24 German defendants at the first trial before the International Military Tribunal; the counts against each man are indicated in the following list:

- (a) Göring, Hermann Wilhelm, Reich minister for air
- (a) Ribbentrop, Joachim von, Reich foreign minister
- (a) Hess, Rudolf, deputy to the führer
- (b) Kaltenbrunner, Ernst, chief of the Gestapo
- (a) Rosenberg, Alfred, responsible for the Nazi Party's spiritual and ideological training
- (b) Frank, Hans, governor general of occupied Polish territories
- (b) Bormann, Martin, deputy to the führer
- (a) Frick, Wilhelm, minister of the interior
- (b) Ley, Robert, leader of the Labor Front
- (a) Sauckel, Fritz, commissioner for forced labor
- (a) Speer, Albert, minister of production
- (a) Funk, Walther Immanuel, minister of economics
- (c) Schacht, Hjalmar, president of the Reichsbank
- (d) Papen, Franz von, ambassador to Turkey
- (a) Krupp, von Bohlen und Halbach, Gustav, armament manufacturer
- (d) Neurath, Konstantin von, protector for Bohemia and Moravia
- (e) Schirach, Baldur von, Nazi Youth leader
- (a) Seyss-Inquart, Artur, Reich commissioner for occupied Netherlands
- (e) Streicher, Julius, editor of *Der Stürmer*, anti-Semitic weekly
- (a) Keitel, Wilhelm von, chief of the German Army High Command
- (a) Jodl, Alfred Gustav, member, German Army General Staff
- (f) Raeder, Erich, commander in chief, German Navy (1935-43)
- (f) Doenitz, Karl, commander in chief, German Navy (1943-45)
- (b) Fritzsche, Hans, minister of propaganda
- (a) all counts; (b) counts 1, 3, 4; (c) counts 1, 2; (d) counts 1, 2, 4; (e) counts 1, 4; (f) counts 1, 2, 3.

Martin Bormann was not in custody at the time the indictment was presented, and Robert Ley committed suicide in prison at Nürnberg, on October 25, while awaiting the opening of the trial.

Appendix B named groups or organizations which, in the words of the indictment, "should be declared criminal by reason of their aims and the means used for the accomplishment thereof and in connection with the conviction of such of the named defendants as were members thereof." These groups or organizations comprised the Reich Cabinet, the Leadership Corps of the Nazi Party, the SS guard, the Gestapo, the SA guard, and the German General Staff and High Command. *Appendix C* of the indictment set out charges and particulars of violations of international treaties, agreements, and assurances caused by the defendants in the course of planning, preparing, and initiating the wars.

The International Military Tribunal set November 20 as the date for commencing the trials in Nürnberg, with Lord Justice Lawrence presiding. When the case opened pleas of not guilty were entered by all the defendants except Ernst Kaltenbrunner, who was absent on account of illness. Rudolf Hess at first feigned amnesia, but later admitted that he had been pretending and that he was prepared to answer for his acts. Prosecution was featured by the reliance placed upon presentation of documentary evidence, of sound recordings of conversations, and of motion pictures, rather than on the calling of individual witnesses. An exception was the appearance of Maj. Gen. Erwin Lahousen, of the German Army Intelligence, who testified that Keitel personally ordered the execution of the French generals Giraud and Weygand; the order was, however, frustrated by Admiral Wilhelm Canaris, at that time chief of Intelligence, who was later involved in the 1944 bomb plot against Hitler and executed. By the end of the year, the prosecution had not completed the presentation of evidence, and with scores of witnesses to be sum-

moned by the defendants, the trial was far from concluding.

War crimes trials were also planned for the Orient. In June 1944 a subcommission of the United Nations War Crimes Commission was set up in Chungking to investigate the situation in the Far East and Pacific areas. The Chungking subcommission was composed of representatives of Australia, Belgium, China, Czechoslovakia, France, Great Britain, India, Luxembourg, the Netherlands, Poland, and the United States; Dr. Wang Chung-hui, the Chinese representative, served as chairman. First of the Japanese leaders to be arraigned was Gen. Tomoyuki Yamashita, commander in the Philippines the last 11 months of the war, whose trial opened in Manila on October 29 before a United States Military Commission, a five-man body headed by Maj. Gen. R. B. Reynolds. Failing in an appeal to the United States Supreme Court for a hearing before that tribunal, Yamashita was convicted on December 7 of responsibility for atrocities committed by Japanese troops in the Philippines during his period of command, and was sentenced to death by hanging. A stay of execution was ordered on December 17 until the Supreme Court could rule on his application for a writ of habeas corpus and his challenge of the authority of the military court. In order to preclude such appeals in subsequent cases, General MacArthur ordered that defendants henceforth should be placed under the jurisdiction of the Allies instead of under that of the United States alone. WAR LABOR BOARD, National. The year 1945 saw the operations of the National War Labor Board reach full and fairly stable maturity during the first six months but, following the August victory over Japan, brought a gradual liquidation of the board's activities and final termination of the agency on December 31 under Executive Order 9672. The executive order ended a four-year program for peaceable settlement of labor-management disputes by government arbitration, but transferred the modified wage stabilization program—second of the WLB's two wartime assignments—to a newly-created National Wage Stabilization Board.

Probably the major action of the board during the initial six months, while the agency was in active operation, was a report of public members to the president on February 20 recommending that no change be made in the Little Steel Formula, a basic wage stabilization device under which general wage increases were permitted for groups of employees up to a limit of 15 per cent above the level of Jan. 1, 1941, to offset advances in the cost of living. Liberalization of the rule has been requested by both the American Federation of Labor and the Congress of Industrial Organizations, and separate comments objecting to the findings of the public members were submitted by both the AFL and CIO members of the board. Industry members agreed with the recommendation but objected to the further recommendation that war-caused innovations in industrial practices be made post-war norms. Basic conclusions of the report were that upward revision of the formula would bring about a new round of general wage increases such as threat-

ened the stability of the economy in 1942, and that wage controls should be ended only as a part of a broad economic plan to assure high levels of civilian production and employment in the post-war economy.

Other significant developments of the early part of the year included the board's decision of February 21 ordering 55-cent minimum wages for the New England and Southern textile industries to correct substandards of living and calling, as well, for "balanced and properly aligned" wage structures; the February 21 denial of general wage increases to packinghouse workers (but with an order for the parties to negotiate well-balanced wage structures), and a July 21 decision holding the War Labor Disputes Act superior to any state law in connection with a contested maintenance of membership clause in a union contract with a St. Joe, Fla., paper company case. A court test of the power of the president to seize a non-war establishment (Montgomery Ward & Company) for defiance of board orders resulted in a decision of the Chicago District Federal Court on January 27, holding such seizure illegal, but the decision was reversed by a U.S. Circuit Court of Appeals on June 8. (A final adjudication of this legal point appeared unlikely in view of subsequent refusal of the U.S. Supreme Court to review the case on the ground that the issue was "moot" because seizure of the property had been terminated.)

With the collapse of Japan on August 14 and sudden shift of economic trends, there started, however, a succession of changes in the disputes and wage stabilization programs and in the War Labor Board itself. In his statement of August 16 the president announced a relaxation of wage controls consistent with a loosening of the labor market and also a program to terminate the War Labor Board as a disputes-settling agency "as soon after conclusion of the forthcoming industry-labor conference as the orderly disposition of the work of the Board, and the provision of the War Labor Disputes Act permit; and after facilities have been provided to take care of the wage stabilization functions under the Act of October 2, 1942." Two days later, on August 18, the broad plans announced by the president were more carefully defined in Executive Order 9599 directing the War Labor Board to continue wage controls with such modifications as were necessary to prevent either inflation or deflation, and to move as rapidly as possible toward the removal of controls and toward the restoration of collective bargaining. In the field of wage stabilization, the board acted promptly with adoption of General Order 40, which—for the first time since October, 1942—permitted employers to make wage increases not affecting prices without prior approval of the board. An exception was made in the case of the building and construction industry, in which controls were continued on the former footing. In the field of industrial relations, the board urged the parties in some 3,000 pending disputes to renew collective bargaining and to settle the issues without further recourse to the government. New dispute cases were accepted by the board and its agencies only upon joint agreement of the parties.

On September 19, Executive Order 9617 was issued transferring the War Labor Board, and certain other war agencies, to the Department of Labor. This, however, did not tangibly alter the character of the board inasmuch as the agency was preserved as an entity within the Department of Labor, with autonomy over its powers,

personnel, funds and other administrative operations. Likewise, correspondence with the Secretary of Labor established that the board was to retain full autonomy over its policies and decisions.

The board's termination program was speeded again in October with announcement that, effective October 22, the board would not hear the merits of any new disputes cases and would accept such cases only for the purpose of appointing an arbitrator to hear and decide the issues. In the meantime, the board fixed Jan. 1, 1946, as its final termination date and laid plans for disposing of all pending matters before that date. The month also brought the issuance of Executive Order 9651 amending Executive Order 9599 and setting up standards for approval of wage increases which may be used by employers as a basis for obtaining higher prices.

In November, as requested by the president, the board moved toward providing facilities for continuance of the wage stabilization program by setting up within the framework of the board a six-member Wage Stabilization Division of tripartite composition to rule upon voluntary wage applications involving "price relief," to rule upon all wage decrease cases (all wage decreases continued to require prior approval of the board) and to deal with other phases of the program. The wage-price policies to be applied by the division and related government agencies were set forth in greater detail on December 5 by Stabilization Administrator John C. Collet and the practical application of these policies was spelled out fully in a series of regulations issued by the division on December 27. These regulations explained that with the exception of certain increases in the basic steel industry and the building and construction industry, "the general rule is established that wage or salary increases may be made lawfully in any amount and at any time without the approval of the National War Labor Board." With the two exceptions, the sole effect of approval of a wage increase application was to permit the increase to be used as a basis for higher prices, rents or costs of goods furnished to the government. Denial of an application, however, did not prevent the applicant from placing into effect immediately all or any part of the proposed increase, and did not mean that such increase was unlawful under the wage stabilization laws or that it was disapproved by the government. Conforming to the policies of the executive orders and the stabilization administrator, the regulations permitted approval of "cost of living" wage increases for groups of employees whose average straight-time hourly earnings had not risen 33 per cent above the level of 1941; wage increases to correct inequities between plants by comparison of rates within a plant with the average rates currently prevailing in an industry or area, and wage increases necessary to overcome manpower shortages in certain "bottleneck" industries which constituted interference with the national reconversion program.

The final step in the liquidation of the board came on Dec. 31, 1945, when Executive Order 9672 terminated the agency and created a National Wage Stabilization Board to carry on the wage control functions. Physically, the members and staff of the new board were drawn from those of the previously-operating Wage Stabilization Division and the expired War Labor Board. W. Willard Wirtz, chairman of the division, was named chairman of the NWSB.

With termination of the War Labor Board, it

becomes possible to review its work and to determine the extent to which it achieved its two objectives of minimizing war-time disputes and of stabilizing the general wage levels to combat inflation.

In the first of these tasks, the National Board and its agencies from Jan. 12, 1942, to Aug. 18, 1945, dealt with 17,807 disputes which were deemed threatening to the war effort and issued decisions, normally involving many issues, affecting approximately 12,300,000 employees. Probably the most significant yardstick of the agency's effectiveness is the fact that the percentage of all working time lost by strikes and lockouts from Pearl Harbor until V-J Day was 11/100 of 1 per cent as compared with 27/100 of 1 per cent in the five peace-time years 1935-39. In other words, operation of the no-strike program reduced the loss of production time during the war to approximately one-third of its peacetime levels. The comparative speed in termination of stoppages is demonstrated by the following table showing the average duration of strikes in the pre-war and wartime years: 1939, 23 days; 1940, 21 days; 1941, 18 days; 1942, 12 days; 1943, five days; 1944, 5½ days.

In accordance with the voluntary no-strike, no-lockout pledge of labor and industry, compliance with the board's decisions came about by voluntary acceptance, rather than by compulsion, in most cases. Of the 17,807 disputes handled up to V-J Day, 50 were turned over to other agencies to compel compliance. In 40 cases seizure was ordered by the president and in four cases economic sanctions were applied by the Office of Economic Stabilization. Six ultimately were settled without action. In 26 of the disputes unions were in defiance; in 23 cases employers were in defiance and in one case both sides defied the order of the board.

While any attempt to measure the effectiveness of the wage stabilization program as administered by the board involves many intangibles, some conclusions may be drawn by a comparison of the average level of urban wage rates before and after inauguration of the program. In the 21-month period from Jan. 1, 1941, to Oct. 2, 1942, urban wage rates in manufacturing industries rose 17 per cent or at a rate of 0.8 per cent a month. In the 34-month period from Oct. 3, 1942, to Aug. 18, 1945, the increase was 13.6 per cent or at a rate of 0.4 per cent a month. Thus the advance of the inflationary spiral was reduced by one-half its former rate of progress. It was estimated further that of the total rise of 13.4 per cent during the period of control, about one third could be ascribed to immediate increases granted by the WLB, with most of the remainder resulting from increased output of incentive workers, more liberal management policies in the matter of merit increases and other factors outside the jurisdiction of the agency.

While the basic wage rates were being held in line, however, total wages were permitted to advance so that the increase in straight-time hourly earnings (adjusted to discount increases caused by shift of workers to higher-paid industries) amounted to 40.5 per cent from Jan. 1, 1941, to July 1945. In the same period the cost of living advanced by an estimated 33 per cent. Thus, it appeared that real hourly wages—the amount of wage paid in a job for an hour of work—were slightly higher at the close of the war than on Jan. 1, 1941.

During the entire period of wage stabiliza-

tion, from Oct. 3, 1942, to Aug. 17, 1945, the National Board and its agencies ruled upon 412,543 voluntary requests for wage adjustments and allowed increases (in original decisions before appeals) in whole or in part in 353,749 instances, affecting the earnings of 23,233,000 workers. Of these workers, 10,916,000 received immediate increases in basic wage rates averaging 6.1 cents an hour, while the remaining 12,317,000 received either non-immediate increases in basic wage rates or such other benefits as paid vacations, shift differentials and the like. In settlement of disputes, 1,915,000 workers received an average immediate increase in basic wage rates of 5.6 cents an hour, while another 3,577,000 workers received other benefits affecting their wages. (Statistics in disputes cover three-fourth sample of cases.)

Distribution of increases appeared to vary little between the union groups, and between the union and non-union groups. In voluntary cases, the average immediate increases approved by the board were distributed as follows: AFL unions, 5.3 cents an hour; CIO unions, 4.8 cents an hour; independent unions, 4.7 cents an hour; unorganized employees, 6.5 cents an hour. In dispute cases, the averages were: AFL unions, 5.8 cents an hour; CIO unions, 5.3 cents an hour; independent unions, 6 cents an hour.

JOHN A. STUART,
Assistant Information Director, National Wage Stabilization Board.

WAR MANPOWER COMMISSION (WMC). Activities of the War Manpower Commission in 1945 were directed toward improving, extending, and in some measure standardizing the national pattern of labor controls that had been built throughout 1944. Although there was no overall labor shortage in the early part of 1945, a lack of skilled labor in certain vital industries caused production of some critical items to fall short of demands. In January, a total of 180,000 workers were needed immediately in 1,500 widely scattered plants producing vital war materials. Such "spot" shortages necessitated intensive interregional recruitment campaigns. For the critical atomic bomb projects alone, 300,000 workers were recruited by the U.S. Employment Service (USES), 179,000 of these through interregional recruitment from practically every state in the country. For the first half of 1945, manpower needs, including the armed services, were estimated at 1,500,000. Because the overall labor supply was as yet tight and relatively inflexible, intensive effort was still required to recruit enough workers for the right plants at the right time. Through interregional recruitment, 221,800 placements were made in top-priority jobs in 1945 through June.

The Veterans' Employment Service of the U.S. Employment Service steadily expanded its program of job counseling and placement of veterans as the number of returning servicemen and women increased. A veterans' representative is available in each of the 1,725 permanent USES offices. Each representative, himself a veteran, is well qualified to handle the special types of job problems that confront the veteran. Since January, USES representatives were assigned to army separation centers throughout the country to provide occupational and employment information. As of July, more than 1,000,000 veterans of the Second World War had sought employment, job counseling, or other information at USES offices, and 600,000 Second

World War veteran placements were made as of June. In April alone, the USES made 86,000 placements of veterans of all wars and made 13,000 "selective" placements for disabled veterans. A total of 1,400,000 placements for veterans were made by the USES during the period Jan. 1, 1942, to Jan. 1, 1945. Among the tools developed for the proper placement of veterans are "Special Aids for Placing Navy Personnel in Civilian Jobs" and "Special Aids for Placing Military Personnel in Civilian Jobs." These list several thousand typical civilian occupations in which discharged enlisted army and navy personnel can most profitably use skills and experience gained in service. The WMC's Apprentice Training Service, which in January had registered programs in 32,000 business or industrial establishments throughout the country, also had its responsibility for the development of new programs greatly increased by the enactment of the Serviceman's Readjustment Act of 1944. This act specifies apprentice training as a particular method of training through which veterans are entitled to subsistence allowance.

Another specialized service developed by the USES is a simplified selective placement technique for the proper placement of handicapped workers. This carefully matches the physical demands of a particular job against the physical abilities of each applicant. "Selective Placement for the Handicapped" presents a composite of selective placement techniques which have been developed by the USES over a period of years. Through July, the USES had made 220,500 placements of handicapped persons in 1945.

When the early defeat of Germany became evident, the employment trend began to shift. From March 15 to June 15, munitions plant employment declined from 9,000,000 to 8,300,000. In the same period, 29 labor area classifications were revised downward. From V-E Day to August 1, Group 1 (acute shortage) areas dropped from 74 to 46. The defeat of Germany, however, did not eliminate the need for intensive recruitment of workers for war activities vital to the Pacific campaign. The hiring rate for ship repair yards, for example, did not keep pace with enemy attacks on United States ships, and recruitment for ship repair became one of WMC's most urgent programs.

The WMC adapted its program to the transition period between V-E Day and V-J Day by giving area and regional WMC officials extended authority to modify or rescind hiring controls according to developments in the employment situation within individual localities. Manpower programs affected included employment stabilization, employment ceilings, priority referral, and the 48-hour work week. These modifications could be initiated by WMC area directors after consultation with the area management-labor committee.

With the surrender of Japan, the WMC immediately lifted all manpower controls. The U.S. Employment Service, which made 29,400,000 placements during the three-year war period (April 1942 to April 1945), made available its full facilities to all employers. Labor was channeled by voluntary methods to civilian industries, especially those in which reconversion bottlenecks were anticipated. All veterans services were expanded and increased emphasis given to job counseling and other personalized services to assist job seekers in adapting their wartime experience to peacetime job opportunities. Displaced war workers, many of whom migrated

during the war, were assisted in finding employment in other communities as civilian production began to expand.

By Executive Order No. 9617, on Sept. 19, 1945, the president transferred War Manpower Commission functions, with the exception of personnel and functions of Procurement and Assignment Service, to the Department of Labor.

PAUL V. McNUTT,
Former Chairman, War Manpower Commission.

WAR MOBILIZATION AND RECONVERSION, Office of (OWMR). After Congress passed the War Mobilization and Reconversion Act, Oct. 3, 1944, President Roosevelt transferred to the newly created Office of War Mobilization and Reconversion all functions previously assigned to the Office of War Mobilization, established by Executive Order 9347 of May 27, 1943.

The director of OWMR is charged with the responsibility of directing the economic forces of the nation into a co-ordinated war program while maintaining an adequate civilian economy and developing an effective program for the transition from war to peace. In discharging these responsibilities, the director is authorized to: (1) prepare such plans as appear necessary, co-ordinate the plans and procedures of the responsible executive agencies, and keep the various agencies mutually informed of each other's progress; (2) issue to the responsible agencies such directives, orders, and regulations as he deems appropriate for effective war mobilization or reconversion; (3) settle controversies among executive agencies; (4) recommend to the Congress such legislation as appears appropriate and necessary for the execution of the plans developed for the transition from war to peace.

In addition to co-ordinating responsibility for war production and reconversion, the director has a number of particular duties specified in the executive order of the act. These include: (a) studying and recommending appropriate changes in the organization of emergency war agencies and agencies having jurisdiction in the field of manpower; (b) approving the continuation of any prime contracts for war production no longer required for the prosecution of the war in the event he finds that the continuation of work under the contracts is beneficial to the government; (c) maintaining a continuing scrutiny of all current and anticipated war programs; (d) establishing policies to be followed by contracting agencies in selecting individual contracts for curtailment, nonrenewal, or termination, and for full and prompt consultation between the government contracting agencies, war contractors, and representatives of employees of war contractors in order to obtain the most effective use of production facilities for war production or for the maintenance of the domestic economy.

The OWMR includes the following agencies which exercise their functions under the supervision of the director: (1) Office of Contract Settlement created by the Contract Settlement Act of 1944. (2) The Surplus Property Administration, successor (Sept. 18, 1945) to the three-man Surplus Property Board, which under the Surplus Property Act of 1944, succeeded the Surplus War Property Administration, created by Executive Order 9425, in February 1944. The functions of the Office of Economic Stabilization, established Oct. 3, 1942 by Executive Order 9250, were transferred to OWMR, Sept. 20, 1945, by Executive Order 8620. The Retraining and Re-employment Administration, established

by Title III of the act creating the OWMR, functioned within the OWMR until Sept. 19, 1945, when it was transferred to the Department of Labor by Executive Order 9617.

The director is advised by an advisory board of 12 members appointed by the president with the advice and consent of the Senate.

James F. Byrnes was the first director of the Office of War Mobilization and continued to serve as director after the functions of the office were expanded by the act of Oct. 3, 1944. Upon his resignation, effective April 1, 1945, he was succeeded by Fred M. Vinson, who took office on April 7. Mr. Vinson was succeeded on July 23, 1945 by John W. Snyder.

ANTHONY HYDE,
Director of Information, OWMR.

WAR POLICY OF THE UNITED STATES. Six years of the most destructive war in history terminated on Sept. 2, 1945, when Japan, last holdout of the Axis, signed the terms of surrender imposed by the Allied Nations. For Japan, original spearhead of the joint drive aimed at world empire, almost fourteen years had passed since the day when her militarists had touched off the most tragic chapter of modern history with their surprise attack on Mukden in 1931. Neither Japan nor her major victim, China, had known the real meaning of peace in all that time. For the Allied Nations and particularly for the United States, last great power to enter the struggle, victory meant full vindication of the moral and military virtues latent in democracy. In that vindication died the opposing principle of slavish self-immolation of the individual in the creation of a militarist superstate. Whether that death is to be followed by a resurrection of the nationalist and racial ambitions which made the war inevitable is a question remaining to be answered by the victorious powers. It was a victorious soldier, Gen. Douglas MacArthur, speaking as supreme commander of the Allied powers on the occasion of Japan's surrender, who epitomized the high purpose of the victors in the following words:

"It is my earnest hope and indeed the hope of all mankind that from this solemn occasion a better world shall emerge out of the blood and carnage of the past—a world founded upon faith and understanding—a world dedicated to the dignity of man and the fulfillment of his most cherished wish—for freedom, tolerance and justice."

The long-range objective has been made clear to victor and vanquished alike. Four months before the final scene was acted out on board the U. S. S. *Missouri* in Tokyo Harbor, Germany's unconditional surrender had been followed by a similar enunciation of Allied principles. Whether or how far they were to be realized, whether on the contrary they may degenerate into pious, unrealized wishes like those which terminated the First World War, depends at the outset on the ability of the Allies to solve their first priority problems. Vast stretches of the most highly developed areas of the Old World lie in utter ruin. A sick civilization is dying amid the rubble and filth left by the collapse of the Axis military machine. The immediate tasks of rescue and healing have been left to soldiers, their mission of mercy complicated by the need of controls strong enough to stamp out any remaining embers of power-mad fascism. In one sense, war has ended. In another, the war to win the peace, to prevent a renewed outbreak of

hostilities has begun. That situation will shape for years to come the military policies of every nation involved. For the United States in particular, it points the way to a complete reorientation of its status in the modern world, and no less of the part played by the armed forces in the drafting and execution of policies.

Down to the final end the general direction and the final objectives of the war policy of the United States continued unchanged from the planned strategy progressively outlined at Cairo, Teheran, and Yalta by the heads of the Allied governments and their military advisers. On the other hand, notable operational modifications became necessary from time to time, chiefly as the result of enemy reaction. The defeat suffered by Allied arms in December 1944 when Marshal Karl von Rundstedt's mechanized drive scored a break-through in the Ardennes area, the unexpected seizure of the Remagen bridge intact by the American 9th Armored Division, the successive delays imposed on the Russians by logistical obstacles and German resistance, and the completeness of Germany's collapse in the closing weeks of the war in Europe were but a few of the events which called for prompt and sound strategic decisions. Similar shifts occurred in the Pacific when, on the one hand, the tenacity of Japanese resistance on Okinawa taxed the full resources of our armed forces; and on the other, the air and naval strikes against Japan's homeland scored an unbroken string of major successes against the sinews and nerve centers of the enemy's last-ditch defenses. By June, two conflicting trends in Japan's policy had placed Allied military leaders in a quandary. On the one hand, Japan's growing weakness pointed to early and complete collapse. On the other, Japan's military leaders obviously were counting, as Hitler had done earlier, on native fanaticism to win the final round. Into the midst of that dilemma dropped two atom bombs, wiping out two of Japan's great modern cities. They tore apart the last shreds of Japan's resolution. They hoisted an emperor out of his mystical obscurity in a Tokyo palace where centuries of tradition had hidden him, bringing his decision to accept the Allies' surrender terms.

For the sake of greater clarity, the 1945 record of United States war policy is presented below on a functional basis, with separate consideration given to the following elements: personnel, operations and training, war production, military government, and plans for postwar policies.

Personnel.—Three major developments of the period threw policies out of gear, necessitating sharp readjustments. The first occurred in December 1944 when Marshal von Rundstedt's powerful drive in the Ardennes disclosed several weaknesses in Allied preparations. Less than five months later came the second, Germany's swift collapse into complete ruin. The third was the welcome but unexpected speed of Japan's collapse. The bloody fighting in the Ardennes, better known as the Battle of the Bulge, made clear how thin Gen. Dwight D. Eisenhower's margin of manpower had been from the day his forces set foot on French soil. In addition, they showed that the supply lines across France were not yet functioning at the pitch of efficiency necessary to maintain all-out operations against a determined and resourceful enemy. From the first, the manpower shortage had been felt most acutely in the category which bears the brunt of the fighting, the infantry. The War Department in January

revealed that, over a period of months before, some 500,000 men had been transferred from zone of the interior forces to infantry combat units and replacement centers. Nevertheless, when the crisis occurred, threatening to sever lateral communications between the Americans and their British Allies under Marshal Montgomery, the last reserves had to be thrown in to contain, and finally to roll back, the enemy offensive.

The net effects were felt all the way back to training centers in the United States. At least two combat divisions, earmarked for the Pacific, and other units as well, were hastily shipped to France. Soldiers in Europe, scheduled for return to the United States under established rotation policies, were held pending the outcome of the battle. Replacements who had completed their 17-weeks' basic training course, including a large percentage of 18-year olds, were forwarded for combat duty. The heavy load thrown on American military hospitals revealed the acute shortage of nurses. When nationwide appeals for volunteers failed to furnish the necessary numbers, Congress in February took up consideration of a nurse draft bill which called for the induction of all unmarried registered nurses in the 20-45 age group.

The home front felt the impact of the reverse in other ways. War Mobilization Director James F. Byrnes, in an effort to get more effective use of available civilian manpower, suspended racing meets, tightened up draft rules for professional athletes, froze civilian production to the levels of the fourth quarter of 1944, and denied priority and allocation rights where necessary to maintain manpower ceilings. Of greater import was the president's message to Congress calling for the passage of a national service act. As submitted to the House Military Affairs Committee, this "work-or-fight" bill aimed to end various kinds of manpower waste, particularly those connected with production or services which had little or no bearing on the war effort, and those resulting from heavy labor turnover. Men from 18 to 45 were to be frozen in their jobs or in new war-connected jobs to which they were to be shifted. Penalties proposed for noncompliance were set at limits of five years' imprisonment and \$10,000 fines. Like the proposed draft of nurses, the measure encountered enough opposition, particularly from labor, to hold up enactment until the collapse of Germany sent both bills to the waste paper baler.

Germany's defeat promptly set in motion a reverse flow. It was no longer a question of restoring the pre-Bulge Battle policy of sending back 12,000 veterans per month to the United States for furloughs and reassignment. In January the War Department announced its policy for the relief of surplus officers, among them: (1) limited service personnel; (2) recovered prisoners, ineligible for further overseas duty; (3) officers previously called to duty from retired status; (4) specialists whose tasks had been completed; (5) all officers over 38 who desired relief and were no longer needed. In May enlisted men 40 years old or older were ordered discharged, reducing by two years an earlier age limit. The navy still held to the 42 year limit. Plans in the meanwhile had been made to cut the armed forces to the limits deemed necessary for the final offensive against Japan. As announced in June, the reductions were to be as follows: Army Air Forces—2.3 million to 2.1 million; Army Service Forces—1.7 to 1.6; Army Ground Forces—3.2 to 2.3; outside major commands—

1.1 to 1.0. In the process, shifts between components and retraining for new assignments became necessary. In the commissioned grades the War Department reported a surplus of 40,000 officers in the European theater, available for relief. And at home, all retired officers on active duty who were above the age for legal retirement were ordered to be relieved by Dec. 31, 1945. The navy, with its still mounting roster of new ships, found itself unable to match the army in the matter of releasing personnel. Its discharge policy looked to getting rid of the least effective men.

The War Department plan for the discharge of soldiers after V-E Day was based on a system of credits or points awarded on four counts, as follows: 1 point for each month spent in service after May 16, 1940; 1 additional point for each month of overseas service; 5 points for each combat decoration received; parenthood credit, 12 points for each child under 18. Points could be scored only to May 12, 1945, with a minimum of 85 required to place a soldier in the initial eligible list. Exceptions to the blanket rule were made in the case of specialists whose services could not be immediately spared. A second exception gave high-score men the option of remaining in the service. Not a few elected to do so. As for commissioned officers, the War Department left control to the theater commanders to be exercised under policies laid down by the commanding generals of the three major components.

A fly in the soldier's ointment was the shortage of shipping, necessitating considerable delay in return to the United States. First priority was given to two classes: transportable wounded and personnel due for Pacific service after retraining. By mid-July, the last of more than 100,000 wounded were back in the United States. For those awaiting return and not assigned to units occupying Germany, opportunity was given to undertake a wide range of educational courses. For the most part the soldier-students were assembled in "GI Colleges" established at various training centers, there to be instructed by professional teachers, in subjects ranging from the elementary to those of college level. A substantial percentage of the men were helped to matriculate at selected universities in Britain, France, Switzerland and Italy, there to pursue graduate and undergraduate courses. A second useful outlet for soldier energy was found in a sports program, including both training and participation in interunit contests. The best morale booster for all was the fact that shipment rates from the very first outstripped the planned program.

Japan's surrender, followed by initial indications that compliance with General MacArthur's orders would be both general and real, brought a further upward revision in the rate of demobilization. The War Department disclosed to Congress its goal of an army, including the AAF, reduced to a maximum of 2,500,000 by July 1, 1946. The navy planned to cut down to a peacetime total of 58,000 officers and 500,000 enlisted men, along with a Marine Corps of 100,000. Separation rates promised to rise to a maximum in the winter months of 1945-46. All contingents planned to replace their trained veterans with younger men, lacking in battle experience, insofar as conditions in the occupied areas permitted. At the same time the voluntary enlistment of veterans was counted on to preserve nuclei of fully dependable soldiers, sailors, and

airmen. An element of confusion was a rising public clamor for elimination of the draft. President Truman countered with a recommendation to Congress that conscription be maintained in force for men in the 18-25 year bracket. The armed forces called on Congress for legislation authorizing a full-scale recruiting drive, admitting as they did so that no more than a minor fraction of the forces needed for occupation duty could be obtained by that means. Estimates of the army's occupation strength needed for an indefinite period of time called for 400,000 in the European theater and a million in the Pacific.

The last weeks of battle brought the casualty total above the million mark, roughly a quarter of whom were listed as killed. Equally depressing was the report of Under Secretary of War Robert Patterson to Congress, showing that as of May 31, more than 33,000 soldiers were in confinement as the result of courts-martial. He added that 102 had thus far suffered the death penalty. Except for one instance of a soldier who had twice deserted in the face of the enemy, resulting in the first execution for purely military crime since the Civil War, these men were found guilty of capital crimes. A more comforting statistic was the reduction in army mortality from disease, one in 2,000 during the Second World War as compared with 14 per 1,000 in its predecessor.

Operations and Training; European Theater.—When the "greatest double-envelopment in history" became an established fact through the linking up of the American First and Ninth armies at Paderborn on April 1, 1945, Germany's last hopes of maintaining a strong enough resistance to induce mild peace terms were forever gone. With the loss of more than 300,000 of her best troops in the enclosed Ruhr pocket and of the industrial resources of that region, went both the means and the will for effective battle. Fanaticism and fear could still support a death struggle against the oncoming Russians. Here and there in the American, British, and French zones occasional groups of bitter-enders fought hard. But for the most part the Germans in the final weeks could be held to their task only by the Gestapo's pistol-backed controls.

The battle of the Ruhr pocket represents the full dividend paid for earlier American successes, for successes won in harder fighting at far heavier cost. From the German point of view the battle was the final penalty of previous mistakes in strategy and execution, and of the greater error of military weakness in the decisive test. The swift recoil of the Americans from their December setback in the Ardennes, the fury of the combined air and ground counterassault on the German elements caught in the Bulge, and the resistless drive thereafter to the Rhine sapped Germany's waning strength. The German Army's failure to destroy the bridge which spanned the Rhine at Remagen before the American forces arrived there on March 8 was more than the mental lapse of some junior officer. In contrast, the platoon of the 9th Armored Division which roared across and neutralized the demolition charges, was acting on more than impulse. A victorious army was making its own luck; a defeated force was breeding its own misfortunes.

A few days after that incident five American divisions were securely established on the east bank of the Rhine. The German High Command, divining an Allied crossing in and north of the

Ruhr area, and having set up a strong defense against such an operation, was suddenly compelled to shift troops south to meet the Remagen threat. Once again General Eisenhower's strategy turned the tables on his enemy when the First Army broke out of the Remagen area to the south and east, instead of to the north and west. Linking up with Gen. George S. Patton's Third Army near Frankfurt on Main, Gen. Courtney H. Hodges' First Army then struck swiftly north to join hands with the American Ninth. With relative ease the American Seventh and French First armies had effected their own crossings of the Rhine barrier. At the northern end of the battle line the Second British and First Canadian armies breached the river defenses against comparatively heavy opposition. Spearheaded by armor and closely supported by tactical air elements, the separate Allied armies drove co-ordinated attacks into the deep rear areas of the defending Germans.

The Elbe was reached on April 17, and there the advance stopped except for the establishment of bridgeheads on the east bank as threats to Berlin. Tactical and political considerations argued for avoiding a repetition of the situation which had developed in Poland in 1939, when columns of Russians and Germans (then allies) had become badly mixed as they drove in from opposite directions. To the south and southeast, however, the drive continued into Czechoslovakia and southern Germany.

Allied forces in Italy, launching their final offensive on April 10 brought their hard two-year campaign to its end three weeks later, when Gen. Mark Clark announced that the German Army had ceased to exist as a military force. His drive continued, joining hands through the Brenner Pass with General Eisenhower's forces and turning east into Austria. An unexpected difficulty arose when it was discovered that Marshal Tito's Yugoslav Partisans, in violation of prior Big Three agreements, had overrun Istria and part of Carinthia. Judicious pressure compelled Tito's partial withdrawal, and joint occupation of Trieste provided a *modus vivendi*, leaving to high diplomacy the question of ultimate territorial settlements. By the end of April, the surrender of one broken fragment of the German Army after another had become the order of the day. The official end of military hostilities came with Col. Gen. Alfred Jodl's unconditional surrender at 8:41 P.M., U.S. Eastern wartime, May 6, 1945 (2:45 A.M. European time May 7) to the military representatives of the American, British and Russian governments. Do-or-die German elements, however, continued to resist until several days later in Austria and Czechoslovakia. At the close General Eisenhower had a total of 92 divisions in action, 61 of them American.

Pacific Theater.—January of 1945 found General MacArthur's forces in firm control of Leyte, the first of the Philippine group to be invaded in the counteroffensive which began at Guadalcanal in August 1942. Nevertheless, the "minor mopping-up operations," as termed in the press, accounted for more than 40,000 Japanese dead after the campaign had been officially declared terminated on Christmas Day of 1943. Parallel operations by American forces under the direction of Admiral Nimitz had at the same time secured firm possession of the key islands of the Marianas: Guam, Saipan and Tinian. Japan's second line of defense, in short, had been definitely broken. And, if Japan's official spokesmen were to be believed, the fate of their empire

hung on the ability of the Japanese to drive MacArthur out of the Philippines.

At that stage Japan still retained several major advantages. Her ground forces were many times stronger than the totals mustered by her opponents in the theater of operations. Her lines of communication were shortened by each Allied advance while those of the Allies were being correspondingly lengthened. Signs of war weariness were growing in the homelands of the Allies. And there was always the possibility of disagreement among them, particularly if heavy casualties could be inflicted by Japan. Lastly, the fanatical attitude of the Japanese soldier in the discharge of his duty remained relatively unimpaired. The other side of Japan's picture showed a technical inferiority which grew more evident with each battle, a costly overall strategy which called for full-scale defense of the vast dotted perimeter of the empire's defense line, and the surrender to the Allies of the initiative—a handicap which insured Allied superiority at every point of attack. And China, split in two by Japan's 1944 drive which had at last given Japan an unbroken line of land communications from Korea to Malaysia, was showing increased powers of resistance as the flow of American munitions and supplies was steadily stepped up. Late in January 1945, the Stilwell (formerly Burma) Road was reopened to permit the passage of the first convoy to China in nearly three years.

A major American blow for the freeing of the Philippines was struck on Luzon when the American Sixth Army landed in the Lingayen Gulf area on Jan. 9, 1945. Only in Manila was serious resistance encountered. Three weeks of the hardest fighting against typical last-ditch defense reduced the city to ruins. A pincer move against the remnants of Marshal Yamashita's forces after a paratroop landing at Aparri in late July by the 11th Airborne Division gave MacArthur control of northern Luzon. Meanwhile other American units carried their drives through southern Luzon, the important island of Mindanao, and the rest of the Philippine group. The effort to hold the Philippines cost the Japanese some 450,000 casualties. Their dead alone numbered nearly ten times as high as the total of all American casualties in the campaign. Simultaneous air and naval sweeps against Japanese-held bases in China and to the south, including the intervening waters, closed the vast area to enemy shipping. It remained now to secure bases near enough to the Japanese homeland to permit round-the-clock air attacks on Japan's industries, commerce, and communications—the core of her resistance.

The capture of Iwo Jima by the 5th Marine Amphibious Corps in the Volcano Islands during March-April, and of Okinawa in the southern Ryukyus in June cracked the last of Japan's outer defense lines. The one-month campaign for Iwo and the 82 days' struggle on Okinawa produced the hardest fighting and the heaviest losses of the war. Clearly Japan staked everything she could use on the retention of these vital areas. A fleet sortie on April 7, headed by the 45,000-ton battleship *Yamato*, cost her that ship, two light cruisers, three destroyers and 391 planes. It was the dying effort of the once proud fleet that had humbled the United States at Pearl Harbor. There were to be no more naval battles. Instead the carrier planes of Admiral William F. Halsey's Third Fleet, supported by land-based planes, systematically destroyed at

their bases in July nearly all that remained of the Japanese fleet. Nearly 1,500 vessels, naval and commercial, were sunk or badly damaged in that period. When the veil of secrecy was finally lifted, it was discovered that submarine action had not only been a major factor in Japan's ship losses, but, in combination with air raids, had all but severed Japan's contact with the Asiatic mainland.

Through the summer months, down to Japan's surrender, American B-29's based in the Marianas struck almost daily at Japan's great cities in a crescendo of power which finally brought the total daily bombardment to a figure higher than that reached in the bombing of Germany. The costly Iwo campaign was now paying a return in saving hundreds of Superfortresses whose crippled condition or lack of fuel would have made it impossible for them to return to their home bases. And from Iwo long-range fighters were giving air cover to our bombers over Japan, as well as making strikes against the enemy's planes and air installations. Okinawa, too, was paying a rising return. Many of the more than 20 available air-base sites had been sufficiently developed by July to permit incessant raids against the enemy's home islands and her shipping in the Sea of Japan, the last link to her huge Asiatic Empire. By August it was evident that Japan's air force, like her fleet, was no longer an effective tool of defense.

Those last months of desperate fighting, however, took a heavy toll of America's attackers. On Iwo our casualties approximated 20,000, on Okinawa our land forces lost more than 45,000 men, including their commander, Lieut. Gen. Simon Bolivar Buckner, mortally wounded while observing the progress of the final assault, June 18. The most serious losses, however, were taken by the navy, chiefly as the result of almost constant attacks by Japanese suicide fliers, the Kamikaze Corps. Japan, in fact, had confidently counted on holding Okinawa by employing the combined tactics of stiff resistance on the ground and the imposition of naval losses so serious as to force our abandonment of the campaign. No major unit was lost but at least 4 battleships, 5 fleet carriers, and 3 cruisers were damaged in various degrees. Some 20 smaller types—escort carriers, destroyers, minesweepers and ammunition ships were sunk, in addition to numerous LST's and smaller craft. No period of American naval history has shown comparable losses.

For the final drive the United States proceeded to assemble the greatest concentration of balanced military power ever mobilized by a single nation. Plans for the Ground, Air and Service Forces of the army called for an aggregate of more than 7,000,000 men, marking a reduction of more than a million from the total mobilized for the two-front war. By contrast, our naval strength continued to mount as the shipyards completed new vessels. British Empire forces in the Far East also rose rapidly as units and replacements were shifted from the European theater. As events proved, Soviet Russia's Far Eastern forces were to play their part, with the mission of engaging and destroying the veteran Japanese Kwantung Army, long dominant in Manchuria and Korea. Lastly, China's reviving military power was becoming adequate to engage fully the enemy garrison on her soil while the projected main blow was launched at the Japanese homeland.

The softening process of unrelenting air and naval assaults against Japan's home defenses

went more rapidly than the most optimistic had believed. Even so, actual invasion was expected to be costly if Japanese fanaticism continued to the end. At that juncture, American science sprung its greatest secret on an incredulous public—the atomic bomb. A test of this most lethal weapon of all time showed that a single bomb released a destructive power estimated as equivalent to that of 20,000 tons of TNT. Two atomic bombs, the first dropped on Hiroshima, August 6, the second on Nagasaki three days later, were sufficient to change three months of Japanese dilly-dallying with peace proposals into a precipitate offer of surrender. Backing up the destruction of Hiroshima and Nagasaki came President Truman's announcement that Japan's unconditional surrender alone would prevent further attacks by the same means. A bomb of another type was Soviet Russia's declaration of war against Japan, coincident with the bombing of Nagasaki. For Japan it was the end of the trail. Seventy years of empire-building, reaching its climax in 1942, when many believed that she had established herself impregnable as master of an area embracing most of East Asia and the islands of the south and southwest Pacific, came to end when the Japanese government on August 14 accepted the terms of surrender laid down by the Allied Powers in their Potsdam Declaration of July 26. The single modification granted by the victors was the retention of sovereignty by Emperor Hirohito, subject however to the orders of the Allied supreme commander. General MacArthur was designated to fill that post.

The actual signing of the surrender terms was delayed until September 2 to ensure the completion of all necessary preparations for a full-scale military occupation. Seaborne and airborne landings were made in the area surrounding Tokyo harbor by enough troops to ensure retention of a proper base if the Japanese balked at the last minute. Both the initial invasions and the progressive occupation of key centers which followed, proceeded without untoward incidents. The concession granted Japan in her retention of the emperor, subject to General MacArthur's orders, proved its wisdom. In Japan proper, the native populace accepted its lot with passive docility. And in China, Southeast Asia, and the Pacific islands, garrison forces aggregating several millions went through the process of piecemeal surrender. By September 5, the situation appeared so favorable that General MacArthur requested the War Department to transfer to the Pacific only three of the six divisions redeployed from Europe for duty in the Far East. Low-point men in the United States, however, were counted on to replace within the next year, the veterans of MacArthur's forces.

War Production.—The battle of the assembly line had been won months before the dawn of 1945. Shortages still continued to appear, however, not only in the Pacific theater with its secondary priority but also in Europe. The acid test of sufficiency was at the firing point rather than in the statistical tables of totals in a pipeline which reached back to the manufacturer's shipping department. The over-optimism of 1944 which had precipitated a too early shift to reconversion for production of civilian goods ended abruptly when the war mobilization director in January stopped the conversion processes until after the cessation of hostilities in Europe. His directive had little effect on one major contributing cause to the shortages, namely labor turnover. As the Navy Department disclosed in

March, the constant loss of skilled labor in shipyards had raised the construction time on destroyers by more than 50 per cent. Even worse delays were encountered in the building of aircraft carriers and six "desperately needed" hospital ships.

Germany's surrender brought abrupt improvement in the overall situation. The change operated in two directions: the filling of a vastly increased "pipeline" to the Far East, now in first priority; and the cutbacks and terminations of contracts for equipment and supplies not deemed necessary for the Pacific war. Calculations for Pacific supply were based on an estimate of the war's continuing for not less than a year, and possibly for eighteen months. The shift in emphasis resulted in the cutting of 44,300 planes of various types from the original 1945 program. At the same time increased output of B-29 Superfortresses and P-80 jet-propelled fighters was called for. Tanks and most artillery types were found to exist in adequate quantity. On the other hand, the recoil-less 57-mm. and 75-mm. guns, the most startling ordnance product of modern years, came in for huge orders. Battle tested in Germany and Okinawa, it gave the infantryman at long last the firepower of light artillery.

Expanded output in such special items was no real offset to the wave of curtailment which, by September, represented nearly 40 billion dollars in war production cuts. More were to come as Congress called for a restudy of prior authorizations and the president took the initiative in certain specific contract terminations. At the same time steps were being taken to provide for the orderly disposal of surpluses of war goods, estimated at various amounts up to 100 billion dollars. Some of it was wanted for urgent relief work in the devastated areas of the Old World; much more had no peacetime value except as scrap, but a vast amount was due for resale to the public. Foreign demand for a share of the goods was affected by President Truman's announcement of the termination of shipments abroad under the provisions of the Lend-Lease Act. Under that law goods and services to the value of more than 42 billion dollars had been furnished our Allies, while we were receiving in return some \$5,600,000,000 worth. Subsequent exports, other than those made under UNRRA relief program, are to be made on a business basis.

The event in war production which, in the eyes of many military and civilian authorities, holds the most serious portents for the future is science's success in splitting the atom and the utilization of forces thus generated to the destructive processes of war. Three years of intensive research and production at a cost of more than 2 billion dollars went into the two bombs dropped on Hiroshima and Nagasaki in the closing hours of the war. It was but one of many items covered by the studies of the Office of Scientific Research and Development, the agency which finally gave the United States unquestioned primacy in research for war.

Military Government.—The first breach made by United States Ground Forces across the German frontier in the fall of 1944 brought them face to face with a grimmer experience in the military control of enemy territory than anything previously recorded in our history. German civilians as well as soldiery were so completely Nazified that nothing short of the sternest measures of justice could cope with in-

grained hostility and gain the minimum of co-operation necessary to make bare existence possible for the native inhabitants. German plans and preparations were intended to turn every civilian into an underground agent determined to sabotage Allied military operations at whatever cost to themselves. For those Germans who were ready to co-operate in any degree with their conquerors the punishment was to be assassination. The "werewolves" murder of the mayor of Aachen, first city of importance captured by American arms, was an intended warning for all other potential co-operators. A collateral difficulty was the fact that few Germans except those whose loyalty to the Hitler regime was beyond doubt had had any experience as public servants. As a result the military government agencies of the Allies were left to make the difficult choice between putting inept anti-Nazis into office or of leaving at least some of the Nazi functionaries in their jobs. Both techniques called for close and stern control. It was accompanied by stringent orders forbidding fraternization between our army personnel and the natives.

Such early resistance declined rapidly as the Allied armies swept on to final victory. There followed a period of complete apathy, psychological shell shock, on the part of the German populace. Gen. Dwight D. Eisenhower, supreme commander, shook the Germans out of that attitude when he warned them that starvation and extreme hardships in the coming winter could be staved off only through the Germans' own efforts to provide for themselves. Basic agriculture and the construction of shelters thereafter got under way.

A few days prior to the final German surrender, General Eisenhower announced the primary objectives of the Allied Military Government, in substance as follows:

- (1) Imposition of the will of the Allies upon occupied Germany.
- (2) Restoration and maintenance of law and order.
- (3) Care, control and restoration of displaced persons of the United Nations and minimum care necessary to effect control of the enemy refugees and displaced persons.
- (4) Protection of United Nations property, control of certain properties, and conservation of German foreign exchange assets.
- (5) Apprehension of war criminals.
- (6) Elimination of nazism, fascism and German militarism.
- (7) Preservation and establishment of suitable civil administration to the extent required to accomplish the foregoing.

On May 11, United States Secretary of War Henry L. Stimson disclosed the organizational plans for the military government, as agreed in the Yalta declaration. It calls for a Four-Power Control Council seated in Berlin, with General Eisenhower (later elected chairman of the council) representing the United States and Lieut. Gen. Lucius Clay serving as his deputy. Twelve major divisions make up the control machinery of the United States' section:

Three Military Divisions—Army (Ground),
Naval, and Air Transport Division
Economic Division
Political Division
Finance Division

Reparations, Delivery, and Restitution Division

Legal Division

Manpower Division

International Affairs and Communications Division

Prisoners of War and Displaced Persons Division

An overall Intelligence Section, answerable to General Clay, supervises the entire denazification plan. Also under General Clay are Public Information and Public Relations sections.

One of the most serious complications which promised to drag on into the fall months was the restoration of more than seven million "displaced persons" to their native homes. These were, for the most part, foreign laborers of both sexes and all ages impressed by Germany in occupied territories for war production. The extreme cases were those of the hundreds of thousands of men and women found in concentration camps, where Germany's organized mass murder of the sick, weak, and "undesirables" had been responsible for a death toll running into millions. And the highways were for weeks filled with mobs and armies of refugees who were making shift somehow to get back to their homelands. Looting and murder of the Germans by such human derelicts was only to be expected. The herculean task of assembling all that human flotsam and jetsam into camps where they could be fed, housed, deloused, and hospitalized where necessary, was a first priority task of the army. By mid-July more than half of the unfortunates had been restored to their native lands under agreements made with the countries concerned.

Progress toward the trial and punishment of Germany's thousands of war criminals was definitely slow. Within the United States zone of occupation, however, military commissions were relatively prompt in hunting down and bringing to justice the Germans who were charged with such crimes as the murder of Air Force fliers whose planes had been shot down. Execution by hanging was the standard penalty in cases where guilt was clearly established. War criminals of high rank like senior government and Nazi Party officials, commanders of concentration and prison camps, and Gestapo officers waited for months behind barbed wire while negotiations as to uniform policy in such matters went on at the top diplomatic level. The policy of the United States in such matters was early made clear by Supreme Court Justice Robert H. Jackson, head of the American Special Commission for the trial of war criminals of high rank. In Justice Jackson's eyes the wholesale and extreme violations of the rules of warfare and of international law stand as a crime committed by all Nazidom, automatically implicating all members of the Nazi Party. Under such a ruling, proof of membership in the Nazi organization would constitute *prima facie* evidence of guilt. Moreover, Justice Jackson insisted that unilateral action would be taken by the United States to bring to book the accused Germans held in American stockades if delays continued in the determination of overall Allied policies in such matters. His stand eventually produced a general acceptance of the basis on which the accused will be brought to trial, and likewise accelerated preparations to the point where it could be announced that the first batch of outstanding war criminals would be brought to book before the Allied War Crimes Commission at Nürnberg about No-

vember 1. A considerable number of the wanted persons, however, still eluded detection and seizure.

Preparations to a similar end were begun in the Pacific theater long before the time of Japan's collapse could be predicted. There the major task falls to the United States and its occupation forces in the Japanese homeland. The extreme brutality of the Japanese in the treatment of prisoners, whether military or civilian, and the savagery with which they conducted the war from first to last have created a staggering problem for our military government personnel. It is not simplified by the fact that such Japanese techniques belong to their code of warfare. A further complication is the impossibility of laying hands on more than a fraction of the many thousands of individuals guilty of such extreme violations of the rules of warfare. And if the violators of the code of civilized nations could be apprehended, tried, and convicted, the resultant wave of executions might well aggravate an already difficult situation. What is really on trial in Japan is an atavistic racial culture rather than its individual adherents.

Postwar Military Policy.—Both the sudden swiftness of Japan's collapse, coming approximately a year ahead of the time anticipated by conservative observers, and the nebulous state of the Allied Nations' plans for world reorganization prevented the early formulation of postwar military policy for the United States. In fact, anything like finality in that matter may well be some years away. The more important basic factors on which final decisions rest are the following: (1) the events of the past four years and the fully mobilized military strength of the United States have automatically given her primacy among the Great Powers; (2) for the present at least a vast majority of the electorate endorses the principle of maintaining in being enough armed force to ensure stabilization of a peace based on the theory of world security rather than mere national defense; (3) the traditional escapist philosophy of many Americans after the termination of an emergency, causing them to substitute the "let George do it," principle for their own contribution to national security; (4) the utter devastation of vast areas in the Old World raises doubts as to whether adequate relief can be provided until the development of domestic resources in the war-torn areas makes it possible to substitute self-dependence for outside relief; (5) the absence of the definitive treaties which must lay the lines of final settlements for the defeated nations and likewise for the states overrun by the major combatants during the war; (6) the actual effectiveness of UNO as a stabilizer of world affairs; (7) the, as yet, unpredictable influence of the atomic bomb on future military strategy and tactics.

Some policy problems, stemming directly from the liquidation of the war, were too pressing to wait. In Germany, Supreme Headquarters Allied Expeditionary Force (SHAEP) went out of existence on July 14 by General Eisenhower's order. At the same time the new Headquarters United States Forces European Theater (USFET) was opened under his direction at Frankfurt on Main. A separate American force took over the task of occupying its allotted zone in Austria, while a special unit was placed in control of a section of Vienna, the Austrian capital. Throughout their occupation zones, the American forces expedited the return of millions of displaced persons to their homeland. Some

hundreds of thousands, mostly Poles and Russians who were determined not to be shipped back, remained to be cared for. The total strength of the force retained for occupation duty was tentatively set at about 400,000.

One of the most onerous duties faced was the execution of the Big Three mandate to destroy Germany's war potential. That goal, according to Lieut. Gen. Lucius D. Clay could not be achieved "... without inflicting some punishment on the German people ... and lowering the German standard of living." Germany's industrial reorientation from heavy to light industry was admitted to be difficult, "... but not impossible."

In the Pacific the apparent wholeheartedness of Japan's acceptance of defeat was such that General MacArthur's plans, announced in September, indicated a garrison of no more than 400,000 American troops for the Japanese homeland and Korea. Supporting troops and reserves in American bases in the Philippines were expected to raise the total Pacific forces to a million. Plans for the complete liquidation of the Japanese war machine, including the supporting industrial establishment, awaited detailed announcement. On one score there were no doubts: the navy declared its desire to secure full development of a strong chain of major bases extending from the Aleutians down through the Ryukyus to the Southwest Pacific, supported in the rear by other bases in the Central Pacific, and thence back to the Panama Canal. The list: Kodiak, at the base of the Alaskan Peninsula; Adak, in the Aleutians; Hawaii; Balboa, C.Z.; Guam, Tinian, and Saipan in the Marianas, considered as one base; Iwo, in the Volcanoes; Okinawa, in the Ryukyus; Manus, in the Admiralties; the Philippines. The navy's recommendations for Atlantic bases added Argentina, Newfoundland; and Bermuda to four prewar American bases: San Juan, P.R.; Roosevelt Roads, P.R.; Guantánamo, Cuba; and Coco Solo, C.Z. Supplemented by secondary supply stations and anchorages at other points, the above fifteen major bases were deemed ample to provide a degree of natural security never before attained.

The strength and composition of the permanent postwar establishment remains a moot point. No progress can be made toward a definitive setup until after Congress has determined whether our future armed forces will or will not be backed by a potential reserve, the product of a system of universal military training. Independent public polls over recent months indicate that seven of every ten citizens favor such a training system. Polls conducted in the armed forces have produced a higher percentage, nearing 100 per cent in units which can boast extended combat experience. On the other hand, powerful and closely knit minorities such as organized labor, the churches, and a majority of educators have brought heavy pressure to bear on Congress in opposition to the project. One element in the situation which may finally determine the issue is the question as to whether voluntary recruitment can bring to the colors anything like the numbers needed to maintain even skeleton forces in occupied areas abroad, garrisons for our permanent overseas and home stations, and the minimum needed for overhead. A test of the practicability of such a solution was indicated for the fall months of 1945 as the War and Navy departments prepared to launch their recruiting campaigns.

Two sharp departures from prewar policy look to a broadening of the armed forces' functions. On the one hand, the setting up of a State, War and Navy Co-ordinating Committee in the State Department augurs well for the kind of collaboration which was almost nonexistent at Pearl Harbor time, if one can judge fairly from the report rendered by the army's Board of Inquiry on that disaster. No surrender of State Department functions is contemplated in that move. On the other hand, successful collaboration at that level should preclude any future failure to disregard the power factors involved in matters of foreign policy. The second move, launched in July, seeks to establish by law a Research Board for National Security. In effect it would continue on a permanent basis the wartime function carried out by the Office of Scientific Research and Development. Actually such studies as produced the atomic bomb would represent but one aspect of the board's work, its activities covering in addition all scientific problems of public interest, notably those of health and medical care, and the basic sciences.

A first question remaining to be answered by the strategists as well as the scientists is the net effect of the atomic power on the whole range of strategy and tactics, whether on land, sea, or in the air. Snap judgment brought prompt statements from various quarters that the world's armies, navies, and air fleets have been rendered obsolete. Official opinion, as voiced by Gen. H. H. Arnold, commander of the Army Air Forces sees future war in terms of pilotless missiles, projected with high accuracy from any spot on the earth's surface to any other spot. If so, a new premium has been placed on the sudden, unannounced attack. The navy, on the other hand, indicates that the interception and destruction or neutralization of such missiles can be effectively carried out by an alert defender.

Whatever the facts, it is clear that the composition, training, equipment and utilization of tomorrow's armed forces must take into full account the latest gifts of science to warfare, as well as those that must surely follow. This time, no mere evolutionary changes can meet the situation. The empty waste which marks the site of Hiroshima silently predicts revolution in the methods of war and the military policies which fashion and direct armed power.

HERMAN BEUKEMA,
*Colonel, U. S. Army; Professor of Economics,
Government, and History, United States Military Academy.*

WAR PRODUCTION, United States. Even before the victory in Europe (V-E Day, May 8, 1945), a series of cutbacks in military requirements heralded the inevitable ending of a war that had witnessed, in the United States, the greatest armament production in the history of any country.

This production provided against the enemy an air fleet of 297,000 military airplanes, including 97,000 bombers, of total airframe weight of 2,500,000,000 pounds for all military airplanes and special purpose aircraft. It supplied an armada of 71,060 warships, exceeding the combined navies of all other countries; furnished the combined fire power of 315,000 pieces of field artillery and mortars; produced 5,400 cargo ships and transports, 86,388 tanks, and 16,018 tank chassis for self-propelled guns; 12,600,000 rifles and carbines; more than 4,000,000 tons of artillery ammunition, nearly 6,000,000 tons

of aircraft bombs, and 41,400,000,000 rounds of small arms ammunition.

Radar, hardly out of the laboratory in 1941, accounted for \$3,700,000,000 of the total war production, and the atomic bomb, which proved finally decisive of the war and involved incalculable consequences in the future, another \$2,000,000,000. Total munitions production during the five years of defense preparation and war—from July 1, 1940, through July 31, 1945—amounted to \$186,000,000,000, at standard munitions costs, in a picture not distorted by price level changes.

Gross national product during wartime expansion (1939–44) rose by more than one half after allowance for price level changes; output of raw materials by 60 per cent, while volume of manufacturing nearly tripled. Without adjusting for price level changes, national output increased from less than \$90,000,000,000 a year when Hitler's armies marched into Poland to an annual rate of \$207,000,000,000 just before the German collapse.

After the most urgent need for facilities had been met in new war plants, military camps, and housing for defense workers, with construction rising in 1942 to double the 1939 level, the problems shifted to manpower and production of war materials.

Manpower drawn into the armed forces was replaced in the industries through calls upon housewives of the nation, youth of school age, elderly men, and the physically handicapped. Thus the labor force increased in five years from 54,100,000 to 64,000,000, or by almost 20 per cent. Out of these 10,000,000 new workers, plus all but a few hundred thousand of the 9,000,000 unemployed of 1939, came the manpower and womanpower to replace the 10,000,000 added to the military services and to add 7,500,000 to civilian employment. Most of this addition was for staffing manufacturing plants, while agriculture, and later construction, actually lost workers.

Between 1939 and 1944, the average work week in manufacturing increased from 37.7 to 45.2 hours, or by 20 per cent; in construction, from 32.4 to 39.5 hours; and in mining, from 32.3 to 43.9 hours. In this interval productivity per manhour climbed sharply.

Consumer expenditures in 1944, after adjustment for price level changes were still slightly higher than in 1939. This indicated that the munitions production that defeated the Axis all came out of additions to the country's normal output. Yet this increment was itself greater than the total munitions output of the Axis powers, and greater than the combined munitions output of the nation's allies.

Industrial production had more than doubled, rising at the rate of more than 15 per cent a year—more rapid than the rise of 12 per cent a year from the deep depression of the 1930's, previously the fastest on record. That record had represented merely recovery of lost ground, not, as during the war, a pushing forward to new highs.

Great as the American war effort was, at no time during the struggle did it absorb more than two fifths of the total national output. Industry superposed war production on the normal production job instead of substituting guns for butter.

During the industrial expansion there were drastic readjustments in the economy. Factory employment of workers increased from 10,151,-

000 in 1939 to 16,558,000 in 1944, while the factory labor force rose from 19 per cent to 26 per cent of the total. The group of manufacturing industries provided work for almost a third of all civilians gainfully employed in 1944, as against less than one fourth in 1939. All other components of the labor force shrank in percentages of the total, although an absolute increase was recorded in finance, trade, services, and government.

Female factory workers nearly doubled in number between 1939 and 1944, while male workers increased by only 35 per cent. From 1 or 2 per cent in 1939, factory workers engaged on war work increased to about 57 per cent of the total, while factory workers producing for civilians declined by about 30 per cent.

Only 2 per cent of total national output was devoted to war in 1939, and 40 per cent in 1944. In 1939, about 70 per cent of production went to satisfy immediate civilian wants, and 28 per cent to civilian government expenditures, capital formation, and exports. But in 1944 the civilian share, although just as large in physical quantity, represented only half the total national output.

During this interval the increase in "soft goods" and services more than compensated for the reduction in durable goods, while the supply of durable goods on hand at the beginning, in large part outlasted the war.

One other far-reaching change occurred in the nation's economy: to an extent unprecedented in previous wars the economy was guided by Washington. Every industrial plant built after April 1942, was by government authorization, and two out of three dollars of the cost was provided by the Treasury. Hardly a ton of steel or copper or aluminum could be fabricated without government approval. Over a large area of production the government decided what should be produced, who should produce it, and to whom it could be sold. Prices and wages were controlled by government. Government helped guide the movement of labor from plant to plant, from industry to industry, and from region to region. Yet the government control never reached, in degree, the regimentation endured by America's chief allies or by the enemy. The nation co-operated wholeheartedly to make the system work.

In the effort to build up war production, three basic problems had to be solved. At first the acute shortage was in facilities for finished munitions products—plant, equipment, and machine tools. In the second phase, the production of raw materials had to be expanded and timed to flow evenly through the new plants. Finally, as selective service took its toll of workers, manpower to run the new machines became the main problem.

Some \$25,000,000,000 was added to new plant and equipment, including conversion of peacetime industry to war. The big expansions were in synthetic rubber and aviation gasoline plants, explosives, guns and ammunition, aircraft, and shipbuilding. To these were added expanded facilities for aluminum, magnesium, certain plastics and plasticizers, combat tanks, and many others. The peak in raw materials was reached early in 1944.

Late in 1944, men were desperately needed in textile mills and lumber camps, coal mines and steel mills; in tire plants, lead mines and smelters, ship repair yards, rocket and shell-loading plants, foundries, many chemical plants,

and most of the aircraft plants. After the Battle of the Bulge in the Ardennes, and during consequent military withdrawals of previously deferred industrial workers, there was hardly an industry that was not short of manpower. The German collapse staved off what might have become a desperate manpower shortage.

In 1942, munitions production and war construction amounted to \$44,000,000,000; in 1943, to \$63,000,000,000; and in 1944, to \$59,000,000,000. In March 1945, after the Battle of the Bulge, the decline in total munitions output, which had begun at the end of 1943, was strongly reversed. But by April 1945, the German collapse became imminent. Military cut-backs gained momentum as V-E Day approached and passed, and with the unexpectedly early Japanese surrender, the war schedules faded away. Estimates then showed that by mid-1946, military procurement would be below the rate at the time of Pearl Harbor, before American entrance into the war.

Reconversion.—V-J Day found the War Production Board prepared with a carefully drawnup program to meet the problems of reconversion and to speed the nation's transition from war to peace. In fact, part of the job was already under way. Early and continued planning for reconversion of industry began with a study undertaken by the WPB in April 1943, and was followed by an almost continuous series of additional studies and reports. The Committee on Demobilization of Controls after V-E Day, established to develop a program for reconversion controls, was followed in February 1945, by a new Committee on Period One, set up to review this program and keep it up to date. This committee continued to function up to V-J Day. The Controlled Materials Plan, which was open-ended after V-E Day, went out of existence at the end of September 1945. Orders and regulations were revoked until soon there was only a handful, with these limited purposes: (1) to prevent speculative buying and hoarding of materials and products which would result in inequitable distribution and thus handicap reconversion; (2) to restrict consumption of items which were still in tight supply, such as tin, natural rubber, hard cordage fibers, lead, certain textiles, and a few others, until normal supplies were again available; (3) to assure the meeting of remaining military needs, through use of the MM preference rating; (4) to break reconversion bottlenecks by expediting and by limited priority assistance to nonmilitary production through use of the nonextendable CC, or civilian, preference rating; (5) to maintain temporarily certain powers which might be needed to assure equitable treatment for small business, for veterans, and for meeting export commitments, or to protect continuing controls of other government agencies.

J. A. KRUG,

Former Chairman, War Production Board.

WAR PRODUCTION BOARD (WPB). Having guided armament production to its highest 1945 level in March, the War Production Board prepared actively for reconversion of industry to peacetime production following victory in Europe, May 8. By September 2 (V-J Day) the board was steadily dissolving its committees and personnel as rapidly as the residue of the war production program and reconversion permitted.

With the ending of lend-lease, several international boards functioning under William L.

Batt, vice chairman (International Supply) were still in being. Early in 1945 the president of the United States and the prime ministers of Great Britain and Canada announced their decision to maintain the Combined Production and Resources Board, Combined Raw Materials Board, and Combined Food Board until V-J Day. It was further announced, August 29, that these three boards would continue, for the time being, to operate on the existing basis in order to ensure that there be no break in combined machinery, which was handling critical supply questions of immediate importance. A review of the work of each board was then being arranged with the object of determining the need for its further operation.

Following V-J Day, the War Production Drive Division, which had stimulated productivity by setting up labor-management committees, was abolished along with the Conservation and Salvage Division and the Management Consultant Division.

After September 30, when the major war production controls had been revoked, remaining members and staff of the WPB carried on into the period of reconversion, with maintenance of such arms of the board as were needed to assure supplies to the occupation forces; to break reconversion bottlenecks; to protect small business and veterans engaging in business; to shepherd materials still in tight supply until normal supplies were forthcoming, and to safeguard continuing controls of kindred government agencies.

At the end of August, 10,800 salaried employees remained on the payroll of the board—6,200 in Washington and 4,600 in the field offices. By November 3, when the War Production Board was terminated by order of the president, and the Civilian Production Board took over its remaining functions for reconversion of the war industries to civilian production, the force in Washington had been reduced to 2,222, and in the field offices to 1,387. By Jan. 1, 1946, the field force had been eliminated entirely.

J. A. KRUG,

Former Chairman, War Production Board.

WAR RELIEF CONTROL BOARD. This board was established by executive order, July 25, 1942, to further, for the duration of the war and six months thereafter, the productive use of voluntary contributions for the emergent relief of war sufferers in foreign countries, or for the welfare of the personnel of the armed forces and the merchant marine of the United States.

The solicitation and collection of public contributions are controlled by the registration or licensing of agencies authorized to administer foreign war relief and national military welfare programs which are approved by the board. The federation, known as the National War Fund, was organized in 1943 with the co-operation of the War Relief Control Board. The programs of the member agencies are co-ordinated, after budget hearings, to permit one annual country-wide appeal for funds to support war charities other than those of the American Red Cross.

Registered organizations numbered 115, of which 90 were for foreign relief activities. During the year June 1944 through June 1945 there was contributed to registered agencies for foreign war relief a total of \$90,423,119.57 in cash, and \$182,798,080.62 in kind. Of the cash received, \$79,197,431.27 was transmitted abroad; goods

in kind shipped abroad totaled in value \$145,677,752.39. The chief beneficiaries were the people in liberated areas, including those in exile. These totals, it should be understood, do not include the value of shipments of food, medicines, and clothing provided through lend-lease, the American Red Cross, and UNRRA.

In addition to the 90 agencies registered with the board for foreign war relief, there were 25 registered agencies engaged in domestic welfare on behalf of the armed forces and the merchant marine. Their total contributions are not available, but approximately \$66,000,000 were included in the National War Fund budgets of 1945 for these services.

JAMES BRUNOT,
Executive Director, WRCB.

WAR TRAINING PROGRAMS. See EDUCATION, REVIEW OF.

WARTIME NURSING. See NURSING, WARTIME.

WASHINGTON. Pacific state, United States; admitted to the Union Nov. 11, 1889. Population (1940): rural, 814,222; urban, 921,969; total, 1,736,191. Land area, 66,977 square miles, divided into 39 counties. Chief cities, with 1940 populations: Seattle, 368,302; Spokane, 122,001; Tacoma, 109,408; Everett, 30,224; Bellingham, 29,314; Yakima, 27,221; Olympia, the capital, 13,254.

Chief State Officers, 1945.—Governor, Mons C. Wallgren; lieutenant governor, Victor A. Meyers; secretary of state, Belle Reeves; treasurer, Russell H. Fluent; attorney general, Smith Troy.

Judiciary.—Chief justice of the Washington Supreme Court, Walter B. Beals; associate justices, Bruce Blake, Thomas E. Grady, C. G. Jeffers, Joseph A. Mallery, William J. Millard, John S. Robinson, George B. Simpson, William J. Steinert.

Legislature.—The state legislature (Senate, 46 members; House of Representatives, 99 members) convenes biennially in odd years on the second Monday in January.

Education.—Public elementary school pupils (1944), 198,493; teachers, 7,479; average yearly salary of elementary school teachers, \$2,017 (men); \$1,897 (women). Public junior high school students (1944), 86,367; teachers, 1,251; average yearly salary of junior high school teachers, \$2,212 (men); \$2,141 (women). Public senior high school students (1944), 61,606; teachers, 3,153; average yearly salary of senior high school teachers, \$2,314 (men); \$2,060 (women). Education in Washington is compulsory for all children between the ages of 8 and 16, inclusive. Total state appropriation for education (biennium 1945-47), \$65,000,000. State superintendent of public instruction, Pearl A. Wanamaker.

Finances.—The following statement of Washington's finances for the biennium 1942-44 was supplied by the state treasurer:

Balance in treasury, beginning of biennium 1942-44	\$ 38,403,524.89
Receipts, 1942-44	396,249,481.06
Total	\$434,653,005.95
Disbursements, 1942-44	350,941,438.73
Balance, end of biennium 1942-44	\$ 83,711,567.22

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)	1,206	1,189	1,305
Oats (1,000 bu.)	7,913	7,728	7,200
Wheat (1,000 bu.)	49,000	64,030	68,427
Barley (1,000 bu.)	4,881	8,550	7,175
Rye (1,000 bu.)	243	240	270
Peas, dry field (1,000 bags)	2,082	4,699	3,000
Hay:			
Alfalfa (1,000 tons)	694	716	842
Clover and timothy (1,000 tons)	405	414	445
Tame (1,000 tons)	1,741	1,916	2,073
Potatoes (1,000 bu.)	8,713	10,340	12,255
Cherries (tons)	24,850	29,100	34,500
Apples (1,000 bu.)	27,446	31,100	26,180
Peaches (1,000 bu.)	1,742	2,604	2,465
Pears (1,000 bu.)	6,260	8,665	7,982
Grapes (tons)	9,480	17,300	18,400

WATSON, Billy, American singer and comedian: b. New York, N.Y., 1867?; d. Asbury Park, N.J., Jan. 14, 1945. As owner and star of *Billy Watson's Beef Trust*, Mr. Watson made a fortune touring the burlesque circuit with an act featuring chorus girls advertised as weighing more than 190 pounds each. His other outstanding show was *Krausemeyer's Alley*, in which he played Philip Krausemeyer, a German clarinetist, and his partner, Billy Spencer, played Mike Grogan, an Irish sausagemaker.

According to an article published in *The New Yorker* some five years before his death, he was born Isaac Levie, and acquired his stage name in 1881, when he took the place of a singer, Billy Watson, who was sick. He made such a success that he adopted this name for good. Later as a Dutch comedian, he did so well in vaudeville and burlesque that by 1905 he owned a Brooklyn theater, Watson's Cozy Corner, which he later sold to Marcus Loew for \$85,000. Mr. Watson retired from the stage in 1925, returning for a few months in 1937, when he and Billy Spencer revived *Krausemeyer's Alley*.

WATSON, Edwin Martin, United States Army officer, secretary and military aide to President Franklin D. Roosevelt: b. Eufaula, Ala., Dec. 10, 1883; d. Feb. 20, 1945, after a brief illness on board a United States man-of-war while returning from the Yalta conference. A close personal friend of President Roosevelt, Major General Watson became the president's military aide in 1933, and was appointed presidential secretary in 1939. He was well-known for his winning personality, tact, and ability to protect and serve the president.

WAVES. See WOMEN'S RESERVE OF THE UNITED STATES NAVAL RESERVE.

WEDEMEYER, Albert Coady, United States Army officer: b. Omaha, Nebr., July 9, 1896. In October 1944, Lieutenant General Wedemeyer replaced Gen. Joseph W. Stilwell as commanding general of United States Army Forces in China and chief of staff to Generalissimo Chiang Kai-shek, after General Stilwell's recall to Washington and the separation of the China-Burma-India theater into two theaters. His command included French Indo-China. General Wedemeyer transferred to Chungking from the Southeast Asia command where he had been Admiral Lord Louis Mountbatten's deputy chief of staff since October 1943. Member of the War Department General Staff from 1941-43, he is regarded as one of the army's ablest strategists, and accompanied Chief of Staff General of the Army George C. Marshall on many of his trips aboard to confer with Allied leaders during the war. He represented General Marshall at the New

Delhi-Chungking conferences in February 1943. General Wedemeyer is a graduate of West Point (1918); the Infantry School, Fort Benning, Georgia; and the Command and General Staff School (1936). His record was such at the command school that he was sent abroad in July 1936 for further study, and enrolled at the German General Staff School, the Kriegsakademie. During his two years there, he witnessed the development of the Nazi war machine. In January 1945 he was promoted lieutenant general (temporary), and Great Britain made him a Knight Commander of the Order of the Bath.

WERFEL, Franz V., Austrian poet, novelist, and dramatist: b. Prague, Bohemia (now Czechoslovakia), Sept. 10, 1890; d. Hollywood, Calif., Aug. 26, 1945. One of the outstanding figures in contemporary German literature, Werfel first established his reputation as one of the most gifted poets of the expressionist school, but he is probably best known in the United States for his two popular novels, *The Forty Days of Musa Dagh* (1934) and *The Song of Bernadette* (1942), and four plays that have been produced on Broadway, *The Goat Song*, *Jaurez and Maximilian*, *The Eternal Road*, and *Jacobowsky and the Colonel*.

In 1911 he published his first book of poems, *Der Weltfreund*. In 1918 he married Alma Marie Schindler, the widow of the composer, Gustav Mahler. When Hitler gained power in Germany, Werfel was expelled from the Prussian Academy of Art, and after the Nazis invaded Austria in 1938, he lived for the next two years in Paris. When France fell he managed to escape to Spain, after taking temporary refuge at Lourdes, where he was inspired to write the story of Bernadette Soubirous. Werfel arrived in the United States on Oct. 13, 1940.

Among Werfel's works which have appeared in English translation are: fiction, *Verdi* (1925), *The Man Who Conquered Death* (1927), *The Class Reunion* (1929), *The Pure in Heart* (1931), *The Pascarella Family* (1932), *Twilight of a World* (1937), *Hearken Unto the Voice* (1938), and *Embezzled Heaven* (1940); drama, *The Goat Song* (1926), *Jaurez and Maximilian* (1926), *The Eternal Road* (1936), *Paul Among the Jews* (1943), and *Jacobowsky and the Colonel* (1944); and *Between Heaven and Earth* (1944), a book of essays.

WEST INDIES. An archipelago extending between Florida and South America, from latitude 10° N. to 28° N. and from longitude 58° W. to 86° W. The total land area is about 91,300 square miles, and the population numbers nearly 15,500,000. Politically, the West Indies comprises three republics, two insular possessions of the United States, six British colonies, two French colonies, and one Netherlands colony. The Anglo-American Caribbean Commission (q.v.) co-ordinates the common activities and interests of the possessions of the United States and Great Britain. Detailed descriptions of the components of the West Indies are given in the following articles: **BAHAMAS**; **BARBADOS**; **BRITISH WEST INDIES**; **CUBA**; **CURAÇAO**; **DOMINICAN REPUBLIC**; **GUADELOUPE**; **HAITI**; **JAMAICA**; **LEEWARD ISLANDS**; **MARTINIQUE**; **PUERTO RICO**; **TRINIDAD AND TOBAGO**; **VIRGIN ISLANDS OF THE UNITED STATES**; **WINDWARD ISLANDS**.

WEST VIRGINIA. South Atlantic state, United States; admitted to the Union June 20, 1863. Population (1940): rural, 1,367,682; urban, 534,292; total, 1,901,974. Land area, 24,090 square

miles, divided into 55 counties. Chief cities, with 1940 populations: Huntington, 78,836; Charleston, the capital, 67,914; Wheeling, 61,099; Clarksburg, 30,579; Parkersburg, 30,103; Fairmont, 23,105.

Chief State Officers, 1945.—Governor, Clarence W. Meadows; secretary of state, W. S. O'Brien; treasurer, R. E. Talbott; attorney general, Ira J. Partlow.

Judiciary.—Chief justice of the West Virginia Supreme Court of Appeals, W. T. Lovins; associate justices, Jo N. Kenna, Fred L. Fox, James B. Riley, Frank C. Haymond.

Legislature.—West Virginia's legislature (Senate, 32 members; House of Delegates, 94) convenes biennially in odd-numbered years, on the second Wednesday in January.

Education.—Public elementary schools (1944-45), 4,368; teachers, 10,059; pupils, 279,205. Public junior and senior high schools (1944-45), 408; teachers, 4,994; students, 126,366. Education in West Virginia is compulsory for all children between the ages of 7 and 16, inclusive. There are nine teacher training schools (two of them for Negroes) in the state. Total state appropriation for education (1944-45), \$19,934,800. State superintendent of free schools, W. W. Trent.

Finances.—Following is a statement of West Virginia's finances for the fiscal year 1944-45, supplied by the state treasurer's office:

Balance in treasury, beginning of fiscal year 1944-45	\$ 26,141,202.35
Receipts, 1944-45	197,061,879.03
Total	\$223,203,081.38
Disbursements, 1944-45	193,137,123.27
Balance, beginning of fiscal year 1945-46	\$ 30,065,958.11

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)	12,798	10,426	12,075
Oats (1,000 bu.)	1,694	1,330	1,625
Buckwheat (1,000 bu.)	272	185	156
Wheat (1,000 bu.)	1,867	1,680	1,666
Barley (1,000 bu.)	198	225	245
Hay:			
Clover and timothy (1,000 tons)	398	402	498
Tame (1,000 tons)	765	805	980
Tobacco (1,000 lbs.)	2,382	3,588	3,780
Potatoes (1,000 bu.)	3,012	2,040	2,850
Apples (1,000 bu.)	4,134	4,356	1,625
Peaches (1,000 bu.)	345	690	300
Grapes (tons)	1,175	1,300	250

WESTERN AUSTRALIA. See **AUSTRALIA**.

WESTERN ISLANDS. See **HEBRIDES**, **THE**.

WESTERN PACIFIC ISLANDS, British. A number of territories in Oceania (q.v.), of differing constitutional status, which are administered by a high commissioner for the Western Pacific. The high commissionership extends over a sea area of 10,000,000 square miles—4,000 miles from east to west, and 2,500 miles from north to south. The total land area is 17,371 square miles, and the total population numbers 205,864. The office of high commissioner for the Western Pacific Islands is exercised by the governor of Fiji (Sir Alexander W. G. H. Grantham assumed office Jan. 9, 1945), whose headquarters are at Suva, capital of that colony. Australian currency is in general circulation. Territories within the Western Pacific Islands administration are as follows:

Territory	Land area (sq. miles)	Popu- lation	Seat of government
British Solomon Islands Protectorate	11,000	93,805 ¹	Harira
Gilbert and Ellice Islands Colony	400	34,752 ²	Ocean Island
Tonga (protected state)	269	34,130 ³	Nukualofa
Pitcairn Island (colony)	2	177 ⁴	
New Hebrides (condominium)	5,700	43,000 ⁵	Vila
	17,371	205,864	

¹ 1931; ² 1938-42; ³ 1939; ⁴ 1943; ⁵ 1941.

Starbuck, Malden, Flint, Caroline, and Vostock islands, also within the high commissioner-ship, are not included in any group.

A large proportion of the islands fell into Japanese hands during 1942.

(1) **British Solomon Islands Protectorate.**—Extending over 375,000 square nautical miles, the protectorate comprises: the Southern Solomon Islands* (among them, Guadalcanal, Malaita, Tulagi, San Cristobal, and the New Georgia group); the Santa Cruz group (including Rennell); and the Northern Islands (Santa Isabel, Choiseul, the Ontong Java group, and others). The high commissioner is represented at Harira, capital of the protectorate, by a resident commissioner, who is assisted by a nominated Advisory Council of officials and unofficials. In 1942, the revenue amounted to £41,357, and expenditure to £63,895. Education is in the hands of five missions. Coconuts are cultivated (yielding 24,600 tons of copra in 1940); and other crops include rubber, sweet potatoes, pineapples, and bananas. Kauri pine timber is shipped from the Santa Cruz group; and trochus shell, used in the manufacture of pearl buttons, and bêche-de-mer, a sea slug regarded as a delicacy by the Chinese, are also exported. Exports in 1942 had a value of £131,938; and imports in 1939-40 were valued at £189,722. Military operations were initiated on Aug. 7, 1942 with landings of United States forces on Tulagi and Guadalcanal, where Solomon islanders, led by British officials who had remained behind when the Japanese invaders arrived, served as scouts and guides. Natives also protected Mrs. Emily Sprott, 70-year-old member of the British Melanesian Mission, who was the only person to remain on Santa Isabel Island; during the campaign she rescued 12 members of the United States forces, and buried four others. Most islands of the protectorate were freed of the Japanese in 1943-44.

Tulagi, capital of the protectorate at outbreak of war, became a major base for United States troops, who built many good roads and constructed a fine harbor with wharves capable of handling 100,000 tons of shipping simultaneously. Seabees also erected substantial permanent steel and concrete buildings on the shores of Guadalcanal Island in the vicinity of Point Cruze. Harira, which replaced Tulagi as capital of the protectorate in 1945, is situated on the coast of Guadalcanal directly opposite Tulagi.

(2) **Gilbert and Ellice Islands Colony.**—This colony extending over 1,000,000 square nautical miles, comprises: the Gilbert Islands (Abaiang, Abemama, Aranuka, Beru, Butaritari, Kuria, Tarawa, Makin, Marakei, Nonouti, Nukunau, Onotoa, Tabetauea, and Taman); the Ellice Islands (Funafuti, Nanumanga, Nanumea, Niutao, Nukakita, Nui, Nukufetau, Nukulaele, and Vaitupu); the Phoenix group (Birnie, Canton,

* The Northern Solomon Islands are within the mandated Territory of New Guinea (q.v.).

Enderbury, Gardner, Hull, McKean, Phoenix, and Sydney); and Ocean, Fanning, Washington, and Christmas islands. Canton, administrative headquarters of the Phoenix group, and neighboring Enderbury, constitute an Anglo-American condominium; by an agreement signed in April 1939 the two countries set up a joint control over both islands for aviation and communications purposes "without prejudice to their respective claims" (concerning sovereignty), the arrangement to continue for 50 years. Ocean Island, headquarters of the resident commissioner representing the high commissioner, is the only one of the colony's islands which is not a coral atoll. In 1941, revenue amounted to £58,559, and expenditure was £79,543. The government maintains schools for natives at Ocean, Tarawa, and Vaitupu; elsewhere in the colony, schools are conducted by missionaries. Phosphate deposits on Ocean Island are worked by the British Phosphate Commission, headed by commissioners representing Great Britain, Australia, and New Zealand; the same body also works the deposits on the neighboring mandated island of Nauru. Coconuts (20,000 acres) and pandanus fruit are the chief agricultural products. In 1938-39, exports were valued at £279,438, and imports at £178,767. The Japanese occupied the Gilberts late in 1941, placing a garrison on Tarawa, administrative headquarters, and building an airfield on Makin. On Oct. 15, 1942, 22 white men (missionaries, officials, and traders), put to forced labor on Betio, an island of the Tarawa atoll, were massacred by the Japanese. Tarawa, Makin, and Abemama (once the home of Robert Louis Stevenson) were recaptured by the United States Marine Corps in November 1943; and Funafuti, headquarters of the Ellice Islands, was occupied without resistance and became an American base. Ocean Island remained in Japanese hands until the close of hostilities.

(3) **Tonga or Friendly Islands.**—An independent kingdom, Tonga comprises 150 islands divided into three groups—Haapai, Tongatabu, and Vavau—and three outlying islands—Niuafo'ou, Niuaotubutu, and Tafahi. Nukualofa, the capital, is on Tongatabu. The monarch (since 1918, Queen Salote Tubou) heads a constitutional government comprising a premier, Cabinet, Privy Council, and Legislative Assembly of 22 members (a speaker, 7 nobles elected by their peers, 7 Cabinet ministers, and 7 elected representatives of the people). The kingdom has its own stamps and currency notes. A British agent, representing the high commissioner, supervises the finances and has jurisdiction over non-Tongan residents. The revenue in 1943 amounted to £A116,180, and the expenditure was £A99,375. In 1942 there were 128 primary schools (67 government and 61 denominational) with 5,125 pupils; 60 students attended Tonga (secondary) college. Most Tongans are members of the Methodist Church. Coconuts and bananas are the principal agricultural products; others include yams, taro, breadfruit, and citrus fruits. Fishing is of considerable importance. Exports in 1942 (including 8,161 tons of copra) were valued at £A119,849, and imports at £A144,110. A protective force landed by the United States Navy early in 1942 constructed an air base with British and Tongan assistance. Shortly thereafter the kingdom formed its first military organization; under command of a New Zealander, the force served with American troops in several of the campaigns in the Southwest

Pacific. One of the sons of Queen Salote Tubou was a pilot in the Royal New Zealand Air Force.

(4) **Pitcairn Island.**—Next to Gibraltar, Pitcairn Island is the smallest British dependency. The outlying uninhabited islands of Ducie, Henderson, and Oeno are included within the colony, and for this reason the stamps (first issued in 1940) bear the legend "Pitcairn Islands." The Pitcairners number 176, all but six being descendants of the nine mutineers of the *Bounty* and 18 Tahitians who landed in 1790; all are members of the Seventh Day Adventist Church. The high commissioner's representative on Pitcairn Island is the chief magistrate, Parkins Christian, seventh in direct descent from Fletcher Christian, leader of the mutineers; he is elected annually by popular vote—as are, too, the four other members of the Island Council. In 1940 a General Assembly of all native-born inhabitants passed revised regulations for the island's internal government. The island school has four teachers. The fertile soil produces excellent coffee, sweet potatoes, yams, taro, sugar cane, arrowroot, beans, and many fruits. After Japan entered the war, a British admiralty wireless station was established on Pitcairn.

(5) **New Hebrides.** See NEW CALEDONIA.

WESTERN SAMOA. See SAMOAN ISLANDS.

WEYGAND, Maxime, French Army officer: b. Jan. 21, 1867. General Weygand was commander in chief of all Allied forces, succeeding General Gamelin, at the time of the French collapse in the summer of 1940. He remained in France with the Vichy government as war minister until early September, when he was dispatched to Algiers as delegate of the government for North Africa. In July 1941, he acted as governor of Algeria. In November 1941, upon German demand, he was requested to resign and return to France. In late November 1942, he was arrested by the Germans and held as hostage for Gen. Henri Giraud who had escaped from a German prison and joined the Allies. On May 5, 1945, with several other prominent Frenchmen, he was liberated from his Itter Castle prison in Austria by American troops. In the First World War, he worked closely with Marshal Foch.

WHEAT. With an output estimated by the Department of Agriculture on October 1 at 1,149,825,000 bushels, the 1945 wheat crop takes its place as one of the banner crops of all time. The 1944 crop totaled 1,078,647,000 bushels, while the 1934–43 10-year average crop amounted to but 789,080,000 bushels. The large increase over the average crop shows that the American farmer really did his bit when it came to providing food for the fighting forces, the home folks and the starving people abroad, because it was all done with a shortage of labor that was very real. Kansas held on to her position as the leading wheat-producing state with an output in 1945 estimated at 214,679,000 bushels. North Dakota was second with 161,931,000 bushels, and Nebraska was third with 86,366,000 bushels.

WHITTLE, Frank, Royal Air Force officer and inventor of the jet propulsion engine: b. Coventry, England, June 1, 1907. In January 1944,

the Royal Air Force and United States Army Air Forces revealed in a joint statement the development of a radically new type of propellerless fighter plane, powered entirely by jet propulsion, and indicated it would soon be in production in Great Britain and the United States. In October 1944, Commodore Whittle was awarded the gold medal of the council of the British Royal Aeronautical Society, its highest award and one given on only seven previous occasions over a period of 35 years. (Its first gold medal went to the Wright brothers in 1909.) According to Commodore Whittle, his idea for a jet propelled plane stemmed from a scientific thesis he wrote when he was an air cadet. He started work on the design for his engine in 1933, and four years later, had it working successfully. In 1939, the British Air Ministry appointed the Gloster Aircraft Company to design and build the jet propulsion plane; the inventor's own small company, Power Jets, Ltd., built the engine. By May 1941, engine and aircraft stood ready for their first test flights. The United States Army was informed of the new plane in July 1941, and the following September, Whittle and one of his colleagues took plans and engine parts to the United States, where Bell Aircraft contracted to manufacture the body, and General Electric, the Whittle engine. In October 1942, the first flight of the American model was made by Bell's test pilot, Robert M. Stanley. The American jaypee (jet propulsion) is a two-motored plane; the British, single-engined.

WILKINSON, Ellen, British politician. After labour's victory in the British general election in July 1945, Miss Wilkinson was named minister of education in the Attlee government. She is Great Britain's second woman Cabinet member (the first having been Margaret Bondfield, labour minister in a former labour government), and a seasoned politician. Earlier in 1945, she became a member of the Privy Council.

Daughter of a Manchester cotton operative, Miss Wilkinson attended Stretford Road Secondary School and Manchester University. From 1923 to 1926, she was a member of Manchester's City Council, and in 1924, entered national politics as a labour member of Parliament. She has been member of Parliament for Jarrow since 1935. It was about Jarrow, shipbuilding town left derelict when the great world depression of 1929–31 swept across the Atlantic, that Miss Wilkinson wrote her moving book, *The Town That Was Murdered* (1939). A year after the outbreak of the Second World War, Miss Wilkinson was named parliamentary secretary in the Ministry of Home Security, and by 1942, had become second in authority to Herbert Morrison (then home security minister), and responsible for England's civil defense. In 1944, she became chairman of the Labour Party, and in May 1945, presided over its Blackpool convention at which it was decided to abandon the party's coalition policy with regard to the Churchill government. Miss Wilkinson was a member of the British delegation to the United Nations Conference on International Organization, convened in San Francisco. In addition to numerous articles, and the book previously mentioned, she has written the following: *Clash* (1929), *Peeps at Politicians* (1930), *Division Bell Mystery* (1932), *Why War?* (1934), *Why Fascism?* (with Dr. E. Conze, 1934).

WINDWARD ISLANDS. A group in the Antilles, West Indies, constituting four insular Brit-

ish colonies under a single governor; the islands form part of the eastern barrier between the Caribbean Sea and the Atlantic Ocean. The aggregate area, including dependent islets, is 821 square miles, and in 1940-42 the combined populations totaled 278,444. The Windward Islands comprise the following:

Colony	Area, sq. mi.	Popu- lation	Capital
Grenada ¹	133	90,586 (1940)	St. George's
St. Vincent	150	60,402 (1942)	Kingstown
St. Lucia	233	73,770 (1942)	Castries
Dominica ²	305	53,686 (1942)	Roseau
Total	821	278,444	

¹ The Grenadines is an island group administered in part by Grenada, in part by St. Vincent.

² Until 1940, Dominica formed part of the Leeward Islands colony.

Although grouped for administrative purposes, the Windward Islands do not constitute a federal colony, there being no common legislature, laws, revenue or tariff. However, the four colonies do unite for certain purposes; and their judiciary and police services are unified with those of the Leeward Islands, a neighboring insular group constituting a single British colony. The governor of the Windward Islands (Sir Arthur Francis Grimble appointed Nov. 19, 1941) has his headquarters at St. George's, Grenada. The governor is ex officio administrator of Grenada; each of the other three colonies has its own administrator. A conference of two delegates from each of the four constituent colonies convened at St. George's during January 1945 to discuss federation with the Leeward Islands; it was recommended that the subject be further considered at a meeting of the unofficial members of all legislatures concerned. While British sterling is legal tender, the United States currency circulates in the Windward Islands. A local air service between the islands of the Windward group was commenced in 1945.

Grenada.—The administrator of the colony (in this instance, the governor of the Windward Islands) is assisted by a Legislative Council of 14 members (3 officials and 11 unofficials, 4 of the latter being nominated and 7 elected). Government revenue in 1942 amounted to £263,849, and expenditure was £225,738; the public debt stood at £350,645. There are 11 government and 42 state-aided elementary schools, and 4 secondary schools. The area under nutmeg has been expanded considerably in recent years, the exports of this spice and of mace being of prime economic importance. Cotton of the Marie Galante variety is cultivated, the crop from 3,000 acres in 1945 being estimated at 375 bales of 400 pounds each. Other crops include cacao, sugar cane, limes, and bananas. Total exports in 1942 were valued at £546,051, and imports amounted to £361,346. Carriacou (area, 13 square miles) is the largest of the Grenadines island-group administered by the colony of Grenada.

St. Vincent.—The administrator (Ronald Herbert Garvey appointed Dec. 23, 1943) is assisted by a Legislative Council of 10 members (2 officials and 8 unofficials, 3 of the latter being nominated and 5 elected). In 1943 revenue amounted to £185,200, and expenditure was £159,855; the public debt was £85,805. There are 36 primary schools, all state-aided, and 2 secondary schools. A high grade of Marie Galante cotton is cultivated in the colony, 75 bales (of 400 pounds each) being estimated as the crop from 400 acres in 1945. The largest area, however, is devoted to arrow-

root, St. Vincent producing the bulk of the world's supply. Most of the sugar cultivation in the Windward Islands is on St. Vincent and St. Lucia, production in 1945 being estimated at 6,111 tons. Molasses and rum are manufactured, and coconut plantations yield a large volume of copra. In 1942 exports had a value of £229,630, and imports amounted to £197,168.

St. Lucia.—The administrator (Edward Francis Twining appointed Feb. 10, 1944) is assisted by a Legislative Council of 10 members (2 officials and 8 unofficials, 3 of the latter being nominated and 5 elected). Public revenue in 1943 amounted to £193,566, and expenditure was £165,609; the public debt was £100,250. The 45 elementary and 2 secondary schools are conducted by missionaries with the aid of government grants. In 1940 the United States secured a base in St. Lucia on 99-year lease; there is a naval station on Gros Islet Bay, and an airfield at Vieux Fort. Some 143,000 acres have been alienated for agricultural purposes. Sugar cane is St. Lucia's most valuable crop (see St. Vincent, above, for estimated yield in 1945), and in economic importance the production of limejuice holds second place. Sea-island cotton, grown on 30 acres, was expected to yield 18 bales (of 400 pounds each) in 1945. Other products include coconuts, cacao, honey, and bananas. Rum, molasses, lime oil, and bay oil are manufactured. Total exports in 1943 had a value of £160,905, and imports amounted to £387,196. The colony has 350 miles of roads (150 miles of all-weather highways). There is a commercial airport at Castries.

Dominica.—The administrator (James Scott Neill appointed in 1937) is assisted by a Legislative Council of 10 members (2 officials and 8 unofficials, 3 of the latter being nominated and 5 elected). Revenue of the government in 1943 totaled £149,259, while expenditure amounted to £127,075. Missionary bodies conduct state-aided schools. Dominica is the only island in the British West Indies where Caribs are to be found; 500 of them, of whom one third are of pure blood, live on a reservation of 3,700 acres. Considerable quantities of limejuice are produced. The acreage under bananas declined during the war, owing partly to disease and partly to the higher prices obtainable for vanilla. Coconuts, cacao, and fruits are also of economic importance. In 1943 the total value of exports was £144,458, and imports totaled £244,428. See also **BRITISH WEST INDIES**.

WINE, American. Upon the cessation of hostilities the American wine industry entered its 1945 vintage season with a bright future, despite a grape crop which, in the eastern growing areas, was below normal. Numerous wartime controls affecting grape growing and wine production had been or were scheduled for removal, and as a consequence a heavier crush and correspondingly greater inventory were foreseen. In preparation for this larger supply, advertising and marketing plans throughout the industry were revised, and greater emphasis placed on distribution and merchandising methods.

Restrictions on the manufacture and use of containers and closures, strictly enforced as a part of the security program, were lifted except in the case of certain metal closures. Transportation facilities were improved when relaxed controls over cars and loadings enabled wineries

and vineyards to move their stocks more readily. Further improvement was expected when the generally congested transportation system should be eased by lessened demand from other commodity shippers.

Release of many workers from essential war plants, shipyards and other emergency occupations returned skilled employees to vineyards and wineries in time to help harvest and process the crop. Price controls, generally removed except where such action might result in an increased price level or adversely affect business, remained in force for wine. However, the Office of Price Administration had established lower ceilings for certain types of wine, and for some services in the industry.

For the first time since 1941 there was no compulsory raisin drying program, the government having indicated what its requirements would be, leaving growers to supply the estimated 260,000 to 275,000 dried tons. All raisin type grapes over that figure were available for wine and other purposes.

The total California grape crop for 1945 was estimated to be 2,678,000 tons, an increase of 164,000 tons over 1944. This figure included 554,000 tons of wine grapes, 513,000 tons of table grapes, and 1,611,000 tons of raisin grapes. Considered from a national standpoint, grape production was expected to approximate the 1944 crop, and to be nearly 12 per cent above the average for the years 1934-43. California, which normally produces about four fifths of the country's crop, seemed certain to fall short of the record 1943 crop by only 7 per cent, and to exceed the ten-year average by 15 per cent.

The eastern crop, grown principally in New York, Ohio, Michigan and Pennsylvania, suffered extensively from adverse weather during the spring, and reports indicated the yield in those areas would be from 33 to 75 per cent under that of 1944, or about 126,500 tons, smallest in 24 years.

Abnormal growing and marketing conditions, responsible for a shorter wine supply during the preceding three years, to some extent affected 1945. Hence, a continued shortage in some wine types was expected for at least a part of 1946, despite the better 1945 vintage. The greater supply derived from the larger crush must be given time to properly age and develop before it will be available for market, but the industry as a whole reflected its optimism for the future in a revival of the annual Wine Week, held October 15 to 22 after a two-year lapse.

During the past few years new capital has been invested in the wine industry, which strengthened its production and distribution facilities. The balance of ownership, however, was not materially changed, and at the close of 1945 approximately one third of the production was owned by individual growers, another third by farmer co-operatives, largely financed by the federal government, and the remainder financed and directed by commercial interests.

A sounder financial position has made it possible for wineries to support their nationwide distribution of more uniform products by national advertising. An estimated \$10,000,000 was spent by California wineries alone on advertising and sales promotion, this effort by individual producers reflecting the long-range marketing program conducted by Wine Advisory Board under supervision of the California Department of Agriculture.

Industry leaders expect that California and other American wine growers will take renewed interest in the export market as quickly as trade channels are opened and shipping facilities made available. Although the export market in American wines never exceeded an estimated 900,000 gallons in any one year between prohibition repeal and the war, many producers are proud of the recognition accorded their wines in other countries, and cultivate this market for prestige as well as profit.

Another probable postwar trend in marketing California wine is a change in bottling operations. Before the war an annual average of about 71 million gallons of California wine were sold in all markets between 1938 and 1941, with a peak of 96 million gallons in 1942. About 80 per cent of this wine was shipped from California wineries in bulk to points outside the state, a third to be bottled by winery branches or subsidiaries, the rest by independent bottlers. The remaining 20 per cent bottled in California was largely consumed within the state.

Due to wartime marketing conditions bottling operations in California increased sharply, and industry sources estimate that only about 50 per cent of the state's 75 million gallons sold in all markets moved out of state in bulk. About two fifths of the remaining gallonage, bottled within the state, was consumed there and the rest shipped to markets throughout the country. Informed industry members believe that postwar marketing will reach a point where 40 per cent of California wine will be bottled at the winery and shipped as case goods.

Rebuilding and replanting by many producers has begun, and the trend to larger plantings of rare grape varieties for premium quality wines, noted last year, has been further intensified. Trade and consumer education through the *Wine Study Course* published by the Wine Advisory Board has continued, more than 25,000 enrollments having been made. Colored, talking motion pictures on the growing of grapes and the production and marketing of wines have been exhibited throughout the country, while plans are being completed for other films more directly concerned with wine service and promotion in hotels and restaurants.

It is believed the rate of wine consumption in the United States will rise steadily, in line with the increase noted before the war, and that the 100 million gallon consumption of California wine alone, representing about 90 per cent of the national total, will be exceeded.

GODFREY IRWIN,

Wine Institute, New York City.

WISCONSIN. East North Central state, United States; admitted to the Union May 29, 1848. Population (1940): rural, 1,458,443; urban, 1,679,144; total, 3,137,587. Land area, 54,715 square miles, divided into 71 counties. Principal cities, with 1940 populations: Milwaukee, 587,472; Madison, the capital, 67,447; Racine, 67,195; Kenosha, 48,765; Green Bay, 46,235; La Crosse, 42,707; Sheboygan, 40,638; Oshkosh, 39,089.

Chief State Officers, 1945.—Governor, Walter S. Goodland; lieutenant governor, Oscar A. Rennebohm; secretary of state, Fred R. Zimmerman; treasurer, John M. Smith; budget director, E. C. Giessel; attorney general, John E. Martin.

Judiciary.—Chief justice of the Wisconsin Supreme Court, Marvin B. Rosenberry; associate justices, Chester A. Fowler, Oscar M. Fritz, Ed-

ward T. Fairchild, John D. Wickhem, Joseph Martin, Elmer E. Barlow.

Legislature.—The state legislature (Senate, 33 members; Assembly, 100) meets biennially in odd years on the second Wednesday in January.

Education.—Public elementary schools (at last report), 6,856, including city, village, state graded, and one room rural schools; teachers, 15,300; pupils, 361,609; average yearly salary of elementary school teachers, \$1,290. Public high schools, 450; teachers, 6,000; students, 158,248; average yearly salary of high school teachers, \$1,660. There are 10 state teachers colleges in Wisconsin.

Finances.—The following statement of Wisconsin's finances for the fiscal year 1944-45 was supplied by John M. Smith, state treasurer:

Balance in treasury (general fund), beginning of fiscal year 1944-45.....	\$ 17,078,104.91
Receipts, 1944-45	182,008,920.81
Total	\$199,087,025.72
Disbursements, 1944-45	177,171,734.20
Balance, beginning of fiscal year 1945— 46	\$ 21,915,291.52 ¹

¹ Does not include \$15,000,000 invested in government bonds.

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.).....	84,991	116,536	105,534
Oats (1,000 bu.).....	80,256	118,938	153,830
Buckwheat (1,000 bu.).....	193	418	375
Wheat (1,000 bu.).....	1,659	1,423	1,484
Barley (1,000 bu.).....	19,589	5,062	3,674
Rye (1,000 bu.).....	2,559	1,000	1,176
Hay:			
Alfalfa (1,000 tons).....	2,191	1,730	2,080
Clover and timothy (1,000 tons).....	3,041	4,473	5,101
Tame (1,000 tons).....	5,844	6,549	7,180
Wild (1,000 tons).....	220	217	180
Soybeans for beans (1,000 bu.).....	319	735	676
Tobacco (1,000 lbs.).....	26,375	29,700	37,288
Potatoes (1,000 bu.).....	17,542	11,844	13,650
Apples (1,000 bu.).....	666	805	339
Cherries (tons).....	8,766	15,000	6,000
Grapes (tons).....	445	600	450

WITOS, Wincenty, Polish statesman: b. Wierchoslawice, Galicia, Poland (then part of Austria-Hungary), 1874; d. Krakow, Poland, Oct. 31, 1945. Nominal head of the Piast or Polish Peasant Party, Witos was twice premier of Poland (1920-21; 1923-26) and recently served as vice president of the Polish National Council. Witos was a member of the Galician Diet from 1908 to 1914, and a deputy in the Parliament of the Austrian Empire from 1911 to 1918. Together with Ignace Paderewski and Marshal Józef Piłsudski, he played an important role in the formation of the Polish Republic in 1918. In 1928 he led a movement seeking the restoration of political government and demanded that President Ignacy Mościcki resign. Marshal Piłsudski jailed the leaders of this movement and appealed to the country in a new general election, in which Witos, although kept in a prison cell during the campaign, won a seat in the Diet. In 1931 he and nine other politicians were convicted at Brest-Litovsk of plotting to overthrow the government, and he was sentenced to 18 months' imprisonment and loss of citizenship rights for three years. The sentence was not confirmed by the nation's Supreme Court until October 1933. He went into exile in Czechoslovakia until 1939, when he returned to resume formal leadership of

the Polish Peasant Party. Witos was held a prisoner in Poland during the German occupation, but recently he played a prominent part in the discussions with Allied authorities that led to the formation of the Polish government in power in November 1945. An opponent of the exiled Polish government in London and considered a leader of Polish democratic elements, he was invited by the Allies to aid in the Polish National Council. In April 1945, his name was included in the list of 16 Polish underground leaders who "disappeared" on the eve of projected political discussions in London and Moscow. In May the Russians denied that he was under arrest, and he was not brought to trial in Moscow with the 16 leaders charged with subversive activities behind the Red Army's lines in Poland. On June 23 he was named as one of the three members of the presidential council of the newly organized Polish government of national unity, although he had been too ill to attend the Moscow conference which led to the formation of this new government.

WOMEN'S ARMY CORPS (WAC). The purpose of the Women's Army Corps was defined by the law which created the Women's Army Auxiliary Corps on May 14, 1942: to make available to the army the knowledge, skills and specialized training of the women of the nation.

Not very many people know that the bill on which congressional action was completed on May 14, 1942, had been introduced in Congress by Congresswoman Edith Nourse Rogers many months before that time. It was introduced even before Pearl Harbor as part of the "Peacetime Preparedness Program." No further congressional action had been taken and no publicity had been given it until after Pearl Harbor. After that event interest in the bill ran high, and during the succeeding months the legislative action was completed.

Col. Oveta Culp Hobby, later director of the corps, was at that time one of the civilian consultants to the War Department. The present deputy director, Col. Helen Hamilton Woods and Maj. Marjorie Onthank also served the War Department in a civilian capacity before going into the corps.

Planning for training, for housing, for assignment, for uniforms, was originally based on a strength of 25,000 within one year. Yet more than 50,000 women were recruited within the first six months. The old Aircraft Warning Service contributed its experience and personnel to the newest group of women in the army. In those early days, the War Department exercised a strong centralized control over the Women's Army Auxiliary Corps, in order that a basis of operating problems might become established for the purpose of making policies. It had to be determined how far the regulations that applied to men should apply to women. But before the passage of the Women's Army Corps Bill, policies were established and operations were being decentralized. In the late spring and early summer of 1943, Wacs were no longer assigned to service commands and attached to other commands for operations, but were assigned to all using agencies. This is the system which now operates throughout the three major commands in the Zone of the Interior, and in foreign theaters.

The integration of the Wacs into the army was on its way when the Women's Army Corps Bill was signed on July 1, 1943. The bill was

Public Law 110, which made the Women's Army Corps a component part of the United States Army and eliminated the extra "A" for "Auxiliary" from its common name.

The director of the Women's Army Corps became a full colonel in the army. By September 30, the changeover, WAAC to WAC, was completely accomplished. All enlisted members and officers who passed the physical and mental requirements were administered the army oath. The Office of the Director, WAC, became a part of the Office of the Commanding General, Army Service Forces. Later, with Wacs serving in the three major commands and in overseas theaters, it was determined better organization to move the Office of the Director, WAC, to the General Staff, G-1 (Personnel).

Public Law 110 gave women identical military ranks and ratings with men, and the full privileges of the Army of the United States. Wacs receive insurance benefits, free postage, and allowances for dependents. They are subject to army regulations. They observe the same military traditions, customs, and courtesies as men. They are eligible to receive such military awards as they earn in service. In addition to these awards, a WAAC service medal is merited by those members of the Women's Army Auxiliary Corps who continued to serve in the Women's Army Corps.

To date, Wacs have been included in the rosters of recipients of the Distinguished Service Medal, Air Medal, Bronze Star, Soldier's Medal, Legion of Merit, Purple Heart, and awards by foreign countries, including the French Croix de Guerre and the Legion of Honor.

Recruiting for the Women's Army Corps was accomplished through the regular United States Army Recruiting and Induction Centers throughout the United States. Standards necessitated two years of high school, successful completion of mental and physical examinations and an age limit between 20 and 50.

Basic training of women was accomplished for about 60,000 enlisted women at Ft. Des Moines, Iowa; about 58,000 at Ft. Oglethorpe, Ga., about 23,000 at Daytona Beach, Fla., and a few additional thousand at Ft. Devens, Mass. and Camp Ruston, La. The training consisted of six weeks indoctrination into the army. At the same training centers were set up a variety of advanced specialist schools for clerks, cooks and bakers, motor transport, and medical technicians. Other enlisted women attended army specialist schools for the study of photography, code, communications and radio. Officer Candidate Schools at Ft. Des Moines and Ft. Oglethorpe gave three-month courses, adapted from the courses given to male officers, to women chosen from the ranks after an initial group had been trained. Selectees, after at least three months' service as enlisted women in the field, were recommended by their commanding officers and officer candidate boards.

Women officers received additional training at many of the Regular Army schools for officers, such as Adjutant General's; Quartermaster; Finance; Morale and Special Services; and the Command and General Staff School.

Thus was accomplished the training of women to serve in the army in all theaters of operations. The first overseas contingent reached North Africa in July 1943, and served later throughout the Italian campaign. The second contingent went to England as part of the Eighth Air Force. Other overseas units were

part of the Transportation Corps, serving in France, and on the other side of the world in the Pacific Theater. Members of the French unit ended up in Berlin—members of the South Pacific unit, in Manila, China and Tokyo. These Wac contingents followed the headquarters of their branches.

Wacs in the continental United States and abroad served in such varied jobs as code clerks, cryptographers, communications operators, weather observers, briefing clerks, link training instructors, small arms repairers, chemical warfare instructors, fiscal clerks, laboratory technicians and hospital-ward aids, jeep and truck drivers, enlisted aides to the Secretary of War and secretaries to generals. Some 100 attained flying status as flight engineers, crew chiefs, and flight traffic clerks.

After such varied experiences, Wacs return at an equal rate with men to civilian life, bringing qualifications and training which should make a substantial difference to industry and to their communities.

PATRICIA M. CHANCE,
Major, Women's Army Corps.

WOMEN'S BUREAU, Federal. This bureau in the United States Department of Labor is the federal agency authorized to "formulate standards and policies which shall promote the welfare of wage-earning women, improve their working conditions, increase their efficiency, and advance their opportunities for profitable employment." Established in July 1918 as the Woman in Industry Service, to protect the interests of women in munitions plants in the First World War, and converted into the Women's Bureau in 1920, the bureau became during the Second World War the main source of information on the utilization of women workers in war production. Since V-E and V-J days the bureau, as a result of its special studies in the emergency period, both on the war adjustments and the postwar employment wants and outlook for women workers, has been able to provide factual data and to make sound recommendations to assist in meeting reconversion problems of women workers.

During 1945 the bureau carried forward consistent lines of research and field investigation to aid with the long range, as well as with the more immediate, situation of women workers. A series of studies begun in 1944, analyzing the effects of wartime alterations in hours, and thus enabling the bureau to advise as to the workday and workweek most conducive to the well-being of the women workers and their production records, was completed. Published reports will be forthcoming. In preparation also is a report on women's jobs in railroad yards and one on the general study of women in the traffic, commercial, and accounting departments of the telephone industry, covering their occupations, job classifications, duties and opportunities, rates and earnings, and working conditions.

At the request of the Social Security Board, the preparation of a joint report on the possibility of extending old-age and survivor's insurance to household employees was undertaken. The Women's Bureau section will deal with the need by these workers of such a measure, while that of the Social Security Board will present the technical details and administrative methods involved in such coverage.

The bureau has continued its research in the fields of labor legislation and the legal status

of women in civic and political matters. In addition to publishing bulletins of charts analyzing state labor laws for women, with wartime changes, a report evaluating such modifications and incorporating findings and recommendations is in preparation.

The special study, started in 1944, of selected local unions in war industries to ascertain to what extent women members have participated in union activities and have received equal treatment with men as to rate for the job and seniority rights has been completed and a special report is pending. Another phase of the bureau's program with unions has been educational with respect to their participation in community programs and development of workers' education projects.

In general, consultative and advisory services, to many different kinds of organizations and agencies concerned in some way with women workers, have constituted an important and extensive part of the bureau's program during the entire year. Its services were utilized by the various war agencies, including the War and Navy departments, and the Maritime Commission; state labor departments; employer organizations, labor unions; educational officials; health and welfare agencies; women's organizations. Its regional offices in San Francisco, St. Louis, Chicago, Detroit, Philadelphia, New York City, and Boston, and the headquarters in Washington, made available the counseling service the bureau offers on all phases of women's employment.

Throughout the year the bureau advised with state labor departments concerning appropriate temporary amendments of labor laws for women that at the same time would facilitate war production and safeguard the welfare of women workers. The bureau has recommended policies and techniques for the administration of such wartime legislation for women. It also has co-operated with the states in the administration of minimum wage laws for women, has advised concerning coverage and standards that would advance both the war and the peace effort through the stabilization of women's employment. The progress of effecting the principle of "the rate for the job," or "equal pay" for women, was followed and the bureau acted as a consultant to both states and the federal government in the drafting of "equal pay" laws.

Two important conferences were convened by the bureau to develop a co-ordinated program for the purpose of safeguarding the interests of women workers during the postwar period. At the first conference, which was attended by 30 key women from large national organizations (including labor, social, civic, religious, racial, and women's groups), a Reconversion Blueprint for Women was adopted. Embodied in it were essential standards, policies, and procedures for the readjustment of workers in the transition from a wartime to a peacetime economy. The second conference was related to union programs toward similar ends and was attended by 31 women labor leaders representing 23 international unions.

The bureau's program of co-operation with other American republics, by authority of the State Department, was continued in 1945. The program of internship training begun the previous year was continued. Materials and speakers were sent to South American countries interested in the development of good working standards for women and of their own national bureaus

for the promotion and protection of such standards.

Postwar Employment Wants and Needs of Women.

—Though reports on this important survey have not yet been issued, considerable data has been released to the public since V-E Day. The study consisted of personal interviews with women workers in 11 war-congested areas in 1944-45 for the purpose of determining experience, occupations, economic responsibilities, and post-war plans of women workers. The 13,000 women interviewed (representing some 1,250,000 women workers) were working in war plants, consumer goods manufacture, trade and service industries (except household employment), government, the professions, and other employment. The 11 areas surveyed were: Detroit-Willow Run, Mich.; Dayton-Springfield, Ohio; Wichita, Kans.; Kenosha, Wis.; Springfield-Holyoke, Mass.; Erie County, New York; Baltimore, Md.; Mobile, Ala.; Seattle-Tacoma, Wash.; San Francisco-Oakland, Calif.; and Elkton, Md. About 75 per cent of the women covered planned to continue working after the war and about 70 per cent stated that they wanted to continue work in the areas where they had been employed during the war. The proportions varied considerably from area to area. One fifth of the women workers surveyed lived apart from their families. Of every 10 women workers living with their families, 9 contributed regularly to the support of their families; and of those who lived with their families and contributed regularly, at least half gave 50 to 100 per cent of their earnings to the family. Of the women living apart from family groups, about 1 in 6 contributed regularly to the support of others. In many instances a woman was the sole wage earner of a family group.

The reports and pamphlets published in 1945 are summarized in the following paragraphs: *The Outlook for Women in Occupations in the Medical and Other Health Services*: A series of 10 bulletins covering the following professions—*Physical Therapists, Occupational Therapists, Professional Nurses, Practical Nurses and Hospital Attendants, Medical Laboratory Technicians, Medical Record Librarians, X-Ray Technicians, Women Physicians, Women Dentists, and Dental Hygienists*. For women physical and occupational therapists, who form about 90 and 99 per cent, respectively, of the workers in these occupations, bureau studies predict a vital postwar role in rehabilitation service. Professional nurses and practical nurses and attendants can anticipate a greater demand on their services than in prewar years if the postwar needs of the public are met. The demand for X-ray technicians and also for qualified medical-record librarians is expected to expand, while some scaling down from the wartime employment of medical laboratory technicians is predicted. Indications are that women physicians will have larger opportunities than before the war, as an increased demand for physicians of all types is anticipated. More employment opportunities for women dentists also are foreseen. A gradually increasing demand for dental hygienists in public health service and in institutional work is expected.

Women's Wartime Jobs in Cane-Sugar Refineries: A report on 5 cane-sugar refineries visited by bureau agents showed that women, who before the war were generally restricted to the lighter packing jobs, have helped alleviate the labor shortage by replacing men at the machines used for refining sugar and on jobs in

the cube-making sections, packing and shipping departments, and warehouses.

Employment of Women in Army Supply Depots in 1943: In 12 depots visited by the bureau representatives in 1943, women constituted close to one third of the civilian force. Wide variations were found in the depots' use of women. Also stressed was the possibility in some instances of more extensive replacement of men by women. In one depot almost half the force in the industrial divisions was feminine.

Negro Women War Workers: This bulletin describes some of the jobs held by Negro women in the war period, showing that Negro women's employment increased by 40 per cent between 1940-44. There was a marked shift of Negro women workers from farm to factories, especially to plants making munitions.

State Labor Laws for Women with Wartime Modifications: Part I. Analysis of Hour Laws; Part II. Analysis of Plant Facilities Laws; Part III. Analysis of Regulatory Laws, Prohibitory Laws, Maternity Laws; Part IV. Analysis of Industrial Home-Work Laws.

Protect Future Wage Levels Now: This leaflet stresses the need for state minimum-wage legislation in the 22 states without such laws.

Women White-Collar Workers—Re-tool Your Thinking for Your Job Tomorrow: Tips are given to the white-collar girl on job attitudes, adjustment, training which will help her to hold her job as well as to advance in the competitive post-war world.

Union Series Leaflets, 1945: Data for the bureau studies were obtained through interviews with officers and women members of AFL and CIO unions in a large war industry area in the midwest. The unions represented had a total membership of 200,000, of whom 75,000 were women.

No. 1—Seniority Status of Women in Unions in War Plants. Over four fifths of the union contracts studied by the bureau had general seniority rules that applied to men and women alike, and only one fifth had separate seniority lists for men and women.

No. 2—Rate for the Job. One half of the union contracts provided for equal pay, one half called for the same automatic progression for men and women, and one third stipulated that the entrance rate for men and women should be the same. The leaflet points out that the establishment of the wage rate for the job, regardless of the sex of the worker, is of the utmost importance to the entire wage structure.

No. 3—Union Provisions for Maternity Leave for Women Members. Only 5 of the union contracts had specific maternity-leave provisions. In most local unions no attention had been given to this question, and in some plants women were discharged when pregnancy became known. Attention should be directed to maternity-leave provisions in order to protect the health of mother and child, to prevent the expectant mother from being discharged, to protect her right to return to her job, and to see that her seniority is retained.

No. 4—Unemployment Compensation—How It Works for Working Women; and also a leaflet entitled *Women's Eligibility for Jury Service.*

FRIEDA S. MILLER,
Director, Women's Bureau.

WOMEN'S CLUBS, General Federation of. In October 1944, the board of directors of the General Federation of Women's Clubs approved a

new youth program. A Youth Conservation Committee was established under the chairmanship of Judge Anna Kross of New York City to develop national, state and local plans to co-ordinate all public and private resources in an effort to curb juvenile delinquency. The co-operation of experts in the fields of education and social welfare has been secured and the foundations laid for a far-reaching program.

War service activities of the General Federation were continued until V-J Day—recruitment for the Cadet Nurse Corps and the women's services, salvage, Red Cross activities, and recreational projects. In addition, an intensive recruitment drive for the Women's Land Army was conducted.

The federation's special bond selling campaign for 1944-45 was completed in June. Total war bond sales reported by clubwomen from June 1944, to June 1945, amounted to \$153,847,093, entitling the federation to markers in a fleet of navy planes.

The General Federation was invited by the Department of State to send a consultant to the United Nations Conference in San Francisco. Mrs. LaFell Dickinson, president of the organization, served in this capacity throughout the conference. Mrs. William Dick Sporborg, chairman of the federation's International Relations Department, and Mrs. Earl Shoesmith, then dean of presidents, assisted Mrs. Dickinson as associate consultants.

Major legislative efforts of the General Federation were directed toward securing renewal of the Trade Agreements Act and United States ratification of the United Nations Charter. Sixty-five thousand pieces of study materia; and 45,000 communications to federation personnel were mailed during 1944-45 in connection with the Dumbarton Oaks proposals and the United Nations Charter. Educational material on all existing and proposed international organizations was widely distributed.

In March a Public Health Institute for state health chairmen of the General Federation was arranged by Surgeon General Parran of the United States Public Health Service, in co-operation with Mrs. Marjorie Illig, the General Federation's public health chairman. Meetings were held at the National Institute of Health, Bethesda, Md. Similar institutes are being conducted at state and local levels as a result of this national institute.

Other activities included the assembling of thousands of kits for needy Russian families, participation in the United National Clothing Drive and circulation of exhibits and lectures on masterpieces in the National Gallery of Art in Washington, D.C.

The federation maintains headquarters at 1734 N Street, Northwest, Washington, D.C. and is composed of 16,500 clubs approximating 2,500,000 members.

MRS. LAFELL DICKINSON,
President, General Federation of Women's Clubs.

WOMEN'S RESERVE OF THE UNITED STATES COAST GUARD RESERVE (SPARS). The history of the Women's Reserve of the Coast Guard, popularly known as the SPARS, has been one of expanding activity until the closing months of 1945 when the organization began its demobilization program as the Coast Guard returned to a peacetime status. The first months of 1945 found the SPARS at the peak of their strength in numbers and in the variety of duties performed to release

coast guardsmen for combat duty. There were approximately 900 SPAR officers and 9,000 enlisted SPARS, assigned to district offices, training stations, radio stations, air stations, repair bases, warehouses, supply depots, captain of the Port offices, and Merchant Marine hearing units.

Enlisted women held 30 different ratings, including such specialized rates as coxswains, photographers, printers, radiomen, radarmen, radio technicians, cooks, and parachute riggers. By the end of August 1945, 64 SPARS had been advanced to the highest enlisted rating, chief petty officer. The highest-ranking SPAR officer is Capt. Dorothy C. Stratton, director of the Coast Guard Women's Reserve since its organization, left the service Jan. 16, 1946. Her successor as Spar director is Commander Helen B. Schleman. SPAR officers have performed practically all communications coding and decoding at shore establishments. They have proved adept at finance and supply work and as office managers.

As a congressional amendment to the original law authorizing the Women's Reserve of the Coast Guard permitted SPARS to volunteer for service in Alaska or Hawaii after September 1944, the summer of 1945 found 200 enlisted SPARS and officers on duty in Ketchikan and 200 in Honolulu. The expansion of the SPAR program to include these two areas made possible the return to the states of a comparable number of men who had served many months outside the United States.

By the third anniversary of the establishment of the Coast Guard Women's Reserve, Nov. 23, 1945, the SPARS were being demobilized with a view toward complete demobilization by June 30, 1946. Those who remained helped the Coast Guard to finish its wartime assignment by working at jobs to bring the men home rather than to release them for combat. Separation centers throughout the country were "manned" to a large extent by SPARS, operating switchboards, arranging transportation, supplying information, and completing service records. In district Coast Guard offices and at headquarters in Washington, SPARS helped process the papers of the returning coast guardsmen and to put the Coast Guard's wartime records in order.

SPARS have always had the same opportunity for advancement and the same benefits and allowances as coast guardsmen. Like other members of the armed forces, they are eligible for free medical and dental care, low-rate government insurance, benefits for war veterans, and other privileges extended to those in military service.

Training for enlisted SPARS consisted of six weeks' basic indoctrination, followed by from 6 to 15 weeks of specialized training for those selected for further instruction. The final class of SPARS was graduated from the Coast Guard Training Station, Manhattan Beach, New York, in September 1945.

SPAR officers received their training in an eight-week course at the Coast Guard Academy, New London, Conn., the academy for regular Coast Guard cadets, or in a sixteen-week course at the Pay and Supply School, Palm Beach, Fla. The training course for SPAR officers was concluded late in 1944.

The name SPAR was coined by Captain Stratton as a combination of the first letter in each word of the Coast Guard motto, "Semper Paratus" and its translation, "Always Ready."

ELLIS REED-HILL,
Commodore, U.S. Coast Guard.

WOMEN'S RESERVE, United States Naval Reserve (WAVES). The end of the war found 86,000 members of the Women's Reserve of the United States Naval Reserve serving in 900 stations in the continental United States and in Hawaii. Officers and enlisted women were on duty in nearly every type of shore activity including air stations, naval hospitals, district headquarters, navy yards, and supply depots and at that time they composed 18 per cent of the total naval personnel assigned to shore establishments in the continental United States.

The scope of service for WAVES was enlarged during 1944 to include their assignment for the first time to naval stations outside the continental United States. The first WAVE officers went overseas in October 1944, less than a month after Congress passed a bill permitting volunteers to be assigned outside the continental United States to the American Area and to the territories of Hawaii and Alaska. The first large group of enlisted women marched down the gangplank of a transport in Pearl Harbor Jan. 6, 1945. By August 1945 when the quotas of WAVES going overseas were canceled, there were 4,000 WAVES on duty at activities in the 14th Naval District. WAVES had also been on temporary duty to such places as Alaska, the Aleutians, Puerto Rico, and Bermuda.

With the surrender of Japan, procurement for the Women's Reserve was halted immediately. Classes currently in training schools for WAVES finished their training and were assigned to duty, and no new training programs were opened. The last class of officer candidates was graduated from a school in Washington Sept. 28, 1945. This school had replaced on a small scale the training formerly carried on at the first midshipmen's school for WAVES at Northampton, Mass. On Oct. 1, 1945, the last class was graduated from the recruit center in New York City. The specialist training program for WAVES was completed when the last class of women to receive Hospital Corps training was graduated in early January 1946.

The members of the Women's Reserve are being demobilized according to a release formula which provides them with lower critical scores than those for navy men, and which was established with a view to permit the release of women from the service at the same relative rate as the men. The WAVES on duty in Hawaii are being returned to the United States for separation from the naval service as they become eligible for discharge under the release formula and as transportation can be provided.

Five separation units (WR) specifically established for the release of WAVES opened Oct. 1, 1945, at New York, N.Y.; Washington, D.C.; Memphis, Tenn.; Great Lakes, Ill.; and San Francisco, Calif. As in the case of navy men, WAVES are separated from the service at the unit which serves their home territory. Women are processed in three days or less after their arrival at the unit. There WAVES receive a final medical examination, an exit interview, final pay, and the services of the civil readjustment program. Among other separation records all enlisted women receive a navy rating description which interprets their navy jobs in terms of comparable civilian occupations, and officers receive qualifications jackets which outline their navy and civilian experience.

The Women's Reserve of the United States Naval Reserve was established by an act of Congress in July 1942 which authorized the ap-

pointment of women to fill shore positions in the continental United States, thereby releasing male naval personnel for combat duty. Additional legislation in November 1943 provided that WAVES would be entitled to all allowances or benefits available to navy men except that husbands of enlisted women may not be considered as dependents to receive allowances. The director of the Women's Reserve is Capt. Mildred McAfee Horton, USNR.

WOODLARK. See PAPUA, TERRITORY OF.

WOODROW WILSON FOUNDATION, The. This foundation was established in 1922, during Mr. Wilson's own lifetime, in recognition of the national and international services of Mr. Wilson, who labored to create a world government by a "reign of law, based on the consent of the governed, and sustained by the organized opinion of mankind."

Publications in 1945 include *The Bretton Woods Proposals: A Reading List*; *The Lost Peace: A Chronology*, compiled by Frank Barth; the *Crimea Conference Report*; 600,000 copies of the *Dumbarton Oaks Proposals*; and *Fifty Questions and Answers on the United Nations Charter*. The foundation had a direct part in both the publication and distribution of Denna F. Fleming's *The United States and the World Court* and was instrumental in making possible the compilation of a *League of Nations Bibliography*, to be published by the Columbia Press. Again it reprinted and distributed the *Annual Report of the Acting Secretary-General of the League of Nations*; and issued the fourth revised edition of *World Organization: An Annotated Bibliography*, compiled by Hans Aufricht, and a revised edition of *Official Documents Issued During the Two World Wars*. The following articles and speeches were reprinted in pamphlet form: Wendell Willkie's *Our Sovereignty: Shall We Use It?*; Raymond B. Fosdick's *The Meaning of Dumbarton Oaks*; Hamilton Fish Armstrong's *Last Time*; and Raymond Swing's *Dumbarton Oaks in a Power World*.

The foundation made a grant of \$4,000 to the Commission to Study the Organization of Peace to aid in its educational work among farm and rural groups throughout the country, and another grant of \$1,500 to help launch the Postwar Information Exchange, which aims to bring together and make mutually available the combined experience of several score organizations which are seeking the best practical methods and the most useful materials for popular education in problems of international organization and peace.

The foundation acquired a six-story building at 45 East 65th Street, New York 21, for its new headquarters, and it was dedicated Woodrow Wilson House on April 17, 1945. The annual meeting took place on Oct. 5, 1945. Officers of the foundation include Arthur Sweetser, president; Mrs. C. Burnett Mahon, director; and Julie d'Estournelles, assistant director. The foundation's total assets on April 30, 1945, amounted to \$820,402.68.

WOOL. The 1945 wool crop of the United States was estimated by the Department of Agriculture at 322,621,000 pounds, as compared with the 1944 crop of 347,094,000 pounds, and the 1934-43 ten-year average crop of 370,749,000 pounds. Texas, the leading wool producer, clipped 78,908,000 pounds in 1945; Wyoming, 25,631,000 pounds; Montana 23,958,000 pounds; and California, 19,967,000 pounds.

WORLD COURT. See LAW, Section 12.

WORLD POLITICS. The year 1945 was replete with military and diplomatic events that reached their climax in the unconditional surrender of Germany and Japan and the occupation of their territory by the armies of the conquering powers. As the year opened, Germany had pushed her offensive (Battle of the Bulge) deep into Belgium. It was not yet clear that the drive could be contained. On the Italian front, the deadlock continued. In eastern Europe, the Red Army was laying siege to Budapest, advancing into East Prussia, but had been stopped before Warsaw and in the Carpathians. Germany's seapower had been crushed or controlled; her airpower, shaken but not impotent; her army and matériel, as far as could be discerned, was fairly intact. In the Orient, the reconquest of the Philippines was under way. Japan had opened an all-land route from Manchuria to French Indo-China, compelling United States air forces to relinquish strategic air bases in the entire area. The enemy was slowly yielding ground in Burma but was still strongly entrenched. Japanese air and seapower had been dealt staggering blows. Her land forces were intact.

Predictions of high officials were that the war in Europe would go into the spring or summer of 1946; and in the Pacific, well into 1947. These forecasts were not essentially different as late as March 1. The capitulation of Germany in May and Japan in August found the statesmen of the victorious powers far behind the accomplishments of the military forces. This dilemma arose not only because of the unexpected collapse of the Axis, but also because statesmen had felt it expedient to hold in suspense certain delicate political questions upon which preliminary explorations disclosed no common ground for agreement. Differences within the ranks had smoldered while the physical conflict raged and had kindled when victory was assured. When immediate danger had passed, nationalistic interests came to the fore, giving rise to conflicts.

In spite of official and semiofficial scoldings within the Allied ranks, each disclosing a "holier-than-thou" attitude, there were notable accomplishments on the diplomatic front throughout the war. The contemplation of what has been achieved in conciliating political differences should give pause to those who may be too quick to conclude that effective collaboration in the interest of peace cannot be attained. Diplomatic moves are not unlike those which characterize human relations in the realm of small things: they are roundabout, devious. It may not be the right way, but it is human. In world diplomacy, the stakes are large. It may be said that world peace is the common object, but each statesman fears that his country will give more than it gets. Witness the outcry on the home front where a foreign minister yields a point. The impasse is hard to dissolve, but the effort goes on. Nobody threatens to give up. Important results have been attained. It is the last word that will be decisive as to whether the nations that have the peace of the world in their keeping can get together on what are fundamental rather than the incidental things.

In the discussion of negotiations among the victorious powers, it would be pertinent to chronicle not only those agreements that have been consummated through concession and compromise, but also those concerning which there

has been virtual unanimity of opinion. However, space requirements necessitate the confinement of this contribution to its peculiar province, namely, a discussion of events and pronouncements which disclose divergent or conflicting policies within the coalition of the victorious powers; solutions, if any; and the status of negotiations on problems upon which agreement has not yet been reached.

(It would contribute to orderly classification, if it were feasible, to divide the political events of the year into two categories, making the defeat of the Axis the dividing line; but this order can be observed only within limits. Certain agreements, in anticipation of victory, and others consummated thereafter as the immediate consequence of victory, may of course be so classified. However, many of the most acute issues persisted throughout the year, becoming more critical when the victors turned their attention to adjustments and relationships that will determine the framework for the new world that is emerging, and the position of each nation in it. It appears expedient to limit the discussion of previctory diplomacy to negotiations that eventuated in definitive accomplishments within the period; and to postvictory diplomacy, not only those new problems that arose as a consequence of victory, but also old problems that simply came into sharper focus when action upon them could be deferred no longer.)

PREVICTORY DIPLOMACY

The Yalta Conference.—A conference of the Big Three—President Franklin D. Roosevelt, Prime Minister Winston Churchill, and Premier Joseph Stalin—was held at Yalta in the Crimea, Feb. 4–11, 1945. Aside from agreements on military strategy arrived at by chiefs of staffs who accompanied the leaders to Yalta, the important discussions had to do with matters of principle affecting the political and the economic reconstruction of Europe, and the proposed world security organization, both in anticipation of victory. The last meeting of the Big Three had taken place at Teheran, 14 months previously. Meanwhile, many problems upon which it was believed agreements had been reached *in principle*, had again become critical as occasion arose to apply principle to rapidly emerging situations. The atmosphere was clouded by charges of bad faith made in the press of the three countries against one or the other ally. These charges were seldom made by heads of governments, but more frequently emanated from semiofficial sources, perhaps as trial balloons. Many of them were made by people who were ignorant or irresponsible. Perhaps it would be fair to say that ill-advised and misinformed statements create a background of artificial barriers to understanding that may be almost, if not quite, as difficult to surmount as the persistence of differences in matters of principle.

The problems with which the conferees on the Black Sea wrestled, and reported progress, had to do with the following: the occupation of Germany; reparations; liberated countries; Poland, Yugoslavia; veto rights in security council of proposed world organization; voting rights in the assembly.

Gen. Charles de Gaulle, head of the provisional government of France, insisted on his right to participate in the conference on an equal basis with the Big Three, to represent French interests in Europe, with special reference to French claims on German territory west of the

Rhine. The Big Three apparently ignored General de Gaulle's claims on the ground that France had capitulated at the Wehrmacht's first onslaught in spite of her commitment to make no separate peace with the enemy; that her current contribution, important though it was, was conditioned on equipment and supplies furnished by her allies; that the three nations which had made the great sacrifice and had come out of the struggle with powerful military establishments, must assume the major responsibility in laying the groundwork for peace. It was agreed, however, that France would be invited to participate in the occupation of Germany, but that her territorial claims would have to await the peace conference. The French chief of state refused to accept President Roosevelt's invitation for a conference in North Africa, following the Yalta Conference.

Occupation of Germany.—The differences that developed regarding occupation had to do mainly with French claims and with the question of whether the zones occupied respectively by the victorious powers would be administered independently or under a joint, co-ordinating commission. It was determined that "the forces of the three powers will each occupy a separate zone of Germany"; that "administration and control" would be standardized "through a central control commission . . . of the three powers with headquarters in Berlin"; and further, "that France will be invited . . . , if she so desires, to take over a zone of occupation, and to participate as a fourth member of the control commission," the limits of each zone to be agreed upon later.

Reparations.—In approaching the subject of reparations, the principle was agreed upon that Germany should be required "to make compensation in kind to the greatest extent possible"; that the details covering her ability to pay and the form that payment should take would be worked out by a commission representing the three powers, for which provision was made.

Liberated Countries.—The chiefs of state decided to consult together and adopt a common policy of assisting liberated peoples, as well as those of former Axis satellite states, "to solve by democratic means their pressing political and economic problems." Specifically they agreed where necessary "to establish conditions of internal peace," and to form "interim governmental authorities broadly representative of all democratic elements in the population . . . pledged to free elections of governments responsive to the will of the people," and to "facilitate where necessary the holding of such elections." The interpretation of these commitments by Soviet Russia and her western allies has been at variance.

Poland.—Definitive policy was announced with respect to only two countries: Poland and Yugoslavia. Following the controversy over the Curzon Line (which has been described in previous issues of *THE ANNUAL*), a conflict of jurisdiction arose between the so-called Lublin Committee, established in Poland under Soviet sponsorship, and the London government in exile. Both Churchill and Roosevelt had labored to reconcile the groups, but without success. Meanwhile, Churchill had indicated his acceptance of the Curzon Line, conceding Russia's claim to territory lying east of the line. Roosevelt had refused to commit himself on either side. This was the situation when the Big Three took up the problem at the Yalta Conference.

After setting forth the broad principle that liberated countries would be assisted in the establishment of truly democratic governments representing all liberal elements, the heads of the three governments reached the following agreement: "The provisional government which is now functioning in Poland should therefore be reorganized on a broader democratic basis with the inclusion of democratic leaders from Poland itself and from Poles abroad." It was further agreed that the "eastern frontier of Poland would follow the Curzon Line" with certain digressions specified. At the same time, it was declared, "Poland must receive substantial territory in the north and west" to compensate for the territory allocated to Russia, "final determination" to await the peace conference.

After prolonged negotiations in which Harry Hopkins, representing President Truman, participated, it was announced June 23, 1945 that a Polish national government, consistent with the Yalta Declaration, had been constituted. London and Washington promptly withdrew recognition from the London group, and extended it to the new government.

Yugoslavia.—The long-standing controversy between Marshal Tito, chief of the partisans, and the London government in exile, had reached an acute stage. Tito had broken with the latter which stood for the restoration of King Peter to the throne. The Big Three, after preliminary negotiations with both factions, adopted a formula calling for a coalition government with Tito, as prime minister, and Ivan Subasitch (head of Peter's cabinet), as foreign minister. The plan called for waiving the question of the monarchy until after liberation, and the determination of the form of government that would emerge by a "free and democratic" election. Both parties agreed to these proposals. The sequel is that Dr. Subasitch presented his formal resignation some weeks before Nov. 11, 1945, the date set for the election, alleging that Tito was using his control of the army and police forces to predetermine the results of the election.

Veto Rights.—It was agreed at Yalta that the Big Five should determine whether force would be used to prevent aggression, or threat of aggression, in any case that might arise. The concurring votes of all permanent members of the Security Council to be set up at San Francisco, would be necessary before positive action could be taken. Hence any one of the Big Five (Great Britain, the United States, Russia, China, and France), merely by declining to vote, could block action. Britain alone of the Big Three expressed her willingness to remove the veto right from the Yalta Declaration. While there was much editorial criticism in the United States of Moscow's insistence on the veto power, little attention was given to the fact that Roosevelt first proposed it because he knew Senate ratification would be difficult, if not impossible to obtain, without the reservation.

Voting Rights in Assembly.—Churchill and Roosevelt agreed to support Stalin's request for three votes in the General Assembly of the United Nations Organization, the two extra votes being claimed for the two Soviet Socialist republics—the Ukraine and White Russia (Belorussia). Apparently this concession was granted to meet, at least nominally, claims by Stalin that Britain and the United States enjoyed spheres of influence in the British Empire, western Europe, and Latin America, that would insure them preponderance in the assembly.

MEXICO CITY CONFERENCE—CHAPULTEPEC DECLARATION

When the Argentine Army seized control of the government of Argentina in 1942, a military dictatorship, of alleged Fascist persuasion, was established. The United States, certain South American countries, England, France, Canada, and Holland, promptly withdrew diplomatic recognition. Washington made specific charges of collaboration with the enemy against the new regime, and applied economic sanctions.

On Oct. 27, 1944, Argentina, facing political and economic isolation, filed formal request with the board of governors of the Pan American Union for a hearing to give her an opportunity to prove that her foreign policy was consistent with the commitments assumed at the Rio de Janeiro conference early in 1942. The appeal was answered by a motion deferring action indefinitely. Argentina then severed diplomatic relations with the Axis powers, announced sweeping restrictions to eliminate Fascist influence, and again pressed for a meeting of the foreign ministers. Meanwhile, evidence was coming through that Argentina was feverishly building up her military establishment. Other Latin American states, fearing aggression, joined in petitions for the meeting. The board of governors relented and sent out the call in January 1945 for a conference in Mexico City, but the invitation was transmitted only to members who had signed the Declaration of the United Nations. This excluded Argentina.

The conference, held February 21 to March 8, passed a resolution stating the conditions under which Argentina might regain recognition and become eligible for membership in the United Nations coalition: She must co-operate "in the common struggle" against the Axis, sign the so-called Chapultepec Declaration pledging solidarity, and declare war on the Axis powers. There was no requirement that the military dictatorship be dissolved, but there was clear implication that signature committed the country to a democratic regime. The declaration of war was forthcoming March 27; signature to the articles, April 4. Diplomatic recognition by the above-named countries followed April 9. Evidence is not reassuring that Argentina's commitments are being complied with.

The remaining issue at the Mexican conference, that possessed important political implications, had to do with the relation of the Pan American pacts to the proposed world organization for the maintenance of peace. Led by Colombia, Brazil, and Uruguay, there was strong demand among the Latin American states for a binding agreement for collective military action, if necessary, to ensure the political independence and the territorial integrity of the members of the union. The United States had previously insisted on a united front against the aggressor. Hemisphere solidarity had been the slogan. Now the United Nations Conference was scheduled to meet in San Francisco April 25, 1945, to draft a world charter to preserve the peace. The United States delegation, mindful of the complications that would arise if the Western Hemisphere should attempt to conclude an unconditional military pact, insisted on amending the proposal. As approved, the resolution authorized "a regional arrangement for dealing with matters relating to the maintenance of international peace and security as are appropriate for regional action in the Western Hemisphere," provided the "activities and procedures referred

to therein shall be consistent with the purposes and principles of the general international organization when formed." (See also INTER-AMERICAN AFFAIRS.)

UNITED NATIONS CONFERENCE—SAN FRANCISCO

The Dumbarton Oaks agreement laid down the broad principles of an organization to preserve world peace (see *THE ANNUAL*, 1945). The San Francisco Conference (April 25–June 26) had the task of implementing these principles into an effective organization clothed with authority and power to prevent, or stop, aggression. The discussion to follow deals only with those features of the United Nations Charter that gave rise to controversy among the delegates. (See under UNITED NATIONS CONFERENCE ON INTERNATIONAL ORGANIZATION for complete review of the charter.)

In addition to differences on questions directly pertinent to the conference, the assembly of delegates, representing all the members of the United Nations, provided a sounding board that furnished leaders an unparalleled opportunity to propound their views on controversial subjects that not infrequently had little to do with the purposes of the conference. It was a veritable field day for press and radio. Many of the representatives of these agencies disclosed a naïveté about the whole proceedings, even the purpose of the conference, that led them to advise the public that nothing worthwhile was being accomplished. They might be referring to the divergence of opinion on the government of Poland, or on what should be done with the Dardanelles—questions with which the conference had nothing to do.

The controversial questions upon which decisions were reached, were as follows: chairmanship; voting rights; admissions: Argentina; Poland; veto rights: small vs. great powers; trusteeships; regional pacts and the World Charter; International Court: question of jurisdiction.

Chairmanship.—In international conferences, the head of the delegation of the country acting as host is frequently named by acclamation as permanent chairman. Soviet Foreign Commissar Molotov objected, demanded rotation among the United States, the USSR, the United Kingdom, and China; and it was so ordered. The significance of the issue was overplayed. The rotation plan served a useful purpose. It gave the delegates an opportunity to appraise the foreign ministers as persons and as officials of the ranking states; made each conscious of a personal responsibility to make the conference a success; gave each an occasion to render decisions and view issues from a broader perspective than that which ordinarily characterizes delegates demanding, or opposing, something. No objection was made to retaining United States Secretary of State Stettinius as permanent chairman of the steering committee.

Voting Rights: USSR.—At the Yalta Conference, President Roosevelt and Prime Minister Churchill had agreed to support Premier Stalin's request for separate votes for the Ukraine and White Russia. The Soviet leader assumed that the United States would usually be able to command the votes of the 20 Latin American states, probably the 7 Arab states, the Philippines, Liberia, and perhaps several countries in Europe; and the United Kingdom would be able to command the Dominions, western Europe, Turkey, Greece, Italy, and Egypt. The most Soviet Russia could count on, under present conditions,

would probably be Finland, Poland, Czechoslovakia, Rumania, Bulgaria, Hungary, and Yugoslavia.

Moscow's insistence on a total of three votes for the USSR could not offset the overwhelming advantage enjoyed by the United States and Britain. The minority position in which Soviet Russia found herself on many questions perhaps has not a little to do with her efforts to project her influence over the tier of states extending from Finland to the Adriatic.

Admissions: Argentina, Poland.—The Latin American states, strongly supporting the admission of Argentina to the conference, demanded such admission as their price for conceding three votes to Russia in the General Assembly. Molotov retorted by expressing his consent to the admission of Argentina if the Lublin government of Poland were admitted. As the conference was speeding on to a vote on the admission of Argentina, the head of the Russian delegation asked for postponement of the vote in order to give him an opportunity to confer with his delegation. The request was denied. The vote was taken, and Argentina admitted. Nothing daunted, Molotov then asked that the admission of Argentina be deferred until the Lublin Committee, recognized by Moscow as the provisional government of Poland, could be admitted. Again, he failed to carry his point. British Foreign Minister Eden and Secretary of State Stettinius adhered rigidly to the commitments made at Yalta, namely, that the Polish government would be recognized and admitted to the San Francisco conference as soon as Poland had reconstituted her government so that it would be truly representative of the liberal elements in Poland and outside.

While the USSR failed to prevent the admission of Argentina, and was thwarted in her effort to bring about the admission of Poland's Lublin group, she nevertheless succeeded in gaining the additional votes in the assembly for the Ukraine and White Russia.

Veto Rights: Small vs. Great Powers.—The Dumbarton Oaks agreement went no further than to adopt broad principles, subject to the approval of the governments there represented, for a plan of collaboration among the United Nations for the preservation of world peace. On the delicate question of veto rights of members of the Security Council (the body which was to determine what constituted aggression and what action, if any, should be taken), the conferees at Dumbarton Oaks came to no agreement.

The veto issue is bound up with the comparative influence of the great and the small powers in the Security Council. The membership of the council lies in two categories: permanent and elected. The Big Five—China, France, Britain, Soviet Russia and the United States—are permanent members. Six elected members are to be chosen by the General Assembly for two-year terms. All members of the United Nations Charter agree to supply men and armaments, consistent with their commitments, called for by the Security Council. However, their total commitments are incomparably less than those of the three great powers. In the light of this fact, the foreign ministers of the latter insisted that authority to act or refuse to act must reside in those nations whose power is essential to prevent aggression. Molotov said it was the responsibility of the great powers, who had made the sacrifice, to assume full responsibility for peace in the postwar period; that they

alone could support their position with the power necessary to make it effective. It is probable that Molotov would have approved a military alliance, composed of the USSR, the United States, and the United Kingdom, to maintain world peace.

The United States was insistent on the necessity of a world organization, but was not willing to be placed in a position where other nations, large or small, could dictate her course of action. She was therefore equally insistent at San Francisco, as she was at Yalta, that no action could be taken against an aggressor without the unanimous vote of the permanent members of the council, each member reserving the right to withhold his vote. Anthony Eden, British foreign secretary, supported this view although in a more restrained manner than that disclosed in the statements of Molotov and Stettinius.

Foreign Minister Herbert Evatt, of Australia, seconded by ministers from Canada, China, and some of the smaller states, led the protest against any effort on the part of the great powers to dominate the policy of the world organization. Canada won an important concession that was written into the charter, namely, that any member of the United Nations, whether member of the Security Council or not, should nevertheless have a vote in the council when such nation is to be called upon to supply forces to be used as the council may direct.

The conclusion of the heated discussion over the veto right was the retention in the charter of the provisions set forth in the Yalta Declaration, namely, that the unanimous approval of the permanent members is necessary before the machinery at the disposal of the council can be invoked to stop actual, or threatened, aggression. Hence one permanent member, whether involved in the dispute or not, may exercise an effective veto upon the intervention of the council.

Foreign Commissar Molotov undertook to expand the above provision by an amendment designed to extend the veto right to decisions on whether or not a given subject should be discussed by the council. The amendment was voted down, and the question placed in the category of "procedures" which require only an affirmative vote of any 7 of the 11 members.

Trusteeships.—Following the First World War, the overseas possessions of Germany and Turkey were distributed among the victorious powers (not including the United States) in accordance with the conditions prescribed in the Covenant of the League of Nations. The territories were said to be mandated to the powers as agents of the League of Nations and responsible for their administration. This device was used because the Allied and associated powers had repeatedly declared that they had no territorial ambitions. The mandatory powers were responsible to the Permanent Mandates Commission of the League of Nations. The mandates were described as a "sacred trust of civilization." The powers designated as trustees were to "derive no benefit from the trusteeship" which was to be administered primarily in the interest of the mandated territories. While some of the mandates were conscientiously administered, it may be said that the League of Nations proved quite impotent to enforce the standards of administration established in the covenant. On the whole, the territories were administered as a colony would be administered.

The object of trusteeships, as stated in the

United Nations Charter adopted at San Francisco, was "to promote the political, economic, social, and educational advancements of the inhabitants of the trust territories, and their progressive development toward self-government or independence as may be appropriate to the particular circumstances of each territory and its people and the freely expressed will of the people concerned."

There was sharp difference of opinion among the delegates, the Soviet Union and China insisting on the omission of the word self-government in the above statement, leaving it, "their progressive development toward independence" for all dependent peoples whether administered under trusteeships or otherwise. The United States and Britain favored the entire omission of the word *independence*. The compromise as finally adopted left the alternatives indicated in the paragraph above in the section referring particularly to trust territories, using *self-government* only in the general declaration applying to all dependent territories. The original proposals of Britain and the United States did not provide for Soviet participation in the determination and adjustment of trusteeship problems. Molotov insisted that all the victorious powers should have a part in decisions affecting the procedures that should apply, and it was so ordered.

The United States delegation went on record as favoring the independence of all colonies as soon as practicable, but did not press the point. The position was untenable because, at the same time, the United States had strongly asserted its right and intention to take such Japanese islands as it considered strategically necessary. The other major powers have likewise been insistent on holding what they have, and participating to the maximum in such distribution of enemy territory as may be made.

Regional Pacts and the World Charter.—The United Nations were scarcely prepared to substitute a world organization to preserve the peace for the system of regional and bilateral security pacts that had evolved through the years, and which, in a sense, had come to replace old balance-of-power concepts. However, the conference at Mexico City had gone on record in favor of collective action in the Western Hemisphere, subject to the proviso that any arrangements must be "consistent with the purposes and principles of the general international organization . . ."

In the European theater, it had been assumed that the proposed world organization would permit, within its framework, bilateral and regional pacts. At the time France made her treaty with the USSR (Dec. 10, 1944), following in general the terms of the Russo-British pact of 1942, question was raised in foreign offices as to whether this meant cleavage within the Western bloc. Both Paris and London insisted that it did not, the propriety of an Eastern bloc fathered by Russia, and a Western, by England, appearing to be implicit in the comments made on the subject. The conferees faced some delicate problems in reconciling the views of those who looked for security to regional pacts, and those who believed that the world organization should function directly and not through the instrumentality of local groups of states outside the world charter. The result was a compromise.

The charter specifically provided that regional systems, such as the Pan American Union and the Arab League (q.v.), may be used by

WORLD POLITICS

the Security Council to meet local situations, provided that approval first be given by the council before such facilities can be applied. This reservation is not to be interpreted as restraining a group of states, or an individual state, from defending itself if armed attack occurs before the forces at the command of the council can be brought to bear; however, the article cautions against using the pretext of defense to justify an act of aggression.

Where conflict of jurisdiction arises, Chapter 16, Article 103 is explicit. It states, "In the event of a conflict between the obligations of the members of the United Nations under the present Charter and their obligations under any other international agreement, their obligation under the present Charter shall prevail."

International Court: Question of Jurisdiction.—Reference is here made to the question whether the International Court of Justice, functioning as an instrumentality of the United Nations Charter, should assume jurisdiction automatically to try cases arising under a given set of circumstances to be specified in the articles of agreement. A subcommittee of jurists submitted a report recommending compulsory jurisdiction where a question arose as to the interpretation of a treaty; any conflict of opinion over international law; any controversy having to do with facts alleged to constitute a breach of an international obligation; and reparations assessed for the breach of an international obligation.

The smaller states expressed themselves as strongly in favor of compulsory jurisdiction. Britain appears to have taken no position on the question, apparently being willing to accept automatic compulsory jurisdiction. The USSR objected on principle, and the United States supported the Soviet position fearing veto by the United States Senate. As finally adopted, the resolution made compulsory jurisdiction optional, leaving the matter open for each state to file a declaration committing itself to automatic jurisdiction if it desired to do so. The action taken by the Big Three on this issue will probably be followed by the lesser powers.

POSTVICTORY DIPLOMACY

The collapse of Germany in May 1945 and of Japan in August brought the military phases of the Second World War to a dramatic conclusion. The statesmen of the great world powers had failed to preserve the peace. They had taken second place while the issues at stake were resolved by war. Following victory, the statesmen of the aggressor powers were being apprehended to answer before tribunals set up by the victorious powers. The military forces stepped into the background, handing the shells of three major nations and a score of satellites and liberated countries to the statesmen of the conquering powers. The latter were now in a position, unchallenged, save by possible internal dissension, to organize the world for peace.

(The conference at Potsdam is discussed under this head because it was held when the capitulation of Japan was imminent, and because it dealt almost exclusively with postvictory problems of a political character. The atmosphere of victory was accentuated by the knowledge of Russia's early entry into the Pacific war, and the demonstrated potency of the atomic bomb; and also by Japan's semiofficial and official overtures for peace even before she became aware of the portentous events scheduled to occur in the days immediately ahead.)

The Potsdam Conferences.—The Big Three met at Potsdam, on the outskirts of Berlin, Germany, the middle of July 1945. The communiqué announcing the accomplishments of the conference was dated August 2. One face was absent at the opening of the conference, that of Franklin D. Roosevelt. His chair was occupied by Harry S. Truman, who had succeeded to the presidency following Mr. Roosevelt's death in April. Midway of the conference, Winston Churchill returned to London to receive returns from the election. The results brought the Labor government into power with Clement R. Attlee at its head. When the sessions of the conference were resumed, the Churchill chair was occupied by Attlee. Of the three great personalities who had guided the coalition governments since the spring of 1940, Stalin alone remained. The conference went on, with no perceptible change in the policies that had been formulated through the years to thwart the Axis bid for world supremacy.

As at Yalta, neither France nor China was invited to attend the conference. The denial of General de Gaulle's insistence that France be represented was presumably the same as that suggested as an explanation of his absence from the Yalta Conference. China's absence was attributable to the fact that the USSR and Japan were not at war—the same reason given for the absence of China from previous conferences in which Moscow participated. There was the added reason that the Russian declaration of war against Japan was destined to follow the adjournment of the conference, and it was not deemed expedient to foreshadow this action by the presence of China in the conference. Moscow had given notice (April 5) of her intention not to renew her treaty with Japan on its expiration (April 25, 1946). It is now known that Stalin had indicated his intention at the Yalta Conference, to enter the war in the Orient about three months after the capitulation of Germany; and that this intention was confirmed at the Potsdam Conference.

The communiqué given to the press, at the conclusion of the conference, dealt with the following matters: reparations; territorial adjustments; council of foreign ministers; freedom of press, elections, plebiscites; Franco's Spain.

Reparations.—The plan submitted by the Allied Commission on Reparations formed the basis for discussions of the Big Three. Departures from these proposals appear to have been only in matters of detail. Profiting by the experience gained in attempting to collect cash reparations following the First World War, it was determined that reparations would be limited to the confiscation of goods and industrial capital equipment that formed the backbone of Germany's military potential, together with so-called excess equipment not essential to Germany's maintenance of a standard of living not higher than that enjoyed in neighboring states.

Specifically, each of the occupying countries was authorized to draw its reparations from the zone which it occupied in accordance with the above principle. However, in addition to drafts made upon its own zone of occupation, Russia would be permitted to collect the equivalent of 25 per cent of industrial equipment, classified as removable, from the zones in Germany occupied by the United States, Britain, and France. Two fifths of this amount would be in the nature of reparations accredited to Russia; but the remaining three fifths would be handed over to

the Soviets by the occupying forces in exchange for food and raw materials supplied by the former. Russia was also authorized to appropriate so-called removable goods and industrial equipment, held to represent German assets in satellite countries, the Western allies specifically renouncing their claims against such assets. In return, Russia renounced all claims to any part of the caches of gold (estimated unofficially at \$1,000,000,000) confiscated by the Allied powers in Germany. Russia also renounced all claims to any German foreign assets whether in Italy or any other country. It was further agreed that reparations to be paid to Poland should come out of Russia's share as described above.

The details covering the distribution of reparations among the victorious powers were to be determined by the Allied Commission on Reparations, and the Allied Control Council to be set up in Berlin to co-ordinate administration in the zones of occupation. It is of course obvious that the terms agreed upon at Potsdam raise the question not only of the equity of the distribution, but also the more important question of classifying goods and industrial equipment into "removable" or "excess" on the one hand, and essential to maintaining the agreed-upon standard of living for the German people on the other. Of immediate interest, the following questions are raised in current dispatches: (1) as to whether the occupying countries, or any of them, are taking their reparations in anticipation of definitive findings of those boards and commissions that are working on the complicated problem of the reorganization of the economic structure of Germany to prevent the revival of her wartime industries, but to permit her to sustain her population on the agreed-upon standard; and (2) whether Russia is projecting the authority to appropriate German assets in the satellite countries (Bulgaria, Hungary, Rumania, Eastern Austria, and Finland) to Poland and Czechoslovakia, and if so, as to whether a distinction is being observed between German investments and those owned by the nationals of these members of the Allied coalition. These charges are being made but it would be premature to accept them until they are verified.

Territorial Adjustments.—The following territorial adjustments were tentatively agreed upon, the same to be subject to determination in the peace settlements to be recommended by the Council of Foreign Ministers and finally approved by the governments of the victorious powers. The Yalta agreement to allocate that part of prewar Poland lying generally east of the Curzon Line was confirmed. In compensation therefore, the conferees agreed to permit Poland to occupy and administer that portion of Germany lying east of the Oder and Neisse rivers. This includes Silesia and a considerable portion of Pomerania. The Free City of Danzig, with a stretch of coastline on either side, and a portion of East Prussia, were placed in the same category. The balance of East Prussia, including Königsberg, was assigned to the Soviet Union.

In addition to the above dispositions of disputed territory, it appears that Ruthenia (q.v.), assigned to Czechoslovakia at the Treaty of Versailles, although not requested by the emerging Czech government because its population was predominantly Russian, has been returned to Russia by direct negotiations without plebiscite or intervention by the Western powers; that Teschen, the important mining area taken from

Czechoslovakia by Poland following the Munich Pact, is still occupied in part by troops of the Red Army, contrary to the announced agreement between Moscow and the Beneš government that the former would not support Poland in the retention of this territory.

The Council of Foreign Ministers.—Both France and China were invited to sign the Potsdam declarations and become parties to the implementation of its principles in the peace treaties. A council of the five foreign ministers of the Big Five was established and assigned the immediate task of formulating terms of peace for Finland, Italy, Rumania, Bulgaria, and Hungary. Reports indicate sharp differences of opinion about the expansion of the Big Three to the council of five as constituted, Stalin taking the position that the remoteness of China from the European scene disqualified her to participate in decisions affecting dispositions in Europe; and that the inclusion of France gave the Western powers preponderance in the determination of policies toward eastern Europe which was primarily of concern to Russia. For the present, he conceded the five-minister conference although it was destined to be brought up as a major issue at the opening conference in London (see below).

Freedom of Press and Elections.—After extended argument in which President Truman and Prime Minister Attlee insisted on free press and elections, it was agreed that the "Allied press shall enjoy full freedom to report to the world upon developments in Poland both before and during the elections," the same assurances being extended with regard to Finland, Bulgaria, Rumania, and Hungary. Likewise, there was agreement on "free and unfettered" elections in the aforesaid countries, that truly democratic governments should be established, and all traces of fascism and nazism eliminated. (It would appear that the term "democracy," which has been frequently used in the declarations of the Allied powers from the adoption of the Atlantic Charter, means different things to different members of the coalition. There is no evidence that the latter have attempted to define it. However, it would appear that the Soviet Union has in mind economic democracy, whereas the Western powers are thinking in terms of political democracy.)

Franco's Spain.—The Potsdam Declaration, consistent with the action taken by the delegates at the San Francisco Conference, went on record against the admission to the United Nations of any state "founded with the support of the Axis powers." There was no effort made to conceal the fact that reference was to Fascist Spain.

Following the capitulation of Germany, among other overtures made by Franco to the Allied powers was his suggestion to London, June 12, 1945, that he was prepared to negotiate the return of Tangier (in North Africa, vis-à-vis Gibraltar) to the international status pertaining before the war. Franco had repudiated this status when German arms were victorious on all fronts, and Spanish troops had occupied the area. Britain and France set July 3 for the conference but postponed it on protest from Moscow that she would insist on participation. Although France indicated her objection to the admission of Russia, the conference took place on August 31, attended by representatives of Britain, the USSR, and France. Meanwhile, under pressure from London and Paris, Franco had withdrawn Spanish troops from Tangier. The final agreement (announced September 4), subject to some

modification in detail to be worked out by a committee of experts representing France, Britain, and Russia, left actual administration in the hands of Belgium, Netherlands, Portugal, and Sweden, in accordance with the procedure prevailing at the time of Franco's assumption of authority. However, the administration of the territory was to be subject to a control committee composed of the United States, Britain, the USSR, France, and Spain, the last-named country having reduced representation in the legislative assembly of the territory. The four countries responsible for actual administration were given authority to expel from the zone any individuals whose presence was considered inconsistent with the status of an international zone.

The London Conference.—The Council of Foreign Ministers met in London Sept. 11–Oct. 2, 1945, to begin the work of drafting peace terms to apply to all the conquered countries except Germany and Japan, and to make a disposition of numerous problems that had risen with respect to the conquered and liberated countries. Many of these problems had been attacked in conferences at Moscow, Teheran, Yalta, and more recently at Potsdam, but they had not been solved. Now that the compelling exigencies of war had passed, these problems, involving national interests in the postwar period, had to be met as a condition precedent to the drafting of peace treaties with the conquered countries. It was here that national interests forged to the front. As a result, all the members, operating under instructions from their respective governments, found themselves unable to reconcile their differences, and adjourned, leaving to their chiefs the task of agreeing upon a directive to guide them in subsequent meetings.

The agreement at Potsdam directed the foreign ministers to draft treaty proposals, for submission to their governments, with Italy and the ex-satellite countries of Europe. The agreement stated that the Allied signatories to the articles of surrender would invite other United Nations members to participate when matters of direct concern to them were under discussion. When the conferees met, it appears that this directive was interpreted as meaning that members of the council who were not signatories, might participate in the discussions of the terms to apply to a country under consideration, but could not vote. With this understanding, France and China remained in session with the other members of the council and participated in the discussions during the first days of the conference.

As the viewpoints of the several members were expressed, it became apparent that the Soviet delegation found itself in a minority of 1 to 4 on most questions relating to the Balkans, the disposition of Italian colonies, and the control and administration of Japan. Foreign Commissar Molotov, on advice from Moscow, then demanded that France and China be excluded from the discussions of treaties with the European states on the ground that they were not signatories to the articles of surrender. He held this to be consistent with a literal interpretation of the Potsdam Declaration. France insisted vehemently that she had vital interest in all European adjustments; that she was not a party to the Big Three agreement limiting participation to signatories, and would not be bound by it. China apparently remained neutral.

British Foreign Secretary Ernest Bevin, and United States Secretary of State James F. Byrnes, after spending several days in an effort to bring

Molotov to their viewpoint that France and China should participate in discussions on the above treaties but should not vote, referred the issue to their respective governments. Molotov did likewise. The three governments respectively supported the positions taken by the foreign ministers. Byrnes then proposed a compromise, namely, that the Big Three should continue conversations of an exploratory character without the presence of the two powers to which Moscow objected; that they would make their report to a representative peace conference to include representatives of all European members of the United Nations of Europe, and others who had contributed substantial military contingents to the prosecution of the war. Molotov replied that he could not agree, holding that the Potsdam directive did not contemplate the participation of other countries in dispositions affecting the Danubian states. At this juncture the conference adjourned, deputies remaining in London to work on such problems as could be considered, pending agreement, among the Big Three governments on matters of principle that must be settled before the foreign ministers can proceed.

Following the conference, Bevin made his statement to the House of Commons; Byrnes broadcast to the American people; *Pravda* stated the viewpoint expressed by Molotov at the conference. All three gave conferences to the press in London. The difference over the interpretation of the Potsdam agreement was given by all as the reason for adjournment without substantial accomplishments. Yet both Bevin and Byrnes had agreed that the Big Three alone would vote on the treaties. Statements made by the Big Three indicate that the cleavage was due to far more fundamental reasons than that to which adjournment was immediately attributed. Without attempting to evaluate the merits of the conflicting viewpoints taken by the Big Three, we may conclude the discussion of the London conference by setting off in juxtaposition the attitudes of the foreign ministers as set forth in the conference.

Following the Potsdam directive, the Italian treaty was first discussed, the Italo-Yugoslavian boundary question coming into the picture. The United States, with British approval, proposed that all Italian colonies be placed under a trusteeship to be administered by a commission of the United Nations Organization as a whole. The USSR objected, asserting her right to a base in Eritrea on the Red Sea, and her participation in a trusteeship of Libya. With regard to Trieste and adjacent territory on the Adriatic, Byrnes and Bevin proposed that the issue, whether this area should be allocated to Yugoslavia or Italy, should be determined on the basis of ethnographical considerations, the port of Trieste itself to be internationalized. Molotov objected, presumably desiring both the shore line and the port to go to Yugoslavia.

Regarding the Dodecanese Islands, inhabited largely by Greeks, the foreign ministers of the Western powers proposed that they be returned to Greece. The Soviet's foreign commissar proposed that they be internationalized. Britain was interested in the control of the islands by a friendly power since they dominated the eastern Mediterranean lifeline. The USSR was interested in having a part in their administration because they dominated approaches to the Dardanelles, her only year-round waterway to the ocean highways. Molotov followed this line, reminding the delegates that the United States had already

declared her intention of taking over such strategic islands in the Pacific as she considered essential to her security.

The most acute issue of all, apparently, was the disposition to be made of the Balkan States. The Western powers had been critical of the provisional governments set up following their capitulation to the Red Army, alleging that these governments were dictated from Moscow. This applied especially to the regimes in Rumania, Bulgaria, and Hungary. Before this question was opened up, Molotov seized the initiative, charging the provisional government in Greece, set up under British auspices, with being undemocratic. Byrnes, with Bevin's support then declared that the elections pending in the three countries could not be free elections under the conditions existing, and the governments resulting therefrom could not be recognized.

In the discussion of the Danubian states, Molotov made it clear that the Soviet Union simply insisted on friendly powers at Russia's back door. He reminded the other ministers that Russia had been invaded twice in a generation from the west; also that Britain insisted on friendly powers along her lifeline to the Orient; the United States, in South America. The Western powers insisted on the internationalization of the Danube. Russia's position was not made clear in press releases. Apparently the issue on the Dardanelles was not joined.

The occupation and control of Japan by the United States was projected into the discussion, the Soviet commissar insisting that Russian interests in the Pacific area, and the interests of other countries, would be better served by placing occupation and control under a joint commission comparable to that in Berlin. Byrnes stated that Japan was not on the agenda and he was not prepared to discuss the issue raised. A few days thereafter, the State Department in Washington announced that nine governments (the USSR, Great Britain, China, France, Holland, the Philippines, Canada, Australia, and New Zealand) would be invited to a conference to discuss the establishment of a Far Eastern advisory commission. It was stated that the commission would be precluded from making recommendations regarding the conduct of military operations and territorial adjustments. Molotov had already written to Byrnes declaring Russia would not participate in an advisory capacity, and proposing a control commission composed of representatives of the United States, the USSR, Great Britain, and China, the first-named to be permanent chairman.

Space does not permit an evaluation of the above controversy. It was the first meeting of the foreign ministers after victory. It was a meeting the function of which was to start the political and territorial reconstruction of Europe. Following the last war, the victorious powers were in reached. It might have been better had they recessed nine months before conclusions were reached. The London conference was in session three weeks. The free-for-all wrangle was disconcerting but not fatal since the meeting was simply adjourned, with commitments to resume. Meanwhile, there are evidences that preparations are now being made through diplomatic channels to resume conversations. It will be necessary to make progress at the next session. Perhaps it may have to be preceded by another meeting of the Big Three to settle certain matters of fundamental principle. Meanwhile, press dispatches indicate that the United States and

Britain are even now prepared to make certain concessions in the Balkan situation. Perhaps the United States may find it impracticable to create democracies in the area patterned after its own, or to interpose effective restraints against the projection of Soviet influence in the area.

China.—Diplomatic relations during the year between the United States and China were concerned largely with efforts to keep China in the war. United States diplomatic exchanges were supplemented by strenuous activity to place at the disposal of the Kuomintang government of Chiang Kai-shek at least a modicum of essential war materials, airpower, and training in modern warfare, to hold together the forces opposing Japan. Diplomatic representations took the form of pressure upon Chiang's government to make his Cabinet more liberal, more truly representative of the democratic elements in the population that were critical of the existing regime. Pressure was also exerted both upon Chungking and Yenan (the headquarters of Mao Tse-tung, leader of the Communist Party) to stop fighting each other and join forces to drive out the Japanese invader.

This is not the place to review the arduous efforts to bring about harmony between the two factions in China, or to essay any evaluation of the merits of the controversy. It is enough to say that the United States has dispatched high officials of the government—Vice President Wallace, Wendell Willkie, War Production Chief Nelson, and finally Patrick Hurley—to Chungking in an effort to compose the differences between the opposing forces. Hurley, after a preliminary survey, was made ambassador to Chungking, thus signaling the decision of Washington to throw all its influence to the Kuomintang government. Likewise, an effort was made to see to it that none of the materials sent to China should fall into the hands of Tse-tung's armies that have for seven or eight years been in almost undisputed control of a wide area in north and central China.

Ambassador Hurley, after zealous efforts during the summer of 1945, succeeded in bringing the Communist chief to Chungking for conferences with Chiang. While from time to time encouraging reports have emanated from the conference, it is apparent, after several months of negotiating, that the differences have not been reconciled. In brief, the Communists demand immediate participation in the government, immediate land and tax reform, and a free election to determine the form of government that shall prevail. Chiang promises these things but refuses to initiate them until Tse-tung's forces lay down their arms and recognize the Chungking government. The conferences were still going on November 1, as civil war burst into flame over a wide area. The Communists are claiming United States aid to Chiang, and the latter claims that Soviet Russia is turning over to the Communists territory in Manchuria being evacuated by the Red Army. The facts cannot now be confirmed.

On June 30, Chinese Premier T. V. Soong appeared in Moscow for a conference with Marshal Stalin. A few days later, a new Chinese-Russian treaty of friendship and alliance was announced simultaneously from both capitals. The treaty commits Russia to noninterference in China's internal affairs, to assistance in the reorganization of China's economy, and to the recognition of the Kuomintang government as the only central government of the country. Gunther

WORLD POLITICS

General session of Foreign Ministers Council meeting in London, September 1945.

At the United Nations Conference in San Francisco, Great Britain's Foreign Secretary Anthony Eden, U.S. Secretary of State Edward R. Stettinius, Jr., Soviet Foreign Commissar Vyacheslav M. Molotov, and China's Foreign Minister T. V. Soong receive General Eisenhower's message announcing the surrender of German troops to Field Marshal Montgomery.

Stein, who has made a first-hand study of the merits of the controversy in China, writing in October *Foreign Affairs*, says that the treaty does not represent a change of policy on the part of Moscow. "The pact," he continues, "merely reaffirms the continuation of Russian policy of long standing." Less well-informed writers have taken the contrary view. A key to the dilemma in which China finds herself, after the foreign enemy has been driven out, may be indicated in Stein's further observation that "China is still in the formative period of modern nation-hood, as America was at the time of the Declaration of Independence."

WORLD WAR, SECOND, 1945—European Theater—The Battle of the Bulge.—Late in 1944, it became obvious to the German High Command that continuance of an exclusively defensive strategy, leaving all initiative to the Allies, would inevitably lead to speedy collapse of the Wehrmacht. Mobility, a most essential factor in modern warfare, was bound to be fatally reduced by Allied bombings, as the air superiority of the Western Allies was steadily growing. The Wehrmacht was compelled to make its final bid to ward off defeat while German communications, even though badly shattered, could still keep at least a limited force rolling in the initial phases of a major battle. Since such a bid would be futile in the vast spaces of the East and of little value in Italy—then a secondary theater of war—the attempt had to be made in the West. Field Marshal General Karl Rudolf Gerd von Rundstedt, Supreme Commander of the German forces on Germany's western border, launched an attack on Dec. 16, 1944, which opened the fateful "battle of the bulge" against the Allied front in Belgium and Luxembourg. Rundstedt chose the invasion route into France which the German armies had previously followed successfully in 1870, 1914, and 1940.

The Germans hoped, as a maximum objective, to pierce the Allied lines completely, thus splitting the western front into two tenuous and isolated holds in northern and southern France, and, by capturing the main Allied supply base of Antwerp, to force the precarious evacuation, if not the capitulation, of all Allied forces north of the penetration. If the Germans succeeded in this, they planned another move to drive the southern group of Allied forces out of France. In this way, the "second front" would be wiped out and the Soviet Union, exhausted and facing the full power of the German Army, would be compelled to accept peace terms.

A second and more realistic hope was based on the premise that the Allied armies would be forced to fall back as far as the Seine River in the north if the conquest of Belgium and the penetration of the Sedan gap severed their north-south communications east of Paris. The German High Command confidently believed that this could be done. On the line of the Seine—with most of the French Atlantic and channel ports still controlled by by-passed German garrisons—the Allied Expeditionary Forces would be short of supplies, would lose many favorable advanced airbases, and would have even less initiative than the Wehrmacht had had in the summer of 1944. In these circumstances, a small German force should be able to hold the Allies in check in the west, while large reinforcements could be poured into the eastern front—so large that the Russians, with very extended communication lines, would not be

able to launch a major drive. Even if this hope failed to materialize, the Germans were almost sure that the Allies would at least be thrown badly off balance, disrupting their offensive preparations and giving Germany an opportunity to reinforce the eastern front and gain a long breathing spell.

With 87 types of V weapons being developed—among them a German version of atomic destruction—the German generals hoped to regain the superiority of equipment that had characterized the early victories of the Wehrmacht. Meanwhile German politicians, watching signs of friction between Russia and the Western Allies, predicted that an open rift would be hastened by Allied setbacks in the west. The Germans knew that the Allied Expeditionary Forces had to cope with major supply problems and that a serious shortage had developed in certain items, such as aerial bombs and artillery shells, but they seriously underestimated Allied ability to solve these problems. Furthermore, the German High Command believed that the Allied Supreme Command, with a large part of its forces poised for attack in some sectors and thinly spread in others, including the critical one, would be unable to regroup soon enough to stem the German tide before it surged beyond Liege and Dinant and toward Antwerp. Bad weather reduced the threat of Allied air power, while snow and mud gave German armor, with its wider caterpillar treads, an advantage over some Allied types.

The offensive was, of course, a gamble. If the clouds should break, enabling the Allied air force to function freely, the odds would change against Germany. Moreover, if the German victory did not materialize fully within a few weeks, the Wehrmacht's communication troubles would prevent exploitation of primary successes. The strain on German manpower (permanent casualties—dead, crippled, and prisoners—had run far above four million since the outbreak of the war) limited the number of divisions available for the push to about 20 in the first line and about half that many as a mobile reserve—far less than the force used in 1940. If the German drive were to fail, the flower of the Wehrmacht in the west would be sacrificed in vain, the road to the Rhine would be open, and final defeat would be hastened by many months. The gamble did fail, due to the tenacity of American and British forces and the swift and alert reaction of the Allied Command.

On December 25, after initial successes, the main German drive was halted at Celle, three miles from Dinant, while the southern flank of the German bulge was under counterattack at Morlange, north of Arlon, on December 23. On December 28, the Third Army brought relief to the hard-pressed defenders of the vital road center of Bastogne. The Allied air force meanwhile, with a break in the weather, rained devastating blows at the German front and rear, flying 4,000 sorties on December 26 and 3,000 the next day. Even during the heaviest overcast, some support was given to hard-pressed ground troops by the use of radar. The German bulge, 51 miles deep and 40 miles wide at its base at high tide, shrank in early January 1945. Allied countermeasures were carried out in three phases: containing the attack, redeployment of available forces, and counterblows designed to destroy most of the German armies within the narrowing bulge if the Germans failed to recognize their failure and retreat before the Allies could build up enough strength to squeeze them into confusion.

In the initial phase, the United States Ninth Army and parts of the First Army, north of the bulge, were temporarily removed from General Omar Bradley's Twelfth Army Group and placed under the command of Field Marshal Sir Bernard Montgomery, head of the Twenty-first Army Group (Canadian First and British Second Army) to protect the approaches to Antwerp and restore north-south communications, some of which were already cut or threatened, so that reserves had to make delaying detours. With the other part of the badly battered First Army and the intact Third Army, General Bradley undertook to contain and press back the bulge.

Regrouping for counterattack, despite sleet, mud, and swollen streams, progressed with remarkable speed. The Germans rapidly lost the initiative. The Wehrmacht's fuel supplies were adequate only for the initial push. Thereafter, Rundstedt had to rely upon the capture of Allied stores to keep his panzers rolling. His forces were turned back only a few hundred yards from a store of millions of gallons of gasoline. In the third week of the battle, the German tanks ran dry. Major strategic objectives became less important than gasoline dumps. This fact doomed the German offensive. Montgomery's and Bradley's groups, originally about 20 miles apart on the western end of the bulge, moved closer together. American heroism at Bastogne paid high dividends. On January 6, after beating back 14 German counterattacks within 48 hours, the Allied counteroffensive was well under way, reducing the distance between the northern and southern army groups to 11 miles. German casualties were conservatively estimated at 60,000.

While the battle of the bulge turned in favor of the Allies, another less dangerous German threat developed in the south, where Wehrmacht divisions, breaking out of the Saar region, advanced more than 15 miles into Alsace. This seemed to be a part of a far-reaching German plan to press parts of the AEF back toward the south and attempt to force the Allied command to switch reinforcements to the threatened sector, thus relieving the growing pressure on the bulge. It failed because the Allied Command chose to lose some Alsatian territory rather than loosen its promising grip on Rundstedt's hemmed-in divisions.

On January 13, the Allied counteroffensive gained momentum. Gen. George Patton's Third Army eliminated the remainder of a German wedge between Bastogne and Wiltz. Houffalize was captured, while the British 6th Airborne Division advanced 10 miles on the western end of the bulge. Four weeks after Rundstedt's drive began, the bulge was reduced to 30 miles in depth. The northern and southern Allied army groups were less than 8 miles apart. Compressed into a narrowing sector, the only remaining German hope was to salvage as many of their forces as possible. On January 21, their losses had risen to more than 150,000. The attacks in Alsace, meeting fierce resistance from Lt. Gen. Alexander M. Patch's Seventh United States Army and Maj. Gen. Jean Delattre de Tassigny's First French Army, bogged down after threatening Strasbourg.

By January 21, Allied losses were reported to total 55,421, including 18,418 prisoners, a small number of whom were murdered by their German captors. The bulge was soon deflated. The Allies had lost two million tons of supplies from a depot containing seven millions to the attacking Germans. But despite such difficulties, supplies poured to the front. The tide turned decisively.

The only recourse left to the Germans was to attempt to delay an all-out Allied offensive by keeping their supply lines under fire by V-1s and V-2s. Liège and Antwerp were relatively harder hit by the flying bombs than London. German garrisons in French ports were ordered to hold out at all costs and to conduct extensive raids whenever possible. Allied transportation, however, succeeded in overcoming the greatest obstacles. The performance of the longshoremen in Antwerp harbor contributed as much to victory as that of the most daring airmen and tank crews. Even the German hope of delaying the Allied offensive soon vanished.

By the end of January, more than two million men stood ready to attack the Reich itself, with the French First Army, reinforced by two United States divisions, completing the successful readjustment of the Allied lines in Alsace. The Germans, after losing almost 200,000 men, were compelled to weaken their lines still more by transferring some crack divisions to the east and replacing them with poorly trained and equipped Volkstürmers.

Russian Avalanche.—During the critical days of the battle of the bulge, the Russian armies confined their activity to the Hungarian sector, fighting inside Budapest in a block-by-block struggle. This caused some discontent and criticism in the United States, where the call for Russian relief attacks in the vital Polish sector was almost as urgent as the Russian request for a second front had been earlier in the war. The Red Army, in the meantime, completed its preparations for an all-out offensive. After a five-month stalemate north of the Carpathian range, armies numbering at least three million men were poised for attack. In the north, facing East Prussia, the Third White Russian Army under General Ivan Cherniakovsky and the Second White Russian Army under Marshal Konstantin Rokossovsky threatened the remaining German hold on the Baltic coast outside the Reich as well as East Prussia. Marshal Grigori (Georgi) Zhukov's First White Russian Army was ready for an all-out assault on Warsaw, after having been repulsed there with high losses in the summer of 1944. Marshal Ivan Konev, in advanced positions on the west bank of the Vistula River to the south, had his lines drawn for a blow at the Silesian border.

Russian motor transport, despite considerable numbers of lend-lease vehicles, was hardly adequate to support a full-scale offensive, but the Red Army improvised successfully. Horse-drawn wagons, carts, and even old-fashioned droshkys of pre-bolshevist times were drafted for the occasion. Anything with wheels served as transportation. Disregarding old rules of strategy, the Red Army, even after deciding to dig in along river lines, established and held bridgeheads on the enemy bank, often at a high cost. Russian strategists correctly deduced that these losses would be more than offset by the saving of lives when the offensive was renewed with the enemy outflanked from the start. Exploiting earlier experiences, the Russian General Staff replaced the "single breakthrough" by one strong spearhead with the "multiple break-through" by a number of parallel pushes, even though each of them had less power than a single main assault. The assumption was that, once momentum was gained, these parallel pushes would pound the whole length of the enemy line into a chaos of disconnected islands of resistance, unable to support one another or to co-ordinate counterblows. Russian artillery was clearly superior to German. Russian tanks were

reinforced by the giant Josef Stalin Super, equipped with a 122 mm. gun, better than the famous German 88. The Russian air force was relatively weaker than the ground army. It served chiefly as flying artillery, neglecting targets far behind enemy lines. Some air support was expected and received from shuttle aircraft from the west.

On January 12, an earth-shaking artillery barrage paved the way for the Red assault forces. Konev's bridgehead broke loose between Sandomierz and Baranow, advancing 25 miles in the direction of Cracow on the first day. The other armies followed from the Carpathian range to the Baltic. German headquarters had been expecting this drive for a long time, but was impotent against the overwhelming impact. Parallel pushes dissolved the Wehrmacht into scattered groups. Reserves had to be rushed to the rear instead of into forward areas to save them from being engulfed by the Red tide. Within one week, Warsaw, Cracow, and Lodz fell to the Soviet armies. Konev outpaced Germany's blitzkrieg of 1939. Marshal Zhukov, after capturing Warsaw, advanced in the direction of Poznan, by-passing and encircling the city, while Rokossovsky and Cherniakovsky, after crossing the Narew River and advancing 28 miles on the first day of the battle, drove into East Prussia. One army moved toward Königsberg, while the other, by-passing the frozen Masurian Lakes, pushed toward Elbing and severed the link between the German forces in East Prussia and the beaten main armies. The German troops were so confused that they could not even attempt to undertake a flanking assault which might have hemmed in the Russian advance in the central sector, where, on January 27, the Red Army stood only 91 miles from Berlin.

In the first two weeks of their offensive, the Red armies advanced up to 200 miles, occupying 40,000 square miles of formerly German-held territory and investing the provincial capital of Breslau. Upper Silesian industries, vital to the German war effort, were about to be knocked out or neutralized.

Helpless in the crucial sectors, the Germans staged large-scale attacks in Hungary, along the Danube and southward to Lake Balaton. Although the Germans advanced about 25 miles and wrested the traffic hub of Székesfehérvár from the Red forces, these attacks had no effect whatever on the decisive events farther north and failed even to relieve the defenders of Budapest.

The Oder River, last great water barrier on the way to Berlin, already reached in its upper course by the Konev army in the second week of the lightning advance, was reached on a broad front in the following week, with Russian spearheads tackling the outer fortifications of Küstrin and Frankfurt on Oder. Pomerania and Brandenburg were invested. Russian vanguards, driving toward the Baltic port of Stettin, threatened to trap the German forces in Pomerania. Königsberg was besieged and the East Prussian pocket was compressed into a narrow space. Budapest's inner defenses were tottering.

On February 4, 1,000 Flying Fortresses battered Berlin in direct support of the Russian drive which, although still unchecked, was gradually slowing down. With a large part of the strategic German reserves assembled in haste for the defense of the capital (tanks went into action with their paint still wet), the Soviet High Command, while still exploiting its tremendous initial successes and wiping out German pockets, prepared for a halt to reorganize rear communications and

gather maximum strength to knock out the Wehrmacht in the east. On February 13, Budapest was conquered by the Second Ukrainian Army. The German forces in Pomerania were almost choked in the tightening Russian vise; the threat to Stettin grew rapidly; a twelve-mile drive encircled Breslau and, in accordance with the characteristic Russian pattern, a solid bridgehead was established on the left bank of the Upper Oder, paving the way for the final drive across the river due east of Berlin.

The Russian deployments for that drive progressed with textbook precision. The initially narrow main attack front was steadily enlarged. Marshal Rokossovsky penetrated the former Polish corridor in the direction of Danzig; Marshal Konev surged forward in Silesia. On the 27th anniversary of the Red Army, Marshal Stalin, proclaiming—simultaneously with the Western Allies—that “full victory over the Germans is near,” put German losses during the first six weeks of the Russian offensive at 800,000 dead and 350,000 prisoners (almost two divisions a day), plus 3,000 planes, 4,500 tanks, and 15,000 pieces of artillery.

On that glorious day for the Red Army, the central front of the attack, massing in front of Berlin, was less than 40 miles from the German capital. Marshal Konev's troops, after having crossed the Oder, had penetrated the west bank of the Neisse River, driving toward Goerlitz to secure the Russian center. Rokossovsky's men were mopping up in Pomerania. The troops of General Cherniakovsky, who was killed in action, were rounding up remnants of the German forces in East Prussia. Far to the south, Balkan armies, harassed by Marshal Tito's Partisans, were falling back hopelessly, unable to reorganize into a solid fighting front. They were useless to the main German forces and little more than a nuisance to the Allied Balkan armies.

Decisive interest, however, remained focused on Marshal Zhukov's central Oder River front, 138 miles wide, where all available strength was gathered for the finale. Although Allied operations in the east and the west were still only co-ordinated by general principles agreed upon at the Yalta conference and were independent in almost every means of execution, they became combined so far as the German High Command was concerned, when the new Allied drive toward the Rhine started in the west. Communications between the western and eastern armies of the Reich became entangled and operational spaces overlapped. The task would have been hopeless even for the great military genius whom the Wehrmacht failed to produce in the Second World War.

The Flood in the West.—The battle of the bulge had not seriously delayed Allied offensive operations and had severely drained German strength. The German commander in the west was in an extremely difficult position. A battle west of the Rhine, with the river behind the German lines, was a risky undertaking, since Allied air power could raise havoc with bridges and ferries. A battle along the river itself would mean abandonment of the Siegfried Line, which Hitler had boasted was impregnable when the French were still relying on their Maginot fortifications, and would neutralize the vital industrial regions of the Saar and the Ruhr. Probably in an effort to keep the Ruhr beyond artillery range, Rundstedt decided to await the Allied onslaught in the precarious shelter of the Siegfried Line. The experienced Marshal must have foreseen that a defeat west of the river might easily become a rout and

must have realized that fortifications based on First World War principles would be virtually useless. Rundstedt, however, had no choice except frying pan or fire.

By the beginning of February, a mighty Allied array was ready for the assault. From north to south, the Canadian First Army faced in the direction of Cleve; the British Second Army pointed toward the Roer River (these two armies again formed the Twenty-First Army Group under Field Marshal Sir Bernard Montgomery); the newly arrived United States Ninth, commanded by Lt. Gen. Courtney Hodges, was aimed at Düren and Cologne; the United States First faced in the direction of Bonn; the United States Third pointed toward the Saar and Moselle; the United States Seventh toward Pforzheim-Karlsruhe; and the French First Army faced the Black Forest opposite the upper Rhine.

The Allied armies employed strategy and tactics based upon their unexcelled technical equipment. No army had ever been so perfectly prepared for fast maneuvering with matchless mobile fire power (tanks, self-propelled guns, motorized artillery). The Allied air force had almost uncontested mastery of the skies. During large-scale ground actions early in the war, the Luftwaffe was chiefly concerned with support of ground operations and did not attempt raids far to the rear of enemy lines. The Allied air force could now extend its strikes over practically all German-held territory, constantly hitting every production and communication center, giving the reserves no rest, paralyzing the enemy while the ground forces moved in for the kill.

The hard crust of enemy first-line resistance was broken by intensive artillery barrages followed by infantry attacks. Then motorized forces went through retreating enemy troops like knives through butter, chopping up the defeated armies. Superlatively trained and equipped engineers dealt swiftly with the most formidable obstacles. Parachute troops, re-employed on a large scale for the first time since the Arnhem disaster, were dropped just far enough behind the enemy rear to create havoc but not so far as to remain isolated. It was teamwork at its best—the former German blitz technique amplified and improved to new peaks of perfection. Allied mobility in 1945 was far greater than that of the Wehrmacht in 1940, whereas Rundstedt's veterans, intermixed with Volkstürmers, were only a shadow of the formerly invincible German Army.

Rundstedt expected the main Allied drive to be aimed at the Ruhr. As if to confirm his expectations, the Twenty-first Army Group, after a thunderous barrage supported by 700 RAF heavy bombers, opened a push in the second week of February which pressed against the heavily fortified Reichswald (Reich's forest). The United States Ninth Army tackled the barrier of the Roer River, where man-made floods were launched through five dams still in German hands in a desperate effort to delay the Allied advance. General Patton's Third Army, thrusting through the dragon teeth of the Siegfried Line along the Moselle River with its armor, gave the Wehrmacht a foretaste of things to come. These threats, which the German High Command mistook for the "real thing," were only preparatory to a far greater offensive.

United States-British air armadas, beginning with a sky procession 300 miles long of 1,300 heavy bombers with a fighter escort, hit Cologne, Bonn, Coblenz, and Cleve in the rear of Rundstedt's doomed armies. Berlin was the target of

two major assaults. Leipzig, with the largest railroad station in Europe, focus of German attempts to switch troops from east to west and vice versa, was badly mauled. Synthetic oil plants near Regensburg and Magdeburg were knocked out of operation temporarily. Benzol plants in the Ruhr suffered heavy damage. The mobility of the German Army was thus further reduced and the Luftwaffe became easy prey for Allied airmen. It could not cope effectively with the air attacks on the capital, pounded by 2,266 tons of bombs (five times the maximum load that struck London during the 1940 blitz) on February 3.

The march of doom stepped up on February 21, when the Canadian Army stood near Goch, advancing in the direction of the famous inland port of Duisburg on the Rhine; the British Second invested Roermond; the United States Ninth closed in on Juelich and Düren; while the United States First, also close to Düren, seized the vital Roer dams. General Patton's Third, developing a superlative penetration tactic, prepared to strike toward Coblenz and Bonn. On February 22, 7,000 Allied airplanes, including huge armadas based on Italy, hammered the front and rear of the 450-mile line. Every rail bridge, road junction, highway, and canal in the operational zone felt the full impact. The Wehrmacht could not maneuver anywhere with any degree of safety. If the German High Command had any far-reaching plan, it was shattered by Allied air power.

Under cover of the aerial assault, the great ground attack developed in a rectangle 30 by 75 miles, bounded by the Rhine in the east, the Roer and Meuse in the west, and running from Goch in the north to Euskirchen in the south. The final tactical break-through was achieved on February 23. On the 24th, Gen. Dwight Eisenhower could proclaim: "The attacks we are seeing now should mark the beginning of the destruction of the German forces west of the Rhine." The Roer, although almost 1,000 yards wide, was crossed by tens of thousands of troops. Plywood boats, each weighing 450 pounds and carrying 11 men, were shipped to the river in trucks and paddled in a shuttle service by engineers.

Within a few days after the break-through, Cologne came under artillery fire and the suburban districts of Düsseldorf, on the west bank of the Rhine, were invested. Confused by Allied feints, Rundstedt still believed the Canadians were to make the main drive. Concentrating his available transportation and reserves, he shifted nine divisions to the north, which facilitated a swift and brilliant advance by the United States Third through the Moselle valley. Meanwhile the United States First and Ninth, brushing aside slackening German resistance, penetrated the Juelich-Düren line. München-Gladbach, Krefeld, and Rheydt fell to the Allies, and Cologne resisted only until March 5. For the third week, Allied airmen hammered the German railroad system, once 42,299 miles long, almost three quarters of which could no longer be used regularly; 38,000 tons of bombs were dropped in two weeks.

The German armies west of the Rhine lost 250,000 men during the first 16 days of the Allied offensive. From the threatened Saar to Holland, the Wehrmacht broke up into pockets. The last Volksturm reserves, aged men and very young boys, showed low morale and even less fighting skill. But parts of the German forces had succeeded in escaping to the east bank of the Rhine and a number of fresh divisions were drawn up for a last-ditch stand along the river. It looked

as if the Allies, like the Red Army on the Oder, would have to regroup for a bloody river-crossing before penetrating into the heart of the Reich.

On March 7, at 4:30 P.M., the picture changed completely. At Remagen on the Rhine, the most crucial sector, fast moving United States forces reached the Ludendorff railroad bridge and found it intact except for some undisclosed damage done by inadequate demolition charges. They crossed the Rhine and established a bridgehead without a fight. Immediate German air attacks by the shrunken Luftwaffe could not prevent rapid expansion and consolidation of the bridgehead. When one span of the Ludendorff bridge collapsed a few days later, it did not matter. The German Rhine line was breached before it could be organized.

On March 9, the United States First and Third armies trapped five German divisions near Coblenz. March 18 saw the closing of another trap formed by the Third and Seventh around the Saar. While the First cut the strategic super highway east of the Rhine, exploiting the Remagen bridgehead, General Patton's forces occupied Coblenz. Only 300 miles separated the Russian and Allied spearheads.

On March 24, the Allies crossed the Lower Rhine near Wesel. Prime Minister Churchill was present, calmly smoking his cigar and giving the V-sign. Paratroopers quickly linked up with the main forces. This bridgehead was rapidly expanded into the Westphalian plain by the Twenty-first Army Group and the United States Ninth. Patton, after effecting two other crossings of the Rhine north of Worms, advanced eastward, while the French First prepared to break loose in the south. On their 33d consecutive day of attacks, the Allied air forces put the unheard-of number of 12,000 planes into the air.

Four weeks after the start of the offensive, German armies west of the Rhine had finally collapsed. The Saar was isolated and the Ruhr under artillery fire in two places. The northern sector of the Rhine, already outflanked by the bridgeheads previously established, was breached in the most scientific river-crossing operation of the war. The Allies employed a 75-mile smoke-screen, while British and United States naval detachments, especially trained on the Meuse, used special landing craft (unprecedented in military history) which had been brought to the theater of action by a unique performance of Allied transportation. Compared to Allied generalship, the Germans seemed clumsy and almost amateurish. The sudden replacement of Field Marshal General von Rundstedt by Field Marshal General Kesselring did not alter the picture. Late in March, only 10 miles separated the central army group under General Bradley from the heart of the Ruhr, and Patton turned up south of Mainz. On March 31, General Eisenhower proclaimed: "The German High Command has lost control of many units, large and small. The Germans as a military force are a whipped army. A full scale battle of annihilation is under way."

Since December 16, German losses in the west were conservatively estimated at 750,000, of which 552,261 were prisoners. The eastern and western fronts were only 229 miles apart. Nine Allied armies were advancing unchecked: Patton invested Kassel, halfway between the Rhine and Czechoslovakia's western border; Montgomery swept through the Westphalian plain, aiming at the Baltic coast; the United States Fifteenth Army, recently brought up, joined the Twelfth Army Group's general advance; the Seventh pro-

gressed in the direction of Baden; the French First was beyond the Upper Rhine. Aerial bombardments pulverized the German troops, transforming them into a mob rather than a fighting force. The Germans were never again able to build up anything resembling an organized western front.

On April 7, United States and British forces, breaking out of the Wesel bridgehead, raced through Hanover province, while the British 7th Armored Division pushed toward Bremen. The United States Third Army, by-passing strongholds that might offer frontal resistance and planning to round up their garrisons later, had reached Fulda and Gotha. In two weeks, the Third Army had advanced 150 miles. Its progress was limited only by natural fatigue. The French First held Karlsruhe, while the Ruhr pocket disintegrated under concentric attacks. British and Canadian forces threatened to cut off the German garrison in Holland. During two weeks ending April 7, 20,000 square miles east of the Rhine were overrun, 50,000 Germans were killed or wounded and 300,000 captured. With Bradley's spearheads 132 miles from Berlin, only 175 miles separated the AEF from the Russians and it looked as if the western Allies would reach the capital first.

The Ruhr pocket was bisected on April 15, while Patton, again on the loose, advanced to within 78 miles of a junction with the Russians on the Czechoslovak border. Almost all of northern Holland was liberated and crossings of the Elbe were made. Then the AEF's advance on Berlin came to a halt. Although it was never officially admitted, there is reason to believe that this was a "political stop." The Russians wanted to enter the capital first, as a reward for their major contribution to victory in Europe. While western Allied columns rolled almost peacefully through the German countryside and resistance was limited to some isolated groups, the Russians were engaged in one of the bloodiest battles of the war.

The Battle for Berlin.—Most of the month of March, along the central Oder River line, was employed by Marshal Zhukov in building up irresistible strength for his attack on Berlin. The only major action by his forces during this time, which led to the occupation of Küstrin, had the sole purpose of gaining better springboard positions. The Russian wings, however, were on the move. By March 10, mopping up operations in Pomerania were completed and 200,000 German troops were pinned to the Baltic. To the south, Russian forces advanced in Slovakia, threatened Moravska Ostrava in Moravia, and pressed forward in Hungary to complete the occupation of that last German satellite and to penetrate into Austria, thus preventing the Germans from manning their "Alpine redoubt."

On March 23, while the nervous German radio prematurely reported the start of Zhukov's all-out attack, Marshal Konev opened twin drives, 200 miles southeast of the Oder River, toward the Sudeten mountains and the Moravian gate. On March 24, Marshal Malinovsky's Second Ukrainian Army shattered the German lines in Hungary after dashing forward 43 miles. On April 1, 7 years and 21 days after that country fell victim to Hitler's first aggression, the Ukrainians reached Austrian soil in the province of Burgenland. On the same day, the Fourth Ukrainian Army advanced toward Olomouc (Olmütz) in Moravia from the east, the Second Ukrainian Army penetrated the outskirts of the Slovak capital of Bratislava, and the Third Ukrainian, stepping up the disintegration of the German Balkan armies, ad-

vanced swiftly down the Drava River valley toward Maribor in northern Slovenia. Danzig and Gdynia, at the northern end of the front, also fell to the Russians.

Swiftly exploiting their gains in Austria, the Ukrainians reached Vienna on April 10. According to Russian reports, the Viennese population gave valuable assistance to the attackers. The Austrian capital is criss-crossed underground by an intricate system of canals, with which the Russians were familiar but the Germans apparently were not. The Reds therefore succeeded in staging a number of surprise underground moves which carried them deep into the rear of the German defenses. The Germans were driven out of the city after only two days of street fighting. Almost simultaneously, Yugoslav Partisans reported the collapse of the German lines northeast of Zagreb, provincial and temporary puppet capital of Croatia.

On April 14, the main blow fell. Zhukov's army broke loose in full strength east of Berlin. Some of the elements of superlative technique and equipment which characterized the western Allied offensive were missing, but the colossal impact of Russian manpower and artillery made up for any such deficiencies. The Germans were helpless against that might. Within one week, all the defenses of the Wehrmacht were shattered and the Red Army stood at Königswusterhausen, site of the big Deutschlandsender (principal radio station) just outside northern Berlin proper. Farther to the south, Russian spearheads outflanked the doomed capital by the capture of Zossen. Meanwhile Red forces occupied Senftenberg, only 14 miles from Dresden, and Marshal Malinovsky's Second Ukrainian Army pressed toward Bohemia against fiercely resisting German divisions under Field Marshal General Ferdinand Schörner.

The struggle in the east was still raging furiously in the last days of April. Berlin was encircled by April 25. The large Tempelhof airdrome fell the next day. On April 27, the industrial suburb of Siemensstadt was in Russian hands, and the attackers penetrated the innermost sector of Berlin, Unter den Linden and the Tiergarten. The Germans fought block by block, in subway shelters and makeshift forts, counterattacking at every opportunity. In isolated Latvia, the Wehrmacht struggled desperately to ward off its final doom. In Lower Austria, Moravia, and Bohemia, the Red Army also had to fight grimly for every mile it gained. But Berlin remained the focal point of the fighting.

On May 1, the Russian victory flag was raised over the Reichstag building. Also on May 1, according to unconfirmed German reports, Adolf Hitler died in the Reichs-Chancellery. On May 2, Grand Admiral Doenitz, self-styled leader of the collapsing Third Reich, broadcast from Flensburg that fighting would continue. On the same day, however, Berlin's last bastions fell, with 70,000 Germans surrendering to Zhukov's forces.

What little territory remained under German control was rapidly invested from all sides by the Allies, who closed in from the west, the east, and the south, where the long dormant Italian front had flared up for the climax of the war.

The Great Blow in Italy.—The Italian front burst into action early in April. Allied soldiers, who had fought their way doggedly from the Egyptian and Tunisian deserts up to north central Italy, had been almost forgotten while their comrades in the west fought spectacular battles. Now they had their day. The German forces under Colonel

General Heinrich Georg von Vietinghoff, estimated at about 20 divisions, were strongly entrenched. They were formidable as long as they could hold their main lines, but, once driven out of these positions, they would be fatally handicapped by inadequate transportation and Allied air supremacy. The German commander decided on a stubborn holding battle.

On April 9, the British Eighth Army (commanded by Lieut. Gen. Sir Richard L. McCreery) crossed the Sillaro River, overcame two other water barriers within five days, and encircled Imola. Amphibious landings in the Comacchio lagoon threatened the prize objective, Bologna, from the east. To the west, the United States Fifth Army, supported by Italian Partisans, pushed along Highway 65, in the direction of Avenza. The Germans resisted strongly. After twelve days, however, the hard crust was broken and Bologna fell.

Sudden bad weather, hampering air activity, offered Colonel General Vietinghoff an opportunity to extricate his forces from the Allied grip and lead them back in reasonable order toward the Po River. But German transportation was in very bad shape and confusion spread in the Wehrmacht's ranks. Gen. Mark Clark rightly declared that the capture of Bologna was "the beginning of the end in Italy." One week after Bologna, Verona was taken, the Po Valley cleared, and the Allied armies began an irresistible advance, through scattered islands of half-hearted resistance, toward Bergamo and Brescia on the Swiss border to cut the north Italian front in two.

On April 28, the objective was reached and the German escape route was severed. On April 29, Colonel General Vietinghoff's representatives began surrender negotiations. On May 3, the capitulation of all German and Italian Fascist troops in Italy and southern Tyrol was signed. One million men were involved, more than three times the number supposed to hold the German lines in Italy. Only a complete collapse of fighting spirit could account for so swift a surrender by so formidable a force.

Finale in Europe.—By the middle of April, the AEF in western Germany held approximately the following positions: The Canadian First was near Groningen, Holland; the British Second close to Bremen; the United States Ninth around Wittenberge; the United States Third from Chemnitz to Bayreuth; the United States Seventh near Bamberg, approaching Nürnberg; the French First near Stuttgart. City after city surrendered with little or no fighting. On April 21, three United States armies sweeping through Bavaria were near the Danube. The Ruhr pocket was finally mopped up with the capture of 300,000 prisoners, bringing the total during the offensive to more than 1,000,000. One third of Germany was in the hands of the Western Allies.

April 26 was a momentous day. At 4:40 P.M., elements of the 69th Division of the United States First Army met spearheads of the 58th Guards Division of the Ukrainian First Army near Thorgau in the quiet Elbe sector, thus establishing contact between the Red Army and the AEF, which had been 2,300 miles apart when the march to victory began. After advancing 120 miles in 9 days, following the capture of devastated Nürnberg, Patch's Seventh Army crossed the Austrian border into Tyrol at two places, while Patton's Third moved along the Danube Valley toward the Upper Austrian provincial capital of Linz. Two fresh armored divisions joined the race, one taking Regensburg in Bavaria, the other

Hitler's residential town of Berchtesgaden. The advance continued into the Salzburg district of Austria. A junction of General Eisenhower's armies with the forces of Gen. Mark Clark from Italy was at hand. The vaunted German "national redoubt" was breached. These movements encountered only slight opposition. The British, however, attacking Germany's main port of Hamburg, still faced hard fighting. On April 30, Munich was in the hands of the victorious Seventh, while other units of that army closed in on the Brenner behind surrendering Colonel General Vietinghoff.

Feverish attempts by Gestapo Chief Heinrich Himmler to drive a last minute wedge between the Russians and the Western Allies were doomed to failure. Count Folke Bernadotte, president of the Swedish Red Cross, carried Himmler's messages offering surrender to the United States and Britain only. These overtures were reported to Moscow, but were otherwise ignored.

After the announcement of Hitler's death, Grand Admiral Karl von Doenitz tried to continue Himmler's efforts. He broadcast: "It is my first duty to save Germany from destruction by the advancing Bolshevik enemy. For this purpose alone the military struggle continues. As far and for as long as the achievement of this aim is impeded by the British and Americans, we shall be forced to carry on our defensive fight against them all."

But German resistance in the west was about to end. Montgomery's northern army group saw considerable action until May 4, when the German armies in that sector suddenly disintegrated. On that day, 150,000 men laid down their arms; 500,000 more surrendered on May 5, when all German forces in Denmark, Holland, and northern Germany capitulated. The German collapse in Yugoslavia took place on May 1, with Marshal Tito's Partisans advancing into Trieste and Austrian Carinthia, and disorganized German remnants in headlong flight ran right into the arms of the Allied forces advancing from Italy.

In Bohemia, the Germans attempted resistance to the last. The United States Third had to fight on Czechoslovak territory. On May 5, Czech patriots seized strategic positions in Prague and appealed frantically to the Allies to hasten their advance. The Russians were given precedence and Prague was therefore finally liberated by the Red Army, with American troops only a short distance away. On May 6, Swinemünde, last German stronghold on the Baltic, fell to the Russians, while the last remnants of German pockets from Latvia to East Prussia were cleared by Soviet forces. At the same time, General Malinovsky completed the conquest of Moravia. The very last German stand, which lasted for only one day, was made by Field Marshal General Schörner south of Olomouc, in Czechoslovakia.

The National Redoubt.—Late in 1944 and early in 1945, reliable reports told of a German plan to organize last-ditch resistance in what was believed to be an almost impregnable position, even if the Allies succeeded in over-running most of the Reich. Strong contingents of Elite Guards and first-class German Army units were to entrench themselves in the Alpine regions of southeastern Bavaria and in the Austrian provinces of Vorarlberg, Tyrol, Salzburg, northern Carinthia, northeastern Styria, and southern Upper Austria. They would be comparatively safe from air attack in deep ravines and narrow valleys, and immune to ground attack on the top of high mountains. Lightning sorties were planned to confuse the besiegers and to terrorize Germans who might be

disposed to collaborate with the Allies. A prolonged stand was expected to tire the victors into easier peace terms and even into an early evacuation of Germany. Avengers called "werewolves" were to be sent into Germany from the redoubt to kill "traitors" as well as foreigners. SS General Ernst Kaltenbrunner, a veteran terrorist, was placed in charge of the grimly romantic enterprise.

There is reliable evidence that this plan was seriously considered, that special headquarters were set up in Aussee, Styria, and that the future garrison was trained for its task. But the redoubt did not materialize. Probably German professional officers were opposed to such amateurish gestures and sabotaged them. It can also be presumed that the speed of the operations leading to final victory in Europe disrupted whatever plans the Germans might have had for a last-ditch stand.

German Underground.—Contrary to many dubious reports of internal German resistance to nazism, no conclusive trace of any popular anti-Nazi activity in Germany was ever found by unbiased observers. The Allied forces had no support from German citizens on their drive through the Reich, whereas a number of cases of civilian violence against the Allied troops were reported.

Unconditional Surrender.—While piecemeal capitulation of large German military groups was under way, surrender emissaries from Grand Admiral Doenitz proceeded to Allied Supreme Headquarters in Reims, France, on May 5. There they were met by Lieut. Gen. Walter Bedell Smith, General Eisenhower's Chief of Staff. German attempts to stall and bargain—the objective of splitting the Allies was still not entirely abandoned—were unsuccessful. Hopelessly beaten, the Germans had to give in. On May 7, at 2.41 A.M. European time (8.41 P.M. EWT May 6), the modest brick building of an industrial school at Reims, site of SHAEF (Supreme Headquarters Allied Expeditionary Force), was the scene of the signing of the unconditional surrender of all German land, sea, and air forces on all fronts. Colonel General Alfred Jodl signed on behalf of the German Supreme Command, General Smith for SHAEF, General Susloparoff as head of the Russian mission to France, and General Sevez for the French forces. This surrender was formally ratified in Berlin, ending the war in Europe May 8 at 6.01 P.M. EWT.

The procedure was repeated on May 9 in Russian-occupied Berlin, where Marshal Grigori Zhukov signed on behalf of the Russian Army, and British Air Marshal Sir Arthur Tedder on behalf of General Eisenhower. Field Marshal General Keitel signed for the German Army, Admiral von Friedeberg for the Reich's Navy, and Colonel General Paul Stumpff for the Luftwaffe.

The Second World War in Europe lasted for five years, eight months, and nine days from the German attack on Poland until V-E day.

Far Eastern Theater.—Never before has any war covered such immense expanses of land and water as the Far Eastern phase of The Second World War. The recapture of the vast Japanese empire of conquest, island by island and mile by mile, and the concentration of naval and air power in support of such operations would have been an almost incredibly slow and costly process. This fact encouraged the Japanese to continued defiance, even after a long and uninterrupted series of setbacks destroyed their prospects of final victory. The Tokyo government was confident

that sheer exhaustion would eventually force the Allies to accept a negotiated peace and that Russia, weakened by tremendous losses in Europe, might maintain its uncomfortable neutrality.

To frustrate Japanese hopes, the United States—which bore the brunt of the struggle in the Far East—and the other Allies had to create a completely new strategy. Concepts which would have been dismissed as fantastic by the conservative general staffs of traditionally militaristic powers were accepted as practicable and developed by the more flexible minds of American generals and admirals. Moves of great boldness were made possible by the unprecedented volume of United States production and by the rapid growth of the range and carrying capacity of the airplane.

The Japanese generals, students of German textbooks, were old-fashioned in their strategic ideas, although they did introduce innovations in tactics (e.g. infiltration). They were sure that the by-passing of strongholds was too dangerous to be attempted except to a very limited degree. They found comfort in the traditional doctrine that no commander in his senses would leave large and unconquered garrisons as a threat to his rear, overlooking the point that such garrisons cease to be a threat if their communications are severed. The American plan, overruling tradition, contemplated by-passing on an unprecedented scale, regardless of the number of enemy forces involved and the distances to be covered. United States strategists had the vision and courage to see that this was the only way to shorten the war and hold down the cost of victory.

By 1945, distances had become Japan's Achilles' heel. In 1941 and 1942, when the Japanese tide engulfed island after island, penetrated the Indian Ocean, and surged through Burma, Malaya, Thailand (Siam), and Indo-China, the Nipponese controlled the sea and air in large sections of the Pacific. They also ruled the air over much of China. Under these conditions, expansion of the fighting area was an advantage to the Japanese. By the end of 1944, the situation had changed completely. The Japanese Navy had been reduced to a shadow of its former might and confined to its home waters. The United States air force and the RAF controlled the skies wherever bases were available. Japanese garrisons on distant islands were cut off from the mother country because the navy could no longer protect their communications. These were the facts upon which the Allies based their plan.

To pave the way for victory, Japanese shipping and air traffic had to be swept from sea and sky beyond the main islands. Relatively few strategically located bases were needed for that purpose. The Allied attack therefore was to be concentrated exclusively against such bases. Once these bases were firmly secured, the destruction of the remnants of Japanese air and naval power would be assured and the helpless Japanese garrisons of the by-passed islands could be left to starve and mopped up later when the Allies chose.

The plan contemplated an ultimate invasion of the Japanese main islands, admittedly a task of unprecedented difficulty. On D-day in Europe, about 60 divisions had been moved across the channel from positions 20 to 100 miles away. Against Japan, more than twice that number would have to join battle over many times the distance. The freeing of the occupied parts of China—possibly without Russian support—was another major problem. But the essential key to Allied strategy was the battle for the bases, ac-

tually begun in August 1942, at Guadalcanal, which was in full swing when the fateful year of 1945 began.

The Philippine Campaign.—On January 6, the Tokyo radio reported that carrier-escorted United States landing craft were concentrating west of Luzon, principal island of the Philippine Archipelago. The Japanese plainly expected the main United States attack in the south of Luzon. Earlier reports had told of additional landings on previously invaded Mindoro and land-based air attacks against Japanese coastal shipping around Luzon. Powerful United States naval forces under the general command of Admiral Chester W. Nimitz, roaming Philippine waters for 21 consecutive days, kept about 500 planes in the air. Among other targets, they attacked Formosa and Okinawa in the Ryukyu islands, only 310 miles south of the Japanese home island of Kyushu. Conservative estimates gave Japanese losses as 95 ships sunk or damaged and 121 planes destroyed. Heavy air attacks on Luzon followed the tactics used successfully at Leyte. The Japanese offered less resistance than ever before in the war. In 1944, Japanese losses from United States air and naval power had amounted to 6,000 planes and 550 ships, more than the Empire could replace. Admiral Nimitz predicted even higher losses for Japan in 1945.

While naval aircraft spread havoc on the approaches to Japan, Marianas-based B-29 bombers (Superfortresses) dealt heavy blows to the heart of the Empire (Tokyo, Nagoya, and Osaka) early in January.

On January 7, the largest amphibious force ever assembled, more than 800 craft ranging from battleships and carriers to PT boats and submarines, steamed into Lingayen Gulf on the northwest coast of Luzon. The Japanese commander, General Tomojuki Yamashita, stubbornly preparing against a blow from the south, was taken by surprise and never recovered from the shock. American landing operations, beginning two days later, were carried out successfully against very minor opposition. Within 24 hours, the landing forces established solid beachheads 15 miles wide and 4 miles deep on the sheltered 60-mile shore line of Lingayen Gulf capturing 20 settlements and began preparing for the drive on Manila, 110 miles away. On January 9, two years and ten months after he had left the Philippines in defeat, Gen. Douglas MacArthur went ashore on Luzon and thereby fulfilled his famous pledge: "I shall return."

Two weeks later, with more troops pouring in and all beachheads secure, the right wing of the United States forces penetrated to the tip of Bolinao Peninsula on the west coast of Lingayen Gulf, cutting a vital highway linking Japanese forces in the north and south. Troops of the United States Sixth Army (Gen. Walter Krueger) beat off furious but poorly co-ordinated Japanese counterattacks on the southwestern sector. At the southern tip of the United States spearhead, the Agno line 70 miles from Manila (first natural barrier on the way to the capital) was breached almost without opposition.

General Yamashita hastily assembled what forces he could muster around Manila. On the 19th day of their advance, United States troops were only 40 miles from their prize. Clark Field, Luzon's main air base, was taken. One week later, only 22 miles separated MacArthur's men from the Filipino capital. The United States Sixth Army, forming pincers, split the thinned out Japanese defense forces while new landings were ef-

fected. The United States Eighth (Lieut. Gen. Robert L. Eichelberger) pushed on to Subic Bay and Olongapo to establish contact with the Sixth. When the Japanese Command bared its apparently useless southern defenses to bolster the lines around Manila, other units of the Eighth, quickly seizing their opportunity, landed 50 miles south of Manila Bay near Nasugbu, thus bringing the Japanese under a three-pronged attack.

Admiral William F. Halsey's Third Fleet, still supporting the Luzon operations, extended its operations to the coast of China. From the beginning of September 1944, until the end of January 1945, the Third Fleet destroyed 4,370 enemy planes, 89 warships (241,000 tons), and 563 transports (776,000 tons), and damaged 152 warships and 1,011 other craft. It also wrought great havoc on enemy docks and shipping. Japanese commercial tonnage was reduced to 3,500,000 tons, about one third of what it had been in 1941. By the end of January, the United States objective of isolating the Japanese homeland from its conquered outposts was already partly achieved.

Early in February, MacArthur's armies recaptured Bataan Peninsula. After one month of campaigning, they held 8,000 square miles of Luzon, with the Japanese defenders in an almost hopeless position through the loss of vital Munoz. Filipino guerrillas, proudly helping the Americans, harassed the enemy constantly. Japanese losses were reported to amount to 48,000 in engagements that could not be termed an organized defense. On February 7, a spearhead task force of the 1st Cavalry Division of the United States Sixth Army entered Manila from the east in a bold move to free the Allied civilian internees in Santo Tomas. At the same time, parts of the United States 37th Division closed in from the north and elements of the Eighth Army came up from the South. It looked as if Manila might be liberated almost without a fight. Once the United States forces had invested the city, however, the Japanese offered stubborn resistance which caused heavy casualties and severe material damage.

On February 17, the Stars and Stripes were again raised over Corregidor, the island citadel in Manila Bay where the American defenders under Gen. Jonathan M. Wainwright made their last epic stand in 1942. On the same day, the Americans succeeded in penetrating the ancient *intramuros* section of Manila. Although the Japanese armies showed no strategic plan and were hopelessly outmatched in men, guns, planes, and tanks, they still fought fanatically in isolated positions regardless of odds and losses. This gave a clear foretaste of what the Allies would have to face in future invasions—especially the invasion of Japan proper. But operations continued according to plan. As the Philippine campaign moved into its mopping-up phase, American strategists took another bold step.

Iwo Jima.—As long as the Japanese home islands were beyond the range of Allied land-based fighter planes, air attacks on Japan were restricted to unescorted B-29s and carrier-based assaults. In order to make the aerial blockade and bombardment fully effective, a base had to be won from which fighter escorts for bombers could be provided and shorter range bombers could operate against Japan. Another long stride was successfully taken with an advance of 725 miles at one jump into Japan's inner defense at the island of Iwo (Iwo Jima) in the Volcano Group, only 750 miles south of Tokyo.

This tiny island (8 square miles) was vital to Japan's defenses and the Japanese had built it

into one of the most formidable bastions in the world. The volcanic soil of Iwo, thickly covered with lava, handicapped every step by an attacker, while the defenders were securely entrenched in permanent positions and underground bastions which honeycombed the islands. In the south, the 546-foot volcano, Mt. Suribachi, contained emplacements for guns of all calibers which dominated all of the island and its approaches. The bastion was fully manned with elite troops, ready to die but not to surrender. They could hardly hope for relief or reinforcements, since the United States ruled the surrounding air and sea.

On February 15, a strike by United States carrier-based aircraft destroyed 500 planes over Japan. At the same time, synthetic oil factories in Japan—under heavy strain since the supply of oil from the Dutch East Indies and British Borneo had been virtually cut off—suffered a blasting that further crippled the Japanese air force. While the carrier planes were still in action, an armada of 800 ships lined up off the shore of Iwo. The United States air force had worked on Iwo for 74 days. Short-range shelling by naval guns of all calibers lasted for two days more. A few Japanese planes and PT boats struck furiously at the attackers, but they could not prevent or delay the invasion.

On February 19, the 4th and 5th Marine divisions stormed ashore. Under the most difficult circumstances and at the price of heavy losses, they fought their way forward literally step by step. The Marines not only lived up to but even surpassed their finest fighting traditions. On February 23, the American flag flew over captured Mt. Suribachi, but gains continued to be measured in yards, while United States casualties during the early phases of the invasion ran as high as 100 an hour. The defenders had to be blasted out of every foxhole and every cave. The final drive opened on March 6, after a short stalemate. After 27 days of battle, Iwo was completely in American hands. United States casualties totaled 19,938. Japanese losses were more than twice as large. The objective was worth the terrible price—but the latter was considered another grim warning of what might be in store for the invaders of Japan proper.

Siege by Sea and Air.—The constant air and naval attacks on the narrowing inner circle of Japan's defenses and Japan proper, although frequently termed a blockade, differed from the traditional type of blockade in its offensive characteristics. It was not just a slow choking of the defender but a continuous hammering at his fortifications, factories, and communications. Although experiences in Great Britain and Germany had shown that a determined people could take a severe pounding without breaking, the great inflammability of Japan's lightly-built cities was bound to result in a degree of destruction unknown even in battle-scarred Berlin. During the third week in February, a mighty United States carrier task force steamed within 300 miles of Japan and 1,200 planes of the navy air arm attacked the Tokyo area. After two weeks of practically continuous action, Admiral Marc A. Mitscher's carriers sent another 1,000 planes over Tokyo. They were followed by 200 B-29s. Six hundred fifty acres of the city were engulfed in flames. The task force then steamed toward Formosa, attacking this vital Japanese island base while some of its units rained blows on the Ryukyu islands, another barrier to Japan's innermost defenses and the China coast. The Ryukyu attacks were pressed on a large scale after March 1.

What was left of the Japanese fleet obviously shunned battle and husbanded its depleted strength for the defense of the most vital objectives. The air attacks on the homeland were stepped up. On March 9, the first 1,000-ton raid by 300 B-29's, using incendiaries on an unprecedented scale, laid waste 15 square miles of the Imperial capital and destroyed the dwellings of a million people. Other devastating B-29 raids hit the aircraft manufacturing center of Nagoya (March 12), Osaka (March 14), and the Kobe shipyards (March 17). A two-day blow by 15 fast carriers of Mitscher's famous Task Force 58 struck the Japanese inland sea with 1,400 dive bombers and torpedo planes hitting all kinds of targets. Special attention was given to units of the Imperial fleet moored at Kure naval base. Returning from that mission, the carrier force joined the attacks on Okinawa. The fury of the onslaught against "fortress Japan" mounted in a steady crescendo. The British fleet contributed an attack by a carrier task force in the Sakishima Group, between Okinawa and Formosa, creating a diversion of Japanese attention from threatened Okinawa.

The Conquest of Okinawa.—The Ryukyu chain, although practically neutralized as a Japanese base for offensive operations, could not be bypassed. Allied bases in this group were needed for the prospective battle of the Chinese mainland and for the further intensification of destruction in Japan proper. The most valuable prize was the largest island in the chain, Okinawa, strongly manned by Japanese troops and heavily fortified. It was believed that 50,000 Japanese soldiers were on Okinawa, a figure that turned out to be a serious underestimate. For nine days, as the climax of previous attacks, the United States Fifth Fleet, reinforced by powerful British units which had recently arrived in the Pacific, hammered incessantly at Okinawa and adjoining islands. The Japanese had been pushed back 3,000 miles from their high tide of conquest.

On April 1, when the pounding came to an end, United States troops went ashore on Okinawa, an island 67 miles long and 3 to 10 miles wide. The 3d Marine Division landed on the west coast and an amphibious army corps, meeting amazingly little opposition at first, advanced through the Ishikawa Isthmus. The weight of Allied preparations seemed to have stunned the defenders and it was hoped that Okinawa would be less costly than Iwo Jima. In reality, the Japanese commander, recognizing that Allied control of sea and sky would permit the invaders to land practically wherever they chose, shrewdly decided to concentrate his forces in a comparatively narrow space in the southern half of the island where they could not be as easily turned or outmaneuvered as they could if they were thinly spread along the whole coast.

The situation created by the Allied attack was so grave that the Japanese Navy came out for battle. On April 6, the Fifth Fleet delivered a smashing blow to the Imperial forces, sinking the largest Japanese battleship still afloat, the 45,000-ton *Yamato*, two light cruisers, and three destroyers, with a loss of three destroyers and damage to one United States heavy unit. With their navy knocked out, the Japanese resorted to their last instrument of defense, the Kamikaze ("divine wind") suicide fliers.

The Kamikaze pilots were all volunteers, at least in the beginning. Some of them used normal bombers, carrying a full load of bombs, which they tried to crash dive on their floating targets.

Others flew any type of plane, loaded with explosives, that was handy. Still others flew the Baka ("stupid") bomb, which somewhat resembled the German V-1 except that the latter was unmanned. The Baka—built like a small airplane, about 20 feet long with a wing span of 16 feet—was flown to the vicinity of the target by a larger plane and then released. After its release, it continued to the target with rocket propulsion. The pilot, like all Kamikaze flyers, had no parachute. A high explosive charge in the Baka bomb's nose was ignited by a fuse as soon as the missile hit the target. The Japanese High Command not only expected the Kamikazes to cause heavy damage, but also thought they would frighten the Allies into the belief that their task would be too costly and difficult against an enemy who employed such fanatical methods of self-destruction. The first objective was partly attained. Large casualties and material damage were inflicted on Allied naval forces, but Allied morale was not impaired.

While the fleet offshore battled the Kamikazes, the United States invasion forces from the west coast started to push to the north and south. Progress northward continued steadily at a rate of one to two miles a day, and the northern part of the island was rapidly cleared of the enemy. But the southern drive, meeting fierce resistance, soon came to a halt. The ensuing battle was even bloodier than Iwo, with the Japanese fighting desperately for every inch of ground. The United States forces showed equal determination. On April 19, units of the Tenth Army advanced about half a mile in the direction of the island capital of Naha (Nawa). On April 21, Lieut. Gen. Simon Bolivar Buckner's 27th and 96th divisions, after a tremendous artillery barrage, continued to inch forward, with the heaviest fighting centered at Hill 178. On April 22, the Japanese were hemmed into one fourth of the island's total surface, where they held on grimly. The front was only about 8,000 yards wide, but the fury of the fighting and the number of casualties made the operation a major battle.

On April 27, the 7th Division closed in on Shuri, second city of Okinawa, only two miles away. On May 5, "Banzai" counterattacks gave evidence of Japanese distress. By May 13, the suburbs of Naha were invested. Sugar Loaf Hill, the key to Naha, was taken and retaken five times before it remained in United States hands. By May 18, United States casualties on Okinawa had reached 30,526, including 3,958 suffered by the navy. Three United States divisions, in 44 days of fighting, had managed to advance only 15,000 yards. On May 25, heavy rains added to United States troubles. Japanese suicide attacks continued with the result that, on May 31, the count of Japanese dead passed 60,000. On June 2, Naha airfield came under attack and Shuri was finally won. The fleet supported the land drive with everything it had. Five days later, the end was in sight. Pincer drives cut the remaining Japanese forces into two pockets, which were incessantly hammered by land and naval artillery and from the air. The three strongest Japanese hill positions fell on June 16, bringing 97 per cent of Okinawa under United States control.

By June 21, after 82 days of ferocious and costly fighting, Okinawa was declared won, with some mopping up operations still to be completed. Japanese dead amounted to 98,564, with 6,932 prisoners. Japanese airplane losses reached the gigantic figure of about 4,000. But the United

States forces had also suffered heavily, with 11,260 dead, among them the valiant Lieut. Gen. Simon B. Buckner, and 33,769 wounded. Thirty-three Allied ships were sunk, more than 50 heavily and more than 100 slightly damaged. The battle of Okinawa, called "decisive" by the Japanese premier when it began, turned out in fact to have been a decisive battle. After June 22, nothing could stop Allied air and sea power on their way to victory. On land, however, the fighting continued with heavy Japanese resistance on many fronts.

Chinese Mainland.—As available Japanese forces were not large enough to occupy all the parts of China wrested from the national government, the Japanese spread an intricate network of key strongholds over enormous areas. Japanese garrisons stretched from the Manchurian-Russian border along the Chinese coast to French Indo-China, Thailand (Siam), and Burma. As long as the Japanese army, numbering about two million on the Asiatic mainland, was on the offensive, as it had been most of the time since 1937, this occupational system worked smoothly. In the event of a defensive against strong and well-equipped forces, however, the system of scattered strongholds would contain elements of danger for the Japanese.

Early in 1945, it appeared that any large-scale Allied counteroffensive on the Chinese mainland was still remote and that the lifeline of Japanese conquest from Manchuria to Singapore was secure. To prevent possible Allied amphibious operations against the China coast, the Japanese, after the invasion of Luzon, struck out to strengthen their hold in China. They captured the key railroad center at Kukong, the United States airbases at Sichwan and Kanhsien (Kau-chow), and the mining center of Namyung. Chinese resistance was spirited but ineffective. The next Japanese move, late in March, was undertaken by at least five divisions, some of them from the Kwantung Army guarding the Soviet border. This drive reduced United States aerial support for the hard-pressed Chinese by forcing the evacuation of another airfield at Lachow.

But somber predictions from some sources about China's inability to continue resistance were not borne out by the facts. On April 7, Chinese Headquarters reported a victory in southwestern Hunan Province, removing the potential threat to Chungking and recapturing Lachow. Three weeks later the Japanese, after regrouping, pushed toward the United States airbase at Chih-kiang. As United States air power was the most effective modern weapon in China, steps had to be taken to counter this threat. United States Lieut. Gen. Albert-C. Wedemeyer disclosed plans for the co-ordination of American and Chinese efforts to deal effective blows to the enemy. His announcement was immediately followed by a successful Chinese drive to cut the highway to Shanmen, escape route for 60,000 Japanese troops. On May 20, Chinese forces entered the port city of Foochow after a see-saw battle.

On June 2, the Japanese lines near Paoking (Shaoyang) in Honan province gave way and the bastions of Tantow and Chikoupu fell to the Chinese. With the Japanese position in southern China deteriorating and no reinforcements available, signs multiplied that the Imperial forces were preparing to abandon large areas and withdraw to the north in order to concentrate their defenses. This move inevitably exposed Indo-China to the Allies. On June 9, Chinese troops captured the cities of Chungching and Cao-bang

on the Indo-Chinese border, while other forces took Szelo in Hunan Province, 23 miles from Indo-China. By June 17, Chiang Kai-shek's armies held 160 miles of the China coast and were pushing in the direction of Shanghai. Two weeks later, after capturing Luchow, the Chinese were only 145 miles from that prize port and their patrols also crossed into Indo-Chinese territory. American-trained Chinese, operating 450 miles west of Okinawa, and supported by Okinawa-based air power, seized Taichow.

The Japanese command, nervously expecting the next large-scaled Allied amphibious operation to be aimed at China, massed its reserves to strike near Amoy as a countermeasure. Twin Japanese drives opened on July 6, gaining 35 and 55 miles respectively along the coast, but they soon faded out when transportation broke down. On July 15, Chinese forces were nearing Kweilin, which was captured on July 27. Four Chinese armies were on the move, supplies flowed into China in increasing volume, and the United States air force roamed the skies in great strength in the battle zone, taking off from hard-won island bases. Three new airfields were put into operation around Kwangsi.

Both the United States struggle for the island bases and the British victories in Burma, which opened and secured the land route to China, helped to turn the tide of battle in China. Another important factor was the reopening of the Ledo-Burma Road into China late in January, after all traffic had been cut off for 33 months. The road was rechristened in honor of United States Gen. Joseph W. Stilwell, who had directed under extremely difficult conditions the construction of a new section of it, leading from India.

Reconquest of Burma.—From January 10 to February 5, British air and light naval units, in a spearheading operation, penetrated the waters of the Malayan coast. Meanwhile land fighting in Burma continued on a small scale. Early in March, the British stepped up their attacks and besieged Mandalay. By March 11, the city's citadel was seized. The Japanese countermove was political rather than military. The French puppet government in Indo-China was removed by the Japanese occupational authorities on the ground that French garrisons had attempted to co-operate with the advancing Allies.

During the third week in March, an amphibious threat to Japanese positions at the mouth of the Irrawaddy River took shape, menacing Japan's grasp on regions rich in oil, rice and tin. Japanese losses of 50,000 known dead during the 1944 campaign began to tell. The Allies had also suffered heavily, with 10,000 dead, 27,000 wounded, and 3,000 missing. Moreover, no less than 250,000 United States, British, and Chinese soldiers had been struck by illness. But Allied ability to replace losses increased from month to month, whereas that of the Japanese vanished. After capturing the rest of Mandalay by the end of March, the reinforced British Fourteenth Army captured Meiktila, cutting off 30,000 Japanese, while Chinese troops, retaking Lashio, opened an overland supply route to support a campaign into Thailand (Siam).

On April 7, Lord Mountbatten's Southeast Asia Headquarters triumphantly announced that the Japanese Fifteenth Army, pocketed between Mandalay and Meiktila, had ceased to exist as an organized fighting unit. Two other Japanese armies operating in that theater had suffered heavy casualties. It was the greatest Allied victory in Burma since the war began. Supplies

flown in by the Air Transport Command contributed considerably to the success.

Spearheaded by fast armored forces, the British Fourteenth Army, on April 28, advanced 64 miles toward Rangoon to a point only 54 miles from the Burmese capital. Heavy air blows hammered the retreating Japanese. On May 4, Rangoon was in British hands and Pegu, 50 miles north of Rangoon, was captured on the same day. With better roads secured by these gains, the mobility of the Allied forces improved. Even the monsoon season did not halt the Allied advance toward Thailand. The battle of Burma was officially declared at an end on July 28, with the Japanese Twenty-first Army annihilated.

Reconquest of Borneo.—Long isolated from the homeland, the Japanese invaders of Borneo saw all the wealth of this huge island become useless to their war effort. To the Allies, however, the recovery of Borneo meant access to extremely valuable raw materials (especially oil), and the consolidation of their strategic position. General MacArthur ordered an attack on the island. The initial phase was carried out by a sizable Australian amphibious force on May 2. The Australians went ashore first on Tarakan, an island of 150 square miles off the northeastern coast of Dutch Borneo. This was the first recovery of Dutch East Indies territory except for a few small footholds in New Guinea. After a week of fighting, the town and airbase of Tarakan fell to the Australians. On May 20, Japanese forces defending the remainder of the island were split and crumbled. On June 8, Tokyo reported Allied landings on Labuan Island, following an intense air bombardment.

After these preliminaries, the Australians achieved a successful landing on the Borneo mainland at Brunei Bay, driving toward the Brunei and Sarawak oil fields and rubber plantations. These fields were capable of supplying 20 per cent of the total Allied oil consumption and the quality of the oil was exceptionally high. The strategic location of the beachheads—700 miles from the Indo-China coast and 800 from Singapore—opened another bombing threat to these precarious Japanese conquests.

On June 16, the Australians had progressed 4 miles toward Brunei. On June 27, a heavy air bombardment hit Balikpapan in eastern Borneo. After five days of furious air attacks, the invasion began. Here again the Australians bore the brunt of the fighting, capturing Balikpapan harbor within one week after the initial landings. By July 15, the harbor had been opened to Allied shipping, while a 14-mile advance secured a valuable seaplane base. Although the size and topography of Borneo gave Japanese die-hards an opportunity to hold out indefinitely in the wilderness, concentric Allied assaults promised quick recovery of all objectives of economic or military importance.

The Great Assault.—Land operations, somewhat slowed down by vast distances and fanatical Japanese resistance, continued during the late spring and early summer. Although the Philippine campaign had entered its final stages in April, fighting against scattered Japanese defenders there lasted until the end of the war. The drive against Baguio, center of the Japanese mountain defenses in Luzon, began early in March and led to the capture of that town on April 28. On May 5, Davao, last large Philippine city still in Japanese hands, fell to United States forces. The United States Eighth Army completed the liberation of the island of Mindanao in June. Five

months and nineteen days after the initial landings, General MacArthur announced that the Luzon campaign was completed, with Japanese losses of 115,000 dead and United States casualties of 1,827 dead and 11,350 wounded.

Air and naval operations against the Japanese homeland steadily increased in intensity. On April 7, B-29's, protected by Iwo-based fighters, raided Tokyo and Nagoya. On April 14, another big incendiary raid hit the Imperial capital, climaxing a week of uninterrupted attacks against targets in Honshu and Kyushu islands. On April 28, six airfields on Kyushu were hit by B-29's. These last raids were heavily opposed by Japanese fighters. Japanese air resistance varied from nonexistent to furious. It became evident that the Japanese High Command was husbanding some of its air power to counter assaults on the most vital targets and to ward off the invasion of the homeland.

On May 2, 197 mining operations were carried out from the air in Japanese home waters, thus opening another stage of the siege and crippling what little coastal shipping and fisheries still existed. May 10 saw a combined air and naval action against Minami-Daito, an island only 200 miles east of the Ryukyus, deep in Japanese home waters. The coastal shipping of Korea was attacked the next day. The fury of United States assaults mounted during the following week, with attacks on Honshu, the Bonins, the Palaus, and the Marshall Islands. Two raids against Nagoya, carried out by 500 Superfortresses within three days, dropped 7,000 tons of bombs. The Malaya region came under heavy air attack later in May. On the 24th, 20 enemy vessels were sunk in the Java sea and 13 more were destroyed off Formosa.

On May 28 it was disclosed that the Eighth Air Force under Lieut. Gen. James H. Doolittle had been transferred from Europe to the Far East. On the Asiatic mainland, Japanese communications suffered a constant hammering from Indo-China to the Yangtze River. In Japan itself, Tokyo, Osaka, Nagoya, Kobe, and several smaller cities were blasted with thousands of tons of bombs. From June 3 to June 10, 85,000 tons of shipping were destroyed and 91,000 damaged. On June 14 and 15, a British task force hit Truk Island against weak opposition. After a week of attacks on smaller Japanese cities, the B-29's returned to their tactical objectives, smashing at four industrial centers on Honshu on June 25, oil refineries near Nagoya on the 26th, naval bases on June 28, oil refineries again the next day. The Japanese lifeline to Korea, once believed to be attack-proof because of its natural protection by numerous islands, was virtually cut by air raids which destroyed or heavily damaged 33 ships.

Apart from the heavy blows by B-29's and carrier planes, the air forces under Gen. Douglas MacArthur flew 135,000 sorties during the first six months of 1945, dropping 90,000 tons of bombs and destroying or heavily damaging 2,282,000 tons of shipping.

From July 1 to 3, Japan was hit again by 2,500 tons of demolition and gasoline-jelly incendiary bombs. On July 7, 600 B-29's rained 4,000 tons on Kufu, Chiba, Shimizu, Akashi, and Shitsu. Tokyo was the target again on July 11, and 2,000 planes raided airfields and production centers the next day. The attackers were mostly unchallenged.

On July 10, the United States Third Fleet, under Admiral William T. Halsey, set out on a

record strike against the main enemy islands. The warships shelled Honshu and Hokkaido, with special attention to the iron producing city of Kamaishi. The fleet moved within rifle shot of the shore, but met no opposition. Carrier based planes carried out 6,000 sorties during 11 days of operations, while B-29's dropped 12,000 tons of fire bombs. Six United States battleships, the British battleship *King George V*, and a great number of smaller naval units, some of them British, hit the industrial region near Tokyo, where 500,000 people were engaged in war work, with 8,000 tons of explosives.

On July 21, the Potsdam Declaration of the Allies, still not including the Soviet Union, warned the Japanese to surrender unconditionally or face total destruction. The Japanese emperor was not mentioned in the declaration.

Although the invasion of Japan proper did not seem imminent and experiences on Iwo and Okinawa indicated how fanatically the Japanese could fight, Japan's situation was hopeless. With the Imperial armies on the Chinese mainland unable to get supplies and scattered forces all over the western Pacific islands cut off and doomed to slow starvation, the arms of the Japanese octopus had atrophied. The main Japanese armies had not yet suffered defeat, but their final defeat was assured. Kamikaze fliers and other fanatics could not change the inevitable outcome. Japan's only hope was to prolong the war to a point where the Allies might be willing to accept something less than unconditional surrender.

The remnants of the Japanese Navy were mostly bottled up in the Kure naval base and the shipyards of Okayama and Fukuyama. On July 24, 1,500 carrier-based planes attacked these strongholds, continuing their raids on July 25, 27, and 28. The toll amounted to 26 warships and 208 merchant ships sunk or damaged, including nearly all of Japan's few remaining large naval units—a super-Pearl Harbor in reverse. United States destroyers entered Tokyo Bay itself to attack a convoy and returned without a scratch. On July 30, the Third Fleet again shelled Japan and remained in Japanese home waters for further action.

On August 5, it was announced that MacArthur's command had been extended to the Ryukyus and that a mighty invasion force was being forged under his direction for the final conquest of Japan. Twelve Japanese cities were warned by leaflets of impending destruction from the air.

The Death Blow.—On August 6, at 10:20 A.M., President Truman disclosed that an American airplane had dropped one atomic bomb on Hiroshima 16 hours before. This one 400-pound bomb—equal in explosive force to 20,000 tons of TNT—wiped out 60 per cent of the city of 375,000 inhabitants. The atomic bomb, tested very secretly in New Mexico on July 16, was the only entirely new weapon used in the Second World War. All others were merely improved versions of existing devices. (See ATOMIC BOMB.) The Japanese Cabinet met on August 7 to discuss the new situation.

On August 8, two more heavy blows fell: Another atomic bomb hit Nagasaki and Russia declared war on Japan. All Japanese hopes of prolonging the war disappeared. With the use of the atomic bomb, Japan's power to resist indefinitely was broken and the total destruction threatened by the Potsdam Declaration became a frightfully imminent reality. With Russia in the

war, the Allies were sure to gain springboards for invasion much closer to the Japanese mainland than any they already held. As soon as the Red armies had advanced through Korea and Japanese-held Sakhalin, pincers could develop across the strait of Tsushima from Korea and across Perekop Strait from Southern Sakhalin. Without a navy, not even the Kamikazes could delay or block such an invasion and no land army could offer prolonged resistance in a country laid waste by atomic missiles.

On August 10, 93 days after Germany's capitulation, Japan sued for peace through Swedish and Swiss intermediaries, interpreting the Potsdam declaration as permitting the emperor to retain his prerogatives. On August 11, the Allies, including the Soviet Union, replied that they did not object to the emperor's retention of the throne provided he took orders from the Supreme Allied Commander. After some stalling, the Japanese government announced its acceptance of Allied terms on August 14. Gen. Douglas MacArthur, named as Supreme Commander for all Allied forces, accepted the official Japanese surrender on the United States battleship *Missouri* on September 2. Japanese forces in the far-flung theaters of war surrendered individually to local Allied commanders, thus reducing the empire to its home islands.

The Japanese reported 240,000 killed by aerial bombardment (90,000 of them by the two atomic bombs¹), 420,000 injured (180,000 of them at Hiroshima and Nagasaki), and 9,200,000 homeless. B-29 attacks accounted for the destruction of 50.8 per cent of Tokyo, 31.2 per cent of Nagoya, 25.6 per cent of Osaka, 56 per cent of Kobe, 32.8 per cent of Kawasaki, and 44 per cent of Yokohama, with damage in smaller towns ranging up to almost 90 per cent. Japanese propagandists endeavored to describe Japan's defeat exclusively to the atomic bomb (and Emperor Hirohito's "noble desire" to save lives). They ignored the effect of Russian intervention as far as they could.

Russian Intervention.—It was secretly agreed at Yalta that the Soviet Union would enter the war against Japan within three months after V-E Day. This obligation was fulfilled. The Far Eastern Independent Red Banner armies, as they were called to distinguish them from the Russian forces in Europe and western Siberia, were very useful to the Allies even before they entered the war. Their very presence along the Manchurian, Korean, and Sakhalin borders immobilized the Japanese Kwantung armies, numbering almost 1,000,000 men, and prevented them from interfering in the battle of the Asiatic mainland.

The brief Russian Far Eastern campaign was more of an occupation than a war, although Moscow bulletins reported some heavy Japanese resistance, losses of almost 30,000 men, and the capture of about 450,000 prisoners. Three Russian armies, under the Supreme Command of Marshal Alexander M. Vasilevsky, took part in the campaign. The First Independent Red Banner Army, under Marshal Kyrill A. Meretskov, advanced from the region of Vladivostok in a twin drive to the Manchurian communication center of Harbin and—supported by the Red Banner Fleet—toward Rashin and Seishin in Korea. The Japanese Fleet was so thoroughly smashed that it could not even hold off the weak and obsolete Russian Navy. A separate group of Meretskov's forces occupied the southern part of

¹ This figure later was said to have risen to 156,000, 80 per cent of which was in Hiroshima.

Sakhalin, while parachute units carried out the occupation of strategic islands in the Kuriles. The Second Independent Red Banner Army, under General Purkajev, took off at Khabarovsk, moved against Harbin through the Sungari River valley, and continued to Mukden, Port Arthur, and Dairen. The Third (Transbaikalian) Army, led by Marshal Rodion Y. Malinovsky, conqueror of Vienna and Budapest, drove south and west from Outer Mongolia, completing the occupation of Manchuria and cutting off the northern divisions of the Japanese Kwantung Army and Manchurian puppet forces. The Soviet Union concluded a treaty of friendship with the Chungking government, pledging nonintervention in Chinese internal affairs. United States efforts to promote an understanding between Chungking and Yenan forces—while supporting the former—tended to lessen the threat of a large-scale civil war in China.

It was agreed at the Moscow Conference late in December that both Russian and United States forces should be withdrawn from China soon.

Thus ended the military phase of the most stupendous, and the most destructive war the world has ever known. (See also AMPHIBIOUS WARFARE.)

Major, Austrian Army; Author of *Phantom Victory; Blitzkrieg and Bluff*.

GENERAL MARSHALL'S REPORT

Some weeks before he retired as chief of staff of the United States Army, a position he had held for six years, General of the Army George C. Marshall submitted to the secretary of war his biennial report covering the period July 1, 1943, to June 30, 1945. Taken in connection with his report for the biennium July 1, 1941, to June 30, 1943, General Marshall has supplied one of the most authoritative and interesting histories of the Second World War that has yet appeared in print. In it, Great Britain and the Soviet Union are given full credit for refusal to accept what appeared to be inevitable defeat in the early days of the war, which General Marshall says, "was the great factor in the salvage of our civilization." To this he adds: "Of almost equal importance was the failure of the enemy to make the most of the situation. In order to establish for the historical record where and how Germany and Japan failed, I asked General Eisenhower to have his intelligence officers promptly interrogate the ranking members of the German High Command who are now our prisoners of war. The results of these interviews are of remarkable interest. They give a picture of disension among the enemy nations and lack of long-range planning that may well have been decisive factors of this world struggle at its most critical moments. As evaluated by the War Department General Staff, the interrogations of the captured German commanders disclose the following:

"The available evidence shows that Hitler's original intent was to create, by absorption of Germanic peoples in areas contiguous to Germany and by the strengthening of her new frontiers, a greater Reich which would dominate Europe. To this end Hitler pursued a policy of opportunism which achieved the occupation of the Rhineland, Austria, and Czechoslovakia without military opposition.

"No evidence has yet been found that the German High Command had any over-all strategic plan. Although the High Command approved

Hitler's policies in principle, his impetuous strategy outran German military capabilities and ultimately led to Germany's defeat. The history of the German High Command from 1938 on is one of constant conflict of personalities in which military judgment was increasingly subordinated to Hitler's personal dictates. The first clash occurred in 1938 and resulted in the removal of von Blomberg, von Fritsch, and Beck and of the last effective conservative influence on German foreign policy.

"The campaigns in Poland, Norway, France, and the Low Countries developed serious diversions between Hitler and the General Staff as to the details of execution of strategic plans. In each case the General Staff favored the orthodox offensive, Hitler, an unorthodox attack with objectives deep in enemy territory. In each case Hitler's views prevailed and the astounding success of each succeeding campaign raised Hitler's military prestige to the point where his opinions were no longer challenged. His military self-confidence became unassailable after the victory in France, and he began to disparage substantially the ideas of his generals even in the presence of junior officers. Thus no General Staff objection was expressed when Hitler made the fatal decision to invade Soviet Russia.

"When Italy entered the war Mussolini's strategic aims contemplated the expansion of his empire under the cloak of German military success. Field Marshal Keitel reveals that Italy's declaration of war was contrary to her agreement with Germany. Both Keitel and Jodl agree that it was undesired. From the very beginning Italy was a burden on the German war potential. Dependent upon Germany and German-occupied territories for oil and coal, Italy was a constant source of economic attrition. Mussolini's unilateral action in attacking Greece and Egypt forced the Germans into the Balkan and African campaigns, resulting in over-extension of the German armies which subsequently became one of the principal factors in Germany's defeat.

"Nor is there evidence of close strategic coordination between Germany and Japan. The German General Staff recognized that Japan was bound by the neutrality pact with Russia but hoped that the Japanese would tie down strong British and American land, sea, and air forces in the Far East.

"In the absence of any evidence so far to the contrary, it is believed that Japan also acted unilaterally and not in accordance with a unified strategic plan."

General Marshall closes this section of his report with the following comment: "Here were three criminal nations eager for loot and seeking greedily to advance their own self-interest by war, yet unable to agree on a strategic over-all plan for accomplishing a common objective."

The steps that led to Germany's defeat, as described by captured members of the High Command, are listed in General Marshall's report as follows:

(1) Failure to invade England; (2) the campaign of 1941 in the Soviet Union, where a sudden change in the weather brought disaster to Hitler's forces; (3) Stalingrad, where the Germans suffered a disastrous defeat; (4) invasion (Allied) of North Africa, which Hitler and Göring refused to believe would take place; (5) the Allied invasion of France, which all German headquarters expected and for the success of which they give credit to the Allied air arm; (6) the Ardennes counterattack, which was Hitler's

WORLD WAR, SECOND

GERMANS SURRENDER TO MONTGOMERY MAY 4, 1945.
General of the Infantry Kinzel signing the terms of surrender while Field Marshal Montgomery stands watching.

On September 2, 1945, Japanese Foreign Minister Mamoru Shigemitsu signed formal document of surrender aboard U.S.S. *Missouri*.

personal conception, and which had Antwerp as its objective; and (7) the crossing of the Rhine, which the Germans believed could be held until the loss of the Remagen bridge exploded this hope.

General Marshall states that the War Department General Staff's analysis of the Japanese objectives were as follows:

"The Japanese, for many years, bolstered by a fanatical belief in divine guidance and their own spiritual and military supremacy, had planned the domination of the Far East and eventually the world. Japan in her inland empire was not self-sufficient. She required broader land areas and access to oil, rubber, and other raw materials if she were to become a major industrial world power. This principle of expansion was outlined in the 'Tanaka Memorial' purportedly a secret memorandum prepared for Hirohito by the Jap Premier in 1927. Authentic or not, it provided the pattern which Japan has followed, culminating in the great Pacific conflict.

"Strategically, Japan was well poised in 1941 to carry out her aims in Asia. All the major world powers who normally maintained the status quo in Asia were absorbed in the war in Europe. France had been overrun and eliminated. England was threatened by German invasion. The U. S. S. R. was attempting to repel a German invasion on her Western front reaching to the gates of the capital. The United States had become the Arsenal of Democracy, with major efforts directed toward the support and preservation of our European Allies.

"The Tripartite Pact had been signed, giving Japan a free hand in Asia. She had a large and relatively well-equipped army and a moderately good air force well trained by actual combat in China. She had obtained by forced agreement a staging area in French Indo-China. She had a fairly large navy especially strong in the transport craft available. She had accumulated by great national economy a good stockpile of strategic materials at home for the initial effort and with each successive conquest she obtained new and important areas from which other supplies of materials could be drawn, such as oil, rubber, and metal. The Japanese mistakenly believed in the hearty co-operation of 'liberated' peoples of the so-called Greater East Asia Co-Prosperity Sphere with their huge labor pools. Japan considered herself ready to strike.

"Japan's objective was the conquest, consolidation, and eventual domination of the whole Far East. She intended to make her conquest in a rapid surprise drive which would overpower all resistance, to form an iron ring of outer defenses against which the spiritually inferior, pacifistic combination of opponents could beat themselves into weariness, while she consolidated her gains at leisure.

The report added that the best estimate of Japan's plan for the accomplishment of her objectives appears to have been the following:

(1) Neutralize or destroy the United States Pacific Fleet by an attack on Pearl Harbor; (2) drive rapidly south overcoming the Philippines and the Southwest and South Pacific Islands in order to cut sea routes of supply or attack from the East and gain the vast natural resources of the East Indies; (3) cut China's supply line from the west by an invasion of Burma; (4) form a flank by the seizure of the naval base of Singapore and the islands of Sumatra and Java; (5) isolate or possibly invade Australia; (6) invade the Hawaiian Islands via Midway; (7) in-

vade the Aleutian Islands to form a northern flank, dependent on initial successes and retained momentum; (8) bring the American Northwest under aerial bombardment, raid our west coast aviation industries, and then seize critical areas; and (9) stimulate unrest to eventual revolution in India.

General Marshall adds that the Japanese strategic plan initially failed when she missed the opportunity of landing troops on Hawaii, capturing Oahu and the important bases there, and denying us a necessary focal point from which to launch operations in the Western Pacific. "There can be no doubt," said General Marshall, "that the greed and the mistakes of the war-making nations, as well as the heroic stands of the British and Soviet peoples saved the United States a war on her own soil. The crisis had come and passed at Stalingrad and El Alamein before this Nation was able to gather sufficient resources to participate in the fight in a determining manner."

The foregoing information is taken from the introduction to General Marshall's report. In succeeding pages he deals in more or less detail with the "Victory in Europe," its strategic concept, the fall of Italy, "Operation Overlord," or the invasion of Normandy and the liberation of France; the advance into Germany, and the final knockout of the Nazi forces. The report then takes up under the title "Victory over Japan," the war in the Pacific, covering each phase of it in more or less detail from its beginning with the sneak attack of Japan on Pearl Harbor to the final surrender of the Japanese aboard the battleship *Missouri* in Tokyo Bay. Final chapters carry such headings as "Occupation," "Our Weapons," "The Troops," "Price of Victory," "Beyond the Call of Duty," "Information and Recreation," "Army Management," "Demobilization," and "For the Common Defense." All together it is a magnificent report—one of the finest ever made by a high military officer of any country.

WORLD WAR CHRONOLOGY FOR 1945. The following chronological list presents a summary of the principal events of the Second World War and certain phases of its aftermath during the year 1945. Chronologies of the war for 1941, 1942, 1943, and 1944 will be found in *THE AMERICANA ANNUALS* for 1942, 1943, 1944, and 1945.

GENERAL

Jan. 18—Admiral Sir Harold M. Burrough appointed naval commander of Allied Expeditionary Forces under Gen. Dwight D. Eisenhower, succeeding late Admiral Sir Bertram Ramsey.

Jan. 22—Maj. Gen. Curtis E. Le May moved from 20th Bomber Command in India and China to head 21st Bomber Command in Marianas, replacing Brig. Gen. Haywood S. Hansell, Jr., who is returning from the latter command to Washington for undisclosed appointment.

Jan. 24—Lieut. Gen. Ben Lear, commander of U.S. Army Ground Forces in the U.S., appointed deputy commander in European theater.

Gen. Andrew G. L. McNaughton, Canadian defense minister, states that North Atlantic is alive with Nazi U-boats which are sinking Allied boats day by day.

Jan. 25—Secretary of War Henry L. Stimson announces assignment of Gen. Joseph W. Stilwell as commander of Army Ground Forces in the U.S., succeeding Lieut. Gen. Ben Lear.

Jan. 28—Admiral Chester W. Nimitz moves U.S. Pacific Command headquarters from Pearl Harbor to Guam.

Feb. 23—Turkey declares war on Germany and Japan.

Feb. 24—Premier Ahmed Maher Pasha of Egypt is shot and killed in Parliament after reading royal decree, declaring war against Germany and Japan.

Feb. 26—Gen. Douglas MacArthur turns civil government of Philippines over to their president, Sergio Osmeña. Syria declares war against Germany and Japan, third nation of Middle East to take such action in 4 days.

- Feb. 28—Korean provisional government in Chungking declares war against Germany.
- Mar. 1—Most of Saudi Arabia goes to war with Germany and Japan.
- Mar. 13—President Roosevelt nominates 9 lieutenant generals of army for temporary promotion to rank of full general: Joseph T. McNarney, Omar N. Bradley, Walter Krueger, Brehon B. Somervell, Carl Spaatz, George C. Kenney, Mark Clark, Jacob L. Devers, and Thomas T. Handy.
- Mar. 22—Field Marshal Albert Kesselring replaces Field Marshal von Rundstedt as supreme German commander on western front.
- Mar. 27—Argentina declares war on Japan and Germany, directing declaration primarily against Japan on grounds that it attacked U.S. at Pearl Harbor; declaration of war against Germany justified by fact that Germany is Japan's ally.
- Apr. 5—U.S. Joint Chiefs of Staff announce appointments of General of the Army Douglas MacArthur and Fleet Admiral Chester W. Nimitz as commanders, respectively, of all army and navy forces in entire Pacific theater for coming decisive phases of war against Japan.
- Apr. 7—American Third Army troops find German gold reserve in Merkers salt mine, containing approximately 100 tons of gold bullion, plus \$2,000,000 in American currency; 1,000,000 francs in French currency; 110,000 pounds in British currency; 4,000,000 Norwegian crowns; and lesser amounts in other currency.
- Apr. 11—Spain breaks diplomatic relations with Japan because of Japanese troop brutalities against Spanish citizens in Battle of Manila.
- Apr. 12—President Juan Antonio Rios and all Chilean Cabinet members sign decree announcing existence of state of belligerency between Chile and Japan.
- Apr. 17—War Department announces redeployment of men and matériel from Europe to Pacific has begun.
- Apr. 24—Lieut. Gen. Barney M. Giles, deputy commander of Army Air Forces and chief of air staff, named commanding general of the AAF in Pacific Ocean areas.
- Apr. 26—Reich Marshal Hermann Göring, founder and commander of the Luftwaffe, resigns command; replaced by Col. Gen. Robert Ritter von Greim, who was promoted to field marshal immediately.
- May 2—Grand Admiral Karl Doenitz, successor to Hitler, dismisses Joachim von Ribbentrop as foreign minister; appoints Count Lutz Schwerin von Krosigk as his successor.
- May 6—Portugal severs diplomatic relations with Berlin on ground that there is no longer responsible German government.
- May 10—René Pleven, French finance minister, informs President Truman that France has 2 divisions of 30,000 men ready to go into action against Japan.
- May 14—First U-boat to surrender off American shores, surrenders 44 miles off Cape May, N.J.
- May 15—Allies take over about 475 naval and merchant vessels, including transatlantic liner *Europa*, found in north German ports.
- President Truman nominates Vice Admiral Richmond K. Turner for promotion to full admiral.
- May 17—The 27,000-ton U.S. aircraft carrier *Franklin* reaches Brooklyn Navy Yard, completing 12,000-mile voyage after being severely damaged and suffering 832 of her crew dead or missing and 270 wounded, by direct hits from lone Japanese dive bomber in Inland Sea, 60 miles off coast of Japan, on March 19.
- May 21—War Department announces that U.S. First Army is "on the move" from Europe to Pacific by way of U.S.
- May 23—British Minister of Petroleum Warfare reveals that 20 pipelines were laid under English Channel from Britain to France to supply gasoline to Allied armies fighting in Germany. Achievement, known as Operation Pluto—or Pipelines Under the Ocean—was entirely British.
- May 29—Vice Admiral Isaburo Ozawa replaces Admiral Soemu Toyoda as commander in chief of Japanese combined fleet and as commander of naval escorts command.
- June 10—Marshal Gregory K. Zhukov presents General Eisenhower and General Montgomery with Russia's highest award, jeweled Order of Victory.
- June 12—King George of England makes General Eisenhower first American member of Order of Merit.
- June 14—General Eisenhower receives Cross of Liberation from General de Gaulle, highest honor France can bestow.
- June 18—Lieut. Gen. Simon Bolivar Buckner, Jr., Tenth Army commander on Okinawa, killed by Japanese artillery shell.
- June 21—General MacArthur names Gen. Joseph W. Stilwell to lead U.S. Tenth Army, succeeding Lieut. Gen. Simon Bolivar Buckner.
- June 22—Lieut. Gen. Roy S. Geiger succeeds Lieut. Gen. Holland M. Smith as chief field commander of Marine Corps.
- July 10—Fleet Admiral Chester W. Nimitz announces that command of Army Air Forces in Ryukyus area has been transferred to General MacArthur, with Admiral Nimitz retaining command of Naval Air Forces, including Marine aviators in Ryukyus, and on Iwo.
- July 12—Col. Oveta Culp Hobby, organizer and director of Women's Army Corps, resigns post effective September 3; succeeded by Lieut. Col. Westray Battle Boyce.
- July 13—Italy declares war on Japan.
- Supreme Headquarters Allied Expeditionary Forces in London comes to end.
- July 14—Maj. Gen. Clare Chennault resigns as commander of U.S. Fourteenth Air Force in China; announces he will retire upon return to United States.
- July 18—Lieut. Gen. George E. Stratemeyer arrives in Chungking and assumes command of U.S. Army Air Forces in China theater.
- July 29—Famed British Eighth Army disbanded.
- July 30—Dissolution of Mediterranean Allied Air Forces announced by Field Marshal Sir Harold R. L. G. Alexander.
- Aug. 4—General MacArthur's Pacific army command is extended to Ryukyu Islands, thus for first time giving him control of conquered Japanese soil.
- Aug. 5—British Admiralty reveals that phantom fleet of wooden warships, fitted out to resemble big Royal Navy battlewagons, hoaxed enemy reconnaissance aircraft for 2 years.
- Aug. 8—Russia declares war on Japan.
- United States offers to transfer to Japan ship to replace *Awa Maru* which United States acknowledged had been sunk by American submarine by mistake.
- Aug. 9—Lieut. Gen. George E. Stratemeyer, U.S. Army Air Forces commander in China, announces appointment of Maj. Gen. Charles B. Stone, 3d, to succeed General Chennault as commander of U.S. Fourteenth Air Force.
- Aug. 11—General of the Army Douglas MacArthur, commander in chief of U.S. Army forces in Pacific, designated Allied supreme commander to accept Japan's capitulation when it comes.
- Aug. 19—American parachutists find Lieut. Gen. Jonathan M. Wainwright, Japanese prisoner for more than 3 years, at prisoner-of-war camp at Sian, 100 miles northeast of Mukden, Manchuria.
- Aug. 21—Four of 8 airmen lost in attack on Tokyo led by General Doolittle in April 1942, are rescued by American parachutists, dropped on Japanese-occupied Peiping.
- Aug. 27—General MacArthur announces Lieut. Gen. Robert L. Eichelberger will head Eighth Army in occupation of Tokyo area.
- Sept. 5—President Truman nominates Lieut. Gen. Jonathan M. Wainwright for promotion to rank of general.
- Australian Defense Minister John A. Beasley states U.S. naval intelligence officers had "cracked" Japanese naval cipher code just before Battle of Coral Sea.
- Survivors of U.S. cruiser *Houston*, liberated from Japanese prison camps in Burma, tell horrifying stories of death of 20,000 out of 56,000 Allied prisoners, of starvation, disease, and fantastic cruelties.
- Oct. 10—Typhoon levels virtually every structure in southern section of Okinawa, destroying planes, battering shipping, leaving 2,000 hospital patients without shelter, and scattering mountains of food, leaving only enough for less than week.
- Oct. 12—Superfortresses rush tons of food to Okinawa's 150,000 isolated troops; 13 American sailors dead or missing, 100 soldiers injured as result of typhoon.
- Oct. 14—Lieut. Gen. Barney M. Giles appointed commander, U.S. Strategic Air Forces in Pacific, succeeding Gen. Carl A. Spaatz.
- Oct. 24—United Nations Charter comes into force after final ratification by 29 United Nations, including Russia, 29th to sign; protocol signed by Secretary of State Byrnes.
- Nov. 20—President Truman appoints General of the Army Dwight D. Eisenhower to succeed General of the Army George C. Marshall as chief of staff of the army, and Fleet Admiral Chester W. Nimitz to succeed Fleet Admiral Ernest J. King as chief of naval operations. Gen. Joseph T. McNarney will succeed General Eisenhower, and Admiral Raymond A. Spruance will succeed Admiral Nimitz.
- Dec. 15—Preparatory commission of United Nations Organization votes to place headquarters of new world peace organization in U.S.
- Dec. 16—Big Three Foreign Ministers Conference opens in Moscow.
- Dec. 24—Big Three foreign ministers in Moscow announce the peace treaty issue upon which the London Conference failed has been settled along lines suggested in Secretary Byrnes' compromise, and agree to call 21-nation peace conference by May 1, 1946, to consider peace treaties with Italy, Rumania, Bulgaria, Hungary, and Finland.
- Dec. 26—Among decisions at Big Three Conference is Russia's agreement to join Far Eastern Commission in return for 4-nation Japanese Control Council with each member retaining veto power.
- Big Three Foreign Ministers Conference in Moscow ends.
- Lieut. Gen. Le Roy Lutes is appointed commander

of Army Service Forces, succeeding Gen. Brehon B. Somervell.

- Dec. 28—Admiral John H. Towers designated as commander in chief of the Pacific Fleet and Pacific Ocean areas, succeeding Admiral Raymond A. Spruance, who becomes president of the Naval War College.

EUROPEAN THEATER

- Jan. 1—American Third Army launches third attack on southern flank of German salient in Belgium north of Bastogne.
- Jan. 4—Berlin radio states that present German drive has caused General Eisenhower to shelve all plans for Allied winter drive into the Reich.
- Canadians capture Convettello and continue to advance in eastern Po Valley.
- Jan. 5—Russians crush big German drive northwest of Budapest.
- Jan. 7—Canadians troops trap several hundred Germans in swamplands north of Ravenna, Italy.
- Jan. 10—Germans retreat all along western front, saving most of their men and equipment.
- Jan. 13—Red Army opens winter offensive in south central Poland, advancing 25 miles on 37-mile front to within 71 miles of industrial German Silesia.
- Jan. 16—Fighting on home ground, Norwegian troops advance 80 miles to join Russian forces in liberated east Finnmark, capturing Nazi air base at Banak.
- Jan. 17—Warsaw captured by Soviet and Polish troops.
- Jan. 19—Red Army reaches border of German Silesia, captures Polish cities of Lodz, Krakow, and Tarnow, and advances 31 miles inside East Prussia.
- Jan. 24—German troops withdraw from western front.
- Jan. 26—Red Army troops advance to Bay of Danzig, completing encirclement of East Prussia.
- Jan. 29—American troops break back into Germany from Ardennes bulge south of St. Vith.
- Feb. 1—U.S. First and Third armies liberate virtually all of Belgium and Luxembourg from Germans.
- Feb. 2—American 2d Division penetrates thickest part of Siegfried Line; American and French troops reach center of Colmar, third largest city of Alsace.
- Feb. 5—Red Army captures Zellin, Germany, within 33 miles of capital. Marshal Zhukov's drive to Oder River marks 280-mile advance in 23 days.
- First concerted offensive in 3 months made against German defenses below Bologna, Italy, gain being 500 to 600 yards.
- U.S. Third Army, smashing through Siegfried Line, hits key communications center before Prüm, Germany, and seizes control of two vital Roer River dams.
- Feb. 7—Gen. George S. Patton's Third Army invades Reich at 10 points; strikes across Sauer and Our rivers.
- Feb. 8—Canadian First Army, part of Field Marshal Bernard L. Montgomery's Twenty-first Army Group, starts offensive against northern end of Siegfried Line.
- Feb. 10—Germans dynamite Schwammenauel Dam, flooding Roer River valley.
- Feb. 12—U.S. Third Army captures key center of Prüm.
- Feb. 13—American 92nd Division forced back to original position south of Strettoia, Italy, suffering many casualties and loss of equipment.
- Budapest, Hungary, falls to Red Army after 50-day siege. Troops killed or captured number 159,000, and included commander of Germans, General Pfeiffer-Wildenbruch with his staff.
- Feb. 16—Hitler proclaims martial law for Reich; recent reports state that 3,400 Germans were taken prisoner in fall of Budapest, making total casualties in Battle of Budapest 181,850 killed or captured.
- Feb. 19—Scottish troops of Canadian First Army virtually clear town of Goch.
- Feb. 23—Russian troops complete conquest of Polish fortress city of Posen and seize Pomeranian rail hub of Arnswalde.
- Feb. 24—U.S. Third Army advances 4 miles beyond Roer River, capturing 21 German towns and villages; First Army captures half of Dueren.
- Feb. 27—Canadian First Army captures Calcar.
- Mar. 3—U.S. Ninth and Canadian First armies join in the Rhine-Meuse corridor and push toward Rhine.
- Mar. 4—Allies announce landing of troops on Pisopi (Tilos) Island in Dodecanese group, night of February 28, 35 miles from Turkish coast and 25 miles northwest of Rhodes.
- Mar. 5—U.S. Fifth Army in Italy occupies strategic Mount Della Croce, west of Pistoia-Bologna highway.
- Mar. 6—Cologne, fourth largest city in Germany, falls to U.S. First Army; U.S. Third Army gains 30 miles, reaching point 20 miles from Coblenz.
- Mar. 7—U.S. First Army crosses the Rhine at Remagen, the first time an invading army had crossed the river since 1805.
- Mar. 8—U.S. First Army crosses Rhine River between Cologne and Coblenz; establishes bridgehead on eastern bank; to the north other First Army troops enter Bonn.
- Mar. 9—Reports from Paris reveal Allied armies have captured 1,009,657 German prisoners since first landings in Normandy, June 6, 1944.
- New American army, Lieut. Gen. Leonard T.

Gerow's Fifteenth, is added to General Bradley's forces, making more than 1,000,000 Americans under that leader.

U.S. First Army completes capture of Bonn, 12½ miles north of Rhine bridgehead at Remagen.

- Mar. 17—Third Army overruns Coblenz, historic German city.

Ludendorff (Remagen) railroad bridge, spanning Rhine between Remagen and Erpel, collapses 10 days after U.S. First Army stormed across it after thwarting Nazi efforts to blow it up, causing worst episode of accidental Allied casualties of the war.

- Mar. 19—More than 1,000 Third Army tanks sweep through rapidly diminishing Saar-Moselle-Rhine triangle.

- Mar. 20—The 4th Armored Division of U.S. Third Army captures Worms, 19th Infantry Division captures Mainz, and 10th Armored Division clears railroad center of Kaiserslautern; Seventh Army troops capture Saarbrücken and Zweibrücken.

- Mar. 21—U.S. Third Army enters Ludwigshafen on Rhine; Seventh Army, now linked with Third at 2 points, enters Homburg.

- Mar. 22—U.S. Third Army establishes bridgehead over Rhine 4½ miles north of Ludwigshafen.

- Mar. 24—General Montgomery's British Second Army and U.S. Ninth Army push across Rhine at 4 places from south of Wesel north to Rees.

- Mar. 28—Russians capture Baltic port of Gdynia.

British Second Army makes breakthrough on Westphalian Plain, reaching Dorsten.

- Mar. 30—Russian troops capture Baltic naval base of Danzig, seizing 45 German submarines.

- Apr. 1—German radio announces formation of Werewolves, guerrilla organization to wage suicide war on Allied soldiers and Germans who collaborated with them.

- Apr. 3—The 11th Armored Division of British Second Army enters Osnabrück, 63 miles from Bremen.

In first amphibious operation of Italian campaign since Anzio, British troops land on east shore of Comacchio Lagoon.

- Apr. 4—Red Army captures Bratislava, Slovak capital, while their southern offensive pushes last Germans from Hungarian soil.

- Apr. 5—Schwarze Korps, Nazi paper run by Heinrich Himmler, Gestapo chief, reports that Germany now is "only days or perhaps weeks from absolute collapse."

- Apr. 9—Soviet troops capture Königsberg.

Allies advance along 300-mile front from Bremen to Stuttgart.

- Apr. 10—British Eighth Army in Italy launches spring offensive, crossing Senio River on wide front in general vicinity of Lugo.

- Apr. 12—British Eighth Army troops cross Santerno River between Tossignano and Comacchio Lagoon, and advance on 30-mile front.

- Apr. 13—Red Army completes occupation of Vienna.

- Apr. 15—Polish troops of British Eighth Army capture Imola, 20 miles from Bologna.

- Apr. 16—Hitler issues order of day asking Germans to drown Russians in sea of blood and hold Berlin at all costs.

U.S. Fifth Army captures Vergato, 17 miles southwest of Bologna.

- Apr. 18—U.S. Ninth Army captures Magdeburg; Third Army smashes into Czechoslovakia near Asch, cutting Germany in two; Seventh Army invades Nuremberg; French troops take Freudenstadt and Oberkirch and reach Dinglingen.

British Eighth Army captures Argenta.

- Apr. 19—U.S. First Army captures Leipzig and Halle.

- Apr. 20—U.S. Fifth Army smashes into Po Valley near Bologna; British Eighth Army moves up Adriatic coast to within 8 miles of Ferrara.

British Admiralty and U.S. bombing headquarters jointly announce first use by Eighth Air Force of rocket-propelled bomb with extreme penetrative and explosive power against E-boat pens at Ijmuiden, the Netherlands, on February 10 and March 14.

- Apr. 21—Red Army enters Berlin.

American, Polish, and Italian troops of U.S. Fifth and British Eighth armies capture Bologna.

- Apr. 24—U.S. Fifth Army troops cross Po River at several unrevealed points, capturing Modena; British Eighth Army occupies Ferrara.

- Apr. 25—U.S. First Army meets with First Ukrainian Army at Torgau on Elbe, 28 miles northeast of Leipzig.

Russians complete encirclement of Berlin.

- Apr. 26—British troops capture Bremen; U.S. Third Army captures Eger in Czechoslovakia, enters Regensburg, crosses Danube on both sides of city, and takes Kelheim to the west; Seventh Army crosses Danube to take Genderkingen; French capture Constance at the Swiss border.

General Eisenhower issues direct order halting Ninth Army at Elbe to await arrival of Russian forces from the east, thereby leaving capture of Berlin to Red Army; it is also understood that U.S. First and Third, and British and Canadian armies received similar orders to halt at Elbe.

Fifth and Eighth armies press toward Brenner Pass

after having driven across Po Valley and captured cities of Verona and Parma.

Soviet troops capture Baltic port of Stettin.

Apr. 27—U.S. Fifth Army enters Genoa.

Apr. 28—U.S. Seventh Army sweeps over Austrian frontier at two points; Third Army takes Augsburg.

In Italy, Allied troops seize Bergamo, 30 miles from Swiss border and 125 miles from Brenner Pass; take Brescia, 30 miles southeast of Bergamo.

Apr. 29—U.S. Fifth Army enters Milan, Italy; reaches Como and north end of Lake Garda; British Eighth Army captures Venice, after seizing Mestre, 5 miles to northwest.

Apr. 30—U.S. Seventh Army captures Munich; reaches point 13 miles from Innsbruck; U.S. Ninth Army makes second junction with Red Army forces at Apollensdorf on Elbe; First Army makes contact with Russians around Wittenberg.

Dachau, Germany's most dreaded extermination camp northwest of Munich, captured by Americans, freeing 32,000 inmates.

Gen. Mark W. Clark states that German ground forces in Italy have been virtually eliminated, as Turin, 30 miles from French border, falls to Allies.

May 1—Hamburg radio announces Hitler's death during the afternoon; Grand Admiral Karl Doenitz, German navy chief, proclaims himself the new Führer by Hitler's appointment.

British Eighth Army's 2d New Zealand Division meets with Marshal Tito's forces at Monfalcone, Italy, after 55-mile advance.

May 2—Red Army forces complete occupation of Berlin and win Baltic ports of Rostock and Warnemuende.

British troops seize Hamburg, Lübeck, and Wismar, 30 miles from Russians at Rostock.

War for Italy ends when hostilities cease under unconditional surrender signed by Germans on April 29 at Allied Headquarters in Caserta; terms apply to all northern Italy to Isonzo River in northeast and to Austrian provinces of Vorarlberg, Tyrol, and Salzburg, and portions of Carinthia and Styria.

May 3—Doenitz government of Germany moves to Copenhagen, Denmark.

Admiral Doenitz declares Prague, Czech capital, open city.

American, British, and Canadian fliers sink or damage more than 64 ships off Baltic coast of Schleswig-Holstein, carrying Germans attempting to flee from Reich toward Denmark and Norway.

Port of Trieste formally occupied by British Eighth Army's New Zealand 2d Division which joined Yugoslav Partisans there after 220-mile drive in 23 days.

May 4—Anglo-Greek forces raid German garrisons in Dodecanese Islands.

May 5—All German forces in Netherlands, Denmark, and northwestern Germany, including Helgoland and Frisian Islands, surrender to Marshal Montgomery.

U.S. Seventh Army drives through Brenner Pass to form junction with U.S. Fifth Army, capturing Berchtesgaden, Salzburg, and Innsbruck; U.S. Third Army advances to within 35 miles of Pilsen, Czechoslovakia.

Southern flank of German Army facing western Allies collapses when Army Group G surrenders to Gen. Jacob L. Devers and his Sixth Army Group.

Russians capture German naval base of Swinemünde, last big German Baltic port.

May 6—U.S. Third Army captures Pilsen and Karlsbad in Czechoslovakia, in only fighting on old western front.

May 7—Germany surrenders unconditionally to western Allies and Soviet Union at 2:41 A.M. French time (May 6, 8:41 P.M. Eastern wartime), as surrender is signed at Reims, France, for Germany by Col. Gen. Gustav Jodl, new chief of staff of the German Army; for Soviet Union by Gen. Ivan Susloparoff; for the United States, Great Britain, and other Allied nations by Lieut. Gen. Walter Bedell Smith, chief of staff for General Eisenhower; and for France by Gen. François Sevez.

Grand Admiral Karl Doenitz orders all German U-boats to cease fighting.

May 8—Germany's surrender is formally ratified in Berlin; peace in Europe comes technically at 12:01 A.M. May 9 (6:01 P.M. May 8, Eastern wartime).

May 10—Moscow announces that German forces in Czechoslovakia have refused to surrender to Russian troops and that bitter fighting was raging there more than 48 hours after official end of all hostilities.

May 13—Russian armies mop up German stragglers in Czechoslovakia, taking over 1,000,000 prisoners, including 91 generals.

AIR WAR OVER EUROPE

Feb. 2—Headquarters announces that American and British planes dropped 82,014 tons of bombs on German targets in January—most of them on Germany proper. U.S. Eighth Air Force, based in Britain, dropped 39,100 tons; U.S. Fifteenth Air Force, based in Italy, 6,164 tons; and British planes, 36,750 tons.

Feb. 12—British Air Ministry announces total weight of bombs and explosives dropped on Berlin since beginning of war to be 62,000 tons.

Mar. 1—U.S. heavy bombers dropped more than 51,000

tons of bombs on Germany in February. Losses for the month were 94 bombers, an all-time low, and 108 fighters.

Mar. 4-5—In first attacks since June 13, 1944, German planes raid Great Britain.

Mar. 12—London reports 484 civilians killed and 1,151 injured in Britain during February by enemy air action. January figures were 586 and 1,651.

Mar. 14—RAF drops world's biggest bombs, 11-ton missiles, 25 feet 5 inches long, on German main line rail viaduct at Bielefeld, north of Ruhr, in first attack with latest "secret weapon."

Mar. 26—London report states that at least 800 Netherlands civilians were killed, 1,000 injured, and 20,000 left homeless in bombing by error at The Hague, German-occupied capital of the Netherlands, by British planes on March 3.

Apr. 1—Headquarters announces that U.S. Eighth Air Force, based in Britain, dropped a record 73,500 tons of bombs on Germany in March, flew 44,900 sorties (28,500 by heavy bombers) and sustained a record low loss rate of about .5 per cent (138 bombers and 99 fighters). Fighters shot down 250 German planes in combat and destroyed 129 on the ground. Bombers gunners downed 31 Luftwaffe planes. RAF planes dropped 75,600 tons of bombs during the month, also a record.

Apr. 4—London dispatches report a new American warplane, the "droop-snoot" P-38, has been leading air attacks since May 1944. The plane, a fighter, carries a Norden bombsight and directs bombing with accuracy at a speed 50 per cent greater than that of regular bombers.

Apr. 17—London reports destruction during the day by Allied fliers of at least 440 additional German planes, bringing the April total to 4,139.

Apr. 19—RAF drops 12,000-pound volcano bombs on German island fortress of Helgoland.

Apr. 26—Prime Minister Winston Churchill tells British House of Commons that the German V-2 (huge stratospheric) bombs have stopped falling on England. Attacks began Sept. 8, 1944, the day after attacks by the smaller V-1 robot bombs ended, and lasted until Mar. 27, 1945. A total of 1,050 V-2 bombs reached England, killing 2,754 persons and seriously wounding 6,523.

May 23—Paris headquarters reports that in 19 months of operations against Germany the U.S. Ninth Tactical Air Force made nearly 400,000 flights and destroyed 4,228 German planes against a loss of 2,944 planes.

June 16—The British Air Ministry announces that the RAF lost 16,385 planes in the European and Mediterranean theaters up to V-E Day. The Bomber Command lost 9,163 aircraft. Planes lost in European theater totaled more than 10,000.

Sept.—The U.S. *Stratigical Bombing Survey*, published in September, summarized the air war over Europe as follows:

	U.S. Army Air Forces	Royal Air Force ¹
Tons of bombs dropped (short tons)	1,461,864	1,235,609
Bomber sorties	754,818	687,462
Fighter sorties	991,750	1,695,049
Claimed enemy aircraft destroyed and probably de- stroyed	35,783	21,622
Bomber planes lost	9,949	11,965
Fighter planes lost ²	8,420	10,045
Personnel lost in action . . .	79,265	79,281
Bomber planes assigned to combat units ³	March 1945	April 1945
	7,177	6,956
Fighter planes assigned to combat units ³	May 1945	August 1944
	6,203	7,728
Personnel assigned to com- bat units ³	August 1944	July 1944
	619,020	718,628

¹ All Royal Air Force statistics are preliminary or tentative.

² Includes fighter bombers and reconnaissance planes.

³ Maximum strength of each air force.

PACIFIC THEATER

Jan. 9—American troops land on Luzon, largest of Philippine Islands.

Jan. 21—Pacific Fleet carrier planes bomb Okinawa Island, naval base in Ryukyu Archipelago, within 320 miles of Japan.

Jan. 29—On Bougainville, Australians advance 40 miles northward along coast in direction of Buka Passage. Superfortresses heavily bomb Iwo Island.

Jan. 30—U.S. Rangers under Lieut. Col. Henry Mucci and Filipino guerrillas led by Maj. Robert Lapham rescue 513 survivors of Corregidor and Bataan "death march" from Cabanatuan prison camp near Cabu, Luzon. Of the rescued, 486 are Americans, 23 British, 3 Netherlands, and 1 Norwegian.

Jan. 31—Gen. Douglas MacArthur announces new American landing on west coast of Luzon Island, the Philippines.

- Feb. 1—Superfortresses of 20th Bomber Command attack Singapore, destroying floating drydock.
- Feb. 6—General MacArthur announces fall of Manila and liberation of 5,000 prisoners, 4,000 of whom are Americans. Cavite Navy Yard and island of Corregidor remain in enemy hands.
- Feb. 7—General MacArthur enters Manila informally; visits Santo Tomas camp, receiving ovation.
- Feb. 11—Australian troops in Bougainville, Solomon Islands, drive Japanese from Simba Ridge. Ami, New Guinea, is occupied by Australians. In Java, Mendalin Siman power station is smashed.
- Feb. 14—U.S. 11th Airborne Division seizes Cavite naval base in Luzon and clears Nichols Field; Japanese still control Manila Bay; Japanese casualties since January 9, 68,000; American, 9,883.
- Feb. 16—After 3 years Corregidor is again in American hands as 503d Airborne Regiment drops parachute troops on Topside area and amphibious landing is made by Gen. Charles P. Hall's 11th Corps.
- Feb. 18—Tokyo reports American troops have made successful landing on Iwo Island, 750 miles from Tokyo, and engage in fierce fights with Japanese.
- Over 7,000 American and Filipino troops freed as American troops seize Philippine General Hospital in Ermita section of Manila.
- Feb. 19—Americans in Manila capture Fort McKinley.
- Feb. 22—Americans reach top of Mount Suribachi on Iwo as American casualties reach 5,372 as against 1,222 Japanese killed.
- Feb. 24—Last remnant of Japanese garrison in Manila destroyed.
- American troops in Philippines capture Japanese internment camp at Los Banos, 35 miles southeast of Manila, freeing 2,146 prisoners.
- Mar. 1—Tokyo reports that 600 American carrier planes attacked Okinawa naval base in Ryukyus for 6 hours.
- Mar. 2—In Philippines, American troops seize Lubang Island; other troops achieve practical control of Palawan, westernmost of Philippines.
- Mar. 3—B-29's hit Tokyo for 11th time.
- Mar. 9—Fleet of 300 B-29's pour over 1,000 tons of incendiaries on 15 square-mile-area in heart of Tokyo.
- Mar. 10—American Eighth Army troops land on Mindanao, second largest of Philippine islands.
- Mar. 12—American troops capture Zamboanga, city on western tip of Mindanao.
- Reconnaissance photographs show that 786 acres of Nagoya were burned out as result of attack by 300 B-29's the day previous.
- Mar. 13—B-29's from Saipan, Tinian, and Guam drop more than 2,000 tons of explosives on Osaka, Japan's second city.
- Mar. 14—United States flag formally raised over Iwo although fighting continues unabated in northern sector and in small pocket in northeastern part of island; Japanese dead in 23-day Iwo battle estimated at 20,000.
- American Eighth Army troops, in night landings, occupy Philippine Islands of Romblon and Simara in Sibuyan Sea, 60 miles east of Mindoro.
- Mar. 16—Pacific Fleet Headquarters announces end of organized Japanese resistance on Iwo and reveals Marines lost 4,189 officers and men killed, 15,308 wounded, and 441 missing, bringing total to 19,938.
- Over 300 B-29's drop 2,500 tons of incendiaries on 5 square-mile-area of Kobe, Japan's principal port.
- Mar. 18—More than 300 B-29's drop 2,000 tons of incendiary bombs on Nagoya, Japan's third largest city. Carrier-based planes of Pacific Fleet hit great Yawata Steel Works and Nagasaki on island of Kyushu.
- U.S. Army and Navy planes drop 1,000 tons of explosives on front stretching from Borneo to Formosa, with heaviest tonnage dropped on Heito and Okoyma air bases in Formosa, and Baguio, Philippines summer capital.
- British Information Services announce that submarines of British Far Eastern Fleet in last 8 months have sunk total of 274 Japanese ships.
- Mar. 19—American conquest of Leyte and Samar islands in Philippines costs Japanese 136,173 casualties. In same campaign, American losses were 11,245 up to Dec. 27, 1944.
- U.S. Navy's hunt for Imperial Japanese Fleet ends when carrier planes catch Japanese warships in Inland Sea and damage 15 to 17 warships, sink 6 freighters, and destroy nearly 500 Japanese planes.
- Mar. 20—U.S. Eighth Army's 40th Division captures Iloilo, Panay capital.
- Lieut. Gen. George C. Kenney, commander of Allied aviators from Solomons to Philippines, states that his men and carrier fliers had positively destroyed at least 10,000 Japanese aircraft since Sept. 1, 1944, and that the Japanese are no longer an air threat.
- Mar. 23—Australian troops make second amphibious landing within week on northwestern end of Soraken Peninsula, Bougainville Island.
- Mar. 27—U.S. Eighth Army troops capture Cebu, second largest city in the Philippines.
- Mar. 29—Admiral Nimitz discloses that Royal Navy has joined Pacific Fleet in attacking Ryukyus.
- Mar. 30—American troops invade Negros, last big island held by Japanese in Philippines.
- Mar. 31—In central Philippines, American forces seize Bacolod, provincial capital of Negros Island.
- Fifth Fleet continues close-range bombardment of Okinawa in Ryukyus; Admiral Nimitz reports 18 Japanese ships have been sunk by carrier planes in this area, 14 probably destroyed, and 15 damaged; 150 Superfortresses blast Kyushu and Honshu islands in southern Japan.
- Apr. 1—In largest amphibious operation of Pacific war (an armada of more than 1,400 ships), new U.S. Tenth Army invades Okinawa, main island of Ryukyus, 362 miles from Japan.
- The 14th corps of U.S. Sixth Army lands at Legaspi on southeastern tip of Bicol Peninsula, securing city and nearby airfields and completing encirclement of Japanese troops in southern Luzon.
- Apr. 4—The 40th Division of U.S. Eighth Army invades Masbate Island northwest of Leyte, 11th largest island in Philippines and 36th island to be invaded.
- Apr. 7—U.S. Fifth Fleet carrier planes sink 6 Japanese warships, including most powerful remaining unit, 45,000-ton battleship *Yamato*, 2 light cruisers, and 3 destroyers, in east China Sea, 50 miles southwest of Kyushu.
- American troops virtually complete conquest of Mindanao in Philippines.
- Apr. 9—American troops land at Jolo, old capital of Sulu sultans, capture town's airfield, and take complete control of Sulu Archipelago, southernmost group of Philippines.
- Apr. 11—American Division lands unopposed on Bohol Island in Visayan Islands, last major island of Philippines, between southern ends of Cebu and Leyte islands.
- Apr. 16—Admiral Mitscher's carrier task force pilots destroy 242 Japanese planes in Okinawa area. American army troops land on Ie Island off northwest tip of Okinawa, quickly seizing airfield there.
- Apr. 19—American troops invade Balabac Island, 45 miles north of Borneo.
- Apr. 21—Fighting ends on Ie Island, where Ernie Pyle was killed April 18.
- Apr. 27—Baguio on northern Luzon falls to Americans.
- May 2—Australian announcement confirms Japanese reports that Allied troops have invaded Borneo, landing on 10-square-mile island of Tarakan on northeast coast.
- May 6—Australian and Netherland troops capture center of Tarakan city and take full possession of airfield.
- May 13—Australian 6th Division captures Wewak, last Japanese foothold on northern coast of New Guinea.
- May 16—Over 500 Superfortresses for second time in 3 days drop nearly 3,500 tons of incendiaries on southern half of Nagoya, Japan's third city and major empire production center.
- May 20—General MacArthur's communiqué reveals total Japanese dead or taken prisoner for entire Philippine campaign is 369,818, dating from Oct. 20, 1944, when Americans landed on Leyte.
- May 25—About 500 Superfortresses from Marianas drop 4,000 tons of incendiary bombs on Tokyo for second time in 48 hours.
- May 26—About 500 Superfortresses carry out 2 attacks on Tokyo, causing great destruction, and damaging Imperial Palace; 19 Superfortresses lost.
- May 27—Admiral Nimitz announces that since Dec. 7, 1941, U.S. submarines have sunk 1,119 Japanese ships, totaling 4,500,000 tons.
- May 28—More than 450 Superfortresses make gigantic attack on Japanese industries in Yokohama, dropping 3,200 tons of incendiaries.
- May 29—Maj. Gen. Curtis E. Le May, commanding general of B-29's operating from Marianas, announces that 51 square miles of Tokyo were laid waste in 6 separate attacks.
- May 31—Over 450 B-29's, escorted by P-51 Mustang fighters, drop 3,000 tons of incendiaries on industrial concentrations in Osaka, Japan's second largest city.
- June 5—Typhoon strikes Third Fleet between Okinawa and Philippines, damaging at least 21 ships, including 5 aircraft carriers, 3 battleships, 4 cruisers, and 9 destroyers.
- June 6—More than 400 fighter-escorted B-29's again attack Osaka, Japan, dropping 2,500 tons of high explosives and incendiary bombs on arsenal and business and industrial areas.
- June 11—General MacArthur reports Australian troops made second invasion of Borneo, pushing ashore at 4 points in northwestern section around Brunei Bay on June 10.
- June 14—Australians capture Brunei in northwest Borneo.
- June 15—Navy reveals that U.S.S. *Saratoga*, oldest and biggest aircraft carrier in U.S. Fleet, was badly hit by Japanese planes at Iwo Island on February 21.
- Osaka, Japan, hit by 3,000 tons of incendiaries dropped by 520 Superfortresses.
- June 19—About 450 American Superfortresses drop 3,000 tons of incendiary bombs on Japan's industrial centers of Shizuoka, Toyohashi, and Fukuoka (on Kyushu

- Island), bringing to 13 number of Japanese cities hit by mass incendiary attacks.
- June 21—Admiral Nimitz reports end of organized resistance on Okinawa, most bitterly fought and costliest battle in the Pacific war.
- June 23—Australian 9th Division troops on Borneo seize great Seria oil fields without opposition, after 60-mile advance southwest down island's north coast.
- June 24—Hundreds of American and British planes, of at least 6 air forces, loose 1,000 tons of bombs on 16 Japanese targets over 5,000-mile front from Borneo to Kuriles.
- June 25—About 500 B-29's hit 10 Japanese aircraft ammunition and ordnance factories on Honshu Island, 5 in Nagoya area, 2 in Osaka sector, 2 in Gifu area, and 1 at Akashi.
- June 26—Australians complete reconquest of West Borneo oil fields by capturing Miri.
- June 27—Admiral Mitscher's flagship, 27,000-ton carrier *Bunker Hill*, arrives (under her own power) at Puget Sound for repairs, after 2 Japanese suicide planes crashed on her deck on May 11, killing 373 and wounding 264.
- June 30—Admiral Nimitz announces American occupation of Kume Island, 50 miles west of Okinawa; no opposition.
- July 1—Australian troops land at Balikpapan, Netherlands Borneo, from largest Allied fleet of warships and transports to assemble in Makassar Strait since Luzon invasion.
- July 3—Far Eastern Air Force, under Gen. George C. Kenney, makes first attack on Japanese islands from Okinawa bases. Gen. Carl A. Spaatz named to command newly created Strategic Air Force in Pacific, composed of Eighth under Gen. James H. Doolittle, and Twentieth under Maj. Gen. Curtis E. Le May.
- July 5—General MacArthur announces liberation of entire Philippines; states campaigns there can be considered closed. He reveals that of 23 Japanese divisions, totaling 450,000 men, only 30,000 remain for guerrilla fighting, thus reducing foe to practical impotence.
- July 6—U.S. Navy permits Japanese hospital ship to take 974 ill and wounded Japanese off Wake Island.
- July 8—Japanese suicide planes damage 3 British carriers off Sakishima Islands; British guns shoot down 140 Japanese planes in 2 months of operations.
- July 9—Netherlands forces make 2 landings along northern shore of Balikpapan Bay in Borneo as Japanese try to stem Australian advance with flaming oil drums. Over 1,500 American planes, 700 of them from Admiral Halsey's fleet of at least 26 ships, hit Japanese home islands in most co-ordinated aerial blow of Pacific war.
- July 10—Over 1,000 carrier-based planes of Admiral Halsey's Third Fleet strike airfields in Tokyo area, without opposition; 173 Japanese planes and 31 ships destroyed or damaged in day's operations. Australians make new river landing on Borneo, winning complete control of Balikpapan Bay.
- July 11—U.S. Navy report states that since Pearl Harbor, navy and marine aircraft have destroyed more than 17,000 enemy planes at cost of 2,700 of their own; army fliers have wrecked 10,173 more and lost 4,226.
- July 13—U.S. warships shell Japanese homeland 275 miles north of Tokyo for first time in war.
- July 14—U.S. Third Fleet continues attack on Japan.
- July 16—Carrier task force of British Pacific Fleet joins U.S. Third Fleet attack on targets in Tokyo area; combined force commanded by Admiral Halsey. In one year from June 1944, Superforts flew 261 missions, dropped nearly 90,000 tons of bombs, wiped out 127 square miles of 26 major Japanese cities, and destroyed 919 Japanese planes, losing total of 291 B-29's.
- July 18—For first time, airmen from European theater in about 350 planes from Okinawa bases smash airfields, communications, and industries on home island of Kyushu.
- July 22—First American soldiers from European front reach Philippines.
- July 23—More than 1,000 fighters, dive-bombers, and torpedo bombers from fast carriers of Admiral Halsey's Third Fleet attack Japan's greatest naval base at Kure in Honshu on Inland Sea and other military installations in area. American warships enter Sagami Bay, sail into Suribachi Bay in Kuriles to shell Paramushiro shore installations, and sweep Japanese shipping off China's coastal province of Chekiang. More than 600 Superfortresses, in blow co-ordinated with carrier strike on Kure, drop nearly 4,000 tons of demolition bombs on 80 square miles of Osaka-Nagoya area.
- July 25—Admiral Nimitz announces 2-day toll of carrier strike against Japanese naval bases in Inland Sea area on southern Honshu and northern Shikoku as 20 warships, including 3 battleships damaged, 84 merchant vessels sunk or damaged, and 209 Japanese aircraft destroyed or damaged.
- July 26—President Truman, Prime Minister Churchill, and Gen. Chiang Kai-shek draw joint declaration calling on Japanese government and people to surrender unconditionally or face "prompt and utter destruction."
- July 27—In 700 sorties over Japanese home islands, Okinawa-based planes of Far East Air Forces score direct hits with heavy bombs on Japanese battleship *Haruna*, and on 2 enemy aircraft carriers, cruiser, 7 freighters, subchaser and number of small ships.
- July 29—Japanese reject surrender ultimatum issued by United States, Great Britain, and China as Premier Kantaro Suzuki declares that "so far as the imperial government of Japan is concerned it will take no notice of the proclamation."
- Aug. 3—Far East Air Forces reveal in Manila that during first 7 months of 1945 they destroyed 2,846,932 tons of Japanese shipping and 1,375 planes.
- Aug. 6—President Truman and War Department announce that an atomic bomb, possessing more power than 20,000 tons of TNT, destructive force equal to load of 2,000 B-29's, and more than 2,000 times blast power of what previously was world's most devastating bomb, was dropped August 5 (Aug. 6 Japanese time) on Japanese city of Hiroshima, important army center on Honshu.
- Aug. 7—Report based on study of photographs discloses that 60 per cent of Hiroshima was destroyed by single atomic bomb dropped August 5. Hiroshima had a built-up area of 6.9 square miles and a prewar population of 343,000.
- Aug. 8—General Spaatz announces that a second atomic bomb has been dropped on Nagasaki, Japan's 12th largest city. Japanese radio, reporting results of atomic bombing of Hiroshima, states that "practically all living things human and animal were literally seared to death."
- Russia declares war on Japan and begins offensive operations against Manchuria.
- Aug. 9—Admiral Halsey's fleet moves in close to northeast coast of Honshu and sends salvo after salvo roaring into steel city of Kamaishi for one hour and 45 minutes.
- Aug. 10—Japanese government offers to surrender under interpretation of Potsdam ultimatum that would leave emperor's sovereignty unimpaired. General Spaatz announces that atomic bombing of Nagasaki destroyed 30 per cent of city's industrial area.
- Aug. 11—Allied powers agree to Japanese proposal to surrender on basis of Potsdam ultimatum but on condition that Japanese emperor come under authority of Allied commander in chief.
- Aug. 12—More than 400 American army planes strike targets on Japanese homeland, including Kurume supply and distribution center on Kyushu. Admiral Halsey's Third Fleet carrier planes attack Tokyo; Japanese hit major American warship at Okinawa with aerial torpedo.
- Aug. 13—About 120 Twentieth Air Force Superfortresses drop 850 tons of bombs on Marifu rail yards at southern Honshu, and hit Japanese ships off coast southwest of Kure.
- Aug. 14—President Truman announces that Japan has surrendered unconditionally. Emperor Hirohito makes nationwide broadcast announcing Japan's acceptance of Potsdam Declaration at 11 P.M. EWT. Simultaneously with announcement that war is ended, Admiral Nimitz flashes "cease fire" orders to all units under his command. More than 1,000 Allied planes strike Honshu with 6,000 tons of bombs.
- Aug. 15—Red Army's Chief of Staff Gen. Alexei I. Antonov states that war still continues in Manchuria; Soviet columns will press offensive operations until Japanese lay down arms.
- Aug. 16—Japanese troops continue to resist in Manchuria and in Luzon despite demand for surrender.
- Aug. 22—Russian airborne troops land in Kurile Islands west of Aleutians; other Russian troops reoccupy Yellow Sea ports of Dairen and Port Arthur on Kwantung Peninsula below Manchuria, which once belonged to Russia.
- Aug. 25—Soviet troops land on east coast of Korea.
- Aug. 27—Flotilla of 10 warships from Admiral Halsey's Third Fleet sail into Tokyo Bay in final preparation for landings of 10,000 sailors and marines at Yokosuka naval base.
- Aug. 28 (New York time)—Admiral Halsey enters Tokyo Bay aboard flagship *Missouri*. Russian forces complete occupation of southern half of Sakhalin and all but one of Kurile Islands.
- Aug. 29 (New York time)—Following his airborne troops, General MacArthur lands at Atsugi Airfield near Tokyo, accompanied by General Eichelberger of Eighth Army and General Sutherland, his chief of staff, to direct occupation and surrender of Japan. For first time in 1,000 years, foreign troops occupy Japan.
- Aug. 31—Main force of General Eichelberger's Eighth Army begins landing at Yokohama.
- Sept. 2—Japanese surrender formally and unconditionally to Allies, in 20-minute ceremony aboard U.S. battleship *Missouri* in Tokyo Bay. Twelve signatures affixed to surrender document, with General MacArthur signing for Allies and Foreign Minister Mamoru Shigemitsu for Japan.

Japanese Gen. Tomoyuki Yamashita formally and unconditionally surrenders remnants of his Philippines Army to liberated Lieut. Gen. Jonathan M. Wainwright.

Premier Stalin announces that southern Sakhalin and Kurile Islands once again belong to Russians.

Sept. 4—Japanese surrender Wake Island to Americans aboard destroyer escort *Levy*.

Sept. 7—Gen. Joseph W. Stilwell accepts Ryukyu surrender; document is signed by 9 Japanese officers headed by Gen. Tosiro Nomi.

Sept. 8—Lieut. Gen. Stanley Savige, signing for Australia, receives surrender of 723,000 Japanese troops in Solomon Islands, by Gen. Mastane Kanda and Vice Admiral Noboru Sanajima.

Sept. 14—Captain Solda, commander of Japanese forces on Nauru, surrenders to Brig. Gen. J. R. Stevenson of Australia.

CHINA-BURMA THEATER

Jan. 5—British and Indian forces capture port of Akyab, last big Japanese naval and air base in western Burma, without firing a shot.

Jan. 15—Chinese First Army captures Namhkam, leaving Japanese blocking Burma Road only at Wanting.

Jan. 16-17—U.S. Fourteenth Air Force damages or destroys 135 Japanese planes in Shanghai and other cities in occupied China.

Tokyo reports more than 300 American carrier planes hit China coast for fourth successive day, battering Hong Kong, Canton, and Hainan Island, while B-29's again pound Formosa.

Jan. 28—Gen. Chiang Kai-shek officially names Burma-Ledo Road the Stilwell Road in honor of Gen. Joseph W. Stilwell, who planned artery and almost saw it completed before differences with General Chiang led to his recall.

First convoy over Ledo-Burma Road rolls into Wanting, Chinese border town, to make first overland delivery since fall of Lashio in April 1942.

Jan. 31—Japanese claim seizure of entire Hankow-Canton railway, with capture of Kukung.

Feb. 6—Japanese capture Namyung and Kanhsien, center of wolfram mining district of China which has been supplying U.S.

Feb. 7—B-29's hit Japanese targets at Saigon, French Indo-China, destroying vital Rama VI Bridge west of Bangkok, Siam.

Feb. 8—U.S. Fourteenth Air Force's January record for China operations give 334 Japanese aircraft destroyed, including 90 bombers; 48 planes probably destroyed and 216 damaged; 15 vessels, totaling 13,500 tons sunk and 89 smaller vessels; 6 others probably destroyed.

Feb. 24—Chinese recapture Lienhwa, key town on Japanese supply route to Kanhsien and Suichwan, former American air bases in Kiangsi Province.

Mar. 3—Plunging 85 miles across Irrawaddy, British forces end dramatic 11-day thrust through Japanese-held Burma by capture of Meiktila, rail, road, and airfield center, 80 miles south of Mandalay.

Mar. 7—Chinese capture old city of Lashio, Burma, 2 miles from new Lashio.

Mar. 20—Mandalay falls to British after 2 years, 10 months, and 12 days of Japanese occupation.

Mar. 22—More than 100 India-based B-29's make second assault on Rangoon.

Apr. 3—General Chennault's Fourteenth Air Force planes destroy and damage 122 Japanese planes in raids on Shanghai and Kiukiang airdromes in China.

Apr. 6—Liberators heavily bomb Hong Kong for third straight day.

Apr. 13—Chinese Army spokesman reports that Japanese mechanized forces moved from Manchuria to Shanghai area are being rushed back to original positions as result of Moscow's denunciation of Russo-Japanese neutrality pact.

Apr. 16—British and Indian troops capture Taungup, last Japanese coastal supply base in Arakan area of Burma.

Apr. 19—British Fourteenth Army troops capture Chauk, heart of one of richest oil-producing areas in Burma.

May 3—British Fourteenth Army captures Rangoon, Burma.

May 4—Admiral Lord Louis Mountbatten proclaims end of campaign in Burma, with Japanese suffering 347,000 casualties, 97,000 of them dead.

May 19—Chinese reoccupy great east coast city of Foochow.

May 27—China's entire Sixth Army moved by air from Burma to China by U.S. Army Air Transport Command.

Chinese troops recapture inland treaty port of Nanking, 470 miles south of Chungking, and cut Japan's overland highway lifeline to Indo-China and Singapore.

June 30—Chinese troops retake Liuchow, former American airbase in south China—fourth major victory in 2 months. Gen. Chiang Kai-shek's forces reoccupy Tai-chow; reach French Indo-China frontier at Trung, Khanh Phu (Chungching) and Malungchia.

July 20—Chinese troops seize Yiyang, key point in Chinese "rice bowl."

July 27—Chinese forces capture Yangso and break into outskirts of Kweilin, regaining 8 former American airfields.

Aug. 1—Tenth Air Force begins operating in China as part of General Stratemeyer's new command.

Aug. 8—Russia declares war on Japan; 9 minutes after declaration becomes effective, Russian Far Eastern Army begins hostilities with attack along eastern Soviet-Manchurian border.

Aug. 10—Russian troops in Manchuria advance 105 miles in day in trans-Baikal sector; take Hailar on Chinese Eastern Railway.

Aug. 11—Gen. Chiang Kai-shek orders armies to keep on fighting until cease fire order is received.

Russians advance 50 miles across Great Hingan Mountain range in western Manchuria in direction of Harbin.

Aug. 13—Following Tokyo's surrender offer, Japanese troop units in Chekiang Province south of Shanghai cease firing; begin negotiating their capitulation.

Aug. 14—Chinese Communists inform Gen. Chiang Kai-shek that they refuse to accept his command to remain at their posts.

Aug. 15—Gen. Chiang Kai-shek invites commander of Communist armies in northwest China to visit Chungking to confer with him.

Aug. 17—In defiance of orders issued by Gen. Chiang Kai-shek, Chinese Communist Gen. Chu Teh summons Japanese commander Lieut. Gen. Okamura to surrender to Communists.

General Spaatz discloses that American Superfortresses in 14-month campaign destroyed industrially 59 Japanese cities at cost of 437 planes.

Aug. 18—Russian forces make 25-mile gains in Manchuria.

Aug. 20—Civil war breaks out in northern China as Communist and government troops clash.

As all organized warfare appears at an end in Manchuria, Russian troops enter cities of Mukden, Harbin, and Changchun, Japanese puppet capital of Manchuria.

Admiral Lord Louis Mountbatten orders Japanese envoys to appear at Rangoon, August 23, to arrange Japanese military surrender in southeast Asia.

Aug. 21—Russians announce surrender of entire Japanese Fifth Kwantung Army Group.

Aug. 23—Premier Stalin announces Red Army has completed conquest of Manchuria and southern half of Sakhalin Island, and has occupied Paramushiro, Japanese naval base in Kurile Islands.

Japanese envoys deliver battle order revealing that 1,000,000 Japanese troops are to be surrendered to Gen. Chiang Kai-shek's forces.

Aug. 25—Gen. Chiang Kai-shek's government forces enter Shanghai and Nanking while rival Communist forces march on these two cities.

Aug. 26—General MacArthur instructs Japanese at Hong Kong to surrender to British.

Aug. 30—Strong British naval force sails into Hong Kong Harbor to reoccupy crown colony. Lieut. Gen. Wedemeyer states U.S. Navy will control all of China coast except Hong Kong and Canton areas.

Sept. 5—British troops reoccupy Singapore.

Sept. 9—Formal surrender of about 1,000,000 Japanese troops in China signed at 9:04 A.M. (8:04 P.M. Saturday, EWT). Gen. Yasuji Okamura signs for Japan; Gen. Ho Ying-chin accepts for China.

Sept. 12—Chungking government takes control of Shanghai; completes reoccupation of Canton. Chinese troops move into Indo-China to accept surrender of Japanese north of 16th parallel in accordance with Big Four agreement.

At Singapore, Lord Mountbatten accepts formal surrender of Japan's huge southern armies and directs his troops to be severe with nonco-operation.

Sept. 13—Japanese envoys sign formal surrender at Rangoon, Burma.

Sept. 16—Hong Kong formally surrendered by Japanese to Great Britain. Rear Admiral Cecil H. J. Harcourt signs for Britain; Maj. Gen. Umekichi Okada and Vice Admiral Ruitako Fugita for Japanese.

Sept. 29—American First Marine Division lands at Tientsin to aid China in disarming of Japanese and restoration work.

Oct. 3—Street fighting breaks out in Kunming between troops of Chungking government and those of Gen. Lung Yun, deposed as Yunnan Province governor in Gen. Chiang Kai-shek's drive on war lords to help unify China.

Oct. 4—After 18 hours of fighting, calm returns to Kunming and deposed governor, General Lung Yun, welcomes his successor.

Oct. 6—Chinese Communists reported under attack from Gen. Chiang Kai-shek's armies, with Japanese support, in central China.

Oct. 21—Chinese Communist Army withdraws north of Yangtze River in accordance with peace agreements made during Kuomintang-Communist negotiations at Chungking.

Oct. 27—Chinese central government offers Communists all north China territory they now occupy provided they evacuate railway zones and do not interfere with railroad communication.

Oct. 28—Reports from Chungking state undeclared civil war is going on in at least 11 provinces of north China.
 Nov. 8—Communist sources report fierce fighting along Great Wall of China.
 Nov. 14—Chinese Communists move troops into Manchuria on heels of withdrawing Russians.
 Nov. 16—Chinese nationalist troops pierce great wall of China, enter Manchuria.
 Dec. 2—Chinese nationalists reach Tahushan, 65 miles southwest of Mukden.
 Dec. 12—Chinese government troops enter Mukden by road, Changchun by air.
 Dec. 20—Communist leader Chou En-lai proposes an unconditional truce be imposed on Communist and Kuomintang troops while all-party Peoples' Consultative Council discusses settlement of Communist-Kuomintang differences in Chungking.
 Dec. 27—Kuomintang and Communists representatives meet in Chungking in renewal of efforts to end civil strife in China.
 Dec. 31—The Chinese government delegates, in meeting with Communist leaders, propose U.S. Gen. George C. Marshall as referee on hostilities.

NAVAL LOSSES

June 13—U.S. Navy and British Admiralty jointly announce that overall merchant shipping losses to United Nations and neutral countries was 4,770 ships, aggregating 21,140,000 gross tons.
 June 25—War Department announces that U.S. ship losses during war against Germany and Italy were 105 vessels sunk and 10 damaged; cargo lost with them amounted to 537,656 measurement tons.
 Aug. 25—Official Washington reports war cost United States 52 submarines.
 Sept. 24—Navy Department announces that 11 U.S. aircraft carriers were sunk, 30 others damaged during second World War.
 Oct. 1—Final count of U.S. naval vessels lost in Second World War totals 701 vessels, including 2 battleships (*Arizona* and *Oklahoma*, both lost at Pearl Harbor); 5 aircraft carriers; 6 escort carriers; 7 heavy cruisers; 3 light cruisers; 71 destroyers; 11 destroyer escorts; 52 submarines. See also under NAVAL PROGRESS.

CASUALTIES

May 24—Germans estimate their casualties in the war—army, navy, and air forces—at between 3,500,000 and 4,000,000 who were killed or died of wounds from outbreak of hostilities to winter of 1945.
 July 6—Chinese High Command estimates Chinese casualties during the 8 years of war with Japan at 3,178,069—1,310,224 killed.
 Sept. 6—Tokyo radio quotes government spokesman that Japanese casualties totaled about 5,085,000, including more than 450,000 army and navy men killed. Allied air attacks against Japan, it was said, killed 241,309 and wounded 313,041, with the heaviest losses in the Tokyo area. Deaths in Hiroshima and Nagasaki, sites of the two atom bomb attacks, were given as 49,221, and 21,501 respectively.
 Oct. 4—United States casualties since beginning of war placed at 1,070,524 as follows: Army—killed, 208,622; wounded, 571,664; missing, 22,552; prisoners, 121,638. Navy—killed, 54,986; wounded, 80,247; missing, 10,259; prisoners, 2,556. In First World War American casualties totaled 364,800, or 8 per cent of the total mobilization, including dead, wounded and missing.
 Oct. 11—Prime Minister Attlee of Great Britain tells House of Commons that the estimated losses of the German armed forces in killed, permanently wounded and permanent medical casualties totaled approximately 7,400,000 from Sept. 1, 1939 to May 10, 1945.
 Nov. 29—Prime Minister Attlee reports that British Empire battle casualties during the war totaled 1,246,025, with 353,652 killed as follows: United Kingdom, 244,723; Canada, 37,476; Australia, 23,365; New Zealand, 10,033; South Africa, 6,840; India, 24,338; colonies, 6,877. Wounded: 475,070; prisoners, 326,459; merchant seamen (not included in above), 45,411 (30,189 deaths).
 Jan. 9, 1946—Final estimates place American casualties on Okinawa at approximately 80,000—Japanese casualties at 120,000. Of the American casualties 32,473 are listed as non-battle. Broken down the casualty list shows 21,342 army; 16,313 marine; and 9,721 navy. The non-battle list shows 21,592 army; 10,881 marines.
 NOTE: Russia has given no estimates of its battle casualties since June 27, 1944, when Marshal Stalin placed them at 5,300,000.

WAR CRIMINALS

Apr. 14—U.S. Ninth Army captures 65-year-old Franz von Papen, former chancellor of German Republic, vice chancellor under Hitler, and later German ambassador to Austria and Turkey.
 Apr. 29—Benito Mussolini, former Fascist dictator of Italy, assassinated by Italian partisans near Como, along with woman companion and 12 other Fascists.

Apr. 30—Edouard Herriot, former premier of France, liberated from German captivity by Red Army, arrives in Moscow.
 May 1—Benito Mussolini, Signorina Clara Petacci, and Achille Starace are buried in paupers' section of Cimitero Maggiore, Milan.
 Nazi radio announces that Hitler died in battle of Berlin at his command post in chancellery.
 May 2—Pierre Laval, former French premier seeking refuge in Montjuich fortress outside Barcelona, Spain, interned at requests of Allied governments.
 May 5—Former French Premiers Edouard Daladier, Paul Reynaud, and Leon Blum; Generals Maurice-Gustave Gamelin and Maxime Weygand; and former Austrian Chancellor Kurt Schuschnigg freed as German political prisoners.
 U.S. Seventh Army captures Poland's number one war criminal, Gov. Gen. Hans Frank, in Berchtesgaden.
 May 9—Marshal Herman Göring, Nazi air minister, and Field Marshal Gen. Albert Kesselring, last supreme commander of German armies in west, surrender to U.S. Seventh Army; Vidkun Quisling, puppet premier of Norway, surrenders with 6 of his aides to Norwegian police.
 May 23—Last government of Germany dissolved by Allies as Grand Admiral Karl Doenitz; Col. Gen. Gustav Jodl and other members of Germany's government, high command, and general staff are arrested.
 May 24—Heinrich Himmler, German minister of interior and Gestapo chief, captured by British in Luenenburg, near Bremen, Germany, and commits suicide by swallowing poison.
 May 24—Field Marshal Gen. Robert Ritter von Greim, who succeeded Hermann Göring as head of Luftwaffe, commits suicide.
 June 15—British capture Joachim von Ribbentrop, Hitler's foreign minister, in Hamburg lodging house.
 Aug. 1—Pierre Laval arrives in Paris and is imprisoned to await trial for treason.
 Aug. 14—Marshal Henri-Philippe Pétain convicted of treason and intelligence with enemy and sentenced to death.
 Aug. 17—General de Gaulle commutes Marshal Pétain's death sentence to life imprisonment.
 Aug. 20—Trial of Vidkun Quisling opens in Oslo, Norway.
 Sept. 5—Military police of U.S. Eighth Army arrest Iva Togori in Yokohama. Miss Togori is California-born Nisei who, during the war, broadcast propaganda from Tokyo to U.S. troops in Pacific, under the name "Tokyo Rose."
 Sept. 10—Vidkun Quisling, Norwegian traitor, sentenced to death.
 Sept. 11—General MacArthur orders arrest of 40 persons classed as war criminals. General Tojo, prisoner No. 1, shoots himself, but is kept alive by American doctor.
 Sept. 19—William Joyce (Lord Haw Haw) sentenced to be hanged.
 Sept. 29—American-born Rita Louis Zucca, "Axis Sally," broadcaster of Nazi radio propaganda to U.S. troops in Mediterranean area, sent to prison by Italian military tribunal for 4 years and 5 months.
 Oct. 7—Rudolf Hess returned to Germany to stand trial as war criminal.
 Oct. 9—Pierre Laval sentenced to death after trial by the French High Court of Justice.
 Oct. 15—Pierre Laval executed at Fresnes Prison, Paris, after attempt to take his own life by poison.
 American military tribunal condemns 3 war criminals to death and sentences 4 others to long prison terms for mass murders in Hadamar insane asylum.
 Oct. 24—Vidkun Quisling executed by firing squad in Oslo.
 Oct. 25—Dr. Robert Ley, German Labor Front chief, commits suicide by strangling himself in his cell at Nürnberg prison.
 Oct. 28—First Pacific war criminal trial begins in Manila as American Military Commission opens case against Gen. Tomoyuki Yamashita, Japanese commander in Philippines during last 11 months of war.
 Nov. 20—International Military Tribunal in Nürnberg opens first trial of 20 top German war criminals.
 Dec. 1—Rudolf Hess, self-confessed amnesia faker, ruled fit to stand trial in Nürnberg.
 General Dostler, German corps commander who ordered execution of 15 Office of Strategic Services men, executed by firing squad at Aversa, Italy, after conviction on wartime charge.
 Dec. 6—General MacArthur orders arrest of Prince Fumimaro Konoye, 3 times premier of Japan.
 Dec. 13—United States military court sentences 36 Dachau defendants to death by hanging, one to life imprisonment and 3 others to 10 years in prison.
 Dec. 14—Josef Kramer, "the beast of Belsen," his subordinate Irma Grese and 9 others hanged in Hameln, Germany, after conviction of concentration camp atrocities.
 Dec. 15—Prince Fumimaro Konoye, three-time premier of Japan commits suicide rather than surrender himself as a war criminal, in his Tokyo home.
 Dec. 17—Lieut. Gen. Tomoyuki Yamashita receives stay of execution from Supreme Court of U.S. to which he appealed Dec. 3.

EUROPEAN OCCUPATION

- May 11—General Eisenhower will control American zone in Germany and will be U.S. representative on 4-power council that will rule Germany.
- May 15—Allied military mission takes over control of government of Admiral Karl Doenitz at Flensburg.
- May 22—Field Marshal Sir Bernard L. Montgomery appointed commander in chief of British forces of occupation in Germany and British member of Allied Control Commission in Germany.
- June 5—General Eisenhower arrives in Berlin to attend first meeting of Allied Control Council for Germany.
- June 9—State Department announces that temporary military administration of Italian province of Venezia Giulia, including Trieste, under Allied control, has been agreed upon by United States, Britain, and Yugoslavia.
- June 28—War Department announces Gen. Mark W. Clark has been designated commander in chief of U.S. Occupational Forces in Austria.
- July 12—British and American troops move into their occupation areas in Berlin.
- July 15—Prime Minister Churchill and President Truman arrive in Berlin by plane.
- July 17—As Big Three Conference opens in Potsdam, Germany, Premier Stalin and Prime Minister Churchill choose President Truman to preside over meetings.
- July 25—Berlin Conference recesses to permit Prime Minister Churchill, Foreign Secretary Eden, and Deputy Prime Minister Attlee to return to hear results of recent election in Great Britain.
- July 28—Prime Minister Clement R. Attlee, successor to Prime Minister Churchill, prepares to leave for Potsdam Conference.
- Aug. 2—Berlin Conference ends.
- Aug. 8—Agreement between Russia, United States, United Kingdom, and France creates system dividing Austria into 4 zones of occupation; provides that Vienna, capital city, shall be under their joint control.
- Aug. 15—State Department issues official map defining limits of Allied zones of military occupation in Germany as follows: American zone, bordering French area on east, includes all or most of provinces of Bavaria, Wurttemberg, Hesse, and Hesse-Nassau; British forces will hold northwestern Germany including provinces of Schleswig-Holstein, Hanover, Hamburg, Bremen, Oldenburg, Schaumburg-Lippe, Brunswick, Lippe, Westphalia and northern part of Rhine; Russia's zone borders British area on east and American on southwest, and embraces Mecklenburg, Saxony, Thuringia, and a section of Brandenburg. Each zone roughly approximates 40,000 square miles, about twice the area allotted to France who will occupy a region bordering the Rhine on both sides and divided into two triangular sections.
- Sept. 6—Under Russian sanction, big estates in Saxony are being broken up and apportioned among poor farmers.
- Sept. 10—All German officials and agents in neutral countries recalled by Allied Control Council functioning in Berlin.
- Oct. 2—General Eisenhower relieves General Patton of his duties as Third Army commander and military governor of Bavaria; appoints Lieut. Gen. Lucian K. Truscott to succeed him.
- Oct. 7—U.S. and Great Britain agree to recognize Dr. Karl Renner's provisional government in Austria.
- Oct. 12—Allies seize 300 plants of I. G. Farbenindustrie in Germany; will destroy those devoted to making war and use others for reparations.
- Oct. 20—U.S., Great Britain, Russia, and France officially recognize provisional government of Austria.
- Oct. 21—Russia gives full recognition to Renner provisional government of Austria independent of Allied Control Council which merely announces extension of Renner's regime over whole of Austria.
- British and American governments protest to Moscow against its proposed trade agreement with Hungary, designed to give the Soviet 50 per cent of Hungarian industry and transportation.
- Oct. 26—Under Potsdam agreement, Soviet Russia claims most of Austria's heavy industry, shipping, natural resources, and 2 largest banks.
- Oct. 31—Russia demands that Italy be required to pay total reparations bill of \$300,000,000, of which one third will be given Soviet and rest will go to Yugoslavia, Greece, and Albania, while Britain and U.S. should waive any share.
- Nov. 1—Soviet Union informs U.S. and Great Britain that it favors internationalizing Ruhr Valley, which French have been demanding; feels it should share in occupation.
- Nov. 6—Italian armistice made public in Washington, London, and Rome; covers every aspect of Italy's military, civil, political, and economic life in accordance with Casablanca doctrine of unconditional surrender.
- Nov. 10—Observers at recent London peace parley reveal Russia had asked for military bases in strategic Dodecanese Islands which other major powers wish to reserve for Greece.
- Nov. 13—U.S. troops begin destruction of German war in-

- dustries; blow up Ebenhausen and Kaufbueren I. G. Farben works in Bavaria.
- Nov. 16—British take over Krupp munitions plants as part of program to obliterate German war potential.
- Dec. 3—Britain asks Russia, France, the U.S. to agree to proposal that all 4 powers reduce occupation forces in Austria to mitigate that country's economic burden.
- Soviet Union rejects U.S. proposal for withdrawal of Soviet, British, and American troops from Iran by Jan. 1, 1946.
- Dec. 7—State Department announces about 2,000,000 Germans driven from Czechoslovakia and Hungary under the Potsdam agreement will be accommodated in the American zone and 750,000 others in the Russian zone of occupation in Germany.
- Dec. 9—Gen. George S. Patton, Jr., seriously injured in automobile accident just north of Mannheim, Germany.
- Dec. 13—France and Britain agree to withdraw all troops from Syria and Lebanon and by implication turn Middle East problems over to the United Nations.
- Dec. 18—Allied Control Council approves Austria's new government after Chancellor Figi makes changes to meet Marshal Konev's objections.
- Dec. 20—Dr. Karl Renner is unanimously elected president of second Austrian Republic and government of Chancellor Figi is immediately sworn in.

PACIFIC OCCUPATION

- Sept. 2—About 25,000 Americans take over 700 square miles of Japan reaching southern limits of Tokyo.
- Sept. 4—Secretary of State Byrnes reveals United States had tacitly agreed to Soviet possession of Sakhalin Island and Soviet sovereignty over Kurile islands in Pacific.
- Sept. 5—American combat reconnaissance troops enter Tokyo.
- Sept. 7—U.S. Marines rescue 1,200 American and British prisoners from 3 "hell camps" on Formosa.
- Sept. 8—General MacArthur enters Tokyo; establishes authority over Japan. Stars and Stripes raised officially over U.S. embassy. Historic 7th Cavalry of 1st Cavalry Division leads procession.
- Sept. 9—General MacArthur states he will permit Japanese to govern themselves under Allied directives. Reminds them he is over entire government, including emperor, but will use force only if necessary.
- Sept. 10—General MacArthur orders Emperor Hirohito to abolish Japanese Imperial Headquarters including army and navy imperial staffs.
- Eighth U.S. Army forces liberate 9,306 Allied war prisoners held in Japan.
- Sept. 12—Japanese General Tojo kept alive by transfusions, following attempted suicide.
- Field Marshal General Sugiyama, 65 year-old commander of Japan's First Imperial Army and former war minister, kills himself and his wife.
- Sept. 16—Generals Homma and Kuroda and José Laurel, puppet president of Philippines, taken into custody.
- Sept. 18—Asahi, Tokyo's leading daily newspaper, suspended for 48 hours by order of General MacArthur for mocking comments and "cautiously inflammable headlines."
- Sept. 24—President Truman notifies General MacArthur that Emperor Hirohito is subordinate to him, that Japan is not to question general's authority.
- Sept. 26—Emperor Hirohito pays formal call on General MacArthur, the first time in Japanese history an emperor of Japan has ever left his palace to call on a foreigner.
- Japanese army and navy forces ordered to turn over to Allied occupation authorities all arms and military equipment, all supplies of food, clothing and motor transport for use in civilian relief.
- Sept. 30—Allied occupation authorities seize and occupy 21 of largest Japanese banks; order and hold the presidents, board chairmen, managing directors, and special advisers at disposition of Allied government.
- Oct. 3—General MacArthur tightens economic controls imposed on Japan by prohibiting all financial business or commercial communications from Japan, except with permission of Allied occupation forces.
- Oct. 4—Premier Prince Naruhiko Higashi-Kuni presents resignation of entire Cabinet to Emperor Hirohito, after General MacArthur orders dismissal of Home Minister Yamazaki and abrogation of all laws limiting freedom of speech, religion, and opinion, as well as abolition of secret police who enforced them.
- Oct. 5—Emperor Hirohito appoints Shigeru Yoshida premier of Japan, succeeding Prince Naruhiko Higashi-Kuni.
- Oct. 9—U.S. troops uncover more than \$250,000,000 in gold, silver, and platinum reserves secreted in Japanese vaults.
- Oct. 11—General MacArthur orders Japan's premier to write a bill of rights into constitution, giving women suffrage; encouraging unionization of labor; liberalizing education system; substituting justice for tools of inquisition; and democratizing Japan's economic institutions.
- Oct. 13—Shidehara Cabinet in Japan amends Japanese election law by authorizing women suffrage, lowering voting age from 25 to 20.

- Oct. 14—Japanese dissolve Imperial General Staff Headquarters in Tokyo in prelude to abolition of general staff.
- Oct. 15—General MacArthur states Japanese armed forces throughout Japan have been completely demobilized and Japan is no longer world power.
- Oct. 17—Emperor Hirohito releases nearly 1,000,000 Japanese, held in jails and concentration camps as political offenders.
- Oct. 18—General MacArthur orders narcotics crops destroyed, demands freezing of all existing stocks, cautions Japanese that no imports of narcotics will be permitted without Allied permission.
- Oct. 22—Allies order Japanese to abolish military instruction and "ultra-nationalistic ideologies" in schools.
- Oct. 24—General MacArthur gives Japanese newspaper editors and broadcasting corporation executives additional emphatic orders to establish free, independent press.
- Oct. 26—Japanese Cabinet votes out of existence war and navy offices that carried out Japan's war of aggression.
- Nov. 9—Japanese Cabinet votes to cancel Japanese conscription.
- Nov. 10—Allied Headquarters orders Japan to wipe out her civil aviation industry, abolish air training by Jan. 1, 1946.
- Dec. 9—General MacArthur issues order to Japanese government to end feudalistic system of land tenure by eliminating absentee ownership, providing government credit for purchase of landlords' holdings by tenants, stabilizing farm prices and protecting former tenants against relapse into condition of share croppers in future years.
- Dec. 15—General MacArthur orders Japanese to abolish Shinto as national religion of Japan.
- Dec. 30—Gen. Douglas MacArthur says he informed Secretary Byrnes six weeks before the Moscow Conference that a 4-nation council, agreed upon at Moscow, to sit in Tokyo was "in my opinion not acceptable." However, as chairman of the council he will "try to make it work."

INDONESIAN REVOLT

- Oct. 13—Demanding full independence of Netherlands rule, commander of Indonesian People's Army proclaims all-out guerrilla warfare in Batavia area.
- Oct. 14—Allies take over Batavia, following Indonesian's call for holy war against Dutch, and declare looting, sabotage, and bearing of arms punishable by death.
- Oct. 17—British troops rush to Java after Indonesian extremists, in fanatical "holy war," kill 15 persons, including Netherlands citizens.
- Oct. 18—Vice President Hatta of Indonesian nationalist movement declares "war of revolution" will continue for years unless Netherlands grant islands full independence.
- Oct. 28—Indonesians, opposing Allied surrender orders, open fire on British Indian troops at Surabaya naval base.
- Oct. 29—Indonesians kill 25 British Indian troops in Surabaya before truce is arranged.
- Oct. 30—Brig. Gen. A. W. Mallaby, commander of British troops in Surabaya, killed by Indonesian nationalists as fighting continues despite cease-fire order agreed on earlier.
- Oct. 31—British order RAF into action to halt Indonesian forces on march in central Java; all available warships ordered to Surabaya naval base city.
- Nov. 6—Netherlands offers Indonesians home rule and full partnership in new worldwide Netherlands commonwealth of Nations; offer rejected by President Soekarno of Indonesian Republic.
- Nov. 8—Maj. Gen. E. C. Mansergh, British commander of Allied forces in Java, orders Indonesians in Surabaya and other areas of east Java to surrender arms or face "all the naval, army, and air forces under my command."
- Nov. 9—Indonesians state British forces in Java have begun to shell Surabaya after expiration of surrender ultimatum.
- Nov. 11—British renew air attacks on Surabaya in support of Indian troops as President Soekarno of unrecognized Indonesian republic declares "thousands and thousands" of civilians had been killed in "vast massacre."
- Nov. 13—Sutan Sjahrir, 36-year-old Socialist leader, replaces Soekarno as premier of unrecognized Indonesian Republic; retains only one of former Cabinet.
- Nov. 15—British forces occupy government buildings in Surabaya.
- Nov. 18—First conference of Netherlands, Indonesian, and British leaders ends without peace formula; Indonesian extremists call for war to death against British.
- British troops seize Semarang, Java, following Indonesian uprising.

- Nov. 22—Japanese troops, under British command, battle Indonesians in Java.
- Nov. 25—RAF Mosquitoes make rocket strike in Java, crippling propaganda machine of Indonesian extremists by shooting up Surakarta and Jogjakarta radio stations.
- Nov. 29—After 19 days of fighting, Surabaya is under complete British control.
- Dec. 6—British and Netherlands officials gather in Singapore to discuss Java situation.
- Dec. 9—Indonesian uprisings spread to Sumatra.
- Dec. 10—Royal Air Force planes wipe out mountain village in Java in retaliation for ambush of relief column.

WYOMING. Mountain state, United States; admitted to the Union July 10, 1890. Population (1940): rural, 157,165; urban 93,577; total, 250,742. Land area, 97,506 square miles, divided into 23 counties. Principal cities, with 1940 populations: Cheyenne, the capital, 22,474; Casper, 17,964; Laramie, 10,627; Sheridan, 10,529.

Chief State Officers, 1945.—Governor, Lester C. Hunt; secretary of state, William Jack; treasurer, Earl Wright; auditor, Carl Robinson; attorney general, Louis J. O'Marr.

Judiciary.—Chief justice of the Wyoming Supreme Court, Fred H. Blume; associate justices, Ralph Kimball and William A. Riner.

Legislature.—The state legislature (Senate, 29 members; House of Representatives, 109) convenes biennially in odd years on the second Tuesday in January.

Education.—Elementary school teachers in the state (latest report, 1943-44 school year), 1,737; pupils, 37,867; average yearly salary of elementary school teachers (1943-44), \$1,360; (1944-45), \$1,430. Public senior high school teachers (1943-44), 743; students, 13,118; average yearly salary of senior high school teachers (1943-44), \$1,685; (1944-45), \$1,785. The University of Wyoming is located at Laramie. Total state appropriation for education (1943-44): oil royalty, \$837,807; common school land income, \$1,030,624; school equalization, \$222,750. Total appropriation by cities and counties (1943-44), \$7,591,538. Education in Wyoming is compulsory for children between the ages of 7 and 16, inclusive.

Finances.—Following is a statement of Wyoming's finances for the fiscal year 1944-45, supplied by the state treasurer's office:

Balance in treasury, beginning of fiscal year 1944-45	\$12,608,886.57
Receipts, 1944-45	19,652,781.80
Total	\$32,261,668.37
Disbursements, 1944-45	16,179,054.22
Balance, beginning of fiscal year 1945-46	\$16,082,614.15

Agriculture.—The yield of the leading crops of the state in 1944, with 1934-43 average crops, and the United States Department of Agriculture's October 1 estimates of the 1945 crops, are shown in the following table:

CROP (and unit of production)	Average 1934-43	PRODUCTION	
		Final 1944	Preliminary 1945
Corn (1,000 bu.)	1,734	1,260	1,552
Oats (1,000 bu.)	3,018	4,320	4,681
Wheat (1,000 bu.)	2,793	3,198	4,306
Barley (1,000 bu.)	1,963	3,162	2,998
Sugar beets (1,000 short tons)	520	807	438
Hay:			
Alfalfa (1,000 tons)	520	512	521
Tame (1,000 tons)	768	761	774
Wild (1,000 tons)	322	311	388
Beans, dry edible (1,000 bags)	729	1,251	1,100
Potatoes (1,000 bu.)	1,954	2,170	2,450

X

X-RAY DEVELOPMENTS. The hope fervently expressed in the 1945 ANNUAL that the world might be at peace to celebrate the semicentennial of the discovery of X-rays by Roentgen on Nov. 8, 1945, has been realized. At the same time the centennial of the birth of this modest man of peace, a German but never a follower of a Kaiser or a Hitler, is commemorated by a grateful world. All the eminent roentgenologists of the United States—medical, industrial, chemical, physical—joined on the above date in Milwaukee in a great accounting of stewardship over 50 years of contributions of X-rays to the saving of life, vastly improved and safer materials, and brilliant pages in the advance of chemistry, physics, mineralogy, metallurgy, engineering, and biology. It is certain that X-rays played some important role in research on the atomic bomb. Roentgen's discovery in 1895 was the first great step in the long road culminating in this amazing, frightful weapon. Even so, we think rather of the countless mobile X-ray units on every battle front for rapid diagnosis to guide the surgeons in their superhuman efforts to save life.

There has not been time as yet for release of information concerning developments in equipment, techniques and applications achieved under stress and of necessity during the war. These will be largely a matter of valuable aid from established equipment and techniques.

Industrial Radiography.—In industrial radiography there have been no special changes since the announcement of the 2,000,000 volt X-ray tubes for radiography of steel sections up to 12 inches; but production of rays from the 100,000,000-volt betatron is still news. A commercial model of the 20,000,000-volt betatron was demonstrated in November 1945, for radiography of steel up to 20 inches thick. Demands for inspection far beyond anything dreamed of before the war have been realized, ranging from the smallest parts and assembled delicate instruments through magnesium alloy castings, which could never have been made satisfactorily without X-ray help, on up to huge bronze propellers, artillery, pressure vessels, ships and tanks.

It has been possible to discover X-ray developments in Germany during the war, as the result of the inspection by American engineers soon after the surrender. The enemy had no million volt or even half million-volt installations. There is no evidence of any unusual tubes, power units or applications though all manufacturers devoted every facility up to the end to supply strictly war requirements. Much of the success of their substitute materials must be attributed to persistent and characteristically thorough X-ray testing, inspection and research.

Instantaneous radiography made possible by the Westinghouse condenser discharge unit has resulted in one of the greatest steps forward in the science of ballistics. Bullets moving at 4,000 feet per second appear to stand still in the exposures of a millionth of a second.

X-ray Diffraction Developments.—Design and commercial production of diffraction units with automatically recording Geiger-Mueller counters for sensitive indication of intensities represent a decided step forward. These were developed originally to control the cutting and grinding of quartz plates used as high frequency oscillators

(See 1944 ANNUAL), but subsequently these units have made possible many new applications. This is part of the remarkable trend towards utilizing the most advanced, formerly purely academic, phases of ultimate crystal and molecular structure analysis to the solution of very practical problems such as the molecular configuration of penicillin and other antibiotics, DDT, and new natural and pharmaceutical compounds of considerable complexity. Under ordinary circumstances DDT as manufactured contains 2 or even more impurities. No satisfactory chemical method has been discovered for such an analysis; but the X-ray diffraction pattern is a certain "finger-print" and is generally accepted as most reliable and simplest for evaluation of this sensational insecticide.

The ultimate goal of diffraction analysis is the construction of a contour map of a molecule based upon calculation of electron densities from Fourier series summations in which measured intensities are used as coefficients. This is an exceedingly laborious process. However, a method devised by Sir William and Sir Lawrence Bragg, based on much earlier work by Ernst Abbe, employs an optical summation. This method has now been further improved and simplified both in England in the "fly's eye" camera and by the Eastman Kodak Company in America. A series of masks are prepared on photographic film. Of these, correct ones are selected to conform with X-ray data. When a beam of light is passed through these masks, an image is photographed which is a "picture" of an atom or a molecule projected on a plane, as it might appear if magnified hundreds of millions of times. With such a method even the molecule of penicillin, which is very complex, is pictured and one of numerous alternative shapes and configurations can be selected.

During the past year remarkable progress has been made in disclosing the ultimate structures of some ceramic materials, clay minerals, limes, plasters and concretes which fail, phosphates for water treatment, complex salicylic-boric-benzoic acid antiseptics, microcrystalline waxes, regenerated protein fibers, chicken feather textile fabrics, animal intestine casings, carbon blacks, storage battery and dry cell chemicals, powder metallurgy products, new plastics and many other materials. It has been possible to set up standards in much the same fashion as any powder by comparison with American Society for Testing Materials Tables. It is even possible to distinguish one neoprene or nylon from another and to measure cis- and trans-linkages in polymer molecules from patterns after reactions with certain simple salts.

A New Diffraction Microscopy.—In 1945 Dr. C. S. Barrett of the Carnegie Institute of Technology announced a new microscopy of potential value in physical metallurgy and in other fields, which depends on X-ray diffraction. This new adaptation supplements optical and electron microscopy and microradiography. It differs from usual technique in employing a fine-grained photographic plate in contact with or very close to the specimen upon which a beam of characteristic X-rays strikes. The diffraction image is enlarged just as in the case of microradiography. These diffraction micrographs show the places where inhomogeneous strain is concentrated.

Along planes where slip has occurred throughout the interior of crystals and polycrystalline grains there is a local bending or rotation of the crystal lattice. At such points the efficiency of X-ray reflection is increased and a dark line is produced on the photographic plate. Measurement can be made of the amount of rotation (usually less than 0.1°) and the thickness of the distorted layer. Thus strain, plastic deformation, twinning, distortion from scratches and cutting tools, annealing, recrystallization, coring, clustering of similarly oriented grains, age-hardening and superlattices are all subjects for investigation by the technique. Sizes and shapes of polycrystalline grains are shown in truly amazing photographs. Since these diffraction micrographs register the effects in individual grains (while ordinary diffraction patterns are the summation of effects from large numbers of grains), it is possible to identify microconstituents from the directions of diffracted rays measured with two films at different distances, and application of the Bragg law. Thus nondestructive microanalysis on individual particles is one of the useful applications.

Direct Photochemical Uses of X-rays.—For a long time it has been known that X-rays may cause various chemical or physical changes when absorbed by certain materials. The effect on the photographic emulsion is most familiar; the lethal effect on the cancer cell is the basis of roentgen therapy. Minerals, gems and glasses are colored by X-ray exposure, and this has served as an industrial process. One of the most remarkable effects has proved highly advantageous during

the war. The Reeves Sound Laboratories discovered that the piezoelectric quartz plates used to control radiofrequencies and produced in a large number for the Army Signal Corps became smoky when exposed to X-rays, and at the same time the oscillation frequency decreased. As a matter of fact, this property could be accurately controlled simply by the time of exposure. Thus thousands of plates which were ground too thin or were otherwise unsatisfactory were salvaged and brought to exactly the desired frequency. The frequency change brought about by radiation can be reversed and the original value restored by baking the plate at a temperature over 175°C . This process undoubtedly may be applied to a wide variety of other materials. Great impetus to practical use of photochemical and biological effects of X-rays is given by the successful development by the Machlett Laboratories of a tube which will generate beams of far greater intensity—5,500,000 roentgens per minute—than ever before achieved. This tube, announced by the writer on Nov. 9, 1945, is characterized by a beryllium foil dome on one end, and an annular filament around the target, thus permitting a beam over a 180° solid angle. The intensity is equivalent to that of γ -rays from 90 pounds of radium.

The year 1946 promises to be one of the most productive and noteworthy in all the history of X-ray science which begins its second half century. See also ELECTRICAL AND ALLIED DEVELOPMENTS; TUBERCULOSIS.

YOUNG, Hugh Hampton, American surgeon and urologist: b. San Antonio, Texas, Sept. 18, 1870; d. Baltimore, Md., Aug. 23, 1945. Dr. Young was not only an internationally known surgeon and a pioneer in the field of urology, but a sportsman, an ardent flier and supporter of aviation, a patron of the arts, and an eager traveler. He became a friend and acquaintance of presidents, princes, and men and women of world renown.

Dr. Young received his B.A., M.A., and M.D. degrees at the University of Virginia, then spent the year 1894-95 in postgraduate study at Johns Hopkins University. He was successively assistant resident surgeon (1895-98), head of the department of urological surgery, and associate surgeon at Johns Hopkins Hospital, and clinical professor of urology at Johns Hopkins University. From Diamond Jim Brady, a friend and patient, he obtained \$600,000 in 1912 for the erection and maintenance of the James Buchanan Brady Urological Institute of Johns Hopkins, the first clinic in the United States devoted entirely to the treatment of urological ailments. During the First World War, Dr. Young was the United States' first medical representative in France, and he served as director of urology in the American Expeditionary Forces in 1917. He received the

Distinguished Service Medal for his services. Dr. Young made what has been termed one of the major contributions to surgery by developing his method of excision of the prostate gland. Later, he made other important contributions, including advocacy of the use of dyes as curative agents by injection. He and his associates were credited with the development in 1924 of mercurochrome, destined to play a large part in the successful treatment of blood poisoning. In 1941 he was one of the four scientists to receive the first Francis Amory awards from the American Academy of Arts and Sciences. He retired from the directorship of the Brady Clinic on July 1, 1942, and since then had devoted his time to clinical research and writing. *Hugh Young: A Surgeon's Autobiography* was published in 1940.

YOUNG MEN'S CHRISTIAN ASSOCIATION (Y.M.C.A.). During 1945 Y.M.C.A.'s in the United States and Canada gave major emphasis to service to veterans through schools, health and recreational activities conducted by local associations; program for servicemen in transit, at military centers and in hospitals; supplying religious, educational and recreational materials to prisoners of war; an active public affairs program.

These special activities and continuing religious, educational, social and recreational activities for boys, young men, older men, girls and women were conducted in 1,267 associations in the United States for 1,295,393 members and

290,694 other registered constituency enrolled in 98,528 groups. The capital investment of associations totaled \$224,398,200 and operating expenses were \$70,416,200. There were 3,429 employed secretaries.

Canadian totals on Jan. 1, 1945 were: 77 associations with 57,973 members, 12,921 registered nonmembers, 5,784 functioning groups, \$86,359 invested in plant and equipment, \$31,431 operating expenditures and 282 employed secretaries.

In the United States the Y.M.C.A. functioned as one of the six founding members of the United Service Organization in maintaining direct service to the armed forces. On Sept. 1, 1945, there were 373 Y.M.C.A. conducted U.S.O. army and navy units and 57 industrial operations with 629 Y.M.C.A. secretaries in U.S.O. service. The Canadian Y.M.C.A., in addition to rendering extensive wartime services at home, functioned as an official arm of the military command overseas, a privilege not permitted under United States military policy.

Work in 33 different countries among prisoners of war on both sides of the conflict was conducted by the World's Committee of Y.M.C.A.'s at a cost of over \$9,000,000 in the past year. In peacetime the World's Alliance of Y.M.C.A.'s, which includes the American and Canadian movements, maintains an office at 52 Rue des Paquis, Geneva, Switzerland, and conducts a worldwide program for the development of physical, social, intellectual and spiritual capacities of youth for effective citizenship.

Offices of the National Council of the Y.M.C.A.'s of Canada are at 21 Dundas Square, Toronto 1, Ontario. Officers are H. Jasper Humphrey, president, and Richard S. Hosking, general secretary.

The National Council of the Y.M.C.A.'s of the United States has offices at 347 Madison Avenue, New York 17, N.Y. Officers are Howard A. Coffin, president, and Eugene E. Barnett, general secretary.

OWEN E. PENCE,

*Director, Bureau of Records, Studies and Trends,
National Council, Y.M.C.A. of the United States.*

YOUNG WOMEN'S CHRISTIAN ASSOCIATION.

In 1945 the Y.W.C.A. in the United States through its 1,516 local units of work served a constituency of nearly 3,000,000 women and girls. During the early months of the year, in addition to its regular service and activities program, the Y.W.C.A. through its participation in special war projects, such as the USO and American War-Community Services, continued to direct its efforts toward meeting the wartime needs of women and girls in this country; and through its World Emergency and War Victims Fund provided money and personnel to Y.W.C.A.'s in other countries to aid them in their war work with women and girls and in giving help to the victims of war. Since the end of the war the work of the World Emergency and War Victims Fund has become even more necessary than formerly in the countries of Europe, aiding in the relief and rehabilitation of homeless and displaced people, the re-establishment of Y.W.C.A.'s and the recruiting and training of new Christian leadership to carry forward the work of the Y.W.C.A. in the postwar period. With the closing of USO clubs in war production areas in the United States and the demand for the continuance of a similar service in the communities affected, the emphasis of the Y.W.C.A.

has shifted to a program of expansion and organization of new Y.W.C.A.'s. In the spring of 1945, in lieu of the regular national convention, local Y.W.C.A.'s throughout the country held individual meetings to consider the issues which would have come before convention and out of these meetings came directives for the ongoing program of the Y.W.C.A.

In the United States in 1945 there were 1,017 local community and student Y.W.C.A.'s. In addition there were 384 registered Y.W.C.A.'s in rural areas, 77 Negro branches and 8 international institutes. The membership of the association in the United States was 544,655.

MARY S. SIMS,

National Board, Young Women's Christian Association.

YUGOSLAVIA. A country situated in the Balkan Peninsula in southeastern Europe, bounded on the north by Austria and Hungary, on the east by Bulgaria and Rumania, on the south by Greece and Albania and on the west and southwest by the Adriatic Sea, Albania and Italy. Set up as a constitutional hereditary kingdom of the Serbs, Croats and Slovenes following the First World War, it became on Oct. 3, 1929, the Kingdom of Yugoslavia (Jugoslavia, Jugoslavija). Its area is 248,897 square kilometers (95,576 square miles), making it the thirteenth in size among the European countries and the largest of the Balkan states. Its population in 1940 was 15,703,000, of whom 7,446,000 were men and 8,257,000 women. This disproportion is a consequence of the Balkan wars and the First World War. Of the main territories comprising Yugoslavia, Serbia, the largest, lies in the southeast portion. In the western part, along the Adriatic Sea, lie (from south to north) Montenegro, Dalmatia, Bosnia-Herzegovina, Croatia-Slavonia, Istria, and Slovenia, the last-named touching Italy, Austria and Hungary. Belgrade (Beograd), the capital, has a population of 300,000. Other towns are Zagreb (Agram, 200,000), Subotica (120,000), Ljubljana (82,000), Sarajevo (80,000), Skopje (Uskub, 72,000), Split (Spalata, Spljet, 70,000), Nis (35,384), Dubrovnik (Ragusa, 18,000), Bihać (10,000), and Jajce (8,000), embattled headquarters of the National Liberation forces under Marshal Tito (Josip Broz) prior to the liberation of Belgrade.

After the outbreak of the Second World War in 1939, Yugoslavia, then under a regency of three members, remained a neutral until March 25, 1941, subject, however, to constant pressure from the Axis powers, especially after the Italian invasion of Greece. On March 25, Premier Dragisa Cvetkovitch and his foreign minister, Lazar Cincar Markovitch, signed a pact with Germany which made Yugoslavia an Axis partner. The signing aroused violent opposition in the country, leading on March 27 to the sudden overthrow of the regency by Gen. Dusan Simovitch, the ascent to the throne of the young King Peter II, and the establishment of a new anti-Axis cabinet with General Simovitch as premier. While German forces were moving into position along Yugoslavia's frontier, the Croats set up an independent state with Ante Pavelitch as president. The Germans, aided by this division in the Yugoslav forces, and disregarding the undertaking of the Yugoslav government to maintain absolute neutrality, bombed Belgrade and began an invasion of the country on April 6, which culminated twelve days later in the capitulation of the Yugoslav armies and shortly afterwards in the dis-

membership of Yugoslavia by the Axis powers and their satellites. Puppet regimes were set up in Serbia by Germany and in Croatia by Italy, which also claimed Dalmatia (along the Adriatic Sea) and Montenegro as Italian provinces, and added a section to Albania. The remnants of Yugoslavia were divided among Germany, Hungary and Bulgaria.

A few weeks after the surrender began the rise of the National Liberation movement. This was for some two years associated by many people in the United States and elsewhere with the name of Gen. Draža Mihailovitch, ranking officer of the Yugoslav Army, who had been appointed minister of war in the Yugoslav government-in-exile, set up in London under the authority of King Peter. By the autumn of 1943, Allied military authorities had become convinced that much more was being done for the Allied cause by the forces organized under Marshal Tito (Josip Broz) than by those under General Mihailovitch. Accordingly, although the Yugoslav government-in-exile continued to be recognized by the Allies, their moral and military support was being given to Marshal Tito. By the end of 1943, Tito's forces, representing all the nationalities, religious, and anti-Fascist political parties of Yugoslavia, had successfully withstood five major offensives of the Germans and their collaborators, and despite incredibly bad fighting conditions and severe losses, had become a force of over 250,000 men and women, and had liberated about a third of Yugoslavia. The forces of General Mihailovitch were estimated at not more than 15,000, which the Allied authorities now believed had long remained inactive against the Germans, and certain of their leaders had been sharply assailed by Sir Henry Maitland Wilson, Allied commander in chief in the Middle East, for collaborating with the Axis.

Important developments were to take place during 1944 and 1945 in the military campaign of the National Liberation movement, and further light was to be thrown upon the political program which, as it now appeared, formed its basis.

On March 20, 1944 in London, King Peter was married to Princess Alexandra of Greece. In July the headquarters of his government-in-exile, which in November 1943 had been transferred to Cairo, was moved back to London.

Military and Political Developments in 1945.—At the beginning of 1944 heavily reinforced German armies engaged in a new effort to re-occupy the liberated parts of Yugoslavia and to destroy the forces defending it. By the close of the year some 70 per cent of the Yugoslav territory, including Belgrade, the capital, and all the south and eastern portions had been freed from the German occupation by Soviet and Yugoslav liberation forces.

On March 1, 1945, some five months after the liberation of Belgrade, an official decree changed the name of the National Liberation Army of Yugoslavia to *Jugoslavenska Armija* (The Yugoslav Army). The Army of National Liberation had been organized on a very primitive basis and was officered by men who in most cases had previously had little or no military training and experience. Nevertheless, it had performed deeds of great bravery and had liberated most of the country with hardly any help from the outside. In the new situation it was confronted with the problem of reorganization and development along the lines of a modern standing army.

While the military campaign proceeded, freeing further large sections of the country, plans for setting up the regency were agreed upon by the Subasitch cabinet in London. When in the opening weeks of 1945 King Peter claimed the right to name the regents, it became evident that the Subasitch government, with at least the tacit approval of the Allies, was prepared to proceed to Belgrade, regardless of the king's opposition, to merge his government with Marshal Tito's executive committee.

In the meantime, a significant issue had arisen in regard to the planning of Allied relief measures in Yugoslavia. The UNRRA, acting originally on the assumption that no government organization existed in Yugoslavia, had offered to extend relief there through its own organization, as in Italy, but on Oct. 2, 1944, the plan was rejected by the Yugoslavs. On Jan. 22, 1945, however, an agreement was announced under which relief was to be distributed by the Yugoslav Liberation authorities subject to general supervision by Allied observers.

One of the most important developments after the liberation of Yugoslavia was the organization of the federal government. Dr. Stojan Gavrilovitch, assistant secretary of foreign affairs, writing in *Free World* (June 1945), says: "The birth of this government and administration took place at a moment when the country was invaded and when the entire nation was engaged in a life-and-death battle for freedom." The government and its administration has central and local state organs, the central referred to as "federal," the local as "federative." Yugoslavia as organized in 1945 has six federative or state units: Serbia, Croatia, Slovenia, Montenegro, Bosnia-Herzegovina, and Macedonia. Each state unit has its own chief city where the federative authorities are centered. For the time being the powers of the king were vested in a council of regency. The transfer of royal authority was effected by means of a royal decree under King Peter's signature. The central and local parliaments, as well as the central and local governments, are formed on the representative basis. Their members come from the ranks of prewar political parties which were incorporated into the framework of what is known as the National Liberation Front. The incorporation implies their *a priori* recognition of three basic political principles, acceptance of which is required for participation in the government and administration of the country, namely: *national unity, the federal form of government, and democratic rule.*

Problems of Economic and Political Reconstruction.—In 1944 provision was made for the immediate needs of considerable numbers of Yugoslav wounded, homeless, or lacking in the means of life because of the war. In addition to the children cared for during three-month rehabilitation periods in Switzerland by the Swiss and International Red Cross, there were by the end of the year about 100,000 Yugoslavs in refugee camps in Egypt, about 30,000 sick or wounded members of the Yugoslav Liberation forces in hospitals or convalescent establishments in Italy, and some hundreds of Yugoslav civilians in the emergency refugee shelter at Fort Ontario, Oswego, New York, set up by the United States government. A number of these refugees returned to Yugoslavia during 1945.

The most important economic step taken within Yugoslavia itself in 1944 and 1945 was

the breaking up of the large estates in the liberated areas, and the taking over by the Liberation authorities of the industrial plants which had been serving the purposes of the Germans. Throughout the areas liberated, especially in 1944, large estates were either broken up and given to peasants or made into co-operative holdings. Among the areas affected by these measures was Bačka and Banat, one of the greatest wheat-growing provinces in Europe, situated on the border of Hungary, in the Danube valley. Over 1,300 industries were also taken over by the National Council from the Germans and their quislings, the purpose being to defeat a characteristic strategy of the Nazis, who are said to have been interested not so much in acquiring property as in placing—and keeping—key men in key positions, the better to achieve their ends.

Such measures are best understood in the light of Yugoslavia's history and the state of its economy subsequent to the German occupation. A study by Frano Petrinović, a prominent Yugoslav industrialist (*Bulletin of the United Committee of South Slav Americans*, May 10, June 20, Aug. 22, and Nov. 1944) indicates some of the most pressing problems of Yugoslavia's agriculture, mining, and manufacturing industries, transportation, finance, and public services. The National Council of Liberation, while much concerned with these problems and with plans for their solution, had announced in February 1943 that it would introduce no radical changes in social life and activities, apart from "replacing the reactionary district administrations and gendarmes by elected people's institutions of a truly democratic character." "All important measures" bearing on social life and state organization were "to be decided after the war by representatives truly and freely elected by the people." (*The Re-Creation of Yugoslavia*, back cover.)

The steps taken in 1944 with regard to the large estates and industrial plants are held to have been measures of immediate necessity in the struggle of the Yugoslavs against fascism and its most deadly collaborator—famine—a contention apparently substantiated in the picture of Yugoslav agriculture—the country's leading industry—presented by Petrinović.

The economic situation in Yugoslavia following the liberation raised a series of new administrative problems. Full respect for private property and individual initiative in economic affairs is one of the guiding principles in the Federative Yugoslavia, as it was formally proclaimed at the historic meeting of the central parliament at Jajce, Bosnia, in November 1943. But in the application of this principle two vital considerations are being kept in mind. The first of these is the general trend of economic reorganization in the country favoring the system of co-operatives.

Before the Second World War the co-operatives, covering many fields of activity, had become an important economic factor in the life of the peasant masses, which included over 80 per cent of the entire population. The tendency since the liberation has been to expand this system wherever it may be needed.

The second point is that as the liberation progressed, a vast amount of private enemy property in Yugoslavia fell into possession of the government. During the years of Fascist ascendancy Germany, Italy, and other enemy countries had acquired large properties and interests in Yugoslavia. The German minority in Yugoslavia also owned large estates of rich, arable land in

the northern parts of the country. Most of these Germans fled with the German Army as it was forced out of Yugoslavia. It was expected that these estates would be subdivided and given to the landless veterans of Tito's Liberation Army. The industrial, mining, banking, insurance and other enemy property was taken over by the government in 1945, and in most cases was being nationalized. The Yugoslavs, despite their severe economic circumstances due to the destruction caused by the war had by the fall of 1945 already put forth great efforts toward the rehabilitation of their country. Many bridges and more than half the railroad mileage had been restored. The farms and mines were in operation, and many homes rebuilt.

Agriculture.—Yugoslavia is pre-eminently an agricultural country. Over 80 per cent of its population are engaged in agriculture, and only about 19 per cent have other trades. About 14,269,829 acres (some 50 per cent of the country's total area) are suitable for cultivation, the remainder being mainly forest. The land under cultivation falls in the following categories: arable land, 7,391,755 acres (51.80 per cent); pasturage, 4,310,357 acres (32.30 per cent); meadows, 1,825,201 acres (12.80 per cent); orchards, 260,346 acres (1.80 per cent); vineyards, 198,922 acres (1.40 per cent); gardens, 143,820 acres (1 per cent); and market gardens, 139,423 acres (1 per cent). Almost a third of the country (30.5 per cent) is in forests, giving Yugoslavia fifth place among the lumber-producing countries of Europe.

Even before the war, states Frano Petrinović, Yugoslavia, although one of the world's most fertile regions, suffered in some sections from a shortage of bread. He attributed this to medieval methods of tillage and harvesting, to exorbitant costs of farm machinery, and especially to the fact that 5,500,000 peasants—over a third of the total population of the country—lived on holdings of 11 acres or less. In 1938 the income of all the peasants—more than 10,000,000 people, comprising 77 per cent of the total population—was only 47 per cent of the national income, and their average annual cash income was only \$20 per capita, with great numbers of the farmers receiving less than this. The farmers, while receiving so little for their produce, had to pay disproportionately high prices for machinery and other manufactured goods. The state, on its part, assigned less than one per cent of its budget to agriculture, while 50 per cent was spent for the army and reportedly excessive police services. The Second World War added to these disabilities a manpower shortage due to the death or incapacitation of hundreds of thousands of peasants, and ruinous losses of draft animals and other livestock, through forced sales, or outright plunder, by the Germans. The situation as Petrinović found it had made inevitable the mechanization and modernization of agriculture, requiring its complete reorganization on a co-operative basis, the lowering of tariffs on machinery and other manufactures required by the farmers, and much larger provision for agriculture in the national budget.

That the new Yugoslavia was already making progress is evident from the tobacco production of 1945. Tobacco had been of very great importance in the economic life of Yugoslavia. It was one of the state's principal sources of revenue. Yet because the peasants received very little in return for their strenuous work in raising the crop, tobacco production declined. The

21,000 acres planted to tobacco in 1932 had fallen in 1934 to 7,154 acres. Prices obtained by the grower depended upon favorable classification of the product, and this frequently depended upon graft or influence. In 1945 tobacco production was revived, and under a system of supervision instituted by the people's representatives, the peasants received fairer prices for their crops.

State Finance and Currency.—Part of the difficulty of the farmers, according to Petrinović, had been due to the heavy debts they had incurred because of the depressed condition of agriculture, and to the character of the credit system. Private creditors and the banks (almost entirely controlled by foreign interests) together held 77 per cent of the peasants' notes, and private charges were extremely high. Before the Second World War only three or four of the twenty larger financial institutions were based entirely on Yugoslav capital, foreign capital playing a larger or smaller part in all the remainder. Foreign investments in Yugoslav financial enterprises amounted to the following sums: French, 800,000,000 dinars; English, 700,000,000; Austrian, 500,000,000; Swiss, 350,000,000; Czechoslovak, 300,000,000; American, 300,000,000; Belgian, 250,000,000; Hungarian, 200,000,000; German, 180,000,000; Italian, 100,000,000; Swedish and Polish to lesser sums.

The war had brought a multiplicity and confusion of currencies, eight different currencies being in circulation in the fall of 1944, including Yugoslav dinars, Serbian dinars, Croatian kunas, Italian lire, German marks, Magyar pengős, Bulgarian levas, and Albanian francs—some paper issues appearing in enormous quantities through manipulations by the Nazis and their quislings. Currency stabilization had become one of the most pressing problems, if only in view of the need for restoring the confidence of the food producers in their market.

Minerals and Manufactures.—Mining is the most important item in the economic life of Yugoslavia. Few countries have a greater variety of mineral wealth, from the precious metals down to lignite. Prior to the Second World War there were 122 mining enterprises and 11 smelting companies in Yugoslavia. However, by the authority vested in the government, foreign capital played the predominant part in most of these enterprises. Instances in point were the Trepča and Bor mines, owned partly by British and French interests, and partly by the king of Yugoslavia and certain of his ministers. Following liberation the ownership of these mines became a subject of controversy between the British and French and Marshal Tito. Tito contended that they were the property of the people and of the state of Yugoslavia. Forests, covering nearly a third of the country, also constitute an important industrial resource.

After the First World War the Yugoslavs, while they had won political freedom in a formal sense, are held to have fallen into economic bondage to various international cartels, to their own manufacturing interests, and to their state monopolies (salt, tobacco, matches, cigarette paper, petroleum, alcohol, gunpowder, saccharine, dynamite, and others). Hence the necessity, as Petrinović sees it, for comprehensive and long-range planning to make the country economically independent, for international credits under which Yugoslavia will be permitted to repay her loans in exportable goods and services, and particularly for importing machinery

and transportation facilities, as basic requirements for the restoration of her shattered economy.

Yugoslav authorities state that various products such as sardines, marasca cherries, olive oil, camomile tea, and wine, which had been marketed in the United States as products of Italy, were actually produced in Yugoslavia. This practice, according to Marshal Tito, will no longer be permitted.

Transportation.—Yugoslavia's transportation facilities, never adequate, are reported to have been reduced to a "deplorable state" as a result of the war. Not only were the railways—with the exception of a few strategic lines—neglected by the Germans, but even the few received only temporary repairs following much destruction of tracks, bridges, tunnels, and rolling stock by the partisan armies, and of important stations and repair shops by Allied bombers. Yugoslavia was also under the necessity of building or buying an entirely new merchant fleet, which is to be entirely state owned.

Observers of the progress made in construction and road building during 1945 under the direction of Yugoslavia's postwar government emphasize the point that the prewar regime had neglected road building, and had misappropriated a fund of over 500,000,000 dinars, which had been set aside in 1935 for the building of 21 vital roads.

The Yugoslav Economy and the War.—In addition to the monopolies exercised by the state over the sale of tobacco, salt, and other important commodities mentioned in a preceding paragraph, the state owned the railways, the telephone and telegraph systems, most of the forests and some of the mines. This feature of the government organization was expected to continue, and even to be somewhat increased on account of the safety measures considered necessary to prevent continued Fascist influence in the industries, and the pressing need for aiding the peasants to grow sufficient food, for providing housing, medical facilities and schools in wide areas which had been completely devastated, and in making Yugoslavia economically independent.

The government to be voted in, following the complete freeing of the country, was expected to develop trends already established, with the people in general participating in, and benefiting from the rebuilding of the national economy to a greater extent than formerly, in line with their heavy sacrifices and common efforts in the war. Contrary to fears voiced in the United States and elsewhere that the national antagonisms of the Balkans, including Yugoslavia, might prove insoluble, proponents of the Liberation movement continued during 1945 to assert their belief that in achieving fighting unity against the Germans and their quislings the peoples of Yugoslavia had created the basis for a solidly democratic Yugoslav federation, and possibly for a still broader federation of similarly minded Balkan peoples, within the framework of the United Nations. See also **WORLD POLITICS**.

Political Developments.—Dr. Ivan Subasitch, Yugoslav foreign minister, and Dr. Juraj Sutej, minister without portfolio, resigned as of Oct. 8, 1945, and Marshal Tito announced that he would act as foreign minister until after the national elections for a Constituent Assembly. These elections, held November 11, and the first since 1938, were the first held by secret

ballot and the first in which women were allowed to vote. Opposition parties withdrew their candidates, and the general vote for the National Liberation Front was estimated at about 90 per cent of the votes cast. In one Belgrade district an American observer reported that about 83 per cent of the electorate had voted, the vote in this case being about 75 per cent for the Liberation Front. On November 29 the Constituent Assembly (Skupština), meeting at Belgrade, proclaimed the country a republic, renaming it the Federal Peoples Republic of Yugoslavia, and declared the monarchy abolished, and King Peter II, "Peter Karageorgevitch . . . deprived of all rights previously vested in him and in his dynasty." (New York Times, Nov. 30, 1945.) On the same day King Peter issued a statement signifying his refusal to accept this decision.

Revised by Vlaho S. Vlahović, Author, *Two Hundred 50 Million and One Slavs*.

YUKON TERRITORY. Constituted a territory in 1898 with an area of 207,076 square miles, the Yukon Territory lies between Alaska and the Northwest Territories of Canada. The climate is subject to extremes in temperature, and very moderate precipitation. The maximum temperature recorded at the Dawson Meteorological Station in 92° above, and the minimum 68° below zero. The average precipitation is 12.8 inches per year.

The chief executive of the territory is called

the controller, and is appointed by the governor in council. He administers the territory under instructions from the governor general in council, or the minister of the Department of Mines and Resources. There is an elective legislative council of three members. The controller in council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of prisons and municipal institutions, issue of licenses, incorporation of companies, administration of justice, and generally all matters of a local and private nature in the territory. The Yukon has one representative in the Dominion Parliament elected at the same time as the General Dominion election. Schools in the territory are maintained wholly by the territorial government, there being no school districts or assessments for school purposes.

Placer gold mining is the chief industry in the territory at present, and it has been greatly curtailed due to conditions resulting from the war. Lode mining was closed down at the beginning of the war. Prospecting for minerals was very active in 1945.

Revenue collected by the territorial government for the fiscal year ended March 31, 1945, amounted to \$299,015.82, and expenditures were \$296,682.04.

The population of the territory has decreased considerably since the year 1944, due to the closing down of the Canol pipeline from Normal Wells and the oil refinery at White Horse; also to the completion of the airfields on the North West Staging Route, and the completion of the Alaska Highway. Dawson is the capital. White Horse, Carcross, and Mayo are other centers of population.

G. A. JECKELL,
Controller, Yukon Territory.

ZANZIBAR PROTECTORATE. See BRITISH EAST AFRICA.

ZHUKOV, Georgi Konstantinovich, Soviet Army officer: b. 1895. Marshal Zhukov commanded the First White Russian Army for the Soviet offensive launched against Germany in mid-January 1945. One of the great Russian armies driving along an 800-mile front from East Prussia to the Carpathians, his armored divisions were by April 17 poised before Berlin for "the last, long heave." Premier Joseph Stalin's deputy commander in chief and political confidant, Zhukov is one of the ablest Soviet commanders to emerge from the Second World War. He was chief of staff for the defense of Moscow in the first bitter months of the Nazi invasion, and in late 1942, with Marshal Vasilevsky, directed the Soviet counter-offensive at Stalingrad. He was ordered to Moscow in the first days of January 1943 to organize Red Army forces for the lifting of the 17-month siege of Leningrad. On January 29, he was awarded the Order of Suvorov, first degree, for his part in the campaign, concluded January 18. In March 1944, he directed the Soviet drive across the Southwestern Ukraine, replacing the late Gen. Nikolai F. Vatutin as chief of the First

Ukrainian Army. Marshal Zhukov entered army service in 1915; fought with Bolshevik forces in 1917–18; and in 1938–39, commanded Red Army tank detachments opposing the Japanese. He is a product of the famed Frunze Military Academy, where he specialized in armored warfare, studying under the late Marshal Boris Shaposhnikov. In 1941, he became vice commissar of defense, an alternate member of the Political Bureau of the Communist Party, and Red Army chief of staff, later to be replaced by Shaposhnikov. During the Spanish Civil War, he was tank expert for the Loyalists. Before the Nazi invasion of the Soviet Union, he co-operated with Marshal Timoshenko in the reorganization and training of the Red Army. He holds the Red Army's highest award, the Order of Victory. He was one of the Allied signatories to the Berlin surrender of the Germans on May 8, 1945.

ZINC. Mine production of recoverable zinc (including that made into zinc pigments) in the United States decreased 3 per cent from 744,196 short tons in 1943 to 718,642 tons in 1944. The total value of the 1944 output was \$157,954,000, compared with \$170,370,000 in 1943. Zinc for French process oxide rose sharply to 76 per cent

above the 1943 total, owing to the need for increased quantities of oxide for military uses.

The "Tri-state" or Joplin region of Oklahoma, Kansas, and Missouri maintained its position as the principal zinc-producing district with 26 per cent of the United States output, even though production declined 5 per cent in 1944. The Western states supplied 46 per cent of the domestic total output, Idaho being the largest producer of the group. Imports of zinc continued at a high rate during 1944, but the total in ore and as slab zinc was 18 per cent below the record established in 1943. Of the 422,700 tons of zinc imported in ore, 42 per cent came from Mexico, 27 per cent from Canada, and 10 per cent each from Peru and Australia.

ZONTA INTERNATIONAL. An organization of classified service clubs of executive business and professional women, membership being by invitation and determined by the type of business in which the firm is engaged, as well as by the position held in the firm. There are 155 clubs in Canada, Denmark, Hawaii, Iceland, Sweden, and the United States with approximately 5,200 members.

Main objectives are community service; encouragement of high ethical standards in business and the professions; improvement of the legal, political, economic, and professional status of women; and the advancement of international understanding, goodwill, and peace through a world fellowship of executive women.

Zonta's chief service is work with women and girls. Included in club activities are the establishment of youth centers; co-operation with juvenile court authorities; establishment of nursery schools for working mothers; health and social welfare programs; improved facilities and conditions for women and girls; encouragement to older business women; work with the blind; and scholarships and loan funds for students. Zonta clubs co-operated fully with their governments in war activities and are continuing in the rehabilitation of war veterans and in relief to war victims. The Amelia Earhart Scholarship, in honor of the noted United States aviatrix and Zontian, is awarded annually to a qualified young woman for graduate study in the field of aeronautics.

Zonta was one of the sponsoring organizations of the United Women's Conference at San Francisco in May 1945. A valuable contribution to world peace made by Zonta in 1945 was the international radio program entitled *Women United for Peace*, which brought on the air outstanding women of four countries: Kerstin Hesselgren, first woman member of Sweden's Riksdag; Senator Thelma Moore Akana, of Hawaii; Zonta's president, Jessie Ekins, of Canada; and Zonta's executive secretary, Harriet Richards, of the United States.

International headquarters are located at 59 East Van Buren St., Chicago 5, Ill. Miss Jessie Ekins, St. Catharines, Ontario, was international president in 1945; Miss Harriet C. Richards, executive secretary; and Mrs. Lucile D. Edgar, editor of *The Zontian*, official publication of Zonta International. LUCILE D. EDGAR, Director of Public Relations, Zonta International.

ZOOLOGY. Taxonomy and Evolution.—In *Tempo and Mode in Evolution*, G. C. Simpson has examined the fossil record in the light of recent developments, especially those of population-genetics. Among his more important results is the conclusion that processes of an unknown

nature, such as would be required in orthogenesis or in Goldschmidt's stepwise evolution by systemic mutations, are not required to explain the paleontological data. For example, origin of the different mammalian lines might be expected to take place in small populations and at a very rapid rate, so that traces of the intermediate stages would have relatively poor chances of preservation, and discontinuities in the fossil record would result.

A second impressive contribution by Simpson, *Principles of Classification*, contains an introductory section outlining the methods of taxonomy. Although systematic zoology has recently become revitalized, facilities for training students in the basic techniques of taxonomy have not kept pace. Simpson's text is designed to help in the correction of this situation. The second part of the study deals with the classification of Mammalia. A table giving the systematic position of all known genera, both recent and fossil, is followed by a discussion of the basis for choice between the various proposed alternatives for each grouping. Explicit comments on "vertical" and "horizontal" notation of phylogenetic relationships, and on "splitting" versus "lumping," provide practical illustrations of principles discussed in the introductory general section.

Among studies on the mechanism of species formation is an interesting series of experiments to determine the degree of sexual isolation between different geographical strains of various species of *Drosophila*, by Th. Dobzhansky together with E. Mayr. Dobzhansky points out that mating preferences tending to reduce gene-exchange between different groups would reduce wastage in the form of ill-balanced hybrids. Differences serving as recognition-marks for sexual aversion would thus be favored by natural selection. The evolution of complex differences between species in structures and habits connected with courtship and mating would thereby be explained without recourse to special theories such as Darwin's sexual selection.

Genetics.—In a symposium on *Genes as Physiological Agents*, S. Wright has clarified the theory of the relationship between genes and the organisms of which they are a controlling part.

T. M. Sonneborn, in the same symposium, brings forward new evidence concerning the cytoplasmic inheritance of "killer" properties found in one race of *Paramecium aurelia*. "Killer" strains of the protozoan give off into the culture-medium a substance poisonous to "sensitive" strains. This "killer" property results from the presence in the cytoplasm of a substance which is produced only in cells containing a certain gene (K). However, cells of the killer genetic constitution do not manufacture the cytoplasmic substance unless this killer substance is already present, somewhat as if a pump had to be primed. Sonneborn now finds reason to believe that the killer substance may be entirely removed from the cytoplasm of the cell by combination with the macronuclei. A strain of *Paramecium* of this sort does not exhibit the killer property as long as it reproduces only by asexual means, but may become killer again after sexual reproduction, when the old macronuclei break down and release killer substance into the cytoplasm.

Wright points out that Sonneborn's results may offer a clue to one of the most mysterious of biological processes, *differentiation*, by which the

original single egg cell gives rise in the course of development to daughter cells which are presumably of identical genetic composition but are of different self-reproducing kinds. As a still more startling possibility, the supposed behavior of the killer-substance would be in accord with recent evidence that mutations can be induced by antibodies.

Experimental Embryology.—J. Holtfreter's studies of the role of the surface coating or syncytial membrane of embryonic amphibian cell-aggregates have now enabled him to clarify further the confused data concerning organizer-action. He finds that differentiation of nerve structures in fragments of presumptive epidermis kept isolated in standard culture solution, results from stimuli released by cells expelled from the exposed uncoated surfaces of the explanted fragments. He concludes that in most if not all cases in which chemical substances or dead or foreign tissues have been thought to have acted as "inductors," the effect was actually an indirect one, mediated by cytolysed cells of the host.

Behavior.—W. C. Allee, in an essay on the biological background of human conflict and co-operation, has brought together and related the wealth of recent experimental data on mechanisms governing the relationships between individuals of animal communities.

Physiology.—D. Nachmansohn has added new evidence for his view that it is the release and removal of acetylcholine which produces alterations in the nerve cell-membrane and so controls and generates the flow of electric current in the transmission of nerve impulses. Choline esterase, the specific enzyme which destroys acetylcholine, is known to be found in all nerve tissues, whether from vertebrates or invertebrates, mammalian brain or electric organ of fishes, synapse and cell-containing grey matter or axon only. Acetylcholine itself is now found to be formed in axons at a rate not lower than one half to one third of that in grey matter.

Protozoa.—Jennings, summarizing his studies of age and death in *Paramecium*, has concluded that these processes are not limited to multicellular animals but occur on a vast scale in protozoa. Most if not all asexually produced lines of protozoa ultimately decline and die if they are not rejuvenated by sexual reproduction. The rejuvenating function of conjugation, as distinct from its function as a producer of genetic variation, is not understood but must be accepted as a fact.

Insects.—V. B. Wigglesworth has demonstrated that the restriction of water-loss through the skin of insects is due to a thin layer of wax or grease on the outer surface. Disorientation of the molecules of the wax layer occurs at critical

temperatures, which are highest in those insects or stages which are most resistant to desiccation. This results in an abrupt increase in permeability. High evaporation rates can also be produced by scratching the wax layer, which accounts for the high moisture-needs found in insect larvae from the soil. Abrasion of the wax by inert dusts results in higher permeability of insects to water and to insecticides.

Birds.—The means by which birds are able to find their way from remote points to their nests or seasonal habitats remains a subject of controversy. William Rowan has brought forward new evidence that migratory orientation is not accomplished simply by the recognition of geographical and meteorological patterns and familiar landmarks. Juvenile crows were kept caged in Canada, for a month after the last adults had flown south. They were released when the ground was blanketed with snow. Over 50 per cent were recaptured during the next ten days, up to 250 miles away, all of them on the direct line to their wintering ground in Oklahoma.

MARTIN D. BURKENROAD,
Peabody Museum, Yale University.

ZULOAGA, Ignacio, Spanish painter: b. Éibar, Guipúzcoa, Spain, July 26, 1870; d. Madrid, Oct. 31, 1945. Zuloaga was internationally known for his paintings of popular Spanish types, bull-fighters, and gypsies; his portraits of women; and his landscapes. Zuloaga started out to be a mining engineer, but after a visit to the Prado he decided to study art and was sent to Rome. He stayed there only a few months and then traveled throughout Italy, France, and England. After six months' work he finished his first painting, which was exhibited in the Paris Salon of 1890. He continued his studies in Paris, being strongly influenced by Gauguin and Toulouse-Lautrec, but it was not until his return to Spain that his mature style developed under the influence of such Spanish masters as Velasquez, Zurbarán, El Greco, and Goya. However, it was in Paris rather than in his native country that Zuloaga was first acclaimed as the reformer of Spanish national art. He was noted for his collection of paintings by El Greco, a number of which he discovered stored away in a monastery and bought for five donkey-loads of provisions. Zuloaga became an American favorite in 1909, when an exhibition of 38 of his works was held in the museum of the Hispanic Society in New York. At the time of his visit to the United States in 1924, he was estimated to have completed more than 500 paintings, some of which brought as much as \$25,000.

ZULULAND. See SOUTH AFRICA, UNION OF.

Cumulative Index to Americana Annuals

1942, 1943, 1944, and 1945

This index covers special articles, related material, and biographies. Cumulative indexes to all issues of THE AMERICANA ANNUAL, 1923 to 1932, inclusive, will be found in the 1933 ANNUAL, and those for 1933 to 1941, inclusive, in the 1942 ANNUAL.
